*These appointments could be made either by the several governments or by the Pan-American Congress. Allowing the members of the court to appoint the Chief Justice would tend to minimize political and maximize judicial considerations in the choice of the Chief Justices to act as Circuit Judges.

Rica, Honduras, Gautemala, Nicaragua and Salvador. This court already exists.

A South Central Circuit, composed of Colombia, Ecuador and Venezuela.

A Western Circuit, composed of Bolivia, Peru and Chile.

An Eastern Circuit, composed of Argentina, Paraguay, Uruguay, Brazil.

An Island Circuit, composed of Hayti, San Domingo, and, perhaps, the adjacent possessions, Porto Rico, Jamaica, etc.

Cases between nations in the same circuit would come before this Circuit Court. When nations in different circuits are involved the judges for both circuits would sit. The Chief Justice of each Circuit Court appointed by his associates would represent his circuit on the Supreme Court to which final appeal would be in all cases between nations, and in specified cases between citizens of different nations. The court should have no jurisdiction to entertain a suit against a nation at the request of a citizen. When the United States Supreme Court did this (Chisholm v. Georgia) the State of Georgia made it a capital crime for a writ in such a case to be served upon the State. Thereupon it was unanimously agreed to amend the Constitution so as to expressly forbid any such construction of the authority of United States Courts. All the judicial Federal machinery in each country could be at the disposal of these International Courts so long as necessary.

While this sounds complicated at first, it is in fact simple, and the more it is studied the more it is found to be in harmony with the requirements of justice as revealed by the actual working of the English system as modified in America and applied to Federal as well as State governments.

Supposing that it is taking too many steps at a time to jump from no American judiciary at all to this complete system, the following seems practical and desirable as a long step in the right direction.

II. Let the Pan-American Congress elect from the Permanent Tribunal of Arbitration, to which each country has appointed four members, an American Court of International Justice, composed of one person from each American Republic (including Canada). Let these twenty-two judges be divided into six sections geographically as outlined above, each section taking original jurisdiction over questions arising in its territory, the case going by appeal to the full court, where the parties in interest can by agreement use the entire court, or upon demand of either choose seven judges from the entire court, either by selection or elimination as may seem best.

If this be untimely the following would be a move in the right direction:

III. Let each country designate one of its four representatives on the Tribunal of International Arbitration as a member of the American Court of Justice, these twenty-two persons to constitute the court. Each country to be at perfect liberty to demand a select court even for questions that must be arbitrated in accordance with treaty agreements. In case of such demand the interested Powers constitute the court either by mutual agreement or by alternately selecting or striking from the list of judges till six are chosen. These to select the seventh and Chief Justice.

In any of these ways the American Republics can achieve the wise wish of the First Delegate of France so sagaciously exprest at the Second Hague Conference. The American part of the sleeping Tribunal of International Arbitration would thus spring into beneficent action. In due time a similar result would probably take place in its other parts, probably thru the granting of jurisdiction to the Asiatic members in controversies among Asiatic Powers, and to its European members in controversies among European Powers.

The term of the members of the existing tribunal is six years. The term of the proposed prize court is six years, and of the proposed court of international justice is twelve years. The term can easily be altered if experience shows this to be wise. The question of pay is a more important one. International judges possest of any jurisdiction ought to be paid not by the nation of which they are citizens, but by the Union of Nations in whose affairs they are to act as judges. As commerce between the nations necessitates the international court, a way should be found for enabling the Pan-American Congress to collect the neces-

sary funds by a charge upon international commerce or in some other way. Till this is done I suppose each country would pay its own appointees. Their salary should be double that provided for the highest judicial officer of the nation concerned. For any of those or other practical plans, general consent of all the American nations is requisite.

While private consideration and public discussion are preparing the way for this, it would seem feasible to take the following course as a step in this direction, requiring the assent of only two Powers at a time: Let a series of general treaties be initiated by the United States with American nations, containing mutual guarantees to respect territory and sovereignity and to arbitrate all questions growing out of commerce between the people of the contracting Powers, and providing that for sentiment of such questions each Power will designate and pay one judge (double the salary of the highest national judge), these to choose the third, when a case arises, his compensation to be equal to one year's salary of the highest paid of his associates. There is a treaty that has become the fashion for European (great) Powers *inter sese* and with the United States—the treaty negotiated between France and England nearly a decade ago. It reserves all questions affecting vital rights or national honor, and is therefore too vague for use in defining a jurisdiction.

There is a treaty that finds general favor among South American nations *inter sese* and which binds the signatory Powers to arbitrate all questions except such as affect their respective Constitutions.

But there is no prevalent treaty between North and South American countries. Therefore it seems desirable that the United States initiate with the nations to the south of us this form of treaty to prepare the way for founding and erecting an efficient system of justice for the American nations. Being the most powerful of the American nations this restriction upon the possible abuse of power can be proposed by the United States with greatest effect and also with the best grace. Suppose we conclude such a treaty with every South American country and designate the same judge to act as our representative in deciding controversies as they arise under each treaty. The other Powers would probably conclude similar treaties *inter sese*, and probably each Power would designate the same judge to act under all treaties. Thus a real international judiciary will spring up and acquire a sort of jurisdiction by the action of the Powers in pairs, and it will then be a short step to the constitution of a court having jurisdiction in controversies growing out of commerce thruout all America. To begin with we might conclude such a treaty with Mexico, Argentina and Chile. By this we would form the nucleus of three of the circuits proposed above.

Undoubtedly it is of greater importance to define the most vital national rights and make them secure, as secure as human agreements can make them, and to remove clearly defined classes of questions to the jurisdiction of arbitral or judicial tribunals, however constituted, than to establish a fine system of courts without granting any jurisdiction to them or making secure against erroneous judgment of the courts those national rights which correspond to the individual rights which form the foundation of the English system of government.

It is probably true that establishing a court composed of a small number of judges and compelling resort to that court would greatly retard the further progress of arbitration. The securities for impartiality supplied by the jury system would be wanting. Providing for the use of juries for questions of fact would probably facilitate the rapid growth of international courts. This was accomplished in the organization of our national courts, and is therefore a possibility internationally. Confidence in the system of justice rather than in particular persons, or in the appointees of particular Powers must be the chief hope of progress in this good work. It is probable that not one out of one hundred voters could name the Justices of the Supreme Court of the United States, now or at any time since the court was created. Probably not one in one thousand of our citizens could name today the four American members of the Tribunal of International Arbitration. Few, if any, Americans can name any of the representatives of other countries on that tribunal. There are no judges in the

world so eminent as to possess or command the confidence of the people of other countries. Even our Chief Justice was recently rejected by one nation when he was proposed by another as an arbitrator. The excuse given was that he does not speak French. But he reads French, and the case was to be presented in print, not by oral argument, as I am informed.

Whatever may be the course of events in the Constitution of a Court of International Justice, for the American Union of Republics or the Hague Union of all Nations, I am confident that the basis of confidence will not be the personality of the judges chosen at the outset or at any other time. The true principle of a system of justice thru courts and congresses, duly constituted, must win against the erroneous policy of enforcing the national will thru admirals and generals in command of armed forces.

Large as the task is, and it seems larger than it is in fact, the way has already been blazed, nay hewn out, we might almost say graded and paved by the formation of this Union of Sovereign States and of other Federal Governments organized during the past century. Thus the area of law and order thru proper agencies of justice was extended so as to include the territory of several nations previously exercising sovereign power, and without derogating improperly from that sovereignty. This can be carried on till the area of justice is as wide as that of commerce—that is, as wide as the world.

The next large step forward in this great work seems the dedication of the New World, by express agreement, to the definite policy of mutual respect for national territory and sovereignty and the settlement of all questions, between American republics or their respective citizens, by the judgments of duly constituted courts in accordance with duly declared principles of international law. We already have the Congress for ascertaining the principles of law that ought to be observed. Let us lay the foundations of justice and begin to rear the superstructure by establishing a court on a bill of national rights with a clearly defined jurisdiction, however limited.

Out of Babylon

BY ISABEL ECCLESTONE MACKAY

Their looks for me are bitter,
And bitter is their word—
I may not glance behind unseen,
I may not sigh unheard!

So fare we forth from Babylon,
Along the road of stone;
And none looks back to Babylon
Save I—save I alone!

My mother's eyes are glory-filled
(Save when they fall on me);
The shining of my father's face
I tremble when I see!

For they were slaves in Babylon,
And now they're walking free—
They leave their chains in Babylon,
I bear my chains with me!

At night a sound of singing
The vast encampment fills;
"Jerusalem! Jerusalem!"
It sweeps the nearing hills—

But no one sings of Babylon
(Their home of yesterday);
And no one prays for Babylon,
And I—I dare not pray!

Last night the Prophet saw me;
And while he held me there
The holy fire within his eyes
Burned all my secret bare.

"What! Sigh you so for Babylon?"
(I turned away my face)
"Here's one who turns to Babylon,
Heart-traitor to her race!"

I follow and I follow!
My heart upon the rack;
I follow to Jerusalem—
The long road stretches back

To Babylon, to Babylon!
And every step I take
Bears farther off from Babylon
A heart that cannot break!

Woodstock, Canada.

The Cost of Living.—V.

[This is the fifth article in our series on the increased cost of living. Those already having appeared are: "The Remedy for High Prices," by Prof. J. Pease Norton (February 10); "The Crisis in American Home Life," by Prof. Simon N. Patten (February 17); "The Tariff and the Cost of Living," by Byron W. Holt (February 24); "An Old Fashioned Theory of Prices," by Professor Franklin H. Giddings (March 3). Next week we shall print "Economy in Diet," by Professor Russell H. Chittenden, of Yale. Other articles of an equally authoritative character will follow and the series will be completed with a symposium of letters from our readers on the subject.—EDITOR.]

Prices and Incomes

BY JOHN BATES CLARK

PROFESSOR OF POLITICAL ECONOMY IN COLUMBIA UNIVERSITY.

WHY should a majority of our people be experiencing "hard times" in the midst of prosperity? One explanation is simple and has been given so often as to require no further repetition. An addition to the total supply of gold reduces the purchasing power of the coins made from that metal, and therefore incomes that for considerable periods remain fixt in terms of that metal undergo a reduction in terms of goods. Prices have risen and the wage earner, the salaried man and all who live on the incomes of fixt investments have suffered in consequence.

Meanwhile business is flourishing. The prices of the goods that employers have to sell have risen and wages have been slow in following suit. A quick boom in prices means profits widely diffused and it stimulates production. In due time the adjustment is made which gives to the wage earner his share of the prosperity. Generally speaking, wages tend to equal the price of that part of the joint product of labor and capital which may be fairly attributed to labor, and in the long run the worker should come as near to getting his share under high prices as under low ones. Losses which labor suffers from an influx of gold are due to a temporary misadjustment of wages and prices; and what is said of the wage earner may in general be applied to the salaried man.

The investor pays toll to prosperity in another way, and the toll is heavy. If he is a holder of bonds or a direct lender of money, the principal of his estate, as well as the income from it, shrinks when money loses some of its purchasing power. Bond holders, depositors in savings banks, holders of mortgages have suffered in their income by the rise in prices; but they have suffered in their entire property as well. When their loans are paid they will get as much money as they originally advanced, but will buy less with it. In general, the creditor class has lost and the debtor class has gained by the influx of gold.

An influx of money transfers value from class to class but does not involve a reduction of the total income of society. Price fluctuations juggle something out of A's pocket into B's, but do not put it out of existence altogether. There is little doubt that the total income of society is at present near to a maximum, even tho it be measured, not in money, but in food, clothing, shelter and all that goes to make life comfortable. Many people, however, are now finding it hard to obtain the accustomed amount of such necessaries and comforts. These are familiar facts, there is little uncertainty concerning them and they are entirely in harmony with economic laws.

Monetary inflation is one of the simpler elements in the present situation, tho, when fully studied, it will be found less simple than it seems. There are other influences at work which are much more complex. To understand the present conditions one should go back to cardinal facts and tabulate the forces

which tend to increase the productive power of society and those which tend to reduce it. Estimating products still in kind—in the actual goods that sustain life and make it comfortable—we shall find some changes going on which tend to make them larger, and others which tend to make them smaller. These changes act directly on the amounts of wealth produced. If for brevity we confine ourselves to incomes derived from labor, we shall find that there are three general causes which increase them. The first is the increase in the total amount of capital in use. Where there is little capital the income from all industry is, indeed, comparatively meager; but the special fact that concerns us is that the product which is fairly attributable to labor and should be measured by the wages that labor gets is comparatively small. In a meagerly equipped shoe shop labor itself makes fewer shoes and gets as its wage the price of fewer shoes than it does when the working appliances are better and more abundant.

The second influence which enlarges the product of labor is technical improvement. Machinery is invented, new motive powers are introduced, chemical discoveries are made, new and cheaper kinds of raw materials are offered; and all this tends not only to make the mill as a whole turn out more goods, but to make the part of that total output that is properly attributable to labor larger than it was. It raises wages.

Thirdly, organization has, up to a certain point, a similar effect. The well managed shop, with its valuable business connections, produces more than the one that is inferior in this respect. It grows larger in consequence of its efficiency. The business of unsuccessful rivals drifts naturally to it, and it grows and thrives by the growth. Its greater size means still greater economy; and not merely does the mill itself produce more than before, but every worker does so; and he should naturally feel, in his increased wages, the effect of this enlarging productivity.

These are the greatest single factors that tend to increase the general product of industry. Temporarily another influence has to be counted, and it is one that has played a brilliant part in the development of America. While land has been supposed to be the one agent of production the amount of which is fixt, there may be long periods during which the available part of it is increasing. When population passed the Alleghanies and spread itself rapidly over the Mississippi Valley it was as tho the actual area of the country itself had grown larger; and this effect was enormously magnified when, under the stimulus of land grants, railroads rapidly traversed the newly settled area and ran far into the solitudes beyond. The work of the railroad engineer was quickly followed by that of the homestead settler. Processions of "prairie schooners" appeared, with every spring, westward bound, and farmhouses and villages sprang up as tho conjured out of the earth.

In economic language agriculture was all this while growing, on the average, less "intensive." The average area that was worked by a man was growing greater. Regions where farms were small and laboriously tilled were losing their population. Towns in western New England that had had one thousand inhabitants came to have a fifth of that number, houses and barns went to decay and scrubby forests replaced the tilled fields; but far in the West, under the hand of the more enterprising of the former inhabitants of the decaying sections, much larger farms were coming under tillage.

It was a matter of the greatest importance that, at the very time when railroads were making vast areas accessible, new agricultural machinery was making them workable. The man who, on the Berkshire Hills, could painfully plant and reap five acres of wheat, could cultivate ten times that number of acres in the West. The seeder, the reaper, the thresher, the gang plow, and a score of other effective appliances made it possible for the settler to utilize the area which was put at his disposal. The returns in produce of a man's labor became far greater than they had been.

If we turn now to influences which have worked in the other direction and reduced in kind the returns of labor, we shall find that the first of them consists in the check that has been put on this territorial expansion. If we could but

annex continent after continent, we could keep up indefinitely the increase of production. But the world is smaller than we thought. The overflow of population from countries where land is scarce was bound sooner or later to occupy our seemingly limitless areas. It has done so and is overflowing into the Canadian Northwest; but the influx from the older countries still continues, and we have begun to feel this land-crowding effect. Agriculture on the average had begun to grow more intensive.

If inventions and discoveries of the future are to annul or reverse this effect, they must be of a different kind from those that have given us our seeders, reapers, threshers, etc. We shall need hereafter, not something that will enable a man to till more acres, but something that will enable him to get greater and greater returns from a single acre. We have reached the beginning of the period of increasing intensiveness of agriculture, and by one of the cardinal laws of economics, that process means a diminution of the *per capita* returns. Labor creates and gets less and less, all other things remaining the same, when it tills each acre more and more laboriously.

Of as great immediate importance as the beginning of land scarcity is the deterioration of land quality. While we were rushing to occupy the great plains of the West, we were practising what has been called "land butchery," rather than cultivation. We were robbing the earth in a dozen ways and making, for the time being, great sums thereby; but nature has presented her bill of damages and we shall have to pay it. We have wasted forests, natural gas, oil and minerals; and while, in the case of some of these things, the time of scarcity has not come, in the case of others it has come, and in that of still others it is rapidly approaching. On the whole the greatest waste has been in the destruction of the fertility of the soil. We found we could crop our lands for a term of years without reduction of return, and for a longer term with only a small reduction. It was more profitable to do this than to use fertilizers; but we pay the bill at present where we restore the fertility in a costly way.

Of course this pressure on the productive power of the soil would be relieved by a check on the growth of the population. If capital continues to grow and methods continue to improve, while the population remains stationary, we shall grow enormously in our average earning power, and labor in particular will feel the benefit of the improved conditions in which it works. The greatest of economic problems and one that will long confront humanity is that which is offered by the growth of population, on the one hand, and the growth of capital and the progress of technical improvement on the other. The probabilities point to a retarding of the general growth of numbers, if the civilized world as a whole be taken into account. In spite of immigration wages in America may increase because of technical improvement and enlarging capital.

With one more general and familiar economic principle in view we shall be in a position to make some estimate of what is before us and decide whether the outlook for a generation is encouraging or otherwise. It is the principle of the diffusion of the effects of a gain or a loss of productivity whose immediate action is local. The whole producing organism suffers, and in the long run tends to suffer uniformly, from whatever makes a single department of labor produce less than it has done. In like manner the whole organism gains, and in the long run tends to gain uniformly, by whatever makes any one department yield richer returns. If a farmer's labor yields five times as much wheat as it formerly yielded, it takes fewer men to feed the population, and those who would otherwise work painfully on the farm to produce nothing but food are released to work in the mill, where they produce comforts and luxuries. The particular mechanism whereby it then comes about that the whole population is better fed and also better clothed, sheltered and generally provided for, we have no room here to discuss; but it is a fact that will not be disputed that the movements of labor from occupation to occupation tend to bring its returns everywhere to a certain approach to uniformity, and if it is the agriculturist who is primarily thriving, the men in other occupations will, in the end, have a share of the gains.

The same is true of improvements in

manufacturing, in transportation and in commerce. As a rule the gains first come singly and in a local way, but all society in the end absorbs them. On this principle what is to be expected in the end, if the population of the world continues to increase, is reduced *per capita* returns in agriculture and increased returns in other departments. It remains to be seen which influence will be the larger, but there is the strongest probability that the favorable ones will be so. We shall gain more by inventions, discoveries and the accumulation of productive wealth than we shall lose by the growth of population.

What is to be said as to trusts? In so far as they are real monopolies they divert income from one class to another; and the law is endeavoring to deal with them on that ground. But do they increase or diminish the general productive power of society? In so far as they restrict their own production they turn some labor and capital into less fruitful fields and so reduce the returns of general industry. In so far as they affect important economies they increase those returns. At present American trusts are partial monopolies. Their effect on social production is a mixture of good and evil —an increase of output due to economy, and a diminution due to monopoly, with a probability that the increase predominates. This does not prevent them from doing great harm and increasing the burden under which large classes are working. The public is not getting the full benefit of their enlarged productive power but is feeling the tax that they impose in the enhanced prices of goods. In such index numbers as statisticians use to measure changes in the cost of living the artificial increase in the prices of trust-made goods is certain to figure.

What is to be said as to the tariff? If we concede the correctness of the classical argument that it diverts labor and capital from more productive to less productive occupations and is therefore inherently wasteful, we must also concede a measure of truth in the protectionist's argument that it develops new industries, which become more and more productive with time, and are in the end a valuable asset of the country. If we connect the tariff with the recent increase in the cost of living, it must be by reason of some effects which it has only lately produced; and such effects are discoverable. It has played into the hands of the trusts. Moreover the duties on agricultural products have, until recently, been comparatively inoperative. Most of them have had little or no effect on the prices of produce in America, and even now they have a relatively small effect on them. We are, however, approaching the point when this effect will be quite perceptible. The tariff problem in America will be more serious than it has been when it taxes appreciably the working man's loaf.

Of the various influences that affect the general productive power of labor and of invested capital not one has sprung into activity as suddenly as the increase in the cost of living has taken place. The pressure of population on the soil has come gradually and so has the development of the trusts, while the tariff is a thing of very long standing. The change in the volume of money which has acted on prices has come somewhat more suddenly. It affects all prices but does not burden all classes. It taxes consumers who have not obtained an increase of income. The increasing labor cost of producing food and raw materials taxes everybody but affects some classes more than others. Monopolies tax all but the monopolists and do this somewhat more severely because of a recent effect of long standing duties. The compounding of the results of these several influences has come with a certain suddenness.

If one looks severally at all these influences and perceives what they might do when they act together, he finds himself moved to account for the comparative smallness of their present effects. That they have not been greater is due to the counteracting influence of increasing capital, organization and to steadily improving methods of production. It is in the power of the people to set further good influences working. It is possible to control trusts and convert them into servants of the people. It is possible to revise the tariff scientifically and in an unmistakably downward direction.

As to the increase in the volume of gold in circulation there is nothing to be

done. In the long run this metal will, like other products of the mine, grow costlier and, as compared with other articles, scarcer. We shall be mining poorer veins and smelting more refractory ores, and prices measured in gold will begin to decline instead of rising. Whenever that occurs the classes that now feel the burden will receive a corresponding benefit and the burden will fall elsewhere. Nature will, sooner or later, cure this part of the present difficulty. A spontaneous economic development should, in the meanwhile, enlarge the social income and give to laborers and to small investors their proper share of it.

By an intelligent plan of action and a determined execution of it the people can contribute to this end.

New York City.

A White Woman Who Married a Chinaman

BY SUI SIN FAR

WHY did I marry Liu Kanghi, a Chinaman? Well, in the first place, because I loved him; in the second place, because I was weary of working, struggling and fighting with the world; in the third place, because my child needed a home.

My first husband was an American fifteen years older than myself. For a few months I was very happy with him. I had been a working girl—a stenographer. A home of my own filled my heart with joy. It was a pleasure to me to wait upon James, cook him nice little dinners and suppers, read to him little pieces from the papers and magazines and sing and play to him my little songs and melodies. And for a few months he seemed to be perfectly contented. I suppose I was a novelty to him, he having lived a bachelor existence until he was thirty-four. But it was not long before he left off smiling at my little jokes, grew restive and cross when I teased him, and when I tried to get him to listen to a story in which I was interested and longed to communicate, he would bid me not bother him. I was quick to see the change and realize that there was a gulf of differences between us. Nevertheless, I loved and was proud of him.

It was hard work, but I persevered until one day. It was about six months after our marriage. My husband came home a little earlier than usual, and found me engaged in trying to work out problems in subtraction and addition. He laughed sneeringly: "Give it up, Minnie," said he. "You weren't built for anything but taking care of children. But there's a woman at our place who has a head for figures that makes her worth over a hundred dollars a month. Her husband would have a chance to develop himself."

This speech wounded me. I knew it was James's ambition to write a book on social reform.

The next day, unbeknown to my husband, I called upon the wife of the man who had employed me as stenographer before I was married, and enquired of her whether she thought I could get back my old position. "But, my dear," she exclaimed, "Your husband is receiving a good salary. Why should you work?"

I told her that my husband had in mind the writing of a book on social reform and I wished to help him in his ambition by earning some money toward its publication.

"Social reform!" she echoed, "What sort of social reformer is he who would allow his wife to work when he is well able to support her!"

She bade me go home and think no more of an office position. I was disappointed. I said: "Oh, I wish I could earn some money for James. If I were earning money, perhaps he would not think me so stupid."

"Stupid, my dear girl. You are one

of the brightest little women I know," kindly comforted Mrs. Rogers. But I knew differently and went on to tell her of my inability to figure with my husband how much he had made on certain sales, of my lack of interest in politics, labor questions, woman suffrage and world reformation. "Oh!" I cried, "I am a narrow-minded woman. All I care for is for my husband to love me and be kind to me, for life to be pleasant and easy, and to be able to help a wee bit the poor and sick around me."

Mrs. Rogers looked very serious as she told me that there were differences of opinion as to what was meant by "narrow-mindedness," and that the majority of men had no wish to drag their wives into all their business perplexities, and found more comfort in a woman who was more unlike than like themselves. Only that morning her husband had said to her: "I hate a woman who tries to get into every kink of a man's mind and who must be forever at his elbow meddling with all his affairs."

I went home comforted. Perhaps after a while James would feel and see as did Mr. Rogers. Vain hope!

My child was six weeks old when I entered business life again as stenographer for Rutherford & Rutherford. My salary was $50 a month—more than I had ever earned before, and James was well pleased, for he had feared that it would be difficult for me to obtain a paying place after having been out of practice for so long. This $50 paid for all our living expenses, with the exception of rent, so that James would be able to put by his balance against the time when his book would be ready for publication.

He began writing his book, and Miss Moran, the young woman bookkeeper at his place collaborated with him.

One evening I left James and Miss Moran engaged with their work and went across the street to see a sick friend. When I returned I let myself into the house very softly for fear of awakening the baby whom I had left sleeping. As I stood in the hall I heard my husband's voice in the sitting room. This is what he was saying:

"I am a lonely man. There is no companionship between me and my wife."

"Nonsense!" answered Miss Moran, as I thought a little impatiently, "Look over this paragraph, please, and tell me if you do not think it would be well to have it follow after the one ending with the words "ultimate concord," in place of that beginning with "These great principles."

"I cannot settle my mind upon the work tonight," said James in a sort of thick, tired voice, "I want to talk to you —to win your sympathy—your love."

I heard a chair pushed back. I knew Miss Moran had arisen.

"Good night!" I heard her say. "Much as I would like to see this work accomplished, I shall come no more!"

"But, my God! you cannot throw the thing up at this late date."

"I can and I will. Let me pass, sir."

"If there were no millstone around my neck, you would not say, 'Let me pass, sir' in that tone of voice."

The next I heard was a heavy fall. Miss Moran had knocked my big husband down.

I pushed open the door. Miss Moran, cool and collected, was pulling on her gloves. James was struggling to his feet.

"Oh, Mrs. Carson!" exclaimed the former, "Your husband fell over that stool. Wasn't it stupid of him!"

James, of course, got his divorce six months after I deserted him. He did not ask for the child and I was allowed to keep it.

I was on my way to the water front, the baby in my arms. I was walking quickly, for my state of mind was such that I could have borne twice my burden and not have felt it. Just as I turned down a hill which led to the docks, someone touched my arm and I heard a voice say:

"Pardon me, lady; but you have dropped your baby's shoe!"

"Oh, yes!" I answered, taking the shoe mechanically from an outstretched hand, and pushing on.

I could hear the waves lapping against the pier when the voice again fell upon my ear.

"If you go any further, lady, you will fall into the water!"

My answer was a step forward.

A strong hand was laid upon my arm

and I was swung around against my will. "Poor little baby," went on the voice, which was unusually soft for a man's. "Let me hold him!"

I surrendered my child to the voice.

"Better come over where it is light and you can see where to walk!"

I allowed myself to be led into the light.

Thus I met Liu Kanghi, the Chinese who afterward became my husband. I followed him, obeyed him, trusted him from the very first. It never occurred to me to ask myself what manner of man was succoring me. I only knew that he was a man and that I was being cared for as no one had ever cared for me since my father died. And my grim determination to leave a world which had been cruel to me passed away—and in its place I experienced a strange calmness and content.

"I am going to take you to the house of a friend of mine," he said as he preceded me up the hill, the baby in his arms.

"You will not mind living with Chinese people?" he added.

An electric light under which we were passing flashed across his face.

I did not recoil—not even at first. It may have been because he was wearing American clothes, wore his hair cut, and even to my American eyes appeared a good looking young man—and it may have been because of my troubles; but whatever it was, I answered him and I meant it: "I would much rather live with Chinese than Americans."

He did not ask me why and I did not tell him until long afterward the story of my unhappy marriage, my desertion of the man who had made it impossible for me to remain under his roof; the shame of the divorce, the averted faces of those who had been my friends; the cruelty of the world; the awful struggle for an existence for myself and child; sickness followed by despair.

The Chinese family with which he placed me were kind, simple folk. The father had been living in America for more than twenty years. The family consisted of his wife, a grown daughter and several small sons and daughters, all of whom had been born in America. They made me very welcome and adored the baby. Liu Jusong, the father, was a working jeweler; but because of an accident by which he had lost the use of one hand was partially incapacitated for work. Therefore, their family depended for maintenance chiefly upon their kinsman, Liu Kanghi, the Chinese who had brought me to them.

"We love much our cousin," said one of the little girls to me one day. "He teaches us so many games and brings us toys and sweets."

As soon as I recovered from the attack of nervous prostration which laid me low for over a month after being received into the Liu home, my mind began to form plans for my own and my child's maintenance. One morning I put on my hat and jacket and told Mrs. Liu I would go down town and make an application for work as a stenographer at the different typewriting offices. She pleaded with me to wait a week longer—until, as she said, "your limbs are more fortified with strength," but I assured her that I felt myself well able to begin to do for myself, and that I was anxious to repay some little part of the expense I had been to them.

"For all we have done for you," she answered, "our cousin has paid us doublefold."

"No money can recompense your kindness to myself and child," I replied, "but if it is your cousin to whom I am indebted for board and lodging, all the greater is my anxiety to repay what I owe."

When I returned to the house that evening, tired out with my quest for work, I found Liu Kanghi tossing ball with little Fong in the front porch.

Mrs. Liu bustled out to meet me and began scolding in motherly fashion.

"Oh, why you go down town before you strong enough? See! You look all sick again!" said she.

She turned to Liu Kanghi and said something in Chinese. He threw the ball back to the boy and came toward me, his face grave and concerned.

"Please be so good as to take my cousin's advice," he urged.

"I am well enough to work now," I replied, "and I cannot sink deeper into your debt."

"You need not," said he. "I know a way by which you can quickly pay me off and earn a good living without wear-

ing yourself out and leaving the baby all day. My cousin tells me that you can create most beautiful flowers on silk, velvet and linen. Why not then you do some of that work for my store? I will buy all you can make."

"Oh!" I exclaimed, "I should be only too glad to do such work. But do you really think I can earn a living in that way?"

"You certainly can," was his reply, "I am requiring an embroiderer, and if you will do the work for me I will try to pay you what it is worth."

So I gladly gave up my quest for office work. I lived in the Liu Jusong house and worked for Liu Kanghi. The days, weeks and months passed peacefully and happily. Artistic needlework had always been my favorite occupation, and when it became a source both of remuneration and pleasure, I began to feel that life was worth living after all. I watched with complacency my child grow among the little Chinese children. My life's experience had taught me that the virtues do not all belong to the whites. I was interested in all that concerned the Liu household, became acquainted with all their friends and lost altogether the prejudice against the foreigner in which I had been reared.

I had been living thus more than a year when one afternoon, as I was walking home from Liu Kanghi's store on Kearney street, a parcel of silks and floss under my arm, and my little girl trudging by my side, I came face to face with James Carson.

"Well, now," said he, planting himself in front of me, "You are looking pretty well. How are you making out?"

I caught up my child and pushed past him without a word. When I reached the Liu house I was trembling in every limb, so great was my dislike and fear of the man who had been my husband.

About a week later a letter came to the house addressed to me. It read:

"Dear Minnie—If you are willing to forget the past and make up, I am too. I was surprised to see you the other day, prettier than ever—and much more of a woman. Let me know your mind at an early date.

"Your affectionate husband,

"JAMES,

"204 Buchanan street."

I ignored this letter, but a heavy fear oppresst me. Liu Kanghi, who called the evening of the day I received it, remarked as he arose to greet me that I was looking troubled and hoped that it was not the embroidery flowers.

"It is the shadow from my big hat," I answered lightly. I was dressed for going down town with Mrs. Liu, who was preparing her eldest daughter's trousseau.

"Some day," said Liu Kanghi earnestly, "I hope that you will tell to me all that is in your heart and mind."

I found comfort in his kind face.

"If you will wait until I return I will tell you all tonight," I answered.

Strange as it may seem, altho I had known Liu Kanghi now for more than a year, I had had little talk alone with him, and all he knew about me was what he had learned from Mrs. Liu, namely, that I was a divorced woman, who, when saved from self-destruction, was homeless and starving.

That night, however, after hearing my story, he asked me to be his wife. He said: "I love you and would protect you from all trouble. Your child shall be as my own."

I replied: "I appreciate your love and kindness, but I cannot answer you just yet. Be my friend for a little while longer."

"Do you have for me the love feeling?" he asked.

"I do not know," I answered truthfully.

Another letter came. It was written in a different spirit from the first and contained a threat about the child.

There seemed but one course open to me. That was to leave my Chinese friends. I did. With much sorrow and regret I bade them good bye and took lodgings in a part of the city far removed from the outskirts of Chinatown where my home had been with the Liu's. My little girl pined for her Chinese playmates, and I myself felt strange and lonely; but I knew that if I wished to keep my child I could no longer remain with my friends.

I still continued working for Liu Kanghi, and carried my embroidery to his store in the evening after the little

one had been put to sleep. He usually escorted me back; but never asked to be allowed, and I never invited him, to visit me, or even enter the house. I was a young woman, and alone, and what I had suffered from scandal since I had left James Carson had made me wise.

It was a cold, wet evening in November when he accosted me once again. I had run over to a delicatessen store at the corner of the block where I lived. As I stepped out, his burly figure loomed up in the gloom before me. I started back with a little cry, but he grasped my arm and held it.

"Walk beside me quietly if you do not wish to attract attention," said he, "and by God, if you do, I will take the kid tonight."

"You dare not!" I answered. "You have no right to her whatever. She is my child and I have supported her for the last two years alone."

"Alone! What will the courts say when I tell them about the Chinaman?"

"What will the courts say?" I echoed. "What can they say? Is there any disgrace in working for a Chinese merchant and receiving pay for my labor?"

"And walking in the evening with him, and living for over a year in a house for which he paid the rent!"

He had evidently been making inquiries concerning the Liu family and also watching me for some time. How a woman can loathe and hate the man she has once loved!

We were nearing my lodgings. Perhaps the child had awakened and was crying for me. I would not, however, have entered the house, had he not stopped at the door and pushed it open.

"Lead the way upstairs!" said he, "I want to see the kid."

"You shall not," I cried. In my desperation I wrenched myself from his grasp and faced him, blocking the stairs.

"If you use violence," I declared, "the lodgers will come to my assistance. They know me."

He released my arm.

"Bah!" said he, "I've no use for the kid. It is you I'm after getting reconciled to. Don't you know, Minnie, that once your husband, always your husband. Since I saw you the other day on the street I have been more in love with you than ever before. Suppose we forget all and begin over again!"

Tho the tone of his voice had softened, my fear of him grew greater. I would have fled up the stairs had he not again laid his hand on my arm.

"Answer me, girl," said he.

And in spite of my fear, I shook off his hand and said:

"No husband of mine are you, either legally or morally. And I have no feeling whatever for you other than contempt."

"Ah! So you have sunk!"—his expression was evil. "The oily little Chink has won you!"

I was no longer afraid of him.

"Won me!" I cried, unheeding who heard me. "Yes, honorably and like a man. And what are you that dare sneer at one like him? For all your six feet of grossness, your small soul cannot measure up to his great one. You were unwilling to protect and care for the woman who was your wife or the little child you caused to come into this world; but he succored and saved the stranger woman, treated her as a woman, with reverence and respect; gave her child a home—and made them both independent—not only of others, but of himself. Now, hearing you insult him behind his back, I know, what I did not know before—that I love him—and all I have to say to you is, Go!"

And James Carson went. I heard of him again but once. That was when the papers reported his death of apoplexy while exercising at a public gymnasium.

Loving Liu Kanghi, I became his wife, and tho it is true that there are many Americans who look down upon me for so becoming, I have never regretted it. No, not even when men cast upon me the glances they cast upon sporting women. I accept the lot of the American wife of an humble Chinaman in America. The happiness of the man who loves me is more to me than the approval or disapproval of those who in my dark days left me to die like a dog. My Chinese husband has his faults. He is hot tempered, and at times arbitrary; but he is always a man, and has never sought to take away from me the privilege of being but a woman. I can lean upon and trust in him. I feel him behind me, pro-

tecting and caring for me, and that, to an ordinary woman like myself, means more than anything else.

Only when the son of Liu Fanghi lays his little head upon my bosom do I question whether I have done wisely. For my boy, the son of the Chinese man, is possessed of a childish wisdom which brings the tears to my eyes—and as he stands between his father and myself, like yet unlike us both, so will he stand in after years, between his father's and his mother's people, and if there is no kindliness nor understanding between them, what will my boy's fate be?

SEATTLE, WASH.

The Columbus and Hocking Scandal

BY HORACE WHITE, LL.D.

[As Mr. White was chairman of the recent commission appointed by Governor Hughes to investigate the Stock Exchange, the following article has especial significance. Probably no journalist in the country has done more to promote sound finance than Mr. White.—EDITOR.]

A FEW years ago there was a rather spectacular boom, followed by a reaction, on the Stock Exchange, in which Amalgamated Copper was the central figure. This property had been formed by the purchase and consolidation of several copper mines of large producing capacity in Montana. Amalgamated Copper was admitted to quotation on the Exchange in the "unlisted" department. This means that the usual requirements as regards the filing of reports of earnings, expenses and other information, had not been complied with. To be "unlisted" means that traders in such securities incur more risks when dealing in them than in listed securities.

The men who organized Amalgamated Copper were known to be very rich. They were called, in a general way, the "Standard Oil crowd," although not all of them were identified with the Standard Oil Company, and not all of the "magnates" of Standard Oil were interested in Amalgamated Copper. The connection between the two companies was sufficiently marked and also sufficiently vague to draw speculators from far and near. The stock began to rise very soon after it was admitted to quotation on the Exchange and the rise continued with increasing rapidity until a climax was reached. Then there was a pause and a decline. Amalgamated Copper fell from 138 to 60 even more swiftly than it had risen, but there were no failures of moment. The affair was generally considered a glaring case of "manipulation," or a systematic attempt to push up the price of a security in order to tempt purchasers and to unload it upon the public at more than its true value. This opinion prevailed for some months after the collapse took place.

The real facts were somewhat different. It turned out later that the boomers of Amalgamated Copper had not made much money, if any, out of the speculation. They had formed a pool in the first instance, intending to put up the price, draw in buyers, and then sell out. This they had done, but to their surprise, the boom continued after they had sold and pocketed their gains. The price of Amalgamated continued to rise. The momentum they had imparted to it carried it onward and upward until they began to consider themselves greenhorns for selling out prematurely. They thought that they had underestimated the value of their own property. So they bought again, contrary to the advice of their pool manager, and now the stock soared to heights not previously dreamed of. Outside speculators, whose heads were not turned by nearness to the dazzling object, had generally taken their profits; that is, they had sold their holdings to the original boomers, so that when the topmost round of the ladder was reached (there always is a topmost round), the Standard Oil crowd occupied that exalted situation. Then there was a "rich men's panic." Ordinarily

in a crash of such magnitude failures would have been numerous and disastrous. They were not so in this case, for while the losses were great, the resources of the speculators were still greater.

As compared with the boom and panic in Amalgamated Copper the recent adventure in Columbus and Hocking Coal and Iron is a mere bagatelle. The capital stock of the latter is less than $7,000,000, that of the former being $155,000,000. As no members of the Stock Exchange failed and no complaint was made in the former instance, there was no apparent cause for action on the part of the officers of that institution. The disciplinary powers of the Exchange do not extend to non-members. However reckless or unprincipled may be the acts of those who merely give orders to brokers, or lend money on Stock Exchange collaterals, the authority of the Governing Committee does not reach them.

In the Columbus and Hocking case two failures of members occurred, and the circumstances were such that investigation on the part of the Exchange became imperative. Under the rules of the body the failure of a member to meet his contracts operates as a suspension, but the failed member may be reinstated after payment of his debts. In both of these cases the Governing Board decided that the failed members had been guilty of "acts detrimental to the interests of the Exchange," and that they should not be eligible to reinstatement. This is very severe punishment. It is like a sentence of financial death. It even compels dissolution of partnership, if the firm to which the member belongs desires to continue business on the Stock Exchange.

What was the nature of the acts detrimental to the interests of the Exchange, of which these members have been guilty, the public have not learned. The final report on the Columbus and Hocking case has not yet been made. In fact the evidence is not completed. The testimony of Mr. James R. Keene, so far as it has been taken, tells us that a pool was formed under his management to bid up the market price, beginning at 25 or thereabouts, and that it was carried up to a point where Keene saw that the stock was not worth the price at which it was selling (about 60), and advised the pool members to take their profits, which they did. The profit realized was about $250,000. Keene says that he advised them to let the stock alone thereafter, but that his advice was not followed. They formed a second pool and pushed the price up to 92, and then came a crash. Columbus and Hocking fell with great violence to 20. A panic was precipitated on the Exchange which caused losses in other securities more than a hundred times greater than those incurred in Columbus and Hocking.

According to outside appearances this disastrous affair was the result of manipulation pure and simple, and public opinion so regards it. It is generally assumed that the members of the pool were aiming to put up the price of the stock in order to attract ignorant investors and to unload it upon them at prices far above its real value—a transaction no whit better than pocket picking, or highway robbery. Looking at it in this light, wonder is naturally expressed that the Stock Exchange authorities do not characterize it as robbery, and do not frame rules to prevent manipulation hereafter. Moreover, the Legislature at Albany—or that portion of it which is not too busy investigating itself—seems eager to reach out and comprehend all vagrom men.

It will be best, however, to await the full report of the Exchange authorities. It may turn out that the Columbus and Hocking speculation ran on all fours with that of Amalgamated Copper, with merely the difference that the speculators in the latter case were operating with their own capital, while those of the former were relying upon the broken reed of call loans. It is possible that in both cases the parties who had once sold out at a profit were dazzled by their success and went into the second pool believing that the property was worth what they were paying for it. One of the victims has already so testified, and since he has paid the severest possible penalty for his mistake, he is entitled at least to a suspension of judgment.

Whether he is entitled to reinstatement as a member of the Exchange (after his debts are settled) is another question. There should be adequate punishment for reckless speculation which

involves other persons in loss and ruin. The Exchange has a right to protect itself against paranoiacs as well as against rascals. Its rules are framed to that end. For this purpose it has officers to determine what kind of acts are detrimental to the common interests and what degree of punishment should be visited upon offenders. As the Exchange is a volunteer organization there is no appeal from its decisions. Its process is summary, and for that reason it is seldom needful to use it. Some people think that the Exchange ought to be incorporated by the Legislature so that the courts may issue injunctions to protect members upon whom the hand of discipline has fallen too heavily. No way so apt to block the wheels of justice and put an end to discipline can be imagined. No other scheme so certain to multiply offenders and shelter them from punishment could be devised.

How to prevent manipulation on the Stock Exchange was one of the problems which engaged the attention of the Governor Hughes Committee on Speculation last year. Nothing in the Columbus and Hocking case thus far disclosed calls for any change in the finding of the committee, stated in the following words:

"While we have been unable to discover any remedy [for manipulation] short of abolishing the Exchange itself, we are convinced that the Exchange can prevent the worst forms of this evil by exercising its influence and authority over the members to prevent them. When continued manipulation exists it is patent to experienced observers."

NEW YORK CITY, March 2, 1910.

Books

BY MARGUERITE OGDEN BIGELOW

BOOKS are not made for libraries, but libraries for books. They are not made to be owned in sets, but to be read by sentences. They are not meant to become the mural decoration of a rich man's home, a luxury of the external life; but they are meant to be serviceable to the inner life of rich and poor alike.

Many books have been destined to pass an idle hour and then die forgotten. Some books have been destined to fill leisure to the full with beauty, and they live while they are enjoyed; but a few books there are that death cannot kill—they are perennial in their repeated resurrections and everlasting in their influence, for these few express ideals that encourage the germination of the spirit in soil long fallow.

Suppose that a certain great book is read only by one great man in each century? Is he alone the gainer by his perusal of it? Will he not, because of it, rise to greater achievement and more abundantly benefit his times? Will not the thoughts exprest in it filter thru his mind into the minds of those with whom he has human relations? Will they not gain dignity by contact with whatever of insight and nobility he has gained from that book?

Wise folk distrust all books beneath their own status of nobility, attainment and power, and love those with a stern challenge, those that are stimulating and helpful in their several vocations, those that inspire the darkest hours, and those that are not inconsistent with ardor and joy. They do not rejoice in the possession of any good book unless they are willing to share it; or, failing this, they do their best to radiate its light.

BURLINGTON, IOWA.

A Busy Musical Season

BY HENRY T. FINCK

Author of "Success in Music and How It Is Won," "Wagner and His Works," Etc.

WHEN I became the musical critic of the *Evening Post,* in 1881, three great men—Carl Schurz, Lawrence Godkin and Horace White—had just assumed editorial control of it. They worked hard to make it a success, while I usually sat at my desk and twiddled my thumbs or looked out of the window at the steamers coming in from Europe or starting on their trip East. There was so little to do in my department that I even went regularly across the river to attend concerts in Brooklyn.

Today I would as soon think of covering performances in Chicago or San Francisco as in the neighboring borough, There are now so many concerts and operas in Manhattan that often I need two assistants to help me out, and I see the time approaching when the musical editor of a metropolitan daily will, like the city editor, sit in a large room, surrounded by a staff of trained reporters who are ready to be sent out in all directions, morning, afternoon and night, to gather the news and comment on the entertainments given.

In the good old times New York had only two orchestras, each of which gave a dozen concerts during the season, six of which were duplicates of the other six. Now we have half a dozen orchestras and the number of concerts given is four or five times what it used to be. In the opera house we had to content ourselves with a prima donna or two, a baritone, and a bass, exhibited in the Academy of Music. Today we have two opera houses, which have corraled nearly all the great singers in the world.

Never before has New York had such a busy musical season as this winter; never have the critics been called upon to write so many columns of praise or censure, to describe so many new operas and comment on so many revivals of old favorites. In the days of Maurice Grau and Heinrich Conried it was considered a sure waste of money to try to enlarge the operatic repertory. Oscar Hammerstein proved the erroneousness of that dogma by the financial as well as artistic successes he achieved, particularly with new French operas and with Strauss's "Salome"; and the Metropolitan managers were compelled to follow his example. Thus it has happened that the present season has witnessed already the production of seven operas new to this city: Massenet's "Grisélidis," "Hérodiade" and "Sapho"; Strauss's "Elektra"; Franchetti's "Germania"; Bruneau's "L'Attaque du Moulin"; Tschaikowsky's "Pique Dame," and the revival of six former favorites: "Stradella," "La Fille de Madame Angot," "Les Dragons de Villars," "Czar and Carpenter," "Orfeo," "Fra Diavolo."

Two of these revivals were not of operas but of operettas. Mr. Hammerstein, who does not always know when to let well enough alone, imported a French opéra comique company which, for some weeks, was heard on Tuesdays and Thursdays at the Manhattan. Some of the singers (among them Devries) were excellent and the chorus and orchestra were the same as on the grand opera nights. "Les Dragons de Villars" was one of the revivals produced by this company; but it did not draw; nor did the other operettas that were given. Whatever may be the case with grand opera (where everything is sung) in the case of light opera, which has dialogue between the musical numbers, it is necessary to use the language of the country. There are not enough French-speaking opera-goers in New York to make such a venture successful. Mr. Hammerstein soon discovered his mistake and sent his opera comique singers to Canada, where they were welcomed.

From a financial point of view the directors of the Metropolitan Opera House made a similar mistake when they undertook to give two performances a week of light operas at the New Theater. The idea prompting this step was a good one. There are certain operas which are

not big enough to fill the vast spaces of the Metropolitan with sound, so it was reasoned that these would be effective in the smaller auditorium of the New Theater. They proved to be so; but few of them attracted large audiences, altho all of them were given with beautiful new scenic attire and generally with the best singers of the Metropolitan Company. The explanation lay in the three words: "too much opera." In the New Theater the Metropolitan managers had unwittingly created opposition to the performances at the Metropolitan which, added to Hammerstein's, brought about a glut in the market. Consequently there will be no operatic performances next season in the New Theater, which is to be remodeled to make it more suitable for plays, and plays only.

Of the old favorites revived at the New Theater several—"Fra Diavolo," "La Fille de Madame Angot" and "Czar and Carpenter," in particular—gave much pleasure. This theater was also chosen for the first production in America of "L'Attaque du Moulin," by Alfred Bruneau, a composer who has long been prominent in Paris. He owed his success in his own country largely to the fact that for several of his operas Emile Zola provided the "book." For "The Attack on the Mill," however, Louis Gallet wrote the libretto, which is concerned with incidents that are supposed to have happened during the Franco-Prussian War. There is much shooting and blowing of bugles—more than there is of original melody, which, after all, is more important to the success of an opera. "L'Attaque du Moulin" was favorably received but it is not likely to remain in the repertory.

One reason for its production this year lay in the engagement of the famous French contralto, Marie Delna, for the Metropolitan. Marcelline, in Bruneau's opera, is one of her best parts. She also won much admiration by her highly dramatic impersonation of Orfeo, in Gluck's opera, at the larger house. "Orfeo" is the oldest of all surviving operas; several previous attempts to revive it at the Metropolitan failed; it succeeded this time, thanks to a good cast (Madame Homer was the Orfeo before Madame Delna came), picturesque and artistic scenery of dream-like beauty, and the devotion of Toscanini, whose greatest ambition is to show that he can interpret German operas as well as those of Verdi and Puccini.

His passionate yet beautiful version of Wagner's "Tristan and Isolde" has been one of the sensations of the season. It makes a tremendous difference—to the singers as well as the listeners—whether he or any one else conducts "Aïda," "Madama Butterfly" and divers other operas; yet even he, with all his devotion, could not make a success of "Falstaff," for the simple reason that when Verdi composed that opera, in his eightieth year, he had lost the power of creating melodies. As a study in style "Falstaff" is a model. But operatic audiences do not wish to study style, either vocal or orchestral; they want to be entertained with agreeable melodies and emotional harmonies.

Toscanini (and Gatti-Casazza) were also responsible for the first production in America of "Germania," by Baron Franchetti, an Italian millionaire who has a weakness for writing for the stage. In his own country some of his operas have had considerable vogue, thanks, in part, to their fine scenic backgrounds, which he helped to provide. At the Metropolitan, also, "Germania" was beautifully staged; and as those who were responsible for its production here are personal friends of its composer and publisher further steps were taken to ensure at least an apparent success for it by including in the cast Caruso, Amato and Destinn. On its own merits it would have attracted little attention because its music is commonplace and reminiscent, with an occasional scene which is stirring in a pompous way, half musical, half patriotic. The story tells the adventures of a number of German students who are plotting to free Germany from the tyranny of Napoleonic rule; and the last scene is a realistic presentation of the battlefield of Leipzig, after the action.

It has been suggested that Massenet should erect a statue to Oscar Hammerstein on his grounds, for this impresario has practically discovered a new continent for him. Previous to the building of the Manhattan Opera House only a few of Massenet's many operas—

"Manon," "Werther," "La Navarraise" —had been produced, with indifferent results. Mr. Hammerstein added to these several others, two of which—"Thaïs" and "The Juggler of Notre Dame"—won immediate and sensational success, partly on their own merits, partly because he had them sung and acted by artists—headed by Mary Garden, Maurice Renaud and Charles Dalmores—who were specialists in this style of music.

During the present season he has added three more Massenet operas to his repertory, "Sapho," "Hérodiade" and "Grisélidis." None of these has proved quite as successful as the two just named, but they have provided agreeable variety and borne witness to the versatility of the artists. Of these three operas "Sapho" is the least interesting by far; it is musically arid and otherwise coarse and stupid. As it will never be revived, it is needless to dwell on it.

Much more satisfactory is "Hérodiade"; its heroine is Salome, but a very different Salome from that of Strauss's opera; she does not gloat necrophilistically over the prophet's severed head, but loves him with the love of a normal maiden and stabs herself when she hears he has been executed by order of her mother. The score of this opera contains two of Massenet's most famous melodies, which are often heard in the concert halls —"Il est doux, il est bon" and "Vision fugitive."

"Grisélidis" also met with considerable favor. It is an operatic miracle play, like "The Juggler of Notre Dame," being based on the story, first told by Boccaccio, of the beautiful peasant girl who is put to such cruel tests of her obedience and fidelity by her husband and the devil. Always the devil! What would opera composers do without the devil? While there are no melodic gems in this opera, like the two just named in "Hérodiade," there is much ingratiating and "atmospheric" music. A peculiarity of this work is, that while the chorus supplies some of its most beautiful strains, it is always invisible.

That the season's most sensational production has been Richard Strauss's "Elektra," it is needless to say. Mr. Hammerstein succeeded last season in making "Salome" the success of the year —the same "Salome" that the Metropolitan's directors had banished as being "objectionable and detrimental to the best interests" of their institution. As a matter of course he promptly secured the rights of "Salome's" successor, "Elektra," and the grateful Strauss charged him only $10,000 therefor, besides the trifle of $18,000 in advance royalties. This time, it is to be feared, the manager lost by his bargain. "Elektra" did not become a sensational success—tho everybody talked about it and there were the usual explanatory lectures and a thematic guide by Hutcheson—and after only six performances it was shelved.

Matricide is the theme of this idyllic opera. The preparations for it take up the first hour and a half; the remaining twenty minutes are devoted to its execution. The murder of one's parents is a crime so unnatural that the Greeks considered it possible only on the part of an insane person, wherefore Solon made no law against it. But the unnatural, in love and crime, is what appeals to Richard Strauss. His music is equally abnormal. Melody is tabooed (it is so much easier to taboo than to create it!); the vocal utterances consist largely of what Madame Schumann-Heink (who was the original Klytemnestra in Dresden) called "groans, shrieks and sighs"; the orchestral score calls for 120 instruments, each of which tries to outdo the others in loudness and acrobatic feats of skill; the colors are monotonous because all the players are kept busy nearly all the time (one is reminded of the theatrical manager who, at a rehearsal, finding the trombonists taking their prescribed rests scolded them for not earning their money); and, altogether, "Elektra" makes the impression of being a curiosity and a monstrosity rather than a real work of art. It will share the fate of its predecessors. None of the Strauss operas has as yet proved an enduring success.

Besides these novelties and revivals there have been multitudinous operatic performances, at the rate of fourteen or fifteen a week. Yet the concerts have not been neglected. Nordica, Sembrich, Farrar, Gadski, Wüllner and others have given well-attended song recitals; Kreisler and Elman have delighted lovers of

violin music; Carreño, Samaroff, Bloomfield-Zeisler, Busoni, Rachmaninoff and others have played the piano wonderfully, and the orchestras—the Philharmonic, the Boston and New York Symphony Societies, the People's Symphony, the Volpe, the Young People's, the Russian—have all been working overtime Chamber music has been abundant, and the only kind of music which has languished—here as everywhere—is the oratorio.

The Busoni piano recitals proved of special interest because this Italian pianist had not been heard here for a number for years, during which his art has ripened wonderfully. He is the most subjective of all players, coloring all the music he performs with his own individuality; but as that individuality is interesting and thoroly artistic, the results are agreeable and commendable. His specialty is the creation of the illusion that when he plays the piano you actually hear other instruments—sometimes a whole band.

While Busoni is a composer, he has not produced here any of his own works. The Russian composer, Rachmaninoff, on the contrary, played and conducted almost exclusively his own pieces. He owes his world-wide fame to a splendid prelude in C sharp minor. His orchestral pieces and concertos do not maintain themselves on the same level of inspiration, but they are worth producing.

There was less interest over the advent of Liza Lehmann this year than there was last over the concerts of Madame Chaminade, France's most renowned woman composer. Madame Lehmann is the best known composer of her sex in England. Her specialty is song cycles. One of these, "In a Persian Garden," is much in vogue in this country. It formed the basis of her concerts, in which she assisted at the piano.

NEW YORK CITY.

The Oak and the Man

BY KATHARINE TYNAN

THE Oak said to the forest trees:
"We are nigh as old as the eagle is;
As old as the carp that takes his ease
In the pond under the terraces.

"Brothers," he said, "it is long, in truth,
Since I was an acorn, round and smooth;
God knows, and yet I am still a youth—
I shall live a thousand years, in sooth.

"Brothers," he said, "lean down by me.
See, a man walketh, so small to see!
His head is not as high as my knee,
But his pride soars high as the highest tree.

"He who must die—his day is brief!
He swings on the bough like a painted leaf
That the wind of autumn layeth in grief—
Friends, of us, trees, he is lord and chief!

"He is but a babe, and yet he is old—
A word, a song, and his tale is told.
He would soar to the sun, but his heart grows cold;
His pride has neither stay nor hold.

"Brothers, many men have we seen
By the lawns and the pond and the bowling green
Of the old house that's wise and serene,
Nigh as old as myself, I ween.

"We see man tottering, daisy-high,
A breath, he loves, he is high as the sky;
He sees his children and he must die,
Brief as the moth and the butterfly.

"Hear, O brothers!" He laughed in his beard;
The whole wide forest shook as it heard:
"We are his, we whom the ages reared,
Whom no storm nor lightning could make afear'd.

"Hear his pride! He is weak and slight,
Yet straddles earth like a god in his might.
We are his. We have seen the ages' flight,
And this world's glory fade in a night."

The Oak shook thru his mighty girth,
Leagues of forest rocked to his mirth.
The man, like a twig that has fallen to earth,
Said: "In my woods the wind now stirreth."

HERTS, ENGLAND.

Literature

The German Element in the United States*

NOTHING is too small for Professor Faust's dragnet, or too large for him to attempt to estimate its value. From "Hurry-Up" Yost, the famous professional trainer of the Middle West, to John Jacob Astor, Carl Schurz, Baron Steuben, and George Boldt, of the Waldorf-Astoria, thru great and small, his two stout volumes are a catalog of Germans in America, living and dead,—a veritable "Who's Who from the Fatherland." Thru a correspondence of great extent and a wide reading in miscellaneous sources, he has accumulated the most remarkable collection in existence for any single ethnic influence in American history. The nature of his material has forbidden any close coherence in his style of exposition and given a Baedeker-like tone to his pages—but then Baedeker, too, was a German and by no means least among his countrymen in influence upon America. The measuring of the influences of the various races upon the United States has long been a matter of active interest among citizens of foreign extraction. We learn from the writings of their offspring that the Scotch-Irish have made and shaped the nation; likewise have done the Dutch, the Huguenots, the Scandinavians, and the Germans. In every case it is possible to gather an imposing list of descendants who have here lived honorable and useful lives, and to ask the question, "What would America have done without these?" We cannot answer, since we do not know. In a modest way we would say that each ethnic group has at least influenced American development by adding to the population the total number of the group.

The Germans have indeed done more than this. As Professor Faust points out, in music and art their predisposition has worked for the betterment of American ideals, while in the former field they are easily pre-eminent. But beyond this we believe that the author's zealous advocacy has proved too much. His multitude of names and cases cited—they must number 1,500 or more—and his tremendous bibliography of eighty-four pages, which he does not claim to be exhaustive, go to show excellent service in all walks of life that might be paralleled a hundred times in a dozen races. That he has gathered their influences together so as to show any causal force upon America, we doubt. The great fact remains, not yet disproved, that while the German, or any other foreigner, remains strongly native, his influence upon America is trifling. Carl Schurz learned English before he became a force. And after the foreign citizen has become a vigorous influence it is commonly true that he has been Americanized. What Americanization means we do not know, but we venture the definition that it is a spiritual and intellectual change of some sort that occurs at the moment of the passing of the foreign influence. Professor Faust has not, we think, proved a definite thesis, yet his book is easily the most important in his field; and if any one shall ever succeed in the ethnic analysis of American civilization he must imitate the painstaking methods and broad scholarship of this author.

*THE GERMAN ELEMENT IN THE UNITED STATES, with Special Reference to Its Political, Moral, Social and Educational Influence. *By Albert Bernhardt Faust.* 2 Vols. Boston: Houghton Mifflin Co. $7.50 net.

Pius IX as Seen by Himself*

This life may be called an autobiography (Preface iv). It is stated expressly that His Holiness read and corrected it; in fact, at the end of the volume is given a phototypic reproduction of some proofs with notes in the handwriting of Pius IX. The book, therefore, must be looked upon as first-hand evidence in regard to the few months

*LES PREMIERES PAGES DU PONTIFICAT DU PAPE PIE IX. *Par P. Raffaele Ballerini, S. J.* Breitschneider, Editeur, Rome, 1909. The same work in Italian, Roma Civilta Cattolica.

which it covers. This holds also for the present French translation, which was made at the exprest wish of the Pope himself by the Abbé Van der Berghen, at that time the Belgian correspondent of the *Civiltà Cattolica*. In an appendix is added the story of the flight to Gaeta. This was written by Padre Bresciano, and after being corrected by Pius IX appeared in the above-mentioned magazine the first Saturday of May, 1851. Later on Bresciano included this story as a chapter in his "Jew of Verona; or, the Secret Societies of Italy," in which also Pius IX figures largely (Preface vii). It took the Jesuits to put the Pope in a novel, and hence they were more successful than the New York pastor who some years ago announced his intention to introduce the Pope to the stage in a play whose leading actress was to be a well-known favorite of the footlights. That play never appeared.

In a footnote to page vi of the preface the reader is informed that a long introduction on the state of Italy after Napoleon's fall and from the pontificate of Pius VII to that of Gregory XVI was judged inopportune and put aside. But nowhere are we told that the book was reprinted, and hence we are left under the impression that it has come down to us as it left the printer two-and-forty years ago. For Ballerini's life, which we are now reviewing, was printed in 1867, but never published heretofore, for the alleged reason that many persons mentioned in it were then living, and events narrated were too fresh. It need not detain us long. In one word, it is an *ex parte* brief, whose leading feature is the Italian cleverness with which the Madonna hovered about the Pope of the Immaculate Conception. In season and out of season, Mary ever Virgin was at hand "to watch and guard, correct and guide" her beloved Pius.

One chapter, the fifth, is devoted to the life of Pius IX previous to his receiving the tiara. Its paging runs as follows: Pages 22 and 23, then 20 and 21, and 18 and 19 of chapter fourth, afterwards pages 24, 25, 30, 31, 28, 29, 26, 27, 32, 33, and thereafter in proper sequence thruout the book. The pagination of the Italian life is correct and hence is in sharp contrast to that of the French edition. These twisted pages need no comment, but stand out the more significantly when we recall the omitted introduction referred to above. It sets at rest one point, at least. According to Ballerini, it was the Viceroy at Milan who in 1812 summoned young Mastai to be incorporated into his guard of honor. The prefect at Sinigaglia, who dwelt with the Mastai family, excused John Mary from attendance on the Viceroy because of his epilepsy. This Viceroy, whose name Ballerini does not give, was Eugene Beauharnais, Napoleon's stepson and representative in Italy. How such commands are issued Americans became familiar with during the Civil and Spanish-American wars. From all sides men offered their services, whence later on followed the commands and assignments. There is no mention of the Papal Noble Guard. Again, our author has not written a word upon the so much disputed part of the youth of Pius IX, namely, the years he spent at Sinigaglia after leaving the college at Volterra. Grave charges—Freemasonry and loose life—were and are afloat. Ballerini, however, makes two statements, very noteworthy. The future Pius IX was tonsured—*i. e.*, made a clergyman—in 1808, when sixteen years old and while still at Volterra (p. 23). It is evident from this fact that the boy was intended for the clerical state. On leaving Volterra and returning to Sinigaglia he threw off the clerical habit, for Ballerini declares that he assumed it in Rome in 1814 (p. 24). Of these five years or so, we learn that, in 1809, the youth was in Rome, following the courses of philosophy, physical science and mathematics at the Roman College, meanwhile living with an uncle in the Quirinal Palace. When the French captured it and made Pius VII prisoner in 1810, both uncle and nephew returned to the latter's native town. Nothing more is related of those youthful years.

An interesting point is the story of the fiasco of the first railway scheme. Gregory XVI, the predecessor of Pius IX, refused to grant any concessions for railroads. When, shortly before his death, two companies were formed, one with headquarters at Rome and the other at Bologna, Gregory was obstinate, altho at

the head of the former was Prince Alexander Torlonia, whose family had enjoyed the monopoly of the hay market and continued to possess it till the fall of Rome. Following the accession of Pius IX, reports were rife that the new Pope was favorably disposed to railroads. Under the presidency of Prince Conti, a new corporation was created. The par value of the stock was put at 100 scudi, payable in daily payments of 5½ baiocci (a papal coin worth a little over 1 cent). In other words, subscribers were asked to pay about eight of our cents daily. There was a wild rush among mechanics, farmers and "the lower class" to subscribe. It proved a wild cat scheme and "ended in smoke" (p. 109). This failure retarded railways in the States of the Church.

One other point need only be noted. In describing the procession from the Quirinal to the Lateran, in order to take formal possession, Ballerini writes:

"This grand variety of costumes, equipages, uniforms which recalled the sight of and the usages of the Roman Court in the age of Leo X" (p. 94).

Martin Luther, from his convent window in the Piazza del Populo, witnessed one of these processions of Leo X, and returning to Germany, nailed ninety-five theses upon the door of the castle chapel at Wittenberg.

Wagner's Tristan and Isolde. Translated into English Verse by Richard Le Gallienne. With Critique by Edward Ziegler. With Seven Full Page Illustrations in Color after Paintings by George Alfred Williams. New York: Frederick A. Stokes Company. $6 net.

English translations of the "book of the opera," as that commodity is hawked about the streets and in our opera houses, are for the most part wretchedly bad. Better, more poetical versions are among the first things needful if the master works in this department of music are ever to be sung in English. Mr. Le Gallienne has done good service in putting into good, clear English that is at the same time smooth and rhythmical this greatest of Richard Wagner's poems, which in the original German is indissolubly linked with still greater music, for "Tristan und Isolde," it is now almost universally acknowledged, is the finest music drama ever composed; and, indeed, all things considered, is probably the most beautiful, the most elemental and far-reaching in its appeal. In Mr. Le Gallienne's translation, for the first time one who knows not German can get some idea of the iridescent glow and beauty of Wagner's poem. But the poem itself occupies only the smaller part of this sumptuous holiday volume. Mr. Ziegler's part is far more than a "critique," as the title page calls it. "Tristan and Isolde" is autobiographic. As Mr. Ziegler puts it, the old legend—"the world's greatest love story —passing thru Wagner's hands . . . became a message, a chronicle of Wagner's love for Mathilde Wesendonck." The illustrations by Mr. Williams are romantic in conception, scarcely at all theatric, and for that very reason more poetic and also more difficult to achieve. The painter has not entirely succeeded in his difficult task. The color reproductions are not up to the standard of excellence of the other parts of this well-printed book, that is as interesting and as valuable as it is beautiful.

Notes sur la Medecine et la Botanique des Anciens Mexicains. Par A. Gerste, S. J. Rome: Imprimerie Polyglotte Vaticane.

The Duc de Loubat has been spending considerable money to very good purpose in recent years in publishing reproductions of many documents relating to America. A number of codices of special American interest in various libraries in Europe have been reproduced in all their original colors and text, and there is very general recognition of the good that is thus being accomplished. This present volume is only a reproduction of certain articles that appeared in the *Revue des Questiones Scientifiques* some years ago, but their interest amply justifies their reprinting. Prescott and Bancroft told of the old hospitals and of old Mexican medicine, but the details furnished here make it very clear that the Aztecs had done excellent work in medical botany and pharmacology "before the Gringo came." They used many different classes of drugs in many different ways. Decoctions, infusions, ointments, plasters, electuaries, pills and powders—

all these were familiar before the Spanish came. Indeed, it is said that at times the native physicians were more successful in treating even Europeans than the Spanish physicians. According to tradition, Cortes asked that European physicians should not be allowed to come to Mexico, so well satisfied were his men and himself with the native treatment of their wounds and ailments. The natives seem even to have had anæsthetic drugs and to have used solutions not unlike antiseptics. Their botanical classification was ahead of that of Europe at that time and anticipated in some ways Linnæus's later classification. Medicine was a family affair, the secrets of the herbal medicines descending from father to son, and another interesting phase of the medical situation was that there were women physicians for women's diseases.

An American Transportation System. By George A. Ranken. New York: G. P. Putnam's Sons, vi, x, 464 pages. $1.50.

The author presents an exaggerated view of the shortcomings of the American railroad system and endeavors to reinforce his destructive criticism by formulating a new and original scheme of railway organization and management. In his estimation the present methods of railroad operation are neither safe nor adequate. The highest degree of safety, efficiency and economy can be attained only when the members of the transportation system operate as a harmonious whole. But such a system, he thinks, "is impossible of realization so long as our railways are subject to the conflicting regulations of one Congress and forty-five State legislatures." The remedy is an amendment to the Constitution whereby the States surrender their semblance of jurisdiction over interstate transportation. When this is accomplished, the Federal Government having full power over all transportation facilities, can effect a reorganization of the railroad and other transportation companies which will ultimately consolidate them into one corporation, "restricted and bound down by law." The scheme proposed resembles in a way the system of organization and control of the great central banks of the leading European countries, such as the Bank of England and the Bank of France. These institutions have merely the semblance of private enterprise, but in reality they are powerful instruments of governmental monopoly and control. The "nationalization" of the railroads of the United States under the guise of private ownership, with strict Federal administrative control is a decidedly more difficult problem than that of state administration of banking in Europe. Moreover, when considered in connection with American ideals and institutions, the whole scheme of the author appears exceedingly impractical. It is nothing more than an attempted compromise between direct government ownership and administration and the present system of private ownership and operation under state regulation.

The Conflict of Religions in the Early Roman Empire. By T. R. Glover. New York: Imported by Charles Scribner's Sons. $2.50 net.

Students of the history of the Christian religion usually fail to devote proportionate attention to the struggle of Christianity with other faiths after the death of Paul and down to the age of Constantine. Information of the origins of the Christian faith in Hebrew piety and of the contest between Judaism and Christianity is much more common than adequate knowledge of the high debate between the followers of Christ and Greek and Roman philosophical and popular forms of faith. Mr. Glover has written a scholarly and interesting account of the great conflict. He sketches the current piety of the Roman Empire in the first century, with special attention to Seneca, Plutarch, and the Stoics, and shows how the representatives of Christianity overcame their teachings. Celsus, Lucian, the early apologists, as well as Clement of Alexandria and Tertullian, are submitted to careful criticism and estimate. Mr. Glover is equally at home with the Roman writers and the defenders of Christianity, and his volume should correct the harmful tendency of theologues to busy themselves exclusively with the Church Fathers in their study of this period. The substance of this book formed the Dale Lectures at Mansfield College, Oxford, in 1907.

Literary Notes

....*Clark's Book Herald,* Boston, begins its second volume in an enlarged and handsome form, under the editorship of Helen M. Winslow, Nathan Haskell Dole and C. M. Clark Atkinson. The leading article is devoted to Mrs. Larz Anderson and the following to the Boston Authors Club, which, it appears, has the advantage over its New York namesake in that it admits women.

....The great Methodist Church of America did not cover the wide continent without the labors of men whose biographies deserve to be recorded and sent abroad for common use. No single one of them may have been of commanding genius, but Messrs. Eaton & Mains have done well in providing attractive biographical sketches, in form scarcely larger than an ordinary envelope, of *Francis Asbury,* by Rev. George P. Mains; *Nathan Bangs,* by Rev. A. H. Tuttle; *Freeborn Garrettson,* by Rev. Ezra S. Tipple, and *Jesse Lee,* by Rev. William H. Meredith. The neat, convenient volumes are sold at twenty-five cents each.

....A monument of marble may be suitable to commemorate a sculptor, but the monument of a man who molded character should be of more valuable and enduring material. It is especially appropriate that the memory of the late Richard Watson Gilder should be honored by a fund "For the Promotion of Good Citizenship." This fund will be entrusted to Columbia University for the support of fellowships whose holders

"shall devote themselves to the investigation and study of actual political and social conditions, either in this country or abroad, with a view to securing more accurate and extensive knowledge, and to improving these conditions."

Contributions may be sent to the treasurer, A. S. Frissell, 530 Fifth avenue, New York City.

....There is a confusion of guidance for children in the matter of reading. THE INDEPENDENT is deluged every year with graded lists of books of varied description; they agree generally in their excellent point and differ in their choice of inferiority. The libraries are not quite sure what is meant by the democratic taste. Lists therefore do not say much and the problem of book selection is still an individual one. *The Children's Catalog,* compiled by Marion E. Potter for the H. W. Wilson Co. ($6) is a serviceable volume. It does away with the necessity for consulting twenty-four special lists upon which it is based; and yet its complete usefulness is handicapped by the omission of the publishers' names under the three thousand titles. The volume is divided into two parts, the first section being a general book index, cataloged under author, title, and subject; the second being a suggestive epitome of Volumes 28-36 of *St. Nicholas.* As a whole, the compilation is not a guarantee of superior excellence; it does not attempt to rise any higher than its sources, and we doubt whether its cumulative average places it as high. It is, nevertheless, a good check list, and its variety is suggestive for the library and for the school room.

Pebbles

UNCLE ELLERY.—"Now, I'll learn ye to milk the cow."

Nephew from the City.—"Oh, uncle, I'm kinder 'fraid o' the cow; couldn't I just as well learn on the calf?"—*Life.*

IT was 4 a. m. and Bilkins crept softly into the house and removed his shoes; but as he tiptoed up the stairs one of the treads gave a loud creak.

"Is that you, John?" demanded Mrs. Bilkins from above.

"No, my love," replied Bilkins. "It's the stairs."—*Judge.*

IN 2010.

"My love," mentioned Mr. Sufferer-Gette, "I wonder—I wonder whether you would let me have the use of my latch-key this week?"

"Latch-key!" bellowed his wife. "What the dickens do you want with a latch-key, my good man?"

"Well, my love," coughed Mr. Sufferer-Gette, "we are holding a series of fathers' foregatherings at the club this week, when we hope to do a little needlework on behalf of the poor. Miss Nancy has kindly consented to come and talk to us about her recent Farthest North trip and—"

"Great heavens!" roared the irate wife, banging her pipe upon the table to emphasize her words. "Don't you know your duty is at home? Besides, on Monday I've got to attend the Women's Emancipation League; Tuesday, the Sisters of Charity meeting; Wednesday, the local policewomen's concert; Thursday, the Daughters of Toil lecture; Friday, the Women's Science Research class, and on Saturday our football club's smoker. Now, don't you forget. Your duty is at home!"

"WILL you let me kiss you?"

They sat side by side in the gloaming, quite close to each other, yet not so close but that it might have been possible to be closer. The sun had gone down behind the Western hills, and the faint shadow of twilight was beginning to suggest itself in the recesses of the hills.

He was patient. He said to himself he would wait.

She did not answer, but looked out into the clear sky and the fleecy clouds as they sailed along the horizon. Of what was she thinking, he wondered, as he sat there. Was it of love and passionate longings, and desires fully met? But never mind what it was, he would not hurry her. He would wait.

The distant call of the owl was heard, and along the lane in the distance came a procession of cows home from the pasture.

For a long time they sat thus, in deep silence, until she turned her eyes to his, wondering, questioning.

"Well," he asked at last. "Will you?"

And she gathered herself up and prepared to leave.

"It is too late—now!" she said.—*Ladies Home Journal.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and club-bing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Rockefeller Foundation

THE announcement is made that Mr. Rockefeller intends to establish a benevolent corporation to which he is expected to give probably a major part of his wealth, and of which the son who bears his name will be the principal almoner. It is a magnificent scheme, and most admirably designed.

Think of the breadth of its purpose. The charter makes no limit to it, save that it shall be for the benefit of humanity. It is tied to no present notion, religious, political, sociological, educational, which happens to prevail in this decade. When the times change the service may change also. It is tied to no one country, such as this in which the donor lives. Millions may go to China, and other millions to Turkey or the Kongo State. It may endow a secular university in China, a missionary college in India or a free theater in New York. Other foundations and corporations have their limited field for benevolent work, but this has all fields, all seasons, all places for its own.

Then think of the amount of the intended gift. It is likely to be much bigger than that to the General Education Board, to which Mr. Rockefeller gave $53,000,000. It may be twice as much; it may be five times as much. It may bring in an annual income of five or ten millions a year, all to be spent for the uplift of humanity.

And some one will say, What will there be left for other people to do? Will not others be discouraged about making their gifts to benevolent objects? How foolish! Five millions or ten millions a year is a very small portion of what good men and women are now giving away every year. Little streams and large rivers of charity are flowing in constantly to relieve want, suffering and ignorance, and yet the sea is not filled. Simply to the missionary societies of England alone is given as much as that every year; that is, their annual benefactions capitalized would amount to as much as the endowment of the Rockefeller Foundation.

It is anticipated by some that this Rockefeller Foundation will do a great work in standardizing benevolence, selecting the good causes, rejecting those that are not worthy, and so directing and aiding the benefactions of others. We doubt if it will have that effect very much, and we hope it will not. We do not want a trust or monopoly in benevolence. The General Education Board selects the colleges which it aids, and the Carnegie Foundation does the same, and they properly make their own standards; but we do not see that this prevents gifts to other institutions of other standards. Each place makes its own demands, and each need invites those who see it and will meet it. We would not have this new Foundation a clearing-house for the benevolences of the country, and any effort to make it such would be a failure.

To one who has followed the history of Mr. Rockefeller's gifts it is clear that there has been a widening of their scope, a broadening of his vision with the increase of his wealth. He first gave to Baptist institutions, until he began to suspect that the Baptists were "lying down" on him. There is a story, which may or may not be true, that a certain proposed university came to him to create its endowment. He looked over its charter and observed that it was to be "non-sectarian"; and he answered that

he had made up his mind to give by preference to Baptist institutions. Thereupon the president waited two years and then went to him again, reporting that they had had the charter changed making it a Baptist university; but he replied that since the previous interview he had changed his views on the subject. This may be a myth, but it represents Mr. Rockefeller's enlarged sense of humanitarian needs. He remains a Baptist, but he reaches beyond the limits of that Church or of any Church. If his new Foundation inaugurates a great educational work in China, as is likely, it will not be denominational. When he founded Chicago University he was in his Baptist chrysalis, and it was put in the charter, never to be altered, that the president and two-thirds of the trustees should always be Baptists; but we trow he would not have insisted on that provision now —which shuts out its retiring professors from the advantages of the Carnegie Foundation. There is something grand, wide as the world, in the better charter of Mr. Rockefeller's new Foundation.

One thing more—the money is not "tainted." If any of it ever was gained by illegitimate financial methods, the money may be purged as well as a man's soul. "The half of my goods I give to the poor," said Zaccheus, and Jesus replied, "This day is salvation come to this house," and he went and took dinner with him. It may charitably be believed that the creators of the Standard Oil concern thought they were doing nothing, or not much, which the ordinary customs of competitive business did not allow, however ethical standards may have improved since then. And we may not always comprehend how far a man who means to live by a general Christian standard may have a convenient conscience as to "sins he is inclined to." One is struck by the magnificent and shrewd business enterprise of those founders of the industry, John D. Rockefeller, Charles Pratt, and others, while they kept a purpose within to use their wealth for the best purposes. The Pratt Institute is an example. The gifts to Syracuse University are another. Mr. Rockefeller's series of gifts is another. And very pleasing is the inherited desire of the next generation of great wealth-getters to give back to the public what they have inherited. That John D. Rockefeller, Jr., should devote his life to wisely administering the wealth which he consents that his father should not leave to him, instead of striving to increase his own fortune, is very creditable, and is precisely what one of Charles Pratt's sons is doing as the head of the Pratt Institute. The world honors Helen Gould for similar devotion, and we think in the same way of Mrs. Sage.

There have been one or two cases lately in which a man has put his property into a close corporation in order to keep it permanently in his family. Much better is the method taken by Mr. Carnegie and Mr. Rockefeller, who put it into corporations in order to put it out of their family, and give it to the people thru whose privilege or labor it has been amassed.

An International Judiciary

We call the attention of our readers this week to the long and well-reasoned article from the pen of Mr. Hayne Davis. It is especially timely in view of the forthcoming Pan-American Conference at Buenos Ayres this summer and because Secretary Knox is already negotiating with the Powers for the establishment of the Court of Arbitral Justice created by the Second Hague Conference and to be inaugurated as soon as a method could be devised for the selection of the judges. At the Buenos Ayres Conference it may be possible actually to create a court to which all the nations of the New World will resort to settle their differences. What are the principles underlying the formation of such a court?

Every nation has a right to the undisturbed possession of its own territory, and to the unimpaired exercise of all the rights of sovereignty therein, so long as it fulfils its obligations to other nations. Every nation has a right, not, perhaps, an equal, but at least a reciprocal, right to have its citizens do business with the citizens of other countries.

If mutual and sufficient guarantees are given to respect the national territory and sovereignty therein, it would seem practical to vest in properly constituted

International Congresses and Courts the measurable right to regulate commerce between the nations making such guarantees and to determine all controversies growing out of said commerce.

Our forefathers were reasonably successful in meeting the insistent demands of "equality" among Sovereign States without instituting a system that would work injustice in the name of justice. In the light of their wise action and of our own subsequent history we should be able to achieve, in providing for international justice, even better results than they accomplished in the establishment of justice among the States.

The mutual guarantee to respect national territory and all the rights of sovereignty therein, and to rear on this foundation a system of justice among the nations, thru duly constituted congresses and courts, is the plan of procedure adopted and proved successfully by the people of the United States.

Therefore there are good reasons why the first steps in this direction should be made by American nations *inter sese*. These steps, when properly taken, will naturally lead to similar steps in other parts of the world. All American nations have enjoyed the undisturbed possession of their territory and the free exercise of sovereignty therein, as a consequence, in part at least, of President Monroe's declaration, made when all Europe was conspiring to take concerted action against the newly acquired liberties of the American Republics.

Nevertheless the lengthening shadow of our ever-increasing armed forces has caused no little anxiety to some of the nations south of the Gulf of Mexico. This was not decreased by the circumstances accompanying the secession of Panama from Colombia, and its erection, by our assistance, into a Sovereign Republic. But, in fact, neither the people nor the Government of the United States covets any territory not now in our possession legally and rightfully. Washington therefore should be the center from which will emanate the movement for express guarantees to respect the domain and the sovereignty of American Republics as the foundation stone of a system for American international justice. That will allay the groundless apprehensions regarding possible abuse of our increasing power and at the same time hasten the effective organization of all the proper agencies of justice among the American Republics.

Secretary Knox has proposed that the International Prize Court evolved by the Second Hague Conference be recognized as competent to perform the functions of a Court of General Arbitral Justice. This is not a reason against but a reason in favor of the creation of the American Court of Justice as proposed by Mr. Davis.

Only eight Powers were accorded *permanent* representation on that court. Twelve of the American Republics are accorded a place on it only when their own interests are involved in the case. Argentine, Brazil, Chile and Mexico are represented only two in the term of six years. Colombia, Peru, Uruguay and Venezuela are represented only one year in six. The United States alone is represented all the time. The others are not represented. These nations will be indisposed to make use of the court. Creating an American Court will dispose them to resort to it, thus stimulating the activities tending to establish international justice.

In the next place it is not proposed actually to grant any jurisdiction to the Prize Court, whereas it is proposed to vest actual jurisdiction in the American Court; first, an absolute jurisdiction in controversies between citizens of the various American Republics, and, second, a qualified jurisdiction in questions of a certain character between the republics themselves. It is important that the experiment be tried in America, which is the world's political laboratory. This will hasten the universal adoption of the right idea, even if it is proven by the experiment that the plan attempted is not the proper one.

On the other hand, if the Powers, and particularly the American Republics, should reject Secretary Knox's proposal, it becomes all the more important that the American Court be created. Whether the proposal be adopted or rejected it is well to organize the American Court as soon as practicable. The Union of American Republics has a destiny of its own quite apart from what European and

Asiatic Powers may or may not do. To fulfill its destiny that Union must develop and perfect itself. To do this a Court of Justice in some form must be created to supplement the Pan-American Congress that already exists, and as these bodies justify their existence the authority and utility of each must be increased. Proper exercise of the power entrusted to them will make plain the additional powers that should be granted, and in due time these two essential agencies of justice, a representative Congress and a duly constituted Court of Justice, will be fulfilling their functions as naturally and as effectually in the mutual relation of American Republics, as in the interstate and individual affairs of the citizens of our great country.

The Burden of the White Taxpayers

It is extraordinary that the statement should continue to be made that in the South "nine-tenths of the money used to educate negroes comes from the pockets of the white taxpayers." This statement has been often challenged, and evidence presented that negroes pay very nearly, and in some sections quite all, their share to support their schools.

The evidence is available. South Carolina spent last year for the education of the average white child $10.34; and for the education of the colored child $1.70. In some of the counties the average amount spent on the education of colored children ran down to 97 cents, 90 cents, 89 cents and 58 cents. In Charleston County $35.70 was spent on each white child and $2.55 on each colored child; that is, it cost the public in Charleston just as much to keep one white child in school as it did to school fourteen colored children. It would appear from this that the pockets of the white taxpayers would not be so terribly prest even if they were called upon to meet the "nine-tenths" required to educate the negroes. Negro education at $1.70 per annum ought not stagger any kind of taxpayers.

But there are other figures from a most reliable source. Mr. Charles L. Coon, Superintendent of Schools, Wilson, N. C., takes up the direct question: "Is the negro public school a burden to the white taxpayer and if so to what extent?" His paper was read before the Twelfth Annual Conference for Education in the South, and published by authority.

His investigations extend over eleven States: Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas and Tennessee. He shows that these States spend on public schools annually $22,068,851, and that the negroes, altho 40.1 per cent. of the population, receive only 14.8 per cent. of the fund. He further shows that even if the school funds of Virginia were divided on the "color line," that is, by taxes paid, the negroes' share, instead of being $482,228, the amount which they now receive, would be $507,305; in North Carolina the amount due negroes is $429,197, instead of the $402,658 which they receive; in Georgia the amount due would be $647,852.54 instead of only about $506,170, which they receive. Thus, according to his figures, the negro schools of these three States alone fall short of receiving their pro rata share to the extent of $93,278. That is, the negroes do not receive, by $93.278 for school purposes, the amount of personal and poll taxes they pay, *plus* their pro rata share of corporation taxes and State appropriations.

It is plain from the above that the negro schools do not receive anything from white property tax or white poll tax; they do receive something from corporation taxes and from appropriations. It is evident, however, that they do not share on equality with the whites in this respect. If these corporation taxes and State appropriation combined can be held as coming from "the pockets of the white taxpayers," and if the amount turned over from these funds to the public schools should equal "nine-tenths of the money spent for negro education," then the claim made might be made good. It does seem, however, a very unnecessary and uneconomic proceeding to regard the general fund otherwise than for general education to be administered on principles of equity. Many poor whites, as also many rich whites, have no more to do with the production

of this general fund than have many negroes, while in some cases negroes may stand as direct or indirect producers of this revenue.

The Charge of Literary Inferiority

THAT in comparison with the Protestants the Catholics in both the educational and the literary fields show a marked and characteristic inferiority, has often been the contention of Protestant writers; but it is a comparatively new phase of the controversy that among the Catholics themselves there has arisen a bitter debate on this question. Yet this is the case in Germany and in the German-speaking sections of Austria and Switzerland, where the two great branches of Christendom have probably the best opportunity of demonstrating their power to direct and control public life and thought. The German Catholics have for years complained that in proportion to their numbers they do not receive recognition in appointments to prominent places in the body politic; and long age Bismarck answered, as the authorities now answer, that the Catholic Church does not train its young men in a manner that will make them acceptable candidates. Now, the German Catholics, or, at any rate, a noteworthy percentage of them, are willing to acknowledge what is technically called "the literary inferiority" of their Church, and are inaugurating a movement that is to lead to putting their young educated men on an equality with those coming from Protestant schools and institutions. The *Germania* of Berlin and the *Volkszeitung* of Cologne, the two leading Catholic periodicals of the Empire, have repeatedly declared that the inferiority of the clergy in education and learning is a leading cause for the spread of the "Away from Rome" movement in Austria.

The present controversy is largely caused by the publication of books and brochures by Catholic writers insisting that there must be more independent scholarship all along the line in the Catholic Church. A leader is Pater H. Falkenberg, whose recent work *"Wir Katholiken und die deutsche Literatur"* protests against the traditional literary methods, particularly of the Hyper-Catholics (*Ueber-Katholiken*), who ignore everything in modern literary output except what has the imprimatur of the Church authorities. Neither in literature nor the character of her writers, the writer maintains, can the Catholic Church compare with the Protestant, and the blame he puts on the lack of interest shown by the clergy and on the lack of critical spirit in the Church in general. This is the same author who only recently wrote a sharp critique of his Church in this regard entitled *"Katholische Selbstvergiftung,"* in which he particularly showed up the suicidal policy of Catholics of ignoring all but Catholic literature.

Karl Muth is another protagonist of this crusade, his chief work being entitled *"Die Wiedergeburt der Dichtung aus dem religiösen Erlebniss,"* published by the model Catholic house of Kösel in Kempten. Several years ago Muth entered upon this controversy in a series of brochures under the pseudonym "Veremundus," and now he has begun the publication of a regular journal entitled *Hochland,* the purpose of which is to show how this inferiority, openly and fearlessly recognized, is to be remedied. His criticism of Catholic literary ideas and ideals has led to the organization of an association, purposing to defend the Catholic literary men against this charge of inferiority, and this new association has begun the publication of a new periodical entitled *Der Gral.*

Quite recently, in the Vienna *Reichspost,* a number of prominent Catholic savants published a protest against the severe criticism of Muth and others of Catholic literature and letters, insisting that this dirty linen, if it be such, should not be washed in public. Significantly among the signers of this protest is Rev. Dr. Commer, well known from his bitter hostility to the late Dr. Schell, of the University of Würzburg, and the crusade for independent Catholic scholarship which he inaugurated, for which leadership his memory was even made to suffer after his death. It is, however, interesting that a large portion of the political

papers of Catholic Germany, the "Center organs," insist that the controversy must be fought out to the finish, as this is a prerequisite for improvement.

The Jesuits are the most pronounced opponents of all discussion and debate in this matter. A characteristic article appears in the *Stimmen aus Maria Laach.* Here the Jesuit father, A. Baumgarten, insists that Muth's recent brochure is a "firebrand." As the *Hochland* had even ventured to notice favorably the "Saints" of Fogazzaro the charge of Modernism is ready at hand against Muth and all progressive Catholic litterateurs. Other prominent Catholic participants in this controversy are Professor R. von Kralik, of Vienna, and Professor M. Spahn, of Strassburg, both of whom plead for a regeneration of Catholic literary methods and manners, but in a spirit that is in harmony with the history and the teachings of the Catholic Church.

Another Ross Case

TEN years ago Prof. E. A. Ross was dismissed from Leland Stanford University because Mrs. Stanford was offended by the active part he took in the campaign for free silver and by his extreme language in opposition to Japanese immigration. Last week he was publicly rebuked by the regents of the University of Wisconsin for exposing his students to the influence of dangerous agitators. The text of the resolution is as follows:

"Whereas, It has come to the knowledge of the Board of Regents that Prof. E. A. Ross, of the department of sociology in our university, has invited to lecture in the university and under its auspices, persons whose record and expressed views are subversive of good morals, therefore be it

"Resolved, By the Board of Regents that we strongly disapprove of such action, and that the president of the university is requested to inform Professor Ross of the censure of the board and their unanimous disapproval of his indiscretions."

The disturbance originated in the visit of Emma Goldman to Madison, where she gave a lecture in a downtown hall in no wise connected with the university. She visited the university and was shown thru it, but her request to be allowed to address classes was refused. Later, however, she was invited by a socialist club of students to speak at their meeting in the Y. M. C. A. building. Professor Ross, referring in his classes to the fact that a woman was tearing down the cards announcing the lecture, took occasion to express himself in favor of free speech and mentioned the Goldman lecture downtown that evening, at the same time stating his disapproval of such anarchistic teachings.

This, however, was made the basis of a sensational attack by certain newspapers of Wisconsin upon the university for using the facilities provided at the expense of the taxpayers for the promulgating of anarchistic and immoral doctrines. The Board of Visitors appointed a committee to examine instructors, students, lecture notes and text-books in the department of political economy and came to the following conclusion:

"This investigation disclosed nothing that would warrant the charge that anarchistic, socialistic, or other dangerous doctrines are being taught in the university. On the contrary, investigation disclosed striking instances of foreigners who have come to the university as students believing in anarchism and violence, who have been led to discard such beliefs thru the instruction given at the university.

"The general purpose of the instruction given was stated to be not to prove or disprove any particular theory or doctrine, but to enable the student to know and to understand facts and conditions; to fit him to solve for himself the problems of government and of society, rather than to send him forth with a solution for all the problems that he may encounter.

"The Board of Visitors finds that the instruction given in the university, including that given by Professor Ross, is such as to strengthen, not to weaken, respect for government and the institutions of existing society."

Evidently the Board of Regents takes a more serious view of the case than the Board of Visitors but they agree that Professor Ross has been indiscreet. So does Professor Ross, for in a letter to President Van Hise he frankly acknowledges that he should not have alluded to Miss Goldman's lecture in his classes and promises not to commit that sort of a mistake again. We hope, therefore, that he will not feel that the censure of the regents makes it incumbent upon him to resign, and we hope that the regents will not feel it necessary to impose any further restrictions on freedom of expression by members of the faculty. If he

should send in his resignation we hope that they will take the same view of it as Seebeck, the head of the corporation of Jena, when Haeckel, in his early days, went to him and offered to resign his professorship because his advocacy of evolution was bringing discredit upon the university. Herr Seebeck answered: "My dear Haeckel, you are still young and you will come to a riper understanding of life. Anyway, you will do less harm here than elsewhere, so stay."

Haeckel, however, never outgrew his tendency to shock people and we do not expect that Ross will. It should be realized it is because of his outspoken denunciation of certain evils in our social system, because the barbed words he has used in condemnation of "smokeless sins" rankle in certain bosoms, that his "indiscretions" are so severely condemned. Such frankness and fearlessness are much needed in our universities now. The importance of the affair lies in the fact that there is a party in the State, not without representation on the Board of Regents, which is opposed to the active interest taken by the political science faculty of the university in labor problems. That the State of Wisconsin has taken the lead in constructive legislation, in checking the abuses of corporate powers and in State control of public services, is an offense to them. They hate La Follette and all his works and La Follette has been closely identified with the university. In 1894 Professor Ely, who now is beginning to be looked upon as rather conservative, was arraigned before the bar of the Board on the charge of having invited a walking delegate to dinner. This aroused the same sort of indignation in Wisconsin as Roosevelt's lunching with a negro did in the South; and if Professor Ely had not been able to disprove the charge there is no knowing what might have happened to him. But the Board at that time made an emphatic declaration in favor of freedom of speech and action and we trust they will stick to it whatever may be popular clamor. It is not probable that any of the students who listened to Emma Goldman had their confidence in the existing social order seriously disturbed, but they would have if they had suspected that some of their professors shared her views but were afraid to say so.

It is not an improper or unwise thing to give university students an opportunity of hearing the advocates of unconventional views, even under official auspices. The University of Chicago not many years ago excited the indignation of some people because it gave audience to Keir Hardie, now M. P., but then regarded as a revolutionary agitator, and to "Coin" Harvey, who was certainly more dangerous than an anarchist because free silver had some chance of adoption. If Prince Kropotkin or Count Tolstoi should visit America now and be allowed by the immigration officials to land, it would be advisable to invite them to address the students, altho they are anarchists and eloquent advocates of principles destructive of existing institutions. But Emma Goldman is not entitled to such a hearing. She is neither a great scholar like Kropotkin nor an eminent author like Tolstoi. She is not even a fair representative of anarchism. The terrorists and the philosophical anarchists both disown her, and if it were not for the persistent attentions of the police and the papers she would have great difficulty in keeping in the limelight.

Among the agitators whom Professor Ross is said to have invited to speak to his classes only one is specified in the dispatches, Parker H. Sercombe. He represents, as he is fond of boasting, only "Sercombe Himself," and his sole claim to attention is the founding of a small communistic establishment in Chicago and the editing of *Tomorrow*, in conjunction with Oscar L. Triggs, sometime instructor in the University of Chicago. These two are bad choices. As exponents of radicalism they are not worthy of attention.

It is our painful duty, even tho it unfringes upon the province of Mr. Bolce, to point out that more stringent measures are necessary if the university is to be freed from the taint of anarchism. We presume that the works of leading anarchists such as Bakunin, Proudhon, Stirner and Reclus are in the university library, purchased by State money, cared for and placed before the students at their demand by State employees. Worse

still, we learn from the catalog that the students are instructed in the writings of one Plato, who advocates community of wives; of a dead author named Aristotle, who recommends infanticide, and of a heathen, Lucretius, who preaches atheism. These pernicious books being in dead languages might be harmless, were it not for the fact that certain professors, salaried by the State, take it upon themselves to teach these languages and to encourage and direct the students to the reading of these authors. Any further investigation should be directed toward the classical department.

The Philadelphia Strike

A big strike, a dangerous and riotous strike, is followed by a larger sympathetic strike in Philadelphia, more dangerous and liable to be more riotous, more people massing in mobs to destroy property, and be beaten back and shot by the police and soldiery. It has come to be the sad fact that violence is a chief method to secure success in a strike, and the prophecy of violence, equivalent to a threat, is a chief argument for a settlement in favor of the strikers. In such a case it ceases to be a conference and a settlement on a just basis, but nothing less than war, armed men on each side. This is a horrible condition of things. While we are trying to put an end to war between nations we are introducing civil war. Some end to this system must be sought and found. Compulsory arbitration has a self-contradictory sound, but it would seem that we may have to come to it, or to some sort of an arbitration court to whose decisions both sides must submit. What other way can there be to put an end to the reckless arrogance of organized labor on one side and of corporate wealth on the other? The Canadian law, which forbids strikes or lockouts until after investigation by a commission, has prevented many strikes. We have a prejudice against a sympathetic strike, because of the general disturbance it causes, but if a strike becomes war we must consider what sympathetic war is. Our war with Spain was a sympathetic war, in behalf of the Cuban rebels, and we do not blame the sympathy of France with us in the War of the Revolution.

The Carnegie Foundation Attacked

We paid no attention to it, regarding it as a wild remark of an hysterical speaker, when at a late religious meeting in Chicago the statement was made that the Carnegie Foundation is a peril to the Christian faith. But we find it seriously referred to in an editorial in the able Jesuit organ *America,* under the title, "An Enemy of Christian Teaching." It says:

> "It is a misfortune that Mr. Carnegie, in carrying out a great purpose for the betterment of the teaching body in the country, cannot bring himself to see that neither religious influence nor religious control is an element to be feared in the development of higher institutions of learning. On the contrary, an element certainly to be viewed with alarm is the building up of an immense fund for educational achievement the benefits of which are rigidly limited to those institutions in which *ex professo* Christian influence is debarred from the academic and administrative policy prevailing. No doubt this is the motive underlying the contention of a speaker in the recent Chicago Conference of the Pan-Presbyterian Alliance, that no greater enemy to Christian teaching exists today than this same Carnegie Foundation."

We cannot see what justification there is for the statement that the benefits of the Carnegie Foundation, which supplies pensions for retired college teachers, "are rigidly limited to those institutions in which *ex professo* Christian influence is debarred from the academic and administrative policy prevailing." All the Foundation requires is that the charters of the colleges it aids shall not put them under the control of any single denomination, which is quite a different thing. It does not forbid or mean to forbid "Christian influence." In most of them students are required to attend religious exercises seven days in the week, and in many religion is a required study. The Christian religion is made a part of the "academic and administrative policy," and a statement to the contrary is misleading.

A Complaint Replied To

We published in our issue of February 24 an article by Frank W. Quillan, which calls for certain corrections by C. L. Bonifield, M. D., of Cincinnati. One statement was that "no colored man is allowed to enroll in the Ohio Medical

College." Dr. Bonifield replies that the Ohio Medical College is a branch of a public institution and it would be impossible to refuse admission to any colored person who has the proper attainments and pays the fee. To be sure none has ever been admitted, but one could by law. The writer further complained that no colored physician is allowed to operate in the City Hospital. It is answered that 500 white physicians are equally shut out, as the surgeons are selected. He further complains that "colored people, received with reluctance into separate wards in the City Hospital, are refused the privilege of having a physician of their own race attend them." Dr. Bonifield replies that he has charge of one ward in which colored patients are freely admitted, but, as stated above, only selected physicians are allowed to attend patients. He says he is also on the staff of a Catholic and a Methodist hospital, and in both negroes are freely received. As to the complaint that the Automobile Club discriminated against negro children the two last years in giving a free ride in the country to orphan children, he replies that he was president of the club, that there were not automobiles enough belonging to its members to give all a ride, and that the privilege had to be limited to children of a certain age, and race was not the only thing considered. As to the complaint that negroes going South are required to take the "Jim Crow" coaches, he replies that the people of Cincinnati cannot be held responsible for the laws of Kentucky. He concludes in a way that suggests how discrimination may be made:

> Cincinnati is and always will be the gateway to the South. Our sentiments may be influenced by those of our good neighbors. We are absolutely opposed to any social mingling of the races, and do not deny it; but we give the negro every chance to get an education, and we deal with him honestly and justly.

The British Cabinet

We do not fully trust the daily dispatches that come by cable as to the political conditions in Great Britain. We observe that they are apt to be of a decidedly Unionist character. One would imagine from reading them that the Cabinet was hopelessly divided, that the factions on which the Government must depend are mutually hostile, so that teamwork is impossible; that the Cabinet does not know its own mind, but is hopelessly drifting; that King Edward will stand by the Lords; and that in a few weeks a crisis will come, and a new Parliament will be called, which will give the power to the Unionists, who are declared to have the majority of the votes. But all these sinister forebodings do not come to pass. The Cabinet holds together, presents an apparently united front, and appears to offer an intelligent program for the achievement of the purposes of the Liberals, which include both the absolute control of the Commons over financial legislation, and the reform on a democratic basis of the House of Lords. We see no reason why the present Parliament may not accomplish both of these ends. The Lords themselves see what is coming and are trying to save what they can of hereditary privilege by a scheme of reform such as Lord Rosebery advises and will present. That may not be sufficient, and it is likely to retain the hereditary right by something like the Scottish plan of the selection of representative peers, in addition to members chosen for merit. The present Unionist bluster will not frighten the Liberals.

What Is Religion?

Volume I, Jan.-Feb., 1910, of the new series of the *Revue d'Histoire et de Littérature Religieuses,* edited by Père Loisy, in Paris, is just out. No reference is made to its suspension by Cardinal Richard and the French episcopate before Loisy's excommunication, and none to the changed position of its able editor. A footnote to the first article states that it was the opening lecture of Loisy in his chair at the College de France. Three articles fill the number. There is a bibliographical chronicle of recent works on religion, with ample criticisms for a fair understanding. They are written by Marcel Hebert, formerly president of the Ecole Fenelon, Paris, now professor at the free University of Brussels, and by Loisy himself. Reviewing Salomon Reinach's "Orpheus," Hebert quotes this

curious definition of religion: "A gathering of scruples, which hinder the free use of our faculties." Hebert rejects it. In his turn, Loisy, reviewing Thompson's "Magic: Its Origins and Development," corrects Thompson's contrast between magic and religion. Thompson regards magic as the employment of the supernatural for the benefit of the individual, while religion is the worship offered for the well-being of the community. Loisy thus states his own view: Religion is the manner socially accepted to deal with the powers upon whom men regard themselves as dependent, while magic is a way, not socially accepted, to deal with those same powers for the benefit of the individual. There is a new feature in a chronology of contemporary religious facts and documents. This is unsigned, but seems to indicate the skillful pen of Houtin. The old series of this scholarly review had very few subscribers in America, not more than a dozen among the ten thousand Catholic priests in the United States. The new series deserves a better encouragement. Its price is $2.50, published by Nourry, 14 rue Notre-Dame-de-Lorette, Paris.

Senator Platt died last Sunday. He had ceased to be a power some years before, and little needs to be said except to put a long biography of him in the New York papers. He represented an old and ended political régime and method, when all offices were paid for political service and the system required a boss. Thomas C. Platt was a boss of the first class. He knew how to follow, as when he resigned from the Senate with Roscoe Conkling as "Me, Too," but he had strength enough after a while to recover his position of power. New times need new men, and Governor Hughes represents the new ideal. The State of New York will find one of another type to be his successor. A boss does not have an easy time now in this State.

We are to have another revision of the English Bible, but this time not careful and scholarly like the Revised Version, but a revision as slight as possible of the old Authorized Version, the purpose being to preserve for us long as may be the quasi-sanctity of the familiar words by making no changes that can be helped. The plan seems to have originated in Dallas, Tex., perhaps with the Rev. C. I. Scofield, who has gone to Los Angeles to do the main work as secretary of the Bible League of North America, and who communicates by letter with his editorial board of some twenty members, and who hopes to gather them for a meeting to conclude the work, which must be concluded this year! It will evidently all be in the secretary's hands. It is impossible that the result can be as good as the Revised Version. There seems to linger a real superstition about King James's Bible, as if it were Saint James's.

All that the discussion over the Fairbanks incident has called forth is the assertion by the defenders of the Methodist mission that it is doing a good and great work which it has the right to do; while its opponents have repeated the charges of expensive purchase of converts, without specification or proof. Besides this we have only the story that Archbishop Ireland a year ago had an experience similar to that of Mr. Fairbanks. He had accepted an invitation to speak at a Lincoln dinner given by American residents, but was forbidden by the Vatican because a toast to President Roosevelt was to be followed by one to the King of Italy.

They expect 40,000 people to attend the passion play at Oberammergau. It has ceased to have the purpose of a religious play such as it was in the old days, and is a business, a profession, a money-making concern, making money and fame out of the representation of our Lord on the Cross. With the pious purpose might well go the sympathy, for it now appeals to the blasé curiosity-seekers.

The report may not be true, but it is reasonable enough to be true, that on account of the failure of milder measures to crush out Modernism in the seminaries in Italy for the education of priests the Pope plans to remove all other teachers and put only Jesuits in charge. That would clean out the poison. The Jesuits could be trusted.

Insurance

The Mutualization of the Equitable in Sight

In The Independent of December 9, 1909, we had something to say regarding the stock control of the Equitable Life Assurance Society that had then but recently been acquired by J. Pierpont Morgan. For nearly forty years prior to that time the society was under the control of Henry B. Hyde, its organizer and builder. Since his death, in 1899, the control has rested in three separate owners, viz., his heirs, Thomas F. Ryan and J. Pierpont Morgan. We said in the issue to which reference has already been made that there was a warning in these frequent changes in a brief period of ten years and pointed out that the Equitable had outgrown the limits of stock domination. We stated that the interests of its hundreds of thousands of members were too important to remain subject to the life or death of one or more individuals; that its concerns were too vast, too sacred to continue longer in subordination to the control of $51,000 worth of stock.

These utterances as printed by us at the time take on more than ordinary significance now since it was announced last week that a plan had been formulated by Mr. Morgan and his representatives to make absolute provision for the future of the Equitable Life Assurance Society and its many thousands of policyholders thruout the world. Mr. Morgan has entered into the arrangement of a careful plan that has been drawn up after consultation with Governor Hughes and other experts and with the approval of the State Insurance Department, the main idea of which is to protect the policyholders and to insure the operation of the society upon a distinctly mutual basis. The details of the plan have not yet been sufficiently worked out to make it possible to publish them; those having a knowledge of the plan having been virtually pledged to secrecy. There is a possibility that new legislation may be required in order to further the putting thru of the scheme as it is proposed. It was found impossible to settle the affair as it had been hoped before Mr. Morgan sailed for Europe on February 15.

It can be definitely stated, however, that it was Mr. Morgan's wish to provide for the policyholders in such a way that would be satisfactory to them and provide for placing the society upon a thoroly firm footing where there would be no longer any question as to what its future would be. The society has been under a trust agreement for the last five years. Ex-justice Morgan J. O'Brien and George Westinghouse are the surviving trustees, and they have signified their willingness to terminate their agreement next June, when the trust terminates automatically, so that it looks at the present time as if the future of the Equitable was assured along the lines advocated last December in The Independent.

The Travelers Insurance Company of Hartford, Conn., is issuing a single premium twenty year endowment policy for $5,000, the cost of which is $2,882.70 at the age of thirty. This affords insurance of $5,000 for twenty years and at the end of that period $5,000 in cash or $2,117.30 more than the cost, which is at the rate of nearly 3 per cent. compound interest on the investment. The average rate of interest on savings bank deposits is 3½ per cent. The insurance for twenty years under such a policy would therefore cost the insured a little more than one half of 1 per cent. in interest. This is infinitely better than any fraternal insurance that was ever devised or which will ever be devised.

Joel G. Van Cise, actuary of the Equitable Life Assurance Society, has resigned. Mr. Van Cise was appointed assistant actuary of the society in 1872, and on November 2, 1898, he was made actuary to fill the vacancy caused by the death of George W. Philips, the first actuary of the Equitable. Mr. Van Cise will meanwhile remain as consulting actuary of the society.

FINANCIAL

Railway Cost of Living

A LONG statement which was recently published by more than thirty Eastern railroad companies deserves the attention of all who have been watching the quiet movement of the organized trainmen of those companies for an increase of wages. This movement involves directly about 150,000 men and indirectly a considerable additional number. It has been marked by conservative management. Nearly all the companies, it is understood, have declined to concede anything. The plea of the men is that more pay is needed to meet the higher cost of living. In a hearing at Chicago before the Illinois Board of Arbitration, in the wages controversy of switchmen with thirteen railroads, the wives of the employees have been testifying as to the increased cost of household supplies and the hardships due to the greater demands upon their husbands' incomes. This greater cost of living is the main support of the applications submitted to the Eastern roads.

The companies' statement is a reply which is based upon established facts. We can touch only upon its leading points. The substance of it all is that the companies are in the same plight; that is to say, that while their freight and passenger rates have not advanced, and, in fact, have suffered a slight average decline in recent years, the cost of all the things they must buy—fuel, locomotives, cars, structural material, lumber, food, etc.—has been rising steadily. They have the support of unquestioned official statistics. Freight rates per ton mile are lower than they were five, six or seven years ago. Everybody knows of the tendency in recent years to reduce passenger rates by legislation. A large item in railway expenditures is the cost of fuel for locomotives, and it can easily be shown that this cost has largely advanced. Taxes have been growing. The companies quote from the Interstate Commerce Commission's reports to prove that the average per mile was greater by 54 per cent. in 1909 than in 1899. With this there should be a statement of the concurrent increase of taxable values, but with allowance for that there has been an increase. There has been an additional expense due to the cost of recent requirements in the line of official regulation. Such expenditure is made in the public interest and should not be discontinued. It must be admitted, however, that it adds something to a railroad's cost of living. Railroad wages were increased in the latter part of 1906 and the early part of 1907. The rate was not reduced afterward because of the panic, altho the number of men employed was cut down.

All this is quite strong from the companies' point of view, but it cannot satisfy employees who feel the pinch of high prices. The companies would find it difficult to increase freight and passenger rates. Thus is presented a problem which is interesting to investors and the general public and which may be made more prominent by a strike.

....The net profits of the American Woolen Company were $5,798,058 in 1909, against only $1,280,705 in 1908.

....In 1909 the American output of steel rails was 3,062,582 tons. Only 1,921,611 tons were made in 1908. The production of rails by the open-hearth process has shown a notable growth, from 256,704 tons in 1907 to 567,304 in 1908 and 1,255,961 in 1909.

....The farms in this country, with their buildings, implements and live stock, according to the *Orange Judd Farmer*, are now worth almost $30,000,000,000, or 44 per cent. more than in 1900, and the value of last year's farm products was nearly four times that of the products of 1889.

....President Brown, of the New York Central, speaking before the Iowa Society in New York last week, said that Iowa had been a pioneer in legislation for the regulation of her railroads. "Iowa was right," he added, "in the contention that the State had power to regulate corporations it had created. The railroads were mistaken in opposing this fundamental principle. Neither would for a moment consider going back to conditions which prevailed prior to the enactment of the law of 1888."

Survey of the World

Testimony Against Secretary Ballinger

In the Ballinger-Pinchot investigation, last week, James R. Garfield, who preceded Mr. Ballinger as Secretary of the Interior, and who was Secretary while Mr. Ballinger was Commissioner of the Land Office, testified that Ballinger, after leaving the Land Office, submitted to him, on September 17, 1908, an affidavit made by Clarence Cunningham, who swore that neither the Guggenheims nor any other capitalists outside of his group of entrymen had any interest, direct or indirect, in the Cunningham coal claims in Alaska. But it has been shown by the testimony of representatives of the Guggenheim syndicate that this syndicate's option (still in force) on these claims was accepted on December 7, 1907. The affidavit was dated September 4, 1908. It has been pointed out that the claims were clear-listed on December 26, a few days after the option was accepted. The record, Mr. Garfield said, showed that the affidavit was false. A member of the committee remarked that the punishment for perjury ought to be inflicted. Mr. Garfield said he differed with Commissioner Ballinger about bills which had been introduced, providing for an increase of the price of the coal lands. He would have had the price apply to all lands not patented, but Ballinger desired that lands already entered should be excepted. This would have permitted the sale of the Cunningham lands for $10 an acre. Ballinger, in his letter to the President, had said that after Glavis's protest he had conferred with Secretary Garfield and had suggested that action on the claims be suspended. Mr. Garfield denied that there had been such a conference. It was shown that the two men, who had known each other in college, were on terms of friendly intimacy before this controversy about coal claims and water-power sites. Arthur P. Davis, chief engineer of the Reclamation Service, was a reluctant witness. Ballinger, as Secretary, he said, had repeatedly directed him to prepare schedules for the restoration of the lands withdrawn by Garfield, asserting that they had been withdrawn in violation of law. He had spoken of Garfield's action as if it had been a great crime. He had asked witness to prepare for the restoration gradually, in order that it might not attract public attention. Ballinger, in his letter to the President, said that the restorations had been made on the recommendation of the Reclamation Service. Witness said there had been no such recommendation; he himself had protested against the restorations, or a considerable part of them. Ballinger, in a letter to Dr. T. E. Wills, in April, 1909 (the letter was read) said that the restorations had been made on the recommendation of the acting director (the witness) of the Reclamation Service. This was not true. E. T. Perkins, a purchasing agent of the Service in Chicago, by order of Ballinger delivered lectures in the West to advertise the reclamation work. Complaint was made that in the territory of the Hill railroads he commended projects in the territory of the Harriman roads, and it was found that the Harriman interests were paying him $6,000 a year. Therefore witness and Director Newell recommended that Perkins be dismissed. Witness was reprimanded for this by Ballinger, who said witness ought not to interfere with work done under his (Ballinger's) direction. Witness had told Ballinger that the latter's whole

course had been against the interests of the Reclamation Service. Because of Ballinger's attitude, all the Service's engineers were at one time about to resign, but were persuaded by witness to remain. In conclusion Davis said to the committee he had not intended to assert or insinuate that Ballinger had intentionally and consciously done wrong.

The Strike in Philadelphia

At the beginning of last week the Philadelphia police authorities asserted that less than 20,000 workmen had obeyed the order for a general strike; the union leaders declared that the number exceeded 125,000. An attempt was made in Pittsburgh to cause a general strike there and thruout the State. Such a movement was favored by the president of the Pittsburgh Trades Council, who said the question of breaking contracts ought not to be raised in time of war. On the 8th, six persons were wounded in Philadelphia during riotous demonstrations. The manufacturers of hosiery voted to close their mills for a week. Many of their 20,000 employees had quit work. A large association of business men held a meeting to devise means for restoring peace. They decided to ask the banks to use their influence with the railroad company in favor of arbitration, and to urge merchants to exert influence upon the Councils. In a telegram, Seth Low, president of the Civic Federation, was asked to serve as arbitrator. He replied that the Federation could not interfere unless both parties should invite it to do so. The business men approved a letter addressed to President Taft, asking him to send to Philadelphia the Commission of the Foundation for Industrial Peace and expressing a belief that under the influence of this Commission the company would yield. It is held at Washington that intervention is not feasible; the Erdman law provides for mediation and arbitration only in the case of an interstate railroad. On the 10th, when a projected mass meeting on the baseball grounds was prohibited by the authorities, there was great disorder. Thousands of angry men started for the City Hall. They were attacked and dispersed by the police. The battle raged for two hours and covered as many miles of Broad street. During the week the company had nearly half its cars in service, but they were frequently attacked. Dynamite was exploded under one of them, but none of the sixteen passengers was hurt. While trying to escape from a mob, a motorman permitted his car to run over a child. Only the mounted police saved him from being lynched. At the end of the week it was said that a considerable number of the idle men were going back to work.

Politics in New York

Republican leaders realize that their party in New York may suffer some injury on account of the Allds investigation, and there has been a movement to place control of the party organization in the hands of men who stand with Governor Hughes. In January last, Mr. Allds was elected president pro. tem. of the Senate and leader of the Republican majority in that body. As he recently withdrew from these offices, the Republican Senators last week in caucus elected his successor. That element in the party which is represented by Governor Hughes and United States Senator Root desired that this successor should be a man identified with the Hughes reform policies. At the first session of the caucus a long telegram sent by Senator Root to State Senator Davenport was read. The first part of it was as follows:

"The conditions attending the selection of a Republican leader in the State Senate seem to justify an expression of opinion regarding the proposed action as a matter of general party policy. After much careful inquiry and consideration, I am clearly of the opinion that under existing circumstances the selection of Senator Hinman is plainly indicated as the only course which will present the Republican party to the people of the State in the true light, will correctly exhibit the real relation of the party as a whole to the principles and policies for which Governor Hughes stands, and will rightly represent the wishes of the voters of the party. Any other action would, it seems to me, be most unfortunate and injurious."

Senator Root also said this was the opinion of Governor Hughes. Mr. Hinman was one of the Republicans who opposed the selection of Allds and who declined to attend the caucus at which Allds was chosen. It was to a little group of these opponents of Allds that

Senator Conger said he knew that Allds had taken a bribe, and the charge thus made was the basis of the investigation now in progress. Senator Root's advice was not relished by certain Republicans influential in the organization, who held that one who had "bolted his party's caucus" did not deserve to be made the party's leader in the Senate. At the second session of the caucus, on the 11th, this advice was not followed. There was a long contest, but on the forty-ninth ballot Senator George H. Cobb was chosen, receiving 17 votes, against 13 for Hinman, and 3 for Senator Davis. Mr. Cobb, in a published statement, had questioned the propriety of Senator Root's action. Governor Hughes, before the election, had issued a statement expressing his entire agreement with Senator Root and saying that this was "a critical time for the Republican party in the State." The comment of many is that a serious division of the party has been made.——Senator Allds was under cross-examination last week. He still asserted that his course concerning the bill which was killed in 1901 was determined by the letters of the late Thomas C. Platt. There was much inquiry as to his bank accounts. Several deposits of $500, $1,000 or $2,000 in bills, commonly at or near the end of a session of the Legislature, were pointed out. Mr. Allds could not remember from what sources these sums had come and he had no records which would supply the information. Among the deposits the history of which he could not give was one of $2,000, made a few days after the date on which it is alleged by Conger that he received the money for suppressing the bridge bill.

The Harrisburg Capitol Frauds

William P. Snyder, Auditor General, and James M. Shumaker, Superintendent of Public Buildings and Grounds, were two of the four men found guilty in December, 1908, of conspiracy to defraud the State of Pennsylvania in connection with the furnishings of the new capitol at Harrisburg. The others were William L. Mathues, State Treasurer, and John H. Sanderson, contractor. Each was sentenced to be imprisoned two years and pay a fine of $500. Pending appeal, they were released on bail. Mathues died soon after his conviction; Sanderson died about a year ago. On the 7th inst. the judgment of the lower court in the cases of Snyder and Shumaker was affirmed by the Supreme Court of Pennsylvania, and both of them are now in the penitentiary. Each is fifty-eight years old. Dr. Snyder had been president of the State Senate and a rival of Boies Penrose for the seat in the United States Senate now held by the latter. Like Shumaker, he asserts that he is innocent. Retaining his respect for the courts, he declares that his conviction was "an awful miscarriage of justice." Shumaker has been stricken by palsy.——On the 7th, the Pennsylvania Attorney General set out to recover, if possible, the money fraudulently taken, by bringing suits in equity for a little more than $5,000,000. The defendants are as follows:

Ex-Congressman H. Burd Cassel, President of the Pennsylvania Construction Company; E. L. Reinhold and E. B. Reinhold, officers of the same company; Ex-State Treasurer F. G. Harris; Ex-Auditor General E. B. Hardenbergh; T. Larry Eyre, formerly Superintendent of Public Buildings and Grounds; Ex-Auditor General William P. Snyder; Ex-Superintendent James M. Shumaker; Joseph M. Huston, architect of the Capitol (who is soon to be tried for conspiracy); the estates of Treasurer Mathues and John H. Sanderson; various Trust Companies, Surety Companies and individuals, sureties in sums exceeding $2,000,000 for the State officers named above.

It is alleged in these suits that Sanderson received $5,376,308 for articles worth only $1,344,077; that about $2,000,000 was paid to Congressman Cassel's company for metallic filing cases, when a fair price would not have exceeded $750,000; and that the corrupt agreement was made in 1902, even before the contract for the erection of the new Capitol had been awarded.

Canada's Navy

In Canada's House of Commons, on the 10th, the Government's navy bill was passed to a second reading by a party majority of 41, the vote being 119 to 78. This action commits the Dominion to the policy of maintaining a navy independent of Great Britain's. The bill provides for the construction of several cruisers and destroyers, for a naval col-

lege and for two dock yards. In time of war the Governor in Council may (not "shall") place the navy at the disposal of the British Admiralty. The leader of the Opposition, Mr. Borden, moved as an amendment that Canada should give to the mother country cash enough for two Dreadnoughts. This was lost, together with Mr. Monk's amendment providing that the question be referred to the voters of the Dominion. It was said on the Opposition side that the Government's project was a step toward Canadian independence, also that it would not give promptly the aid that might be needed. The German peril was not overlooked, and a story was published that an emissary from Germany was taking notes of the debate and sending them to the Kaiser.——There has recently been a notable increase of immigration from Europe. In the first week of March nearly 4,000 immigrants (for the Northwest) arrived at Halifax. ——Three ministers of the Alberta Government have resigned, owing to their disapproval of a subsidy agreement for the construction of a railroad from Edmonton to Fort McMurray, 370 miles, by contractors from Kansas City. It is asserted that the allowance of $20,000 per mile, in ten mile sections, will be far above the actual cost.

Nicaragua's Dead Revolution

The failure of the revolutionists in Nicaragua appears to be complete. It is said that General Chamorro and General Mena returned to Rama from their campaign in the West with only thirty-five men. Estrada, leader of the revolutionary movement, has asked our Government to intervene. His proposition, which has also been submitted to President Madriz at Managua, is that an election shall be held (neither Madriz nor himself to be eligible for the Presidency) ; that the United States shall supervise it to insure fairness, and that the new Government shall recognize the debts incurred by the revolutionists. Unless both factions ask for intervention, our Government will do nothing. There is no indication that Madriz will ask for it.——A quarrel between a policeman and the American manager of the street railway in Bogota, the capital of Colombia, on the 8th, was followed by a riot. Cars of the railway company (which is controlled by residents of New Jersey) were wrecked. The manager, M. C. Martin, Jr., of New Jersey, was attacked on the 9th, when he sought the protection of the American Minister. The mob stoned the Legation, but after a time was dispersed by the police. This incident was due, it is said, to the intense anti-American sentiment of the people.

British Politics

The House of Commons is now merely a field for political maneuvering in preparation for the campaign which all recognize as coming soon. Premier Asquith has so contrived it as to insure that if he is overthrown, this Parliament will die with him. In the absence of a budget the expenses of government have to be provided for by continuous borrowing, but instead of asking for appropriations for four or six months, the Ministry asks for only six weeks' supplies in advance. Therefore, if Mr. Balfour should get in he would be dependent from the start on the House of Commons for running expenses and would be voted out as soon as he applied to the present House for supplies. The speakers of the Opposition denounce the Government for this policy, which they claim is costing the taxpayers some $10,000 a day in interest, and throwing both public and private finances into chaos. They accuse the Government of a willingness to take advantage of the distress of the country for partisan purposes. Why should not the Government, they ask, bring in a series of resolutions each authorizing one of the forms of taxation comprised in the budget, and these, or such of them as the House of Lords was willing to pass, would relieve in large part the financial stringency. The Government speakers, on the other hand, refuse to allow their policy to be dictated by the House of Lords. They call attention to the fact that ever since 1894 the Government has followed the practice introduced by Gladstone in 1861, of providing for the expenses of Government by a single budget. They also question whether the passage of a mere resolution signifying the intention of the

House to pass a finance bill in the future is sufficient warrant to make the collection of taxes legal. The Premier resents the charge that he is responsible for present conditions in the following language:

"I took the opportunity, not by way of menace, but by way of warning, and speaking with full responsibility, to point out the disastrous results, financial and administrative, which must ensue if the whole of the financial provisions for the year were rejected *en bloc*. Other advisers came forward and held very different language. They told the House of Lords gaily and boldly to reject the Budget, and, translating their phraseology into Parliamentary language, to let the consequences take care of themselves. The House of Lords were unwise enough to follow those counsels. They did reject the Budget. They were perfectly reckless of the consequences of their act. Again, after that, as I think, most unhappy action on their part had been accomplished, I took the opportunity, in the last speech which I delivered in the last House of Commons, once more to point out that a condition of financial confusion must be the inevitable result, the absolutely inevitable result, unless the House of Commons had been willing to accept the gracious offer which Lord Lansdowne made that if we would take back our Budget, on which we had spent six months of Parliamentary time, and so prune, trim, amend, curtail and mutilate it that, while it would no longer represent the wishes and views of the House of Commons, it would represent what we conceived to be, in this House at any rate, the totally irrelevant prepossessions and prejudices of the House of Lords, then, no doubt, the finances of the new year might have been arranged. Any Minister in that House of Commons who would have ventured to make any such proposal would have been defeated by a majority of three or four to one. I do not believe any Minister would venture to make such a proposal in the present House of Commons without suffering a similar fate. I pointed out then what was obviously true, that unless we were prepared to take that wholly untenable course financial confusion must result from the action of the House of Lords. Have my predictions been verified or not? They were derided. I was pointed to as an ignoramus who did not know what he was talking about—a false prophet.

"I am not going to be a party—and the present Government are not going to be a party—to departing from what has been regarded as the fundamental principle of our financial system for the last forty years. We regard the Budget taxes imposed, not as a number of isolated things which you can dissect and separate one from the other, and which you can treat as they used to be treated in the old days—each subject a separate enactment requiring the assent of both Houses of Parliament, but, following the footsteps of Mr. Gladstone and of his successors, we treat the Budget of the year as one thing.

French Political Scandals

The Senate commission, headed by ex-Premier Combes, appointed to investigate the administrators of the property of the churches, monasteries, convents and schools expropriated by the State, report the discovery of an appalling amount of corruption and inefficiency. As a consequence of this exposure, many arrests have been made of persons connected with the settlement of these affairs. Among them was M. Duez, who on his arrest confessed that the shortage of his accounts would amount to about a million dollars, which he had lost in speculation on the stock exchange. From further investigation of his papers it is believed that the total defalcation may amount to twice that. M. Duez had been appointed by the Government official receiver for thirteen of the congregations, or ecclesiastical organizations, which have forfeited their property according to the law of 1901. Most important of the congregations of which he had charge was that of the Christian Brothers, which had 1,600 schools in France. M. Pellegrin, who succeeded Duez as liquidator, reported a shortage of $400,000 in the accounts of Stanislas College alone. Among the papers of Duez were found receipts from about 150 persons whom he had subsidized. The names are in cipher and the code has not been discovered, but it is presumed that, as in the case of the Panama scandal, many prominent journalists and politicians are involved. Martin Gauthier, who was private secretary of Duez, on a salary of $40 a month, had rivaled his employer in fast living, spending several hundred thousand dollars in a few years on women and automobiles. Associated with Duez and Gauthier was M. Coutot, a genealogist, who secured a handsome fortune by hunting up the descendants of those who had given endowments to the Church and inducing them to file claims with the Government thru him for the recovery of these funds. The complication of the affairs of the congregations and in the immense number of suits originating in the settlement of these estates furnished rich fees for the lawyers and Government officials and gave unlimited opportunity for collusion and

graft. The matter was brought up in the Chamber of Deputies by M. Jaurès, the Socialist leader, who made it the basis of a bitter attack upon the Government. He declared that it was amazing that such a man as Duez, who had already shown a shortage in his accounts to the amount of $100,000, should be given a responsible position, and he demanded also the arrest of M. Lecouturier, a brother-in-law of Bunau-Varilla, proprietor of the *Matin,* on the ground that he had sold the right to manufacture liquor hitherto made by the Chartreuse Fathers for $10,000, when another company had offered $1,000,000 for it. From the conservative side of the Chamber M. Berry also attacked the Government. He said that "M. Duez being charged by the Government to sell the property of the Church could hardly be blamed for taking part of the booty himself." Premier Briand in reply admitted that the accounts were in many cases in inextricable confusion, but this was due to the failure of the law to provide for the efficient handling of such complicated affairs. It had undoubtedly been a mistake to put so many cases in the hands of a single individual. He protested, however, that the Government had done its duty in exposing the scandal even upon the eve of an election and declared that he had nothing to conceal, and that every document should be made public. The Clerical and Royalist members have now, however, the best of material in support of the charges they have been making against the administration of the republic for its inefficiency and corruption. Another weapon for the opposition is the letter which Maitre Labori has given to the public in refusing another nomination to the Chamber, for M. Labori has been a stalwart Republican and became prominent thru his defense of Dreyfus:

"Four years in Parliament have convinced me that men of good purposes and of sound thought merely lose their time there. Parliamentary business is dispatched in contempt of rule, without order and often in insincerity. Deputies are subservient to the Ministers of whom, in fact, they stand in constant need to assure justice to their constituents—justice which, in the present state of the air of political morals, has become a matter of favor."

The Government has fixed upon April 24 as the date for the next elections, and May 8 for the second balloting.

Roosevelt at Khartum

Ex-President Roosevelt, returning from his year's hunting trip in North Africa, arrived at Khartum, Egyptian Sudan, on March 14. Representatives of American newspapers chartered steamers and in rival boats raced up the Nile in order to meet him, sending back the first dispatches from Renk. Mr. Roosevelt at the start made it plain that he would not express any opinion on public questions and should refuse to accept any receptions in Europe and America having a political character, the following being the only statement he would give out for publication:

"I have nothing to say and will have nothing to say on American or foreign political questions or any phase or incident thereof. I will give no interviews, and anything purporting to be in the nature of an interview with me can be accepted as false as soon as it appears. This applies to our entire stay in Europe."

The newspaper correspondents report that Mr. Roosevelt and Kermit are in excellent health and enthusiastic over the success of their hunting trip, both from the personal and scientific standpoint. Thirteen thousand specimens of African animals were obtained, some of them rare and even representing new species. These will go to the Smithsonian Institution. Part of his articles on African hunting have been published in *Scribner's Magazine* and he has completed his book. He took great interest in what was told him of political affairs and other events of the year in America, but declined to give his own views. He confest that he had been strongly tempted to send a congratulatory message to Dr. Cook when he heard of the report of his discovery of the North Pole, but was glad he did not take such hasty action. Mrs. Roosevelt and Miss Ethel Roosevelt awaited him at Khartum, where he was given an official reception by the representatives of the British Government in Egypt. Visits will be paid to the Memorial College founded in honor of Gordon, who was killed at Khartum, and to the battlefield of Omdurman, across the river,

The Trial of Russian Revolutionists

The trial of Nicholas Tchaykovsky and Madame Breshkovskaya for criminal revolutionary activity and complicity in plots against the life of the Czar was brief, and the prisoners received unexpectedly lenient treatment. Tchaykovsky was acquitted and Madame Breshkovskaya sentenced to exile in Siberia, but not at hard labor. Both are well known in this country and it is probable that the active interest manifested in their welfare by the Friends of Russian Freedom in America had much to do with the conduct of the trial and its result. During the past two years, while Tchaykovsky had been imprisoned in the fortress at St. Petersburg, efforts had been made by many influential personages in America to have him brought to a speedy trial and in open court. Last fall a petition to this effect, signed by many prominent educators, statesmen and literary men, was presented to Premier Stolypin, and a cablegram was sent last month. The Premier, however, refused to permit the public to enter the courtroom for fear of a demonstration. The chief evidence brought against Tchaykovsky was his prominence in connection with movements for the overthrow of the autocracy thruout his long life, and more specifically his return to Russia under a false passport in 1907. The principal witness for the state was a convict sentenced for murder and brigandage, who was brought into the courtroom in chains and testified to Tchaykovsky's recent participation in revolutionary conspiracies. Tchaykovsky pleaded not guilty and witnesses brought from England testified that he had been sent to Russia by them as a chemist for the purchase of manganese. Evidence was also introduced to show that his mission in America was merely for the collection of funds for the relief of Siberian exiles. Madame Breshkovskaya also testified in his behalf. Tchaykovsky has been called the "Father of the Russian Revolution" because he started as early as 1870 the organizations which have carried on ever since the movement against the Government. Being forced to leave Russia in 1875, he went to Kansas as a member of a communistic colony. This was a failure, and his experience in a Shaker colony was no more satisfactory. He is about seventy years old and has spent some ten years in Russian prisons. Madame Katherine Breshkovskaya admitted at the trial that she was a social revolutionist, but denied many of the allegations of the indictment. The prosecution withdrew the charge of conspiracy against the life of the Czar and she was therefore not sentenced to hard labor. An article by Madame Breshkovskaya was published in THE INDEPENDENT, April 16, 1908.

KATHERINE BRESHKOVSKAYA,
Now condemned to Siberia as a revolutionist.

A Bond Issue the Vital Question in Conservation

BY GEORGE E. CHAMBERLAIN

U. S. Senator from Oregon.

THE people do not fully realize the fact, but there is that in public sentiment still which, until it is eradicated, will prevent any material progress along the lines of national conservation and the creation and restoration of great internal waterways so enthusiastically advocated now thruout the country.

We have at last become thoroly awake to the dangers of past policies—late, it is true, but not too late to save something from the devastation we were bringing upon ourselves. We realize that, from the earliest days of the republic, public lands, agricultural and mineral, and public water supplies, on the earth and under the earth, and all the resources of the sea and land have been given away with a most wanton and reckless prodigality until much which is most valuable and essential to national strength has passed into corporate ownership; that we have been literally funding, founding and creating trusts, monopolies, and tremendous combinations of personal power by our lavish generosity.

We realize, at last, that magnificent resources which should have remained under Government control for the use and enjoyment of the whole people have been dissipated by uneconomical administration and short-sighted policies, to the enrichment of a few who were wise enough to take advantage of the laxness of our laws and to the impoverishment of all the rest. We know that the forests of the country, on the mountains and at the headwaters of many of our streams, as well as in the valleys, have been denuded till the date can easily be fixed when, if past conditions continue, there must inevitably be a lumber famine in the country, with all which such a condition entails.

In response to awakened sentiment something is being done, but not half enough, toward preservation and reforestation. But even today, forest lands are still being absorbed by hungry corporations, anxious to enrich themselves while there is still an opportunity. We must have, and quickly, such wise and stringent laws as will render this impossible.

We know that the old coal mines are being rapidly exhausted, in the ever increasing demand for fuel, and that new fields are being sought out and absorbed by old and new combinations, eager to establish a complete monopoly of the fuel supply of the country. We know that as the result of the reckless devastation of the past, soil erosion is taking place so rapidly that vast areas of agricultural lands, of infinite value to the people as a part of their inheritance, are yearly washed into the navigable rivers, destroying their navigability, cutting off these great avenues of commerce belonging to the whole people and strengthening the hands of the railroad monopolies already established.

For our present position of intelligent appreciation and for the universal demand that drastic measures prevent further depredation, we are largely indebted to the persistent and indomitable efforts of Mr. Gifford Pinchot, who deserves a very warm place in the hearts of his countrymen. I was myself among the number to oppose the national forest preservation policy in its early days; but with me, as with others, it was the lack of information concerning the correlation of water conservation, soil erosion, flood and drought, and the uniform distribution of waters for reclamation. The entire movement, now, meets with my hearty approval as it does with the general approval of citizens all over the country.

So much is a great stride to have taken. The next and immediate necessity is stringent laws which shall pre-

serve to us as a people what there may be left of value in our possessions. But even then we shall not have met the vital question in conservation as a national problem; which is, how to accomplish what we have come to appreciate as a national necessity and a duty we owe not only to ourselves but infinitely more to posterity. A few years ago the idea of appropriating public moneys for river and harbor improvements and for the protection of our national waterways was so frowned upon by the great mass of our population in every section, that a distinguished President of the United States was widely approved when he vetoed a bill for the improvement of our waterways. Now we are educated far beyond this, to where we know that the protection and restoration of our waterways is absolutely essential to the upbuilding of our commerce and our industrial system; that paltry sums spent here and there without system or comprehensive unity of design are wholly inadequate and utterly fail to accomplish anything toward the real end in view. But when the attempt is made to induce Congress to pass an appropriation bill which shall make even a small beginning possible, we are told that there is a deficiency in the treasury, that economy is the watchword, and that an appropriation is absolutely impossible. Economy is a grand virtue, but false economy—penny wisdom and pound foolishness—is an irreparable wrong to ourselves, our country, and our children.

Appropriations for real permanent improvements—rivers and harbors, waterways, conservation in all its phases, and many of our public constructions—ought to be made upon a purely business basis, on the ground of practical desirability and value to be received, and not treated like a kind of scrap-heap to be considered according to what is left over after all the other expenses of Government have been provided for and paid. Economy, in this connection, is a false cry and a pernicious argument, accomplishing only delay where serious action is imperative — and accomplishing delay without any compensatory return indicating a better possibility in the near future. It is not a simple postponement till tomorrow, when we shall be better able to meet the demands. We shall never, in this age, be any better able to meet them, and the only way to render coming ages able to meet them is for us to assume them today, in a way in which we are perfectly able to assume them, leaving the final responsibility upon those of the future who will most benefit by the conservation of our national resources, and our creation of waterways, and the increased value of the whole country, rendering them capable of meeting the demands of the future, unhampered by the crushing grip of monopolies and gigantic combinations controlling every financial and commercial possibility, as they otherwise will.

The time has arrived when we ought not to be satisfied with the cry of economy, or with the simple demand for an annual appropriation—even if that much were granted. If we are still hoping, we have only to refer to the recent message of the President to find that the current expenses of the Government for the year ending June 30, will exceed the income by $34,075,620. Thirty-eight million dollars more must be added for the work on the Panama Canal and $1,000,000 to be paid on the national debt. The deficit this year, in spite of the cry of economy, will be $73,075,620. And whether by tariff or any other means the revenues of the country are increased, thru coming years, the current expenses of the Government will follow them. It is a physical impossibility that this session of Congress or any other session can appropriate moneys remotely approaching an adequate amount absolutely necessary to the needs of conservation, redemption, and the demands even of the present day for inland waterway service.

In the last analysis there is but one way in which these permanent improvements can ever be met, and we might as well begin today to realize it and to insist accordingly that a permanent system of bond issue be inaugurated for such imperative expenditures as are of distinctly permanent character to secure the future welfare of the country. When it is fully understood the people all over the country will unite in demanding that such a bond issue be provided for the great national work which ought to be carried out to a speedy and successful

consummation. It ought to be well under way at this moment. It would be but for the lack of funds. That lack of funds will always prevent it till obliterated by a system of bond issue. Every one, now, approves of all possible conservation. Each political party is pledged to the improvement of our waterways. No one doubts the desirability and the untold future value of the improvements. All that remains is to meet this vital question with such a popular demand that a permanent bond issue for permanent improvements will become a necessity.

It is a suggestive fact with what readiness and lack of opposition a bond issue for the Panama Canal was justified —a bond issue, laying the burden upon future generations, for a permanent improvement wholly outside of the country and for all future time of indefinitely greater value, at least, to foreign nations than to our own. How do we know that future generations will approve? How do we know that it will be a profit and not a serious loss to them? If it is a success, even then the great benefit is sure to accrue to the world at large; yet we deliberately indorse a bond issue, throwing the entire cost upon posterity. On the other hand, with the imperative necessity of these improvements at home staring us in the face, with the need of them at the present moment, with the certainty of the untold value of them to our children and the enormous amount they will add to the wealth and commercial possibilities of our own country, we hesitate, we talk economy and deficits in the treasury and we let the time go by in inaction while we boast of the way the dirt is flying down at Panama.

If any argument applies to the Panama Canal, much more is it good with reference to our own rivers and harbors —to the Mississippi, the Columbia and their magnificent tributaries—to all work of canalization, all over the country. It is not a work for the present or for foreign nations. It is a work for ourselves and our own posterity; a work for eternity, and I believe that before long the people will make their demands heard for the issuance of bonds for these permanent home improvements. This is a matter where there is no question; where posterity may well—and ought to —be taxed with its share of the burden, for posterity will reap the great portion of the incalculable benefits to be derived.

I have no patience with the policy of perpetual procrastination. Where would we have been today if the ultra-conservative element of this country had been in complete control? Where shall we be tomorrow if we listen and keep still? This is not a question for tomorrow. It is a question for today. It has been discussed from one end of the country to the other. We are well aware of our dangers and our needs. We know the ways by which we must protect ourselves and our children. As a nation we commend the entire proposition and when, as a nation, we demand a bond issue to carry out the work we shall have met the vital question in conservation and we shall receive favorable action by the Congress of the United States.

WASHINGTON, D. C.

The Cost of Living.—VI.

[This is the sixth article in our series on the increased cost of living. Those already having appeared are: "The Remedy for High Prices," by Prof. J. Pease Norton (February 10); "The Crisis in American Home Life," by Prof. Simon N. Patten (February 17); "The Tariff and the Cost of Living," by Byron W. Holt (February 24); "An Old Fashioned Theory of Prices," by Professor Franklin H. Giddings (March 3); "Prices and Incomes," by John Bates Clark (March 10).

Economy in Diet

BY RUSSELL H. CHITTENDEN, LL.D.

[The question of the advantages of a more frugal diet has been forced upon people by the rise in the prices of food, and on this point no one is better worth hearing than Professor Chittenden, director of the Sheffield Scientific School of Yale University, for he has devoted many years to the experimental determination of the actual needs of the body. The result of his researches, published in the "Nutrition of Man," aroused heated oppositon, be cause it contravened the general practice of the race and the theories that had been built upon this practice. Professor Chittenden showed that the amount of food necessary to keep the body in a state of equilibrium was much less than had been previously supposed, but some physiologists, like Sir Crichton-Browne, hold that, tho this be granted, it is still desirable to consume food considerably in excess of these requirements.—EDITOR.]

A RECENT WRITER[1] on the subject of nutrition has stated that "it is not on *a priori* physiological data, nor yet on laboratory experiments —elucidative and educational though these may be—that the science of dietetics is based, but on common observation and on the hereditary customs and habits of mankind. The lower animals select with unerring precision, as long as they are in a natural environment, from the materials around them those best fitted to their wants, and they do this by instinctive discernment inherited from a long line of naturally selected ancestors, while they are checked in their consumption by a sense of repletion of coeval origin. . . . These habits are tardily ingrained instincts, a little lower than voluntary determinations, and only a little higher than the reflexes upon which life depends. They have been differentiated and elaborated as he has advanced in civilization, but not superseded, for civilization is not the antithesis of Nature, but a higher branch of natural history. Natural instinct or primitive experience has guided the different varities of our species in their selection of viands suitable to their geographical situation and modes of life, has restrained them within proper bounds in their consumption of these, and has ever taught them to combine and balance the different constituents of these in a way on which chemical science can scarcely improve."

The sentiments here expressed seemingly meet with general acceptance, but the writer is strongly inclined to doubt their soundness and to question seriously a line of argument that tends to place instincts, customs and habits in advance of reason and intelligence. By the lower animals instinct may well be relied upon, but that man, endowed above all animals with reason and intelligence of a high order, should cast these aside and rely solely upon acquired instincts and habits in matters pertaining to his own nutrition seems hardly in keeping with the scientific progress of this century.

Lack of knowledge is, no doubt, responsible in some measure for the mental attitude of many individuals regarding their dietary habits. The real object of food is apparently overlooked by the majority of mankind, or if not consciously overlooked, it is so obscured by concessions to the insistent demands of the palate that it sinks out of sight and out of mind. Appetite

[1]Sir James Crichton-Browne. "Parsimony in Nutrition." New York: Funk & Wagnalls. P. 22.

reigns supreme, while customs, habits, traditions and fancies add their influence toward the establishment of a mode of living for which there is no physiological justification. Yet calm judgment must tell the intelligent man that there should be some definite relation of the amount and kind of food consumed daily to the actual physiological needs of his body. There is no apparent reason why the same rule should not hold good here as in the case of any energy-yielding machine. No competent engineer or fireman would think for a moment of burning two tons of coal when one would suffice for the work in hand. The householder in the handling of his furnace or steam plant feeds in sufficient fuel to meet the exigencies of the occasion; *viz.*, to keep the temperature of his house at a proper level for comfort. He does not shovel in twice the amount of fuel necessary, with frequent stokings to maintain the combustion of the large surplus of coal. No, ordinary prudence stands opposed to such unnecessary extravagance and wastefulness, to say nothing of all the labor involved in getting rid of the surplus ash and clinkers that impede the free burning of even the required amount of fuel. And yet that is exactly what a large proportion of otherwise intelligent humanity are constantly doing with their own bodies, under the mistaken belief that thereby they are catering to the needs of their system and fostering health and strength. An educational crusade is called for to enlighten men's minds on this important matter, which has such intimate bearing on the economy of living and what is of far greater importance, on the maintenance of health, strength and general efficiency.

All physiologists are practically agreed that the ideal diet, best adapted for the needs of the individual, is one that furnishes protein and energy sufficient to keep the body in a condition of physiological and nitrogen equilibrium, with maintenance of health, strength and vigor, combined with ordinary resistance to disease. Expressed in different language, there must be enough food, of proper quality and variety, to maintain body-weight (provided the body is not already overloaded with fat), and to keep up that high degree of physical and mental efficiency which are the concomitants of good health. Anything beyond this amount is not only an unnecessary excess, but may constitute an evil of varying magnitude.

Surely, no arguments are necessary to justify careful physiological experiments to determine what the real needs of the body for food are. The problem is a strictly physiological one, and adequate laboratory methods conscientiously carried out are certain to yield results of value. In no other way can a problem of this character be satisfactorily solved. The experimental method is as applicable here as in other fields of physiological inquiry. There is no ground for the assumption that instinct and habit are reliable guides in determining the quality and quantity of the daily dietary, and that aid cannot be expected from accurate scientific investigation of the subject. The dietary standards of Voit and Atwater are founded entirely upon observations as to what people are in the habit of eating. In the words of another, they are "essentially averages, based upon the implicit assumption that the general practice of mankind was the optimum. They showed how much men did eat."

Dietetics should be raised from an observational to an experimental science. There is needed in this study the methods and the discipline of the exact sciences, if the life and health of the individual and of the community are to be benefited in any tangible degree. To assume that man, like the beasts of the field, is dependent solely upon instinct and habit for knowledge as to how best to meet his nutritive requirements is to place him on a level with the lower animals. Customs and habits, in the writer's judgment, are not a safe index of true physiological needs.

The Voit standard assumes that a man of, say, 160 pounds body-weight, doing a moderate amount of physical work, needs daily at least 120 grams of protein food, with fats and carbohydrates sufficient to yield 3,050 calories. The Atwater standard for a man at hard labor calls for 150 grams of protein daily, with fats and carbohydrates sufficient to give 4,150 calories. The attempt which the writer has made to determine by the experimental method the physiological

needs of the body for food has resulted in the conclusion that for a man of 154 pounds body weight there would be required daily 60 grams of protein. As stated in another connection,[1] there is reason to believe that these are perfectly trustworthy figures with a reasonable margin of safety and carrying perfect assurance of being really more than sufficient to meet the true wants of the body; adequate to supply all physiological demands for reserve protein, and able to cope with the erratic requirements of personal idiosyncrasies. These figures are based upon experiments which have continued thru several years, and so far, at least, no results have been obtained that in any way tend to invalidate the above conclusion. It is true, arguments have been advanced from time to time by various writers, aiming to discredit the conclusions drawn, but no experimental evidence has been presented that stands opposed to the results we have obtained. On the other hand, evidences of gain in health, strength and efficiency resulting from moderation in the eating of protein foods are constantly accumulating, while further experiments in the laboratory afford additional data corroborating the general truth of our conclusion.

It is seen that such an intake of protein food as is suggested is equal to one-half the amount called for by the Voit standard, and if, as is believed, the quantity is sufficient for the needs of the body, there is suggested a great saving in the use of the expensive protein foods, with a possible corresponding gain in the health and efficiency of the individual.

Regarding the amounts of fats and carbohydrates needed to supply the demand for energy-yielding material, emphasis must be laid upon the facts that here much depends upon the amount of physical work to be performed. The energy of muscular contraction comes mainly from the oxidation of fats and carbohydrates, consequently the daily amount of these foods required to make good the loss incidental to physical work will vary with the degree of bodily activity. The man at hard muscular work needs to eat much more of the non-nitrogenous foods than the man leading a sedentary life. The problem here is quite different from that of the nitrogen or protein requirement. The latter varies in proportion to the body weight (not including excessive amount of fat), since the purpose of the protein food is primarily to make good the loss of tissue protoplasm. Hence, the man of 130 pounds weight needs less protein than the man of 154 pounds. The amount of physical work to be done, however, makes little difference with the amount of protein food needed. Increased work calls for increased consumption of the non-nitrogenous foods, fats and carbohydrates. An energy value of 2,800 calories will, however, suffice for most men doing an average amount of physical work, while the sedentary man, or the individual who exercises only by the walk to and from his office, will need less.

In other words, the average man, if he aims to acquire dietary habits that will meet the physiological needs of the body, avoiding undue excess, yet with an abundant surplus for possible emergency, may rest content with one-half the amount of protein food called for by the Voit standard, or one-half the amount considered necessary by ordinary usage as based on custom and habit. Moderation in the amount of fats and carbohydrates consumed daily is likewise indicated as being in closer harmony with the true needs of the body. Exprest in different language, the results of experimental inquiry point to the desirability of greater moderation in the daily dietary. With emphasis on this general truth, grams and calories may be ignored except so far as they give expression to the general principle involved. Greater economy in diet promises much for the human race, not only involving a saving in expensive foodstuffs and thereby relieving the strain upon the family purse, but in raising the average of health and efficiency, assets which count heavily in the sum of human happiness.

While temperance or moderation in diet also imply simplicity, this is not to be interpreted as meaning monotony. There is, in the writer's opinion, no justification, unless choice dictates such a course, for restriction of the daily dietary to a few staple articles. Neither does acceptance of physiological economy in nu-

[1]Chittenden. "The Nutrition of Man." New York: F. A. Stokes Co., 1907. p. 272.

trition carry with it necessarily the adoption of vegetarianism, any more than it points to fruitarianism, nutarianism, the grape cure, or any other practice or fad that has, from time to time, attracted votaries in their search after health. Presumably, such benefits as have been derived from these modes of life have resulted primarily from the rest which thereby comes to a jaded digestive system or other overworked organs and tissues through the enforced reduction in the amount of real food consumed, by a nearer approach to the true nutritive requirements of the body.

With our present state of knowledge, most physiologists are inclined to the belief that a mixed diet, with its greater variety of animal and vegetable foods, affords the best means of meeting the many physiological requirements of the body. No one doubts, however, for the evidence is quite conclusive on this point, that a purely vegetable diet, especially if reinforced by eggs, milk and butter, is quite adequate to provide all the apparent wants of the body, and many people appear to show physical gain on such a regimen. On the surface, at least, a meatless diet, with its tendency toward lowered protein intake, has some things in its favor; but the writer is more inclined to advocate the advantages of a mixed diet as affording more surely and economically all the elements required in the nutrition of man. Without doubt, adequate experimental study will in time offer a conclusive answer to this question.

Greater economy in the intake of protein food, a daily diet of 60 grams of protein with the accompanying fats and carbohydrates sufficient to give a total fuel value of 2,400-2,800 calories, does mean, however, less meat and more vegetable food. This does not imply curtailment of the joys of eating when the new habits have been satisfactorily acquired. Indeed, appetite becomes keener, and there is greater appreciation of the delicate flavors of properly prepared and suitably served simple foods, especially those of vegetable origin. As showing how a single foodstuff, containing a proper proportion of the different nutrients, may suffice to meet the wants of the body, it may be stated that Rubner, the noted professor of hygiene at Berlin, has found that 1,500 grams of white bread (a little more than 3 pounds) with a content of 75.2 grams of pure protein, will maintain a workingman in nitrogenous and calorific equilibrium. In other words, bread, aptly called the staff of life, contains all the elements necessary to keep a workingman without loss to his body when 3 pounds are eaten daily. Obviously, however, this is not a diet to be commended for any length of time; indeed, appetite would soon fail under such monotony. Most foodstuffs when taken alone constitute an unbalanced ration; they are either deficient in protein and with an excess of fat or carbohydrate, or else they contain an excess of protein with a deficiency in fuel value. Thus milk, which is an ideal food for the infant and for many invalids recovering from wasting disease, contains too large a proportion of protein for the ordinary adult with a deficiency in calorific value. Rubner's experiments show that 2,483 grams of milk (somewhat more than 2½ quarts), containing 84 grams of protein, is more than sufficient to meet the daily protein requirements of man, but such a quantity of milk only covers two-thirds of the energy requirement. To meet an energy requirement of 2,400 calories would necessitate the taking of 3,400 grams of milk, but this would furnish 140 grams of protein, which means a large and unnecessary excess. A judicious admixture of wheat bread and milk, or better yet, a proper mixture of toasted bread with milk and cream, constitutes a simple food, providing the several nutrients in proper proportion.

The question may be asked, What are the proper quantities of food to be used to meet the daily requirement of 60 grams of protein and 2,400-2,800 calories? In attempting to answer this question, I will take two illustrations from a series of experiments conducted in the laboratory a year ago; experiments that were continued for four months, all the food eaten by the men being weighed and analyzed each day, the excretions collected and analyzed daily, with a view to gaining all information possible regarding nutritive changes and other facts bearing on the physical condition of the subjects. During this period of four

months the subjects maintained a condition of plus nitrogen balance, i. e., the amount of protein food was more than sufficient to meet the requirements of the body; their body weight was either constant or showed a gain, and their physical and mental condition was in every respect satisfactory.

The subject whose diet list for two days is appended weighed 68 kilos or 150 pounds. His work required a moderate amount of activity, such as standing and moving about the laboratory for eight hours of the day. The following figures show the amount and character of the food eaten on two days, with the amounts of protein and fat contained in each article of food.

FOOD OF ONE DAY.

	Amount eaten. Grams.	Protein. Grams.	Fat. Grams.
Cream of wheat	170	1.62	0.44
Milk	150	4.81	5.87
Sugar	62	....	....
Wheat rolls	52	4.56	3.26
Toast	60	5.81	1.72
Butter	50	0.31	43.24
Celery soup	188	3.75	4.38
Roast lamb	50	15.06	4.70
Mashed potatoes	110	2.12	0.32
Lima beans	87	4.81	12.66
Scrambled eggs	70	9.25	12.58
Bananas	110	1.12	0.36
Tea	150	0.12	0.03
		53.34	89.56

If it is desired to translate the quantities of food into ounces, it is to be remembered that one ounce equals 28 grams. On this particular day, the total amount of protein consumed was 53.3 grams, fat 89.5 grams, with sufficient carbohydrate to yield a total fuel value of approximately 2,080 calories. This, it is seen, is somewhat below, both in protein and energy value, the average daily requirement called for. On the following day, however, the values shown in the next table were obtained:

FOOD OF ONE DAY.

	Amount eaten. Grams.	Protein. Grams.	Fat. Grams.
Cantaloupe	96	0.75	0.31
Corn flakes	20	1.31	0.10
Milk	400	12.75	15.64
Boiled eggs	88	12.18	8.95
Bread	130	10.56	3.16
Rolls	44	3.87	2.75
Toast	36	3.50	1.03
Butter	54	0.31	46.70
Sugar	66	....	....
Chicken soup	194	2.43	1.59
Roast chicken	48	12.62	2.95
Chicken gravy	50	1.06	3.15
Mashed potatoes	104	2.00	1.89
Rice	120	2.00	0.12
Butter cake	42	1.87	5.99
Tea	250	0.18	0.05
Watermelon	228	1.00	0.25
		68.39	94.63

Here it is to be observed that the protein consumed was 8 grams above the average of 60 grams, while the total fuel value of the food amounted to approximately 2,700 calories. Such dietaries, the experimental results of the last few years show, are quite adequate to meet the demands of the average individual doing a moderate amount of physical work. They represent temperance in meeting the physiological needs of the body, yet they provide all that is necessary, both of protein and of energy value, for maintaining the strength and efficiency of the individual. Further, such moderation in diet has many times resulted in great improvement in the bodily health.

As another illustration of a simple dietary, adequate for the needs of the body, the following table showing the amount and character of a day's ration may be given:[1]

BREAKFAST.

	Grams.	Protein. Grams.	Calories.
One shredded wheat biscuit	30	3.15	106
One teacup of cream	120	3.12	206
One German water roll	57	5.07	165
Two one-inch cubes of butter	38	0.38	284
Three-fourths cup of coffee	100	0.26	...
One-fourth teacup of cream	30	0.78	51
One lump of sugar	10	...	38
		12.76	850

LUNCH.

	Grams.	Protein. Grams.	Calories.
One teacup chicken soup	144	5.25	60
One Parker-House roll	38	3.38	110
Two one-inch cubes of butter	38	0.38	284
One slice lean bacon	10	2.14	65
One small baked potato	60	1.53	55
One rice croquette	90	3.42	150
Two ounces maple syrup	60	...	166
One cup of tea with one slice lemon	..	...	...
One lump of sugar	10	...	38
		16.10	928

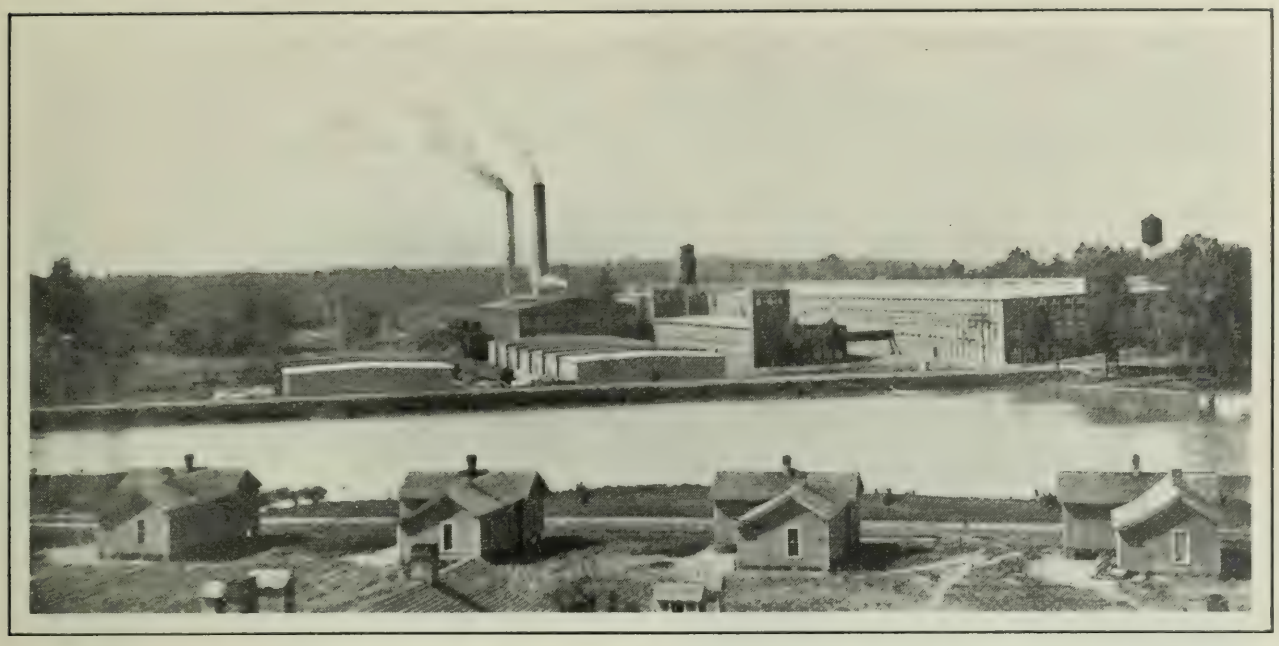
DINNER.

	Grams.	Protein. Grams.	Calories.
One teacup cream of corn soup	130	3.25	72
One Parker-House roll	38	3.38	110
One-inch cube of butter	19	0.19	142
One small lamb chop, broiled, lean meat	30	8.51	92
One teacup of mashed potato	167	3.34	175
Apple-celery-lettuce salad with mayonnaise dressing	50	0.62	75
One Boston cracker, split	12	1.32	47
One-half inch cube American cheese	12	3.35	50
One-half teacup of bread pudding	85	5.25	150
One demi-tasse coffee	..	...	...
One lump of sugar	10	...	38
		29.21	951

[1] "The Nutrition of Man," 1907, p. 280.

The grand totals for the day amount to 58.07 grams of protein and 2,729 calories.

With these examples before one, it is comparatively easy to form a daily dietary that will approximate to the above figures. It is merely necessary to keep in mind a few general facts bearing on the chemical composition of the more common foodstuffs. Lean meats of all kinds are rich in protein and poor in food value. Thus one-half pound of lean uncooked beef will furnish the entire daily requirement of 60 grams of protein, but it will provide only 308 calories. A like weight of any lean meat, such as veal, lamb, poultry, etc., will give similar results, subject to a slight variation owing to differences in the content of water. One-half pound of salt boneless codfish will likewise furnish the required 60 grams of protein, but its food value is only 245 calories. Two quarts of whole milk contain 60 grams of protein and will at the same time furnish 1,300 calories. It is easy to see how the daily dietary can be modified in protein content and fuel value by judicious commingling of various foodstuffs. If a little more protein is called for without increasing fuel value materially, the addition of an egg will give 7 grams of protein and an increase of only 80 calories. To increase fuel value without adding to the protein content of the food, recourse can always be had to butter, fat of meats, additional oil in salads, or syrup and sugar. Where larger volume of food is desired without material increase in food values there are available green foods, such as lettuce, celery, endive, greens of various sorts, and fruits such as oranges, apples, grapes, grape fruit, etc.



It is plain that any attempt to establish a daily routine which shall approach the true physiological needs of the body leads necessarily toward foods derived from the plant kingdom with the adoption of relatively simple dietary habits. With adults the adoption of new dietary habits frequently leads to the complete abolition of one of the usual three meals, either breakfast or luncheon. With many persons under the writer's observation this course has led to very satisfactory results, especially the omission of breakfast, or, as is more usually the case, the limiting of the usual morning meal to a simple cup of weak coffee with milk. This, if followed by a light luncheon, leaves opportunity for a more hearty dinner, and with many persons this plan of dietetic economy—harmonizing with the needs of the body—has been accompanied by great increase in the capacity for work, especially with brain workers.

Finally, it should be stated that the cost of foods ordinarily bears little relationship to nutritive value. Other factors enter into the problem which obscure in large measure the question of food value. Delicacy of flavor, palatability, together with fancies of various kinds, some real and some imaginary, all contribute to raise the price of many varieties of food far beyond the possibilities of the ordinary family purse. It is to be remembered, however, that wholesome, simple foods of a seasonable variety are always available at a moderate price, equally as well adapted for meeting the needs of the body as the more expensive luxuries, which, perhaps, have only a rare flavor or a fancy name to commend them. Further, at the present time, when the price of meats is climbing higher and higher, it is well to remember that this animal food is a very expensive form of protein, and might well be replaced, in large measure at least, by the less expensive vegetable proteins. It is probably true that from the standpoint of value received meat represents one of the poorest food bargains that people make. Judged by the standard of nutritive value, a large variety of vegetable products of far greater worth are available at much less expense per pound.

"The master words which promise help in the carrying out of an intelligent plan of living are moderation and simplicity; moderation in the amount of food consumed daily, simplicity in the character of the dietary, in harmony with the old saying that man *eats to* live and not lives to eat. In so doing there is promise of health, strength, and longevity, with increased efficiency, as the reward of obedience to Nature's laws.'"

New Haven, Conn.

How a Man Went to Meet His Labor Troubles

BY TRUMAN S. VANCE

Country Work Secretary of the Virginia Y. M. C. A.

THERE is a mill owner at Greensboro, N. C., that treats his operatives as well as he does his machinery. Cæsar Cone disclaims any right to the title of a philanthropist, but he is a notable example of that growing number of manufacturers who are solving their labor problems thru no more than sensible consideration of their workers.

He was first of the Southern mill owners to reduce the sixty-six hour week to sixty, but he asserts that this was but the same sort of good sense that makes him never overload an electric motor in the mill. He pays better than average wages, for just the same reason, he says, that he pays more for a better loom, and as for the $15,000 a year that he spends for welfare work, teaching the women to cook and sew and make better homes, for schools and kindergartens for the children and for night classes and social rooms for men and boys, all these he considers as necessary and sensible as his oil bill of as many thousands each year. It simply makes things run smoothly. Contrast with this a Pennsylvania factory from the grinding department of which three hundred Polacks were buried before the priest preached them out of that atmosphere of emery dust and iron particles, yet all the while the management was careful to pack its oil cups with waste to save the bearings of shafts and other machinery from the deadly dust that cut out the lungs of those three hundred Polacks.

So naturally is welfare work set in the general scheme of management at Proximity and White Oak Mills that it is hard to say where it begins. The great mills themselves, employing 3,000, with their superior light and ventilation and self-threading shuttles and artesian drinking water, might be considered fundamental welfare work, but we will begin with the houses. There are nearly eight hundred of these, each set on a quarter-acre lot, thus affording ample yard and garden space. The houses are all neatly painted and otherwise attractive. Each is built on brick pillars to prevent dampness or malaria, but double floors are put in to add warmth. A neat little four-room cottage rents for $3 per month and a six-room house for $5. Wood is delivered at half the price charged in any Northern city. Two deep artesian wells on each square furnish absolutely pure water within easy reach. A seven minute walk

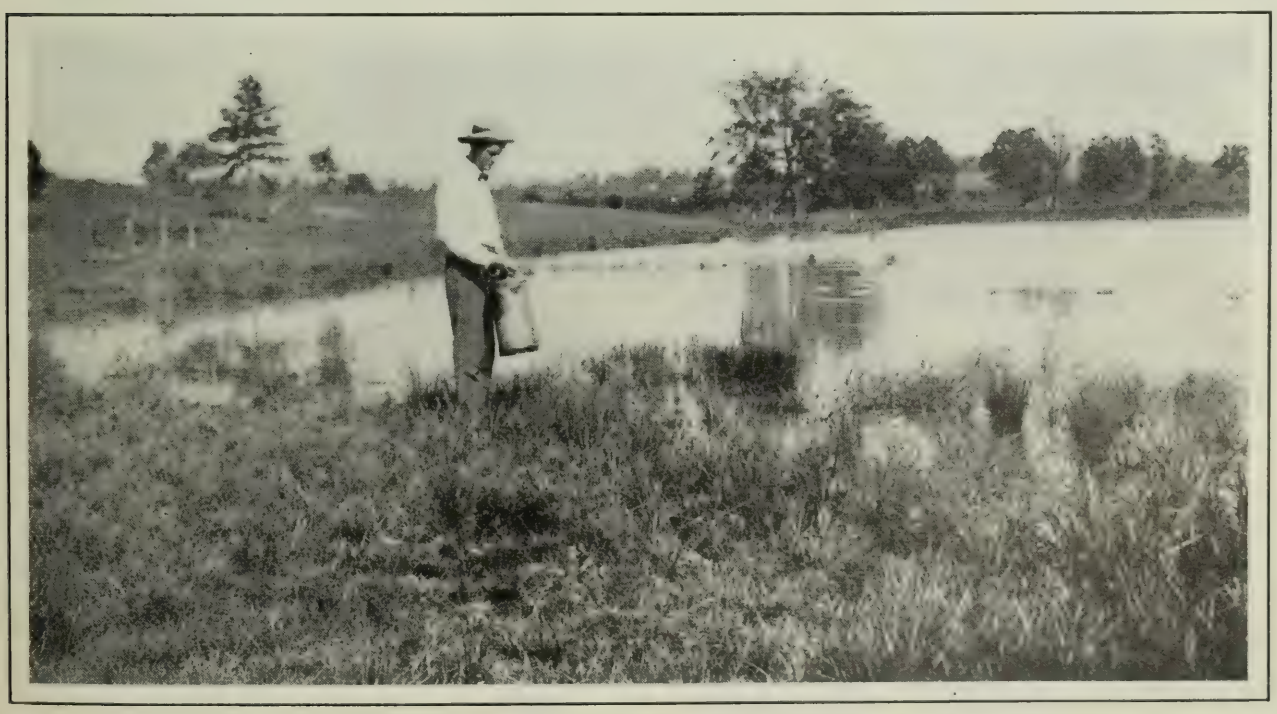
will take any operative to the mill or, in the other direction, to the open fields or park-like woods that surround the villages.

But yard and garden plots, double floors and fresh paint do not make homes. In between these highly necessary beginnings that the company's building and sanitary force has provided and the desired end lies the welfare worker's task. To a refined and thoroly trained

CAESAR CONE.

young woman in each village is given the delicate task of inspiring a love and desire for the little things so important about the home and then to show how they are to be obtained. Flower seeds, vines and plants are given, each spring, to all that will use them, and yards are plowed and grass seed sown for as many as will make an effort to have a pretty yard. Thirty prizes, ranging from $1 to $15, in each village, are given for the prettiest yards and neatest premises.

Nearly all this work about the homes has to be done by the women, who usually have large families, with all their own work to do, but the yards and flowers prove a real diversion from the monotony of other work and make all the difference between having a home and a mere shelter. The rich earth for flower beds and the sod for turfing are often carried as much as a quarter of a mile in baskets or aprons. In White Oak, which four years before had been pine woods and semi-cultivated fields, of the 378 houses occupied, 176 had grass seed sown last year, 261 had flowers and shrubbery, 244 had gardens and 109 had turfed more or less around yards and flower beds.



After all this is done, there is much of within-the-house work to be taught by the welfare worker in this great lesson of home-making. Many of the Southern cotton mill operatives have come from the farms in search of better paid labor, and the long, losing struggle has either beaten much of the domestic pride out of them or, at best, given them but little money for its indulgence. Others come from mills where no welfare work is done and the stimulus to better things is lacking from neighbor as well as welfare worker. On arriving at the Cone mills they find things different. Mrs. Newcomer, however, like most women, is observant and has the energy to improve things when once she finds things need improving. She notices that her neighbors' yards are neater than her own; soon she makes friends with those about her and sees their houses and kitchens. She comes home and cleans up, polishes her kitchen utensils and by dint of economy buys others she hadn't known before that she needed. Then it is not long before the "welfare lady" drops in and, under tactful guise of showing her something new in fancy work or salads, gets her into a cooking class that teaches her to bake good biscuits or to cook meats properly, or into a sewing class that leads her to make her children's clothes fit and even to work in that illusive but plainly noticeable thing we call style. About 500 women and girls are in weekly, or even semi-weekly, classes at the welfare cottages or private homes in all sorts of fancy work, cooking, basketry, raffia work, etc. Some of the classes are called clubs and have frequent social features that make

THIS FOUR-ROOM COTTAGE RENTS FOR $3 PER MONTH. ITS ATTRACTIVE YARD TOOK THE SECOND PRIZE OF $10.

them more attractive and widen the field of their usefulness. Saturday afternoon classes are provided for those that work in the mill all the week and are largely attended by those that give up a good part of their weekly half holiday to learn domestic arts. The results of this work are seen everywhere, and the subtle influence that cannot be seen is even greater.

The laws of North Carolina forbid the employment of children under twelve in the mills, and are very generally obeyed; but some mills have a rent contract specifying that the children shall be put in the mill on reaching twelve. At the Cone mills no such requirement is made. Two school houses, costing $40,000, with fifteen teachers, besides two kindergartners, are witnesses of the company's stand on matters of education. Night classes for men and boys, who showed great eagerness to learn, brought good results. Most of the children, particularly the boys, will not stay in the schools after twelve years old, but it must be remembered that this is a problem in the cities as well as in mill villages, and I can say, from personal knowledge, that it would be a most fortunate thing if all the boys that drop out of school had a cotton mill in which to work instead of the idleness

SPRAYING MARSHES WITH KEROSENE TO PREVENT MOSQUITOES.

or such employment as many have in the cities and small towns.

There are about two hundred boys, twelve to fifteen, employed in the two mills. Most of them are "doff" boys, who doff the full, and put on the empty, bobbins for the 120,000 spindles. They become wonderfully expert and can complete each doff in an hour, which gives them forty minutes rest six times a day. Even in their work the play instinct crops out full and boy-like. Their doff boxes are mounted on wheels with a stirrup, of the boys' invention, tacked on behind. A boy will push his box at full speed along the smooth, hardwood floor, mount his improvised stirrup and dash along at a great rate, guiding his chariot by thrusts of his free foot. If one gets careless, his stirrup may be cut away for a while by way of punishment.

In each village a good brass band, with its instruments and instructor furnished by the company, is the rallying center for town pride and a promoter of enthusiasm. Indeed, where did you ever see real, full-chested town pride without a brass band? At baseball games, lawn fetes and of summer evenings it makes a real contribution to enjoyment of village life.

On the Fourth of July each year the company gives a picnic, the biggest thing of its kind in the country. Revolution, a neighboring mill, is asked to join in the festivities and great numbers from the country around read their invitation clear in the fact that there is no one at the gate to deny admittance to any one. All that come, often as many as ten thousand, are welcomed and fed. Twenty thousand saucers of cream, a carload of watermelons, half as many bananas, with a few little extras, such as fifty bushels of roasted peanuts, a thousand gallons of lemonade, cakes, etc., complete the menu. Over a hundred waiters in white uniforms dispense, rather than serve, the eatables. The order is remarkable. Last year there was not an arrest and no signs of any drinking.

SCHOOL HOUSE, WHITE OAK MILLS.
Built at a cost of $25,000, and maintained, with the exception of 20 per cent. of the teachers' salaries, by the company.

One of the year's greatest sanitary triumphs was the practical extermination of mosquitoes by the Men's Welfare Worker. He was a young man of Y. M. C. A. training, who did not mind wading knee deep thru the marshes, spraying everywhere with the deadly kerosene and noting results. Five sprayings, about monthly from June to October, rid the people of nine-tenths of the mosquitoes. The results were quick and sure. The

oil not only killed the wigglers as they came up to breathe, which they must do every minute, but prevented the deposit of eggs or destroyed them if already deposited.

Of winter nights the mosquito exterminator kept the rooms of the Men's Welfare Cottage well filled with men and boys in educational classes or reading or playing games. In the summer he would take the stereopticon, set up his screen out of doors and give illustrated lectures and travelogues. Sometimes five hundred or more people would be seated on the grass, the more fastidious being provided with reserve seats in the way of newspapers to sit on. Sometimes as the beginning of the week's holiday, the operatives of each department have gathered to present really handsome presents to each boss and to receive in turn liberal packages of candy, nuts and fruits. The company gives each of the nine hundred families a turkey and to each boss a gift check of from $10 to $50. To every worker, young or old, that has not missed a single day, holidays excepted, a $5 gold piece is given. Then operatives, bosses and superintendents join in presents to the officials. When the whistle blows they all come streaming out with beaming faces and Christmas hearts. The long year of hard work is ended, but it has been a happy year, unbeset by labor

EACH GIRL IN THIS PICTURE MADE THE DRESS SHE HAS ON.

tired workers sat on their porches up and down the street, cooling off before going to bed, he would use the talking machine with sweet old ballads and the gospel songs the people love. Sometimes he took the boys on long rambles in the woods, with a camp fire and supper cooked over the coals.

Christmas is the time when industrial peace and good will fairly shine forth. Long before the big whistles signal the agitations or grumblings or discontent.

And what of the man that has footed the bill for welfare work? Well, he has an unusual dividend, the genuine love of his people, and the other dividends for which the world is clamoring so loudly have not suffered. Several of the departments in his mills have run at almost 100 per cent. efficiency and some have actually gotten more work from the machinery than it was built to do. Some

A MEN'S BIBLE CLASS.
On one of the hottest days of last summer 700 of a total village population of 3,000 attended the Sunday School session.

Southern mills run as low as 46 per cent. efficiency, chiefly because their people will work but a few days a week. Other mill owners are reaping a similar reward. Thomas F. Parker, of Greenville, S. C., must share with Mr. Cone the honor of being a pioneer in this practical philanthropy, tho he works thru the Y. M. C. A. and Y. W. C. A. Many others are now following his lead in efficient use of these organizations; while in the North and West they are serving all sorts of factories, mining and lumber camps. The brightest aspect of the industrial world today is that it is waking up to the fact that it pays in peace as well as material gain to treat its workers as well as it does its machinery.

RICHMOND, VIRGINIA.

Castle Giant

BY HARRIET PRESCOTT SPOFFORD

It loomed on the far horizon,
  Monstrous and evil and dark,
The moat at its base was blackness
  And its towers were stern and stark.

What horrors those walls encompassed,
  What bones of forgotten kings,
What soundless depths of donjons,
  What shadows of unknown things!

But it lay in the way before him—
  Should he pause? Should he turn aside,
Where into soft flickering sunlight
  The path ran fair and wide?

Nay, nay; let him press straight forward,
  Horn at lip, and sword at wrist—
And lo, the terrible castle
  Is a rolling cloud of mist!

NEWBURYPORT, MASS.

The Fairbanks Incident

BY A ROMAN CORRESPONDENT

THE American College at Rome is an important seminary, in which are trained upward of one hundred youths for the Catholic priesthood in our country. Up to the creation of the Apostolic Delegation at Washington, the rector of the American College was the chief agent of the American Episcopate in Roman matters, such as naming of bishops, care of Peter's Pence, dispensations, etc. All these have now practically ceased. The rector's work therefore is chiefly in attending functions, ecclesiastical and social. The inside work of the college is done by a vice-rector, who looks after the order of the house, and a spiritual director, whose aim is the training of the students. In this test the principal textbook is "Christian Perfection" by the Jesuit Rodriguez—a work written for Jesuit novices, and so ill fitted to train secular priests or nuns that Bishop Ullathorne of Birmingham, England, forbade its use in his diocese. The present Bishop of Cleveland, Ohio—Dr. Farrelly—held this unusual office for upward of a score of years. In consequence, the rector is very much free for outside work, chiefly social. The ever growing number of Americans who visit Rome and wish audiences with the Pope makes on the social zeal of the rector a very generous demand.

At the present time Dr. Kennedy, now a bishop *in partibus infidelium,* is fully up to the mark and very obliging to all applications of his countrymen. It is no surprise then that ex-Vice-President Fairbanks should ask Dr. Kennedy to arrange an audience with the Pope. This was settled for Monday, February 14. At the same time Dr. Kennedy invited our former Vice-President to lunch at the American College and address the students; this for the previous day, Sunday. On the same day, however, Mr. Fairbanks promised to give an afternoon address at the American Methodist Church.

So far all was fair sailing. When, however, the honored guest turned up at the American College, Bishop Kennedy took him aside and told him that the Vatican would not receive him on Monday, unless he canceled his Sunday's engagement with the Methodists. The Vice-President refused to do so, on the ground that his engagement to speak to the Methodists was made beforehand. Meanwhile all lunched and Mr. Fairbanks wound up the glad morning for the students by an address on Patriotism. Afterward, Bishop Kennedy again brought up the Vatican visit. It seemed clear from this that the telephone between the American College and the Vatican had not been idle. Fairbanks, to his honor, refused to disappoint his own countrymen, whom he addressed that same afternoon. The Vatican canceled the Monday engagement, and the former Vice-President of the United States left Rome without any Papal audience.

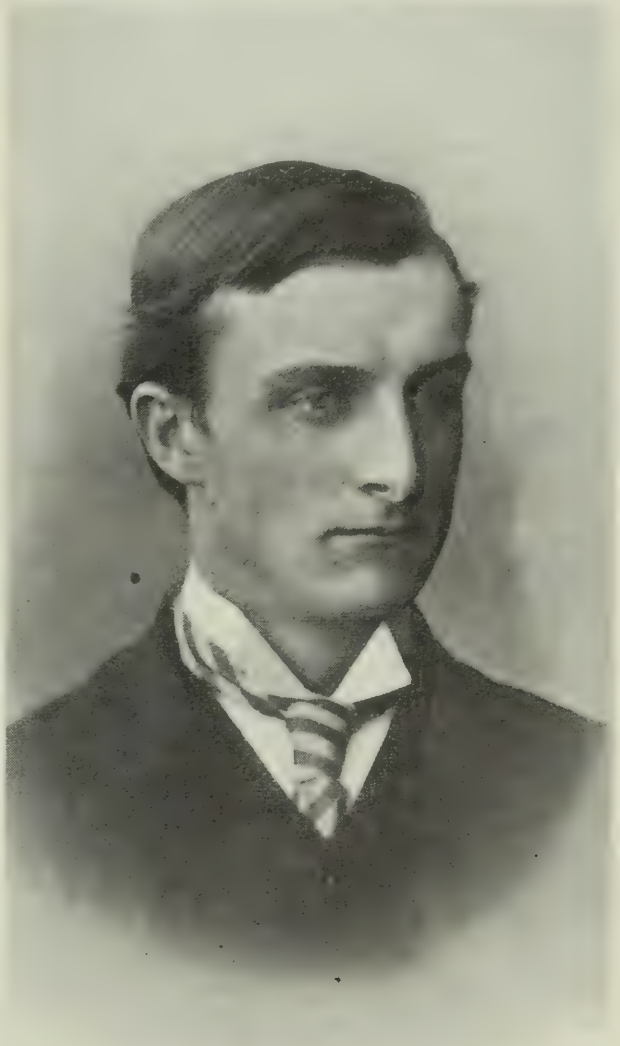
When Giuseppe Sarto was Primate of Venice he was on good terms with the Royal family, the despoilers of the temporal power. As Pope he never hesitates to make such use of the House of Savoy as suits his own purpose. Two regiments of Italian infantry fill the square of St. Peter's during all Papal functions in that great basilica. The telegraph of Italy is at the Vatican's free disposal. There is always an understanding between the Vatican and the Quirinal in naming the bishops of Italy, with the sole exception of the Pope himself and the six suburban bishops surrounding Rome. The Palatine clergy and churches are immediately subject to the King, who names all the pastors of the latter and the members of the former. Curious, too, that the Vatican would object to an address to American Protestants, while it made no protest to an address by the same speaker to American Catholic clergymen. Mr. Fairbanks might speak in a Catholic seminary, but not in a Protestant church. He might teach patriotism to

aspirants to the priesthood, but he must not say anything on any subject to a congregation of his own Protestant countrymen. There is no record that the Pope objected to a discourse which was essentially heretical in a Catholic seminary. For Mr. Fairbanks's idea of patriotism, like that of all his fellow countrymen—a free Church in a sovereign State—such idea is heresy pure and simple.

This treatment of Vice-President Fairbanks may be meant as a warning to his former chief, ex-President Roosevelt, who will also visit Rome. It may also be intended for the American Episcopate, who are not over strict in matters of public meetings, not hesitating to appear on platforms with non-Catholic bishops and clergymen. It may even be a distant echo of Vatican dissatisfaction anent the Parliament of Religions at Chicago in 1893.

This occurrence might suggest to Americans that they avoid Papal audiences. At best they seem stupid. A crowd, as many as sixty, line up, the gentlemen in evening dress, the ladies in black, while the Pope passes along, nearly always in silence, save the Latin blessing, with the irregular zig-zag of the sign of the Cross. It would cut off one large source of that income which visitors to Rome pay so freely.

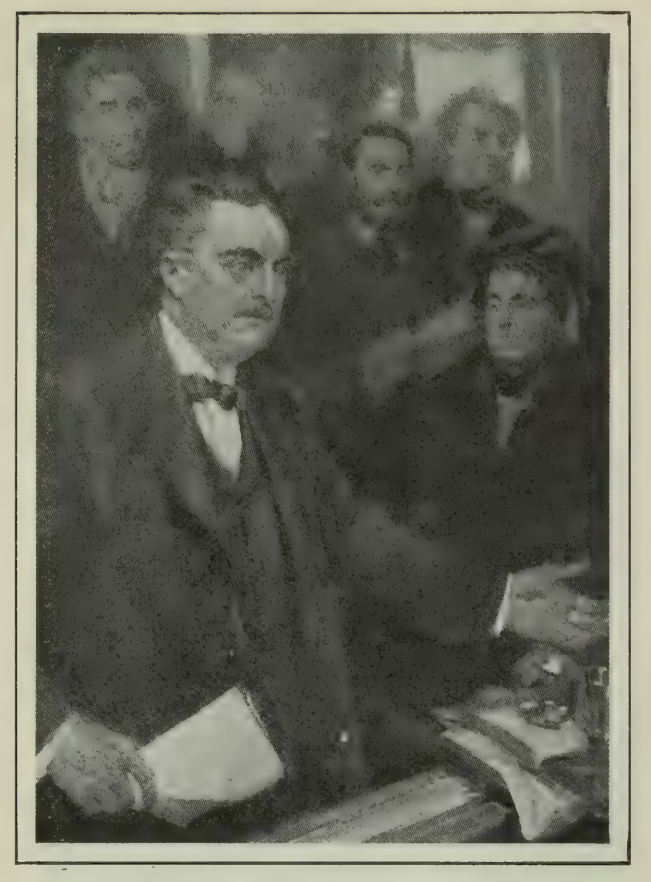
The Coming of the New Parliament



BY JUSTIN McCARTHY

THE new Parliament has not opened as I begin the writing of this article. Meanwhile the public is left to beguile the time as best it can by indulging in all manner of conjectures as to the possibilities of the Government's retaining its tenure of office or the probabilities of the Opposition contriving to become a Government once again after the enforced experiment of another general election. The Conservatives of all orders, and those whom I may perhaps describe as the Whigs, for want of any more appropriate form of description, seem still to be much suffused and enlivened by the hope that the Government majority is not strong enough to sustain them against the perils of their position and especially against the perils brought by the fact that the majority in any case depends so much on the votes of the Irish Nationalist party and the British Labor party. Now, I am quite willing to admit that there might during the course of a protracted session or of two sessions arise some questions on which the Irish Nationalists and the British Labor party might not see their way to give their absolute adherence to Mr. Asquith and his Cabinet, but I do not see how any such occasions would be likely to arise during the course of the opening session. If, on the other hand, I were to be asked whether I think it is likely that the present Liberal Government would be able to hold out in possession of power during the whole allotted time of a Parliament's existence, I must say that I do not feel much confidence in its possession of such a principle of vitality. Much eager and animated discussion is still going on as to whether the Government will deal first with the Budget or with the veto of the hereditary chamber. To me it seems only natural and at the same time reasonable to hope that the veto of the House of Lords will be put absolutely out of the way before Mr. Asquith and his colleagues can undertake any other effort at legislation. Suppose they began the coming session by bringing forward the Budget, what would there be to prevent the Peers from throwing out for a second time the financial project which they were able to throw out without possibility of prevention only a few months ago? I assume, therefore, with confidence that the Government is fully prepared to begin the work of the new session with the struggle against the veto of the

Peers on financial questions, and will then pass on to deal with the conditions of the Budget. The Government has assuredly a majority amply strong enough to carry out the national policy which would deprive the House of Lords of all power over the disposal of the national finances. Then will come the time for testing, first in the House of Commons and afterward, if necessary, by another appeal to the national decision, whether Mr. Lloyd-George's Budget is the natural outgrowth of England's financial development.



In the meantime the Prime Minister, the Chancellor of the Exchequer, and most or all of their colleagues, have already returned to their local quarters. Many or most of these hard-working statesmen had been enjoying a much-needed holiday in some of the regions of southern France, and Mr. Asquith, who was one of these, extended his period of rest and relief as long as it could be fairly spread out. The newspapers in London, and, indeed, thruout the provinces, enter into much discussion as to how far King Edward and his Prime Minister are in thoro understanding with regard to the policy which the latter intends to bring first under the consideration of the House of Commons. The general impression seems to be that Mr. Asquith has been in full and frank communication with the King on the whole subject. King Edward has long since won for himself and thru all political parties the credit of being a thoroly unprejudiced and fair-minded sovereign in his consideration of ministerial arrangements, and Mr. Asquith is not in any sense the sort of man who would be likely to plunge into any course of sudden political action likely to bring him into misunderstanding with so judicious and even-minded a sovereign as the present.

We hear already some very confident statements as to changes about to be made in the composition of the Ministry. No one of these changes is believed to be caused by any dissatisfaction with this or that statesman about to be transplanted to a new position, but we were given to understand that in every instance the change is the result of a common agreement and a sense of common and general advantage. Thus, we are assured that Mr. Winston Churchill is to become chief secretary to the Viceroy of Ireland, in the room of Mr. Birrell, who is expected to follow Herbert Gladstone as Home Secretary. It seems to me that Winston Churchill might safely be regarded as a rising statesman most likely to find a cordial welcome in Ireland. His gifted

SIR EDWARD GREY.

father, the late Lord Randolph Churchill, all too early removed from that political field which he loved and adorned, was ever most friendly in his dealings with the Irish cause and the Irish National representatives during the years when he sat in the House of Commons as leader of the fourth party. I remember those years well. We, the Irish Nationalist members, with Parnell then as our leader, sat in close compan-

From the *Illustrated London News.*
THE LEADER OF THE IRISH NATIONALISTS—JOHN REDMOND.

ionship with Lord Randolph and his comrades on the benches of Opposition during the long struggle which Parnell and his followers carried on against the Liberal administration.

The observer from outside the immediate world of Westminster's political atmosphere may perhaps be inclined to believe that there are no such splendid figures to be seen representing British statesmanship just at present as we used to contemplate during quite recent chapters of our history. We have not had for a long time a Gladstone, great statesman and great orator alike, greatest orator and most popular leader of the House of Commons for several generations. Then there were the Earl of Derby and Benjamin Disraeli, two men the like of whom the Tory cause has not had in our days. Perhaps it is as well for what may be called in a sense the dignity of history that no such leaders should have been thrown away on the condition to which that Conservative cause has been brought by the recent guidance of the House of Lords. If, however, there should come out of the present crisis a complete change in the constitution of the second chamber, it is quite to be expected that a new chapter of history may open for the aristocracy of the coming generation. In the meantime it is evident that the absorbing interest of the vast majorities of observers is centered on the future of the hereditary chamber, and the best and readiest way of getting rid of its power of veto over the system of taxation based on the principle of popular representation.

It will probably have much interest for most of my countrymen in the United States and in Canada if I direct their attention to the fact that there has just been a full-page illustration in *The Illustrated London News* containing as its front and most conspicuous figure a likeness of John Redmond, the present leader of the Irish National party in the House of Commons, and of many other figures beside, around and behind him. A descriptive paragraph printed beneath this illustration tells us:

"Owing to the numerical closeness of the two bigger political parties in the new Parliament, he may find that he and his little band of Nationalist followers are masters of the situation—the tail, in fact, that wags the dog."

Then the writer goes on to say:

"In the background, as shadows of the policy of the past, are Mr. Redmond's political 'ancestors'—if I may use such a term of a group which includes a living politician, Mr. Justin McCarthy. Reading from left to right, they are Henry Grattan, who, first as a member of the Irish Parliament, and later as a member of the Imperial Parliament, was one of the first bitter opponents of the Union (died 1820); Mr. Justin McCarthy, who upon the fall of Parnell became the chairman of the Irish Parliamentary party; Mr. John Mitchel, the leader of the Young Ireland movement, who was sentenced to fourteen years' banishment to Van Diemen's Land, but escaped to America, returning many years afterward to Ireland, where he was elected member for Tipperary in 1874, but was declared ineligible; Mr. C. S. Parnell, the famous leader of the Home Rule party from 1880 to 1890; Isaac Butt, who inaugurated the modern home rule movement in 1870; and Daniel O'Connell, leader of the repeal agitation in 1841, who was imprisoned for sedition and conspiracy."

I may notice the fact that the artist

who produced the likenesses, which are many or most of them very good, and the writer of the descriptive paragraph, both forgot to introduce at least one very important and characteristic figure, that of John Dillon, himself the son of a great Irish patriot and who succeeded me as leader of the Irish party when I retired from that position in 1896 owing to broken health. The author of the paragraph seems also to have a peculiar way of arranging dates, as, for instance, when he brings John Mitchel later in the list than myself, altho there, of course, we must bear in mind that he is reading the portraits from left to right as they show themselves in the illustration. The whole arranging of the figures seems to me somewhat bewilderingly constructed, but then they are, we are told, "shadows of the policy of the past," and shadows can hardly be expected to move in chronological order.

London has not during the last month been shone upon by any light of literature which illumined its macrocosm or its microcosm, as its observers might choose to call it, with any especial beams of brilliancy. We are indeed rather early just yet for the book publishing season to enter into its fullest and brightest activity. The opening season of the year begins its distribution of literature about this time and keeps on making its outpour for some two months yet to come. The books we get during that season are still indeed and have been for many recent years chiefly novels of the modern day and romances of any day to which their authors feel drawn by natural inclination. Then, of course, there are also biographies and histories and personal memoirs, and every now and then there comes some new venture into the regions of poetry. This year, however, we do not seem to have been illumined or bedazzled, as the case might be, by any streamings of meteors in the poetic

FOREIGN AFFAIRS, THE COLONIES, AND THE BOARD OF TRADE:
Sir Edward Grey, the Earl of Crewe, and Mr. Winston Churchill leaving Downing Street together.
Unconventional photograph from the *Illustrated London News*.

or literary sky, and altho the year has not indeed advanced any great distance, yet most of us can recall to memory many years which were ushered in by a far greater epoch-making illumination.

I have just heard that some of the reports of ministerial changes which I have already mentioned in this article are inaccurate. It is now positively and authoritatively stated that Winston Churchill has been created Home Secretary in the room of Herbert Gladstone, who is appointed Governor-General of the new colony of South Africa. I feel certain that Winston Churchill will make his appointment quite welcome to the English public in general, but at the time when I heard that he was to be made secretary to the Lord Lieutenant of Ireland it struck me as one of the interesting freaks of history that a participation in the government of Ireland should now be given to the son of the man who had lent countenance and even some help to Charles Stewart Parnell in his work of obstruction to the Liberal Ministry of that day. Of course, Lord Randolph Churchill was never a Home Ruler, but still in his days of parliamentary obstruction he often became what would be called in slang phrase a pal of Parnell's in his work of obstructing the Liberal Government, and now, behold, here is his son, Winston Churchill, becoming a member of a Liberal Government pledged to the concession of Home Rule.

London, England.

The Differences at Princeton

BY A FRIEND OF PRINCETON

WE are growing accustomed to the exploitation of Princeton University as an experimental or testing ground for educational explosives. Such innovation is startling, however. During the administration of Dr. McCosh reform and advance proceeded in that place with slow and equal step. He left it fully abreast of his times, having introduced a partial elective system and organized graduate instruction on a high plane. It was by him that the rage of anti-fraternity agitation was soothed, and the existing social clubs substituted for that vacuum which nature abhors in social as well as physical life.

His successor presided during a period of quiet growth and consolidation, accepting existing conditions, accumulating endowments, and presenting to the public, with his magisterial power, the ideals of high, intellectual life and of Princeton traditions. The scope of graduate instruction during his term of office was considerably enlarged and the number of graduate students materially increased. This occurred to such an extent that in Princeton, as in the other universities of the country, the status of the graduate student, the organization of graduate life, and the relation of a semi-professional instruction to the purely cultural training of undergraduates claimed the attention of the ablest men among professors and trustees. With the advent of President Wilson, cautious announcement was made that the graduate students of Princeton were to be recognized as an integral portion of the university, that their dignity as disinterested scholars was to be emphasized, and that appeals would be made for buildings and endowments proportionate to the importance of so great an advance.

It is very recent history that in due time this plan was completed, in very large measure under the fostering care of ex-President Grover Cleveland, then chairman of the trustees' committee in charge of the graduate school. The details of the contemplated establishment were such that he was fully convinced it would "conserve the advanced scholarship which our nation needs in every branch of useful activity." He could not "doubt that the way will be open for Princeton to occupy with honor and glory the unique field which, as a pio-

neer, she has entered upon. Speaking for myself, I want to say to you" (this letter was written to the dean of the graduate college) "that I have never been enlisted in a cause which has given me more satisfaction or better feeling of usefulness."

But it soon appeared that the life and instruction of the undergraduates were of greater immediate concern to President Wilson and the circle of his friends than the advancement of the highest learning in Princeton. The educational world is familiar with the inauguration of the preceptorial system by the united and unanimous action of trustees, faculty and graduates. The expense was enormous, but it did not dismay the alumni, who came to its support with a liberality unprecedented. They have funded a portion of the requisite expense, and continue, by annual contributions, to make good a very large deficit. The system is still on trial. Its success seems exactly proportionate to the number of able and devoted young scholars who can be secured as preceptors for a small salary.

With this costly experiment still awaiting results, the next proposed reform was one demanding even larger resources. It was known as the quadrangle system, and appeared to many as a plan for the compulsory association of students with little or no regard for their own desires, in surroundings with the forming of which they had nothing to do, and in which, therefore, they could feel no interest. The idea took shape without knowledge or discussion in either faculty or graduate circles generally, and when finally announced, met with such a storm of disapproval that it was judiciously withdrawn, at least temporarily. But it left behind, unfortunately, a residuum of distaste and suspicion. Meantime, a generous bequest had put at the disposal of the trustees a large sum of money; and this for a graduate college or dormitory on terms which an overwhelming weight of legal opinion has declared to leave the legatees absolutely untrammeled.

Almost immediately the lurking dissension among the authorities came to the surface, and during four years the question of reversing ex-President Cleveland's plan to locate the graduate school somewhat aside from the heart of undergraduate life has been discussed with considerable acerbity. The original plan had commended itself to President Wilson; at the present moment he declares it to be incompatible with university ideals, thus making a complete about-face in his attitude. What may be called the bursting of an educational storm was made known to the public at large when Mr. Procter came forward in support of the Cleveland plan with an offer of half a million, mostly for endowments, on condition that others give a like sum. This offer the trustees formally accepted and they have never declined it. It was withdrawn when President Wilson's supporters in the board of trustees gave the generous would-be founder to understand that his action was so embarrassing as to approach something like *lèse-majesté*.

The matter has been widely discussed in public prints far and near thruout the country, but all the information obtainable leaves interested readers in painful vacillation and doubt as to what may be the principle or ideal violated or shattered by the actual and accepted gift of $300,000 and the proposed gift of $1,000,000 more for the advancement and support of the highest learning in an American university. Graduate students are, for the most part, far from opulent. They were to be housed as are undergraduates. Those of limited means were to be supported by fellowships in proportion to their promise and ability. The best professors obtainable were to be put at the service of those students who could profit by their instruction. It is perhaps useless, but it is highly interesting, to speculate as to what underlies this great convulsion in an old and respected institution, whose trustees, faculty and graduates were recently renowned for their union and harmony, but who now present the sad spectacle of disunion and bitterness.

It cannot be that this is a conflict between democracy and plutocracy, for the Cleveland plan, supported by Mr. Procter, especially provides for the complete democracy of the life and surroundings of the graduate students. In nothing do the rich so exhibit their essential

democracy as in foundations for opening careers to those who have talent. The bone of contention cannot be the site, for one of the sites which President Wilson had chosen and personally urged upon Mr. Procter for his approval was but a few hundred feet less distant from Nassau Hall on the east than the one formally chosen by the trustees and preferred by Mr. Procter, on the west. It cannot be said that the plan which the most unaristocratic of democratic Presidents "felt would conserve the advanced scholarship which our nation needs in every branch of useful activity" violates either national or university traditions. Every great educational institution expands in grounds, in administration, and, normally, in a federal way. There is honest ground for difference as to whether professional or semi-professional students, which graduates are, should live in intimate relation with the undergraduates of our older universities. We believe that we state correctly the opinion of those who have had most to do with graduate students when we say that as yet the overmastering influence in older universities is that of undergraduate life. If this is true, the coming development of the highest American scholarship depends upon safeguarding the leisure and labor of semi-professional graduate students from the disturbing influences of that attractive and fascinating life during which our lads are blossoming into manhood under the influences of study mainly or altogether cultural.

Excluding these conditions, then, as untenable, and considering the tone of the university publications on the subject, we are forced to believe that the truth is largely a contest for autocratic control; and, if this be true, the sooner harmony is accomplished and a return made to normal evolution the better. The world cannot dispense with such princely munificence for educational purposes, especially when, as in this case, it provides an added safeguard to our traditional democratic attitude. Men pass, but institutions go forward with the nation and the race. A single generation may not retard its progress.

We must deplore one perversion of this question; that which seeks to find in the association of scholars, young or old, any parallel with political organization. President Wilson has had kindly mention as a possible leader of one of our great parties. It is deplorable that, for reasons of political strategy in his own State, and in even wider circles, these latest turmoils in Princeton should be used by mistaken friends as political capital. There is no finer indication of American sense and disinterestedness than the steady elimination from politics of the great State universities in the West. Shall we see, without a protest, a reversal of such splendid form in one of our Eastern institutions of learning, a great and venerable university, famous always for its intellectual and social democracy?

New York City.

God's Gifts

BY JULIA B. CADY

God gives us joy that we may give,
He gives us love that we may share,
Sometimes He gives us loads to lift
That we may learn to bear.

For life is gladder when we give,
And love is sweeter when we share,
And heavy loads rest lightly too,
When we have learned to bear.

Suez and Panama

BY POULTNEY BIGELOW

[This is Mr. Bigelow's second article, written for THE INDEPENDENT, on his trip around the world. The first letter appeared in our issue for February 3, 1910.]

MY friend the German archeologist tells me that Chinese fleets floated fluently thru the Suez Canal one thousand years before the birth of our Saviour, and that for a thousand years in our era merchants traded thru this waterway, connecting Canton and Calcutta with Constantinople and Cadiz, by means of Arab dhows or the Boughi boats which are still the marvel of the great eastern Malay Archipelago. Also do we learn that Cleopatra used this canal in making her escape after the naval disaster off Actium. All of which inclines me to think that in matters hydraulic there's nothing new, and in matters of the Panama Canal our wise course is to learn from our engineering forbears—be they Ptolemy's, Muhamed's, de Lesseps or John Bull.

Of John Bull at Suez I can speak but as reflecting what a man can see who is here for the third time in twelve years—and in that interval, short as it is, much is obviously indicative of improvement. Port Saïd, which was but a bundle of hutches when the canal was commenced, is now a beautiful city of nearly 50,000 people, with broad, clean avenues, modern sanitation, public buildings and private residences suggesting permanency and honest administration. At the center a charming little park, with a monument to de Lesseps as beautifully executed as it is richly deserved. Each day Suez grows in beauty, health and commercial importance. The houses have not that shabby, ephemeral appearance that marks those of Colon; here they are built as companion pieces to the Pyramids.

Suez is now far more than a mere canal entrance for steamers to stop a few hours and coal before proceeding to the Red Sea and beyond. It has become a seaport independently of the canal. Dredging is the chronic exercise of the authorities, not merely deepening and widening the existing canal line of 80 miles, but cutting out huge basins, where fleets of merchantmen can load and unload their wares from East and West. The shipping grows faster than the dredges can make berths. The town grows more rapidly than the camels can travel who gently come from the shore in long caravans, laden with sand which they spill from their backs in order to raise the land for the prospective house builder. "Aïda" was sung shortly before the Franco-German War of 1870 in order to celebrate the completion of this great canal; but little did even the great dreamer de Lesseps dream that what he accomplished was but the beginning of a great work only now dimly outlined to prophetic eyes. There was no thought of linking Cape Town to Cairo in 1870! Today they are projecting here a vast railway terminus, in anticipation of a Port Saïd that shall be to Central Africa what San Francisco is to Western United States.

About the streets of Port Saïd I strolled with a French engineer on the

canal works; his father worked here before him and so did his grandfather. He is happy here. He tells me that the British protectorate is just and gentle, and that Jew and Gentile, Mahomedan and Christian, all regard it, if not perfect, at least a vast improvement on anything hitherto experienced by them or their fathers. "Not a revolver has been fired here in my time," said my French friend, to impress me with his opinion that Port Saïd was perfectly safe, night or day; that crime was rare or non-existent.

When first I visited this place it was a byword for wickedness, a refuge for outcasts and criminals; today it is clean, law-abiding and prosperous. What is the secret? Nothing but plain old Bible teaching. The Briton has planted the seed of justice in Egypt, and his reward is in sight.

Prophecy is dangerous; likewise analogies. But danger has its charm, and therefore let me add that Suez and Panama suggest kinship in that each is in tropical climate and each is a resort of mosquitoes; each lying low and requiring much filling in and draining. But de Lesseps at Suez was perpetually hemmed in by not owning the land adjoining his enterprise. We, on the contrary, can do what we please. De Lesseps used the local Arab or Egyptian labor; we use the local or West Indian negro. We have immense advantage at Panama in the Chagres River, which not only can provide an inexhaustible supply of pure, sweet water for the cities of the future, but, when properly dammed in the upper reaches, affords endless electric motor power.

Colon is destined to be another Port Saïd, a great port of call, the terminus of a great railway that shall unite Cape Horn with Colon, as Cairo now with Cape of Good Hope. For this great commercial capital we are now laying foundation. Now is the time to reserve the water front as a park for rich and poor. Now is the time to lay out broad avenues; open places at frequent interval. Above all, now is the time to anticipate the gamblers who grow rich on the unearned increment of land value—let the Government as paramount landlord make wise laws against overcrowding and against land speculation.

CEYLON.

Beyond the Gates

BY S. H. M. BYERS

We often wondered, she and I,
What thing might lie behind the wall,
Whose gate stands open when we die,
Then sudden, shuts beyond recall.

We longed and looked, and dear ones past
As if on wings in viewless air.
No path they left, nor shadow cast,
They sailed and sailed, we knew not where.

Sometimes when twilight gathered round,
Each spake to each when lamps were low,
And never yet God's answer found;
We only said, We do not know.

Then came a promise each to each,
Our thoughts still on the gate divine,
Beyond the wall, if one has speech,
Who enters first shall give a sign.

One summer day she left my side,
A struggle and the angels won;
And that sad gate that stood so wide,
I heard it close and all was done.

And then I waited for the sign;
If love could pierce the mighty wall,
Then she would speak, this lost of mine;
I listened, but no word at all;

Till once, with Nature all in tune,
I walked beneath the myriad stars;
The breath of night was on the June,
And God seemed letting down the bars.

And all at once I seemed to hear
Celestial music in the sky,
And her sweet voice, so soft and clear;
And then I knew we do not die.

ST. HELEN'S, DES MOINES, IA.

Literature

Pragmatism and Anti-Pragmatism

To those who have been deterred by lack of time and opportunity or by other reasons from following in the various philosophical journals the discussions of pragmatism which for the last few years have filled so many of their pages, the collection of essays by Professor James on *The Meaning of Truth*[1] will be found convenient. But those who wish an "introduction" to the subject should first read his earlier volume, "Pragmatism," of which this is the sequel, since it is much easier for the layman to understand him when he is stating his own case in his own way than in the present volume, where he has to adopt the more scholastic language of his adversaries, the abstractionists. But for all who love a good fight—with no blood flowing—this book will be attractive, for Professor James wields a sharp sword, altho he does not slash about so savagely with it as Professor Schiller. He is chiefly concerned with explaining and defending against misinterpretations the definitions of truth he put forth in "Pragmatism":

"True ideas are those that we can assimilate, validate, corroborate and verify. False ideas are those we cannot."

"The truth of an idea is not a stagnant property inherent in it. Truth happens to an idea. It becomes true, is made true by events."

"The true, to put it very briefly, is only the expedient in the way of our thinking, just as the right is only the expedient in the way of our behaving. Expedient in almost any fashion, and expedient in the long run and on the whole of course; for what meets expediently all experience in sight won't necessarily meet all further experiences equally satisfactorily. Experience, as we know, has ways of boiling over, and making us correct our present formulas."

That is, pragmatist and anti-pragmatist do not differ so much as to the meaning of truth as they do in regard to what it attaches to. According to the pragmatist truth is not a property of objects; it is a property of our beliefs; it is that property which makes certain of our beliefs profitable to us as individuals and as a race. In these controversial papers directed against various adversaries Professor James is most emphatic in his refutation of two common misconceptions—"slanders," he calls them—(1) that the pragmatist denies reality, and (2) that he uses mere personal gratification as the test of truth, regardless of agreement with the opinions of the rest of the world and consistency with the rest of his own opinions. The controversy is, in fact, primarily over what shall be the battleground. It is like a fight between a lion and a shark, each trying to drag the other into its own element, the pragmatist all the time insisting on concreteness and the anti-pragmatist on abstractness as the true environment of the philosopher.

Professor Schinz[2] objects to pragmatism on the ground that it is devised for the purpose of bolstering up religion and protecting democracy, as in his opinion a general knowledge of the real truth about the universe would be fatal to both. So far from making usefulness the test of truth, as the pragmatist does, he holds that pragmatism may be useful, but it is not true. Or to quote his own words:

"Pragmatism will triumph, but because it is false, not because it is true; for from the social point of view the false is preferable to the true."

"How is it in America? The intellectual class does not reproduce itself; immigrants, sprung from inferior classes, overspread the country more and more. For this population and for that of the civilized world of the future, scientific determinism would be dangerous, such a population would make a bad use of the truth. Truth has nothing to do with life."

Professor Schinz believes in an intellectual *élite* to whom may be permitted the knowledge of things as they are, but for the masses, who unfortunately are prone to carry their ideas into action, the truth cannot be allowed full sway.

[1] THE MEANING OF TRUTH. A Sequel to "Pragmatism." *By William James.* New York: Longmans, Green & Co. $1.25.

[2] ANTI-PRAGMATISM. An Examination into the Respective Rights of Intellectual Aristocracy and Social Democracy. *By Albert Schinz.* Boston: Small, Maynard & Co. $1.50.

but must be modified and controlled by expediency, opportunism and pragmatism. Curiously enough, he cites in support of his aristocratic theory, not only Mallock, author of "Aristocracy and Evolution," but also W. J. Ghent, whose satire on prevailing social tendencies, "Our Benevolent Feudalism," was first published in THE INDEPENDENT. We wonder which of these two, Mr. Ghent or Mr. Mallock, will feel most disgusted at being thus classed with his often antagonist.

Professor Schinz's method of attack is to pluck off the leaves of the artichoke one by one. He detaches from the pragmatic philosophy all its intellectual elements, until there is left a mere irrational stump that nobody would own. He deprives it of its adherents by questioning in turn the genuineness of the pragmatism of Poincaré, of Dewey, of Schiller, and even of James. As compensation for thus depopulating the sect he pads out the roll of pragmatists with the names of dead people, Abelard, Thomas Aquinas, Pascal, Rousseau and Kant.

It is hardly fair to deny to the pragmatists the use of reason merely because they question the competence of formal logic to decide all questions. It seems to us more correct to look upon the pragmatic movement as essentially the carrying over into the fields of religion, ethics and sociology of the method by which modern science has won its unprecedented triumphs, the method of holding theories and conceptions as working hypotheses, temporarily useful in limited fields for specific purposes. This mode of thinking is adopted more or less by all scientific investigators and has been most clearly exprest by Ostwald and Poincaré.

But apart from its destructive criticism and its somewhat startling social philosophy, *Anti-Pragmatism* is of interest from its observations on the psychology of the American people in comparison with the French, for whom this book was first written. Professor Schinz is witty, well read and outspoken.

According to Professor James, the little volume entitled *What is Pragmatism,*[3] "for its clearness and good temper deserves to supersede all the rest of the anti-pragmatistic literature." This praise from an opponent is a sufficient recommendation of the book. It is a fair-minded exposition and criticism. The only fault we have to find with it is that Professor Pratt devotes more space than it is worth to the attempt to discriminate between the pragmatism of James, Dewey and Schiller. It is not so important to find out how much these men differ as on what they agree and why.

The Catholic Encyclopedia

THE *Catholic Encyclopedia,* which has now reached its sixth volume,* sets a high standard in articles of a statistical and geographical description. In this volume the articles on France, Germany and Geography are fine pieces of work, and, along with one or two other studies of similar character, lend a notable distinction to this sixth instalment of the great undertaking. In these days, however, geographical and statistical articles are of far less importance in such a work as the *Catholic Encyclopedia* than thoro, competent studies on matters of history and apologetics. And in just these vital departments the encyclopedia most grievously falls short. We cannot blame the editors for this. They must protect the work from the slightest suspicion of Modernism, and must therefore exclude a great deal that is now part of the very alphabet of critical studies. Here we have, for instance, an article on the Gospels—certainly the most important topic in the volume, and perhaps in the entire work. It is given three and one-half pages, while Gothic Architecture has sixteen, and a fearfully dry discussion of the theological technicalities of Grace has been favored with twenty. Obviously the momentous problems of Gospel study are not treated at all. The pity of it is all the greater, inasmuch as the author of the article is a splendid scholar, who could have done the work in a distinguished manner. It is not his fault that he has not done so. The Jesuit author of the "Genealogy of Christ" has produced an article which is a scandal to scholarship. The account of Gregory II of course makes no men-

[3] WHAT IS PRAGMATISM? *By J. B. Pratt.* New York: The Macmillan Company. $1.25.

* THE CATHOLIC ENCYCLOPEDIA. Volume VI—Fathers—Gregory. New York: R. Appleton Company. $6.

tion of that Pope's written permission to a man whose wife had contracted leprosy to marry again, on condition that he support the afflicted woman. Gratian, the father of Canon Law, was less ultramontane, for he scored Gregory for the crime of it. Instead of tiresomely endeavoring to minimize the Galileo affair, Father Gerard would have done better simply to transcribe the exact words of the two decrees in condemnation of the earth's orbital and axial rotation. That citation would settle the matter, but perhaps not in the right way. The strenuous attempts of the author of "Fetishism" to maintain that fetish worshippers hold the belief in one supreme God and Creator will appear rather weird to students of comparative religion. The following statement concerning Blessed Gerard Majella speaks somewhat vociferously for itself. This young man, we are told, "was favored with infused knowledge of the highest order, ecstacies, prophecy, discernment of spirits and penetration of hearts, bilocation, and what seemed an unlimited power over nature, sickness and devils."

We have left for the last our high appreciation of the article on Gnosticism, and our grateful acknowledgment of Father Robinson's study of Francis of Assisi.

Doctor Rast. By James Oppenheim. New York: Sturgis & Walton Company. $1.50.

This book is a collection of short stories, the scenes of which are laid in the gray tenement life of the East Side. A young Jewish doctor is the center of interest in them. He has come down among his people to do charity, but with an emotional sympathy and understanding characteristic of idealists of his sort his attitude is not that of the aloof "worker." He becomes a great heart armed with a lancet for the spirit as well as for the body. When "Rizpah," an ardent girl Socialist, comes to him to learn the truth about her eyes he tells her that she is going blind, but he gives her a new social sight which clears her impetuous mind of revolution and gives her a constructive kindness toward all classes. In the romance of the "Unborn" he teaches two lovers, one of whom has developed tuberculosis, the necessity of renunciation for the sake of posterity. On the whole, however, the stories have suffered by being massed in such close proximity. The note of them is too continuously that of hysterical pathos and the hero feels too intensely and acts too dramatically.

The Involuntary Chaperon. By Margaret Cameron. New York: Harper & Bros. $1.50.

There are two forms of writing which have been much tabooed lately by casual readers—that of the letter and that dealing primarily with travels. The author of this book has used both these forms and yet has succeeded in escaping the discursive style of the public letter-writer and the touring tone of the sightseer. The scene is laid in a number of the South American countries thru which the characters are traveling. The chaperon writes the letters, which are filled with many significant things about these countries next door to us, to whom, she complains, we are so indifferent, while all other nations are putting in sturdy thumbs.

A Political History of the State of New York. By DeAlva Stanwood Alexander. Vol. III. New York: Henry Holt & Co. $2.50.

Mr. Alexander has carried his history of New York politics into a third volume, which covers the years from the outbreak of the Civil War to the rise of Governor Cleveland. Seymour, Fenton, Tilden, Seward, Tweed and Conkling are the names that project themselves most forcefully from his pages. But they do not give to it any pronounced unity, and it is doubtful whether the history of the State of New York has any unity. Here, more than in most other States, the local field is the training course for politicians with national aspirations, and the statesman is forever looking over his shoulder to see whether he has gained the national audience for which he longs. The cross purposes of State politics and national interests have always been exceedingly intricate. Only a few New Yorkers have ever succeeded in leading order out of chaos, while these have been the great politicians who have risen thru their perspicacity to the

seats of the mighty. State history is a serviceable handmaid for the larger story of the nation. It needs to be written as Mr. Alexander is doing it, with all honesty and accuracy obtainable. There is no other book on New York that is as useful as this promises to be.

The Human Way. By Louise Collier Wilcox. New York: Harper & Brothers. $1.50.

These essays are a collection of solaces for those for whom the salt of life has lost its savor. They are for those who have, as the author puts it, discovered "the horrible discrepancy between desire and fulfillment"; who have lost the fire of endeavor and have only endeavor left. The book will appeal to the reflective reader of essays and not to one desirous of information. Such information as it possesses is of a limited and personal area. The style is epigrammatic, tho the epigrams are often debatable as to their truth. The essays are full of optimistic stoicism and lessons in common sense. They seek to teach us how to project ourselves into other relations and thus learn to forget or to bear with fortitude our individual disappointments.

Idealism as a Practical Creed. By Henry Jones, LL. D., Litt. D. New York: The Macmillan Company. $2 net.

Philosophy need not always be a dismal and laborious species of literature. Professor James can be light-hearted and debonair in the discussion of its most intricate dogma, as was Friedrich Paulsen among the Germans. Rudolf Eucken's pages are a continued oration, and high eloquence also characterizes these lectures of Professor Jones, of Glasgow, delivered before the University of Sydney. He will have his meaning clear, and he declaims his creed with the passion of a prophet and the fervor of a poet. Every idealist quotes Tennyson's "Flower in the crannied wall," but Professor Jones has a snatch of good poetry every few pages. In the table of contents it is a bit strange to note a chapter on Wordsworth and Browning following a discussion of freedom, but in the text the transition is not abrupt. He will have it that idealism is a practical creed for today, not because we need it, nor because we must believe something and might as well believe what we like, after the manner of the pragmatists, but because it is true. His lectures are good reading of a damp, raw evening, when the sticks in the fireplace refuse to burn; the stupidest fireman will make them burn after the elevation of such philosophy.

The American of the Future and Other Essays. By Brander Matthews. New York: Charles Scribner's Sons. $1.25.

Professor Matthews discourses pleasantly and instructively upon the English language, American manners, character and humor, spreadeagleism, simplified spelling and a number of other subjects more or less related. The magazine reader has seen some of these papers before; if he is appreciative of well-balanced judgments, of good scholarship and of a graceful style, he will be grateful that the papers have been collected under a single cover. Professor Matthews looks with equanimity upon the mingling of races in America—a race-blending that has caused not a little misgiving upon the part of those who set great store upon the preservation of the purity of the Anglo-Saxon breed. Fresh infusions of alien blood are desirable for a healthy stock, and no matter how great may be that infusion, we shall still retain our two best inheritances, the English language and the English common law. There is a happily drawn comparison of the characteristics of the French and the English languages, and a more detailed comparison of the French, the English and the American character. The subject of idealism in American character, a matter that has employed the pens of a good many French, German and Italian critics of America, is treated in a vigorous and commonsense manner. Idealism may have a practical side to it, and an Emerson or a Lincoln, tho with his gaze fixt on the stars, may yet keep his feet firmly planted on the soil. Robert Louis Stevenson's famous half-playful characterization of the French as candid, incapable of friendship, fairly honest and rather indecent toward

women; and of the English as hypocritical, capable of strong friendship, dishonest and fairly decent to women, is brought into requisition. But the author believes that if the various races were graded by points upon the essential virtues, the great disparities on particular counts would pretty nearly even up on the total. The book is printed as the work of a propagandist of reformed spelling should be, with many elisions of unnecessary letters; it is therefore strange to see, in the spelling of the middle part of Alfred Russel Wallace's name, the addition of a letter *l* which the scientist himself disdains to use.

Sir Philip Sidney. By Percy Addleshaw. With twelve illustrations. New York: G. P. Putnam's Sons. $3.50.

Mr. Addleshaw's *Sir Philip Sidney* is a very readable book—readable because the author has made himself variously acquainted with the scandals of Elizabeth's time; because, moreover, he has rather industriously collected a few facts which, with a plentiful addition of inference, almost persuades us that Sir Philip must have got spots of the prevailing pitch upon his immaculate garments. Almost; not quite. There is a growing number who think that, pitch being a product of Nature, no man, not even a Sidney, can be wholly a man without some of it concealed about his person. Mr. Addleshaw accordingly finds the pitch, just where he expected to find it, in Sir Philip's religion—too austere; in his politics—tainted with an unnatural hatred of the much maligned Catholic Church; in his morals, which, of course, must have been correctly depicted in his sonnets, devoted to "Stella," or Lady Penelope Devereux under the disguise of "Stella." It is true that Sir Philip, as a boy, was in Paris and witnessed the St. Bartholomew massacre. But, according to Mr. Addleshaw, Calvinism, too, abounded in pitch. So did Lutheranism. Protestantism was very, very wicked, and Sidney was bigoted. Catholicism was by no means so bad as it was painted. The Jesuit, too, was particularly misunderstood. "No set of men," says Mr. Addleshaw, "can show so splendid an army who stood up for all that was good and right." There is "nothing in the evidence against them much more substantial than a soap bubble," he tells us. With Philip of Spain removed, so his argument runs, Catholicism in those days would have had hardly a seamy side at all. William of Orange did not find it wholly so in the Netherlands; nor Coligny in France; nor does Parkman so paint it in Canada. And even Mr. Addleshaw occasionally forgets. He falls foul of himself as a critic. Sir Philip had undoubtedly seen the Lady Penelope and perhaps fallen in love with her when she was a maid of twelve, and perhaps he would have married her when she was older, and so have made happy her father, the Earl of Essex, who died desiring the match. He may—easily and most naturally; it is very human—have found his love for her not diminished by time, nor by her marriage to a man to whom she was not very faithful. But a *liaison* with her in those later days—that is another thing. And the author brings to bear upon the question no new facts. He settles on the *liaison* on the strength of that beautiful exercise in Elizabethan verse, "Astrophel and Stella," known and discussed by a few friends of Sidney during his life, but published only after his death. Our author argues that the sequence of sonnets, hardly to be surpassed in their quality of "notable images" and in their sense of reality, must have stated the exact truth and spelled out a *liaison;* for Sidney's "unswerving truthfulness, his deep feeling, and his *utter lack of humor* must be remembered." This is Mr. Addleshaw's view, when he is discussing the sonnets. But the humor, so plentifully lacking then, becomes suddenly abundant enough when the "Apologie for Poetry" is analyzed; and this is the point where the critic falls foul of himself: "If the 'Apologie' did nothing else," he says, "it proves that its author had a pungent sense of the ridiculous at times." And again, "Philip also shows a sense of humor, as indeed he does thruout the essay." And again, lest we forget, "The treatise is admirably arranged, and is full of scholarship, even of humor, and logic."

Literary Notes

....The Messrs. Harper have added to their "Reader's Library" *The Great English Short Story Writers*, in two volumes, provided with introductory essays and notes by William J. and Coningsby W. Dawson. The introductory material consists of a review of the evolution of this form of fiction, in the first volume, and of a study of the short story as it is written today, in the second. Both are sound statements of facts and theories generally held on the subject. The stories reprinted are twenty-eight in number, beginning with Defoe, and out of the total no less than fourteen are by American authors. (12mo, each, $1 net.)

....It was, if we mistake not, one of the New York *Sun's* bright young men who bethought him, a few years ago, of writing a review of the City Directory, and ingeniously produced an entertaining column of reading matter. A similar way of treating *Who's Who* for 1910, which has just made its appearance, would, no doubt, yield many columns of curious and valuable material, and perhaps an additional column or two of puzzles that might be headed "Why Who's Who?" Since, however, there is no middle course for treating a work of this kind in a literary column, the bare statement of the publication of the new volume must suffice. This is the original English work, not its American counterpart. (Macmillan, 12mo, $2.50 net.)

....The sad state of our daily press is occupying many minds that occasionally unburden themselves in print or on the platform. A late addition to the discussion of the problem is James Edward Rogers's *The American Newspaper*, which plainly indicates that our papers are what their readers make them, and that it is the educational, cultured, social and economic conditions of the day that mold this public. Much of what Mr. Rogers says is to the point; he pins his faith to a possible rehabilitation of the newspaper, but, on the other hand, it may well be that the press in its evolution will never return to the position and the functions it once held and upheld. Of course, this writer devotes considerable attention to the newspaper as a money maker; he would perhaps have seen several new lights, or at least obtained some new viewpoints, if he had bethought himself of studying it as a money loser more ruinous than almost any other commercial enterprise of modern days.

....A large amount of information concerning the language, text, and versions of the Old Testament is found in Dr. Alfred S. Geden's *Outlines of Introduction to the Hebrew Bible* (Scribner's, $3.50). The work does not cover the ground of such introductions as those of Driver and Cornhill, which treat of the date, authorship, and literary character of the several books of the Old Testament, but is concerned rather with the history of the Old Testament language, texts, and versions. In the last chapter the author treats briefly the origin and literary character of the Pentateuch, maintaining a moderately conservative position. Dr. Geden is a teacher of Hebrew in the Wesleyan College, Richmond, England.

Pebbles

"I'm an author, you understand, spending my vacation on a farm to get local color. How much will board be?"

"Ten per week," replied the farmer, "and $2 extra if we're expected to talk dialect."—*Kansas City Journal.*

"But, Cousin Bertha, how did you make the acquaintance of your second husband?"

"It was quite romantic. I was out walking with my first, when my second came along in an automobile and ran him down. That was the beginning of our friendship."—*Fliegende Blaetter.*

It is presumed that the editor of the Rushville *News* has been having a lively time of it since the publication of the following "Lost" item:

"Lost—A little dog about the size of Joe Hazel's feet, ears like Charles Atkinson's. Looks like Willie Gardner in the face, and hair like Ed. Morgan's. When last seen was headed toward Rushville; if found leave at Gardner's restaurant and receive reward."—*Atlanta Constitution.*

The *Harvard Lampoon* is authority for the following rules concerning electives which have recently been drawn up for the benefit of the class of 1914: 1. Every student entering Harvard College in the year 1910 is required to take during his college course before receiving his degree of A. B., S. B., or H and must pass with a grade of C or D (see catalog pq 55864 for details), at least four courses from each of the following groups in such a way that no two such courses involve either concentration or distribution except in special cases when by a vote of the faculty and consent of instructor and bursar also the medical adviser *ex officio* a student intending to try for a degree with distinction or the wrestling team providing he weighs one hundred and sixty-five pounds and who has passed his Freshman courses with a grade of B or above and strength test with 900 or over may substitute for any one single course in any single group any other single course of any other single group not prescribed for Freshmen and not contained in those primarily for graduates on condition that he notify the college office of his intention not sooner than the last Friday of January nor later than the first Saturday of February of the year in which he proposes the change to take effect in default of which he may be fined five hundred dollars ($500), which, however, does not preclude further action on the part of the parietal or administrative boards unless he has so signified his intention previous to the aforesaid application.

2. In all other cases he shall be suspended.

Rev. J. H. Jowett, of Birmingham, England, tells of a lay preachers' conference, in which a veteran described his method of sermon preparation. "I take my text," he said, "and divide my sermon into three parts. In the first part I tell 'em what I am going to tell 'em; in the second part—well, I tell 'em; in the third part I tell 'em what I've told' em."—*Catholic Citizen.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and club-bing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Bribery in Legislation

THE investigation of the purchase or defeat of legislation in this State by money opens a much larger question than that involved in the innocence or guilt of a Senator at Albany. It is easy to see how money was used to purchase a criminal lot of legislators by putting a sufficient number of bank bills in an envelope and giving it to them. That is plain sailing, a simple and stupid way. The legislation proposed may have been good or bad; and there may have been other reasons for passing it or defeating it, such as the will of the State boss; but the occasion could be used by leeches to suck blood for themselves. Doubtless it has been so used often by some people, by men who were in politics for what they could make out of it. Giving the money in hand is a crude way to get the result, even more crude than allowing the legislator to win it at cards.

But there are other ways equally efficacious; and probably the best is by making large contributions to a campaign fund. We had striking examples of it exposed in the insurance investigation in this State a few years ago, when we learned that large contributions were made to both parties so as to secure the favor of both. This was something in addition to the "yellow dog fund" provided for direct personal corruption at Albany, the very name of which fund indicated the contempt which the givers of it felt for its receivers. Possibly the receivers could have fairly returned the sinister compliment.

Attention has been called within a few days to other great contributions to campaign funds, or attempts to get them, for the purpose of controlling the policy of the national Government. Senator Platt left behind him a vicious bequest of shame which he attempted to bestow on the memory of President Harrison. The substance of it is, that in return for his influence and an immense contribution by Senator Platt for the campaign, Mr. Harrison, if elected, would make him Secretary of the Interior, with all the patronage and policy that position involves, but that he failed to keep his promise. President Harrison had learned that Senator Platt made such a charge privately, and he left behind him a most emphatic denial of the story. He had never made any such promise, and he kept himself strictly free from any entanglements, but it is easy to believe that Mr. Platt believed that his services, and his not overscrupulous securing for Mr. Harrison of the vote of the great State of New York, had earned for him the post which he coveted and which his friends believed he would get. Indeed, Mr. Elkins may have told him he would get it. But Mr. Harrison, one of the most conscientious Presidents we have ever had, would not submit to dictation, and was not willing to be purchased, and so he was not popular enough on renomination to get the vote of New York, and Mr. Cleveland was elected over Mr. Harrison, who had defeated him four years before in Mr. Cleveland's own State and in the country.

There are legitimate expenses in a political campaign; there are also illegitimate expenses. One of the great reforms needed is to reduce the legitimate expenses and to suppress the illegitimate. One or two States are making experiments on this line. The law in Oregon provides that every voter shall receive, without expense to him, not only ballots,

but a handbook which shall give him the arguments by the supporters for every measure which may be referred to the people; and this will reach one or two hundred pages. Laws to limit expense have often been proposed, after the pattern of English legislation, but little has been accomplished beyond in some States, as in Massachusetts and New York, laws which require candidates to give a sworn statement of what they have personally expended to secure the success of the party ticket on which they have run. We need a national law which shall apply to all national elections, whether for President or for members of Congress, and which shall require that full reports be filed of receipts and expenditures by all political committees in charge of election funds. Of course the professional politicians do not desire such laws, and have hitherto succeeded in blocking them. They prefer "blocks of five" as in Indiana, which must be paid for, or bands of repeaters, as in this city, at times, or a hundred other forms of corruption which all cost money. And the enormous contributions made by rich corporations now forbidden in this State, given over to such men as Platt and Quay, were never meant to be used innocently; and it was expected that they would be paid for in legislation or administration. But we may believe that this evil is slowly passing by. It does not have the vogue it did. Legislators are less bought with free passes on railroads, or retainers of a hundred dollars a month, as in the case of Senator Allds. For an example of legislation intended to break up these evils consider the reforms in Wisconsin.

A National Commonwealth

YANKEE instinct has been formed by pioneering thru a free land continent. Originally the Puritans held land in common, and largely tools, while the State was a commonwealth, and a village constituted a community, that is, a commonality. The family was the earlier unit for voting, and it was slow work to bring individualism to the front. The real reason why women are without the ballot today is because the family counted so strongly in town affairs, and the town in State affairs.

But absorbing and subduing the continent had a peculiar power in suppressing the weaker elements, and bringing to the front the Boones and the Masons and the Sir William Johnsons. There was land enough for all, but even at that the weaker went to the wall. The tendency every way was toward absolute ownership, and it was not thinkable that the State should enter upon a man's possessions, to prevent him from cutting a tree where he chose, or damming a stream for his sole benefit. Laws restricting or regulating the planting and cutting of trees were early on the statute books, but they were nowhere obeyed.

This pioneering work is done. The United States owns some five hundred millions of acres that individualism is unable to bring under agricultural control. The new problems become communal and social, and there is no other way of facing them. Irrigation can become a power to reclaim two hundred millions of acres only under governmental direction. Conservation of forests has become an absolute necessity, even in our oldest settled States. Fuel will very soon become a subject to be considered in common; so also lumber.

As for roads, it was seen from the outset that all highways must be held by the people, for the people, but no one foresaw the steam road and the trolley. Today our market facilities are dependent on the judgment and the will of corporations and private individuals. President Taft's suggestions, in his special message, imply nothing more than a reaction to our original methods. There is nothing subversive in his proposition to hold corporations that own our chief highways under governmental supervision.

The nation gave away what seemed to be inexhaustible public property and privileges. Suddenly it has become evident that it yielded the fundamental commonwealth—the essential life of the people. It broke up and wasted almost to the verge of ruin. National right and national property are simply common property, and the people cannot be dis-

possessed. It did not seem self-evident that national property must be cared for and cultivated on exactly the same principles as personal property; with the same foresight to save and increase its value, or the people would become bankrupt.

Conservation is an economic and political, but not a party question. To place our streams and our fuel and our forests and our mines under the wisest management is imperative. The National Conservation Association, in its report, speaks of forests as a crop, just as much as grain. Lumber is one of the chief freight commodities produced by the land. Its weight, per acre, surpasses corn, wheat, oats and barley. An acre is credited, in good lumber sections, with producing 3,000 pounds per acre, while only cabbage, onions and potatoes outreach this.

Up till the present time timber has been cut almost entirely from wild land, without much regard to the acres gone over. The time has come when the yield of wood per acre has got to be calculated just as we do the rest of the crops. It is estimated that the hard wood regions of Tennessee, where the fire is kept out, yield 3,000 pounds of wood yearly for every acre—under conservation principles. Foresters say that we can do much better than this. In Europe the annual growth runs from 4,500 to 6,500 pounds per acre. We shall learn to do much better than that in this country.

We are talking in terms that are entirely new. To speak of wood as an annual crop is hardly comprehensible to the old-fashioned farmer. When he cleared his wood lot he cut everything before him that was usable, and then he burned over the lot to get rid of the stumps and brush. It was his way of reducing a piece of land to corn or wheat culture. Now we begin to understand that we must conserve an acre of forest on exactly the same principles that we would an acre of apple trees; cutting only that which is ripe and saving the younger for maturity. Wood land, under the care that conservation means, yields yearly crops as regularly as the orchard or the small fruit garden. Marketable timber only is cut at regular intervals, and the new growth is cared for as a future crop.

Now, what we understand President Taft to propose is the adoption of principles of forestry that will limit the power of individual owners, and prevent the destruction of forest property as essentially public property. Every man's street tree or grove tree has a social value as well as a strictly home value. Reforestation is also to be encouraged on cut-over lands and on the rough lands where agriculture of any other sort cannot be so well carried on. Covering the United States, this is a huge proposition. It makes the nation a Commonwealth, just as Massachusetts was a Commonwealth in its earliest days, with joint obligations on the part of every resident. A tree will hereafter be as sacred as money from the mint. This is what we need to feel, but we shall find it very difficult to establish this sort of social consciousness. Millions of trees are annually wasted, involving deterioration of climate, as well as direct pecuniary loss, not only to the individual owner, but to the public. Individualism will lose nothing of independence by this change of sentiment and policy, while the people will gain much.

Meanwhile the National Conservation Association urges that our present tax laws must be modified. They prevent reforestation, because the owners cannot afford to be taxed for improvements that hold their profits far in the future. It is a good thing for the States to encourage planting trees, and it is a good policy to encourage a forest owner to cut his timber conservatively; but when the individual owner is obliged to pay an annual tax on his growing timber, it is no wonder that he cuts prematurely and usually cuts it all. It is the most direct way of escaping practical confiscation thru taxation. He naturally prefers to clear his land and plant crops that are not taxed. "It is better from every side that forest land should yield a moderate tax regularly rather than yield an excessive revenue temporarily, after which none at all." The question is a complex one for the Government, but it must be solved, and that forthwith. Our economic life must find a fuller social ex-

pression; an expression not possible in the youthful era of growth, but demanded by a completer development.

Trusting Posterity

THE serio-comic discussion of Mr. John D. Rockefeller's plan for improving the human race suggests one possibility of uplift which might be worked out, we imagine, without money and without price. Along with the real evils of famine and war, ignorance and fanaticism, the paternal solicitude of each generation for its reckless posterity has caused an incalculable amount of imaginative misery. The human mind is a queer thing. We all feel sure that our forebears were a narrow, slow-going, circumscribed folk; yet we are not more confident of our own superiority over them than we are that our children and grandchildren will make a mess of the civilization that we have so carefully created, unless we tie up their heritage fast and forever. Our fathers and grandfathers held similar opinions. To the best of their ability they tied up our heritage and put the knot in the grip of the dead hand.

Now one remarkable thing about Mr. Rockefeller's plan is that he is willing to trust posterity. He proposes to let future generations use the foundation which he creates for their own purposes and according to their own wisdom. He is not worrying himself ill over their probable incompetency, and apparently he intends to round out his career on the golf links quite as if he were not putting the wherewithal to work, either evil or good, into the hands of trustees not yet born.

In view of a faith so simple-hearted as this, Mr. John Bigelow's objection that the Rockefeller benevolent corporation will have all the powers conferred by the Constitution on the Federal Government suggests invidious comparisons. The sapient gentlemen who framed the Constitution were not apparently so ready to trust posterity as this shrewd and successful business man of the nineteenth and twentieth centuries is. Their chief concern was to tie up the heritage of liberty and political wisdom which they were handing down so that no spendthrift heir could squander it. Therein lies the cause of no small part of our present inconvenience. Had we been trusted to amend this Constitution of ours in some simple and straightforward way, we might by this time be doing many useful things for ourselves, including doubtless some of the forward-looking experiments in civilization which the Rockefeller corporation will wish to undertake.

It may well turn out that in thus setting a quiet but potent example of trusting posterity, Mr. Rockefeller is doing the greatest and most far-reaching thing for the human race that he has done in his whole life, either in developing industry or in disposing of the wealth created. It is at least a fair presumption that a people which has advanced so far in civilizatin as to have a belief in progress and to plan for new discoveries and new achievements will have a posterity that will know what it wants and how to get it, as well at least as we can prescribe. That posterity will have to loosen up a good many knots that we and our forefathers have tied, and will have to make a great many adjustments to environment and circumstance that we cannot foresee. The generations to come, if they are to be worth encouraging and helping by us, will doubtless have sense enough to do what their times and occasions demand, and, happily, they will be able to employ the Rockefeller fund without having to waste any of it, or waste their energies, as we are compelled to waste ours in circumventing the unwisdom of past generations that could not bring themselves to trust us. If a social order should arise differing from that under which we live, they can still use this heritage. Civilization is a marvelously complex and a marvelously plastic thing. It can be promoted in ways which our minds, sophisticated tho they be, have not as yet conjectured.

The Ethics of a General Strike

A LABOR strike is one thing, often quite defensible; a general sympathetic strike is quite another thing, and not so readily justified. What such a strike means and is intended to accomplish can be seen in the attempt in Philadelphia.

There was a strike of the street railway men. The public is not kept very

well informed of the questions in dispute, but the substance of it is that the company refuses to deal with the union directly, but insists on dealing with the employees; that is, it will have an "open shop." The union seemed to be losing its fight when a general sympathetic strike was ordered, a strike very nearly universal and complete. It was to include the milkmen, the bakers, and the clerks in the grocery stores, as well as all mechanics. To make the effect of the strike more severe the Central Labor Union asked all members and all sympathizers to withdraw all their deposits from the banks. That goes farther than anything employed before, and shows the determination, or desperation, of the leaders to win a victory at any expense.

We do not raise any question, we say, of the ethics of an ordinary strike. The members of a union are then dealing with their own interests solely, or chiefly. They choose to quit work, and the other party has the right to take on other workmen. If peaceably conducted such a strike may be clearly legitimate. It has to do simply with the strikers, unless a riot is stirred up. But in such a case as the present the strikers definitely and purposely attack the general community. The purpose is to make the community so uncomfortable that it will compel the other side to submit. That is a very different thing.

Take this case. In order to get the advantages for themselves they think they ought to secure, they require the bakers, the milkmen and the grocery clerks to strike. They order them to refuse to supply the absolute necessities of the people. What are the babies to do that depend on the milk fresh every day? How many will they kill? What are the households to do that get their bread from the shops and are forbidden to buy flour at the stores? They would shut off the total supply of food from the third greatest city in the United States. They would, for the advantage of a small section, imperil the life of multitudes of the people and destroy the comfort of the rest. There is nothing Christian in that; indeed, nothing moral on any scheme of ethics. It is downright selfishness and cruelty, unjustifiable on any grounds.

Less directly dangerous to life, but yet similarly mischievous, is the proposal to cripple the business of the city by a simultaneous run on the banks. The result would be most disastrous, but that is what is intended, namely, to take this means to force, as by violence, the city, unconsulted and against its will, to support them in their contest. The great public is to be discommoded that their comparatively small number may be accommodated. That, again, is not Christian and not ethical. It would appear to be a conspiracy in effect, and probably in law.

It is not strange that a sympathetic strike finds but partial approval, and a general strike almost none at all.

Mr. Taft's Railroad Bill

The President very earnestly desires that the policies associated with the name of his immediate predecessor, and approved by himself, shall be enforced by legislation. Bills in support of these policies have been prepared under his direction. One of them is an elaborate measure increasing the power of the Interstate Commerce Commission and providing for the more effective regulation of railroads. The Senate committee has reported it substantially without change, a minority of two Republican insurgents having attacked parts of it without effect. In the House committee, however, serious opposition has been manifested by regular Republican members as well as by those who are called insurgents, and parts of the bill which were regarded by the President and his advisers as essential have been cut out or greatly modified. Therefore it is difficult to foresee the fate of the measure.

As originally introduced, it forbade a company to control a competing road by purchase of stock, but there was added a proviso that if a company at the time of the enactment of the bill should be holding one-half the stock of another it might buy the remainder. This proviso has been stricken out in the House committee, where some assert that it would legalize the Harriman railroad merger, which the Government is now asking the courts to dissolve, the prosecution

being directed by Attorney-General Wickersham, who wrote the proviso in question. It is an interesting coincidence that on the day when the proviso was eliminated by the committee, testimony was given in the merger suit showing that because of the proviso the Union Pacific, in January last, set out to acquire 50 per cent. of the Southern Pacific stock, bought 74,000 shares, and was about to buy the additional shares needed, when it learned that the proviso would be rejected. The proviso was inserted not for the benefit of such a combination, but to protect mergers made long ago and now regarded as harmless, such as the union of the New York Central and the West Shore. There is a difference of opinion as to the effect of the adoption of it upon the Harriman merger. Some hold that it would protect that combination and end the prosecution now in progress; others assert that it would not.

We shall not examine in detail the changes made by the House committee. It should be said, however, that when a measure of so much importance and of such scope is transmitted to Congress by the Administration, criticism and amendments must be expected. They do not necessarily indicate hostility to either the Administration or the policy involved. It could be seen at the beginning that the bill in question could be enacted only after thoro debate, and that its provisions would surely be modified. Those who recall the memorable contest over the Railroad Rate bill cannot expect that a measure considerably in advance of that bill, which is now the law, will move smoothly and speedily to enactment.

The changes made by the House committee indicate that those who are responsible for them would compel competition rather than rely upon official regulation. While we do not say that combinations which the Government seeks by prosecution to dissolve should be approved, it seems to us that in the proposed additional railway legislation the chief aim should be to insure effective official supervision and regulation, and that Congress should avoid modifications of the original bill which tend to withhold a part of the additional power which the Commission ought to have. The proposed Interstate Commerce Court, which the House committee has virtually rejected, is needed for a prompt settlement of litigation. It would also promote the effectiveness of supervision by relieving the Commission of certain duties which might better be performed by such a tribunal.

French Political Scandals

FEW pots nowadays can call the kettle black and glass has come into such general use as a building material that it is unsafe for anybody to throw stones. Whether the recognition of this condition of affairs has any other beneficial effect than the checking of pharisaical boasting is a question, but it may be acknowledged that we turn with a certain sense of relief from the too continuous contemplation of political corruption in our own country to the exposure of similar conditions in other lands. This feeling, however unjustifiable it may be, has had abundant satisfaction in recent years. The rottenness of Russia, as disclosed by the war, was not unexpected, but that Japanese, whom we had been led to believe were in all military affairs inspired by the purest patriotism, should have been found guilty of cheating their Government on its purchases, came as something of a surprise. So did the recent disclosure in Germany of wholesale graft in army contracts, for the German officials, whatever their faults, had been esteemed generally honest.

But what seems likely to prove a bigger scandal than them all is coming out in France. America must take a back seat. We have had men who combined politics and finance very profitably to themselves, but have we anybody to match with M. Duez, who got a rake-off of $2,000,000 in the handling of Government funds in the course of three or four years? No doubt we have individuals capable of it, but we do not give them quite such favorable opportunities. Nor in general does France. The magnitude of the defalcation is due to the exceptional occasion, the confiscation of the property of the Catholic Church

after the revocation of the Concordat. The settlement of an estate is apt to be a good thing for the lawyers, even the honest ones, and here were hundreds of ecclesiastical oragnizations all over the country dying intestate by sudden and not exactly natural deaths, leaving their property to the State. This property was of all conceivable forms—churches, schools, houses, distilleries and trust funds and endowments for various purposes, the accumulations of many centuries, estimated to be worth some $200,000,000. Here was patronage galore. The friends and the willing-to-become friends of the Government were given jobs as administrators. One man had charge of the settlement of the affairs of seventy-five of the congregations. M. Duez had thirteen in his hands, and their accounts are in such confusion that the Senate commission of investigation is not able to determine the amount of the defalcation by several hundred thousand dollars. His receipts, kept in cipher, show that he had in his pay about 150 politicians and journalists. Other liquidators appear to be equally guilty so far as their opportunities went, and the ramifications of corruption may prove to be as extensive as in the Panama affair. In fact, some of the names involved are familiar to us in connection with the history of the canal.

In its political effect it is likely to equal the Dreyfus case. That peculation on such a scale should be possible is just ground for criticism of the Government. M. Briand, who is now Premier, originated and carried thru the law separating Church and State, but there is no evidence that he is is to blame for the frauds connected with its execution. But if the Ministry is not overthrown this week by adverse vote in the present Chamber of Deputies it probably will be by the next Chamber, soon to be elected. The Briand Ministry is not in a position to make a successful appeal to the country. It is running behind in its finances; it has not been able to carry out its program of social reforms; it has alienated the army of State employees by not permitting them to form militant unions; it has to face a revolutionary labor party of unprecedented strength, and a new clerical party that the Catholics, freed from their entangling alliance with the State, have now been able to form. The present scandal gives point to the Catholic contention that the seizure of the ecclesiastical property was more for the purpose of crippling the Church than aiding the State. Whatever the intention, such at least seems to have been the result. The Government has not got much out of the Church property and it has lost much thru the animosity and suspicion that have been aroused by the act and the way it has been carried out. If the money had gone for public schools, workingmen's pensions and such purposes as anticipated, little fault would have been found, for the nation, as a whole, had a good claim on much of this wealth, and the Church had forfeited its legal right to it thru its refusal to comply with the terms provided by the law. But to turn out friars and nuns into the cold world, and then to use a large part of their wealth to enable corrupt politicians to lead fast lives is adding insult to injury.

Moving Pictures and Health

It is a well known rule that every new form of popular amusement brings with it special dangers to health. The roller-skating rink with its dust and exercise in a confined space, the bicycle with its tendency to accidents, the automobile emphasizing even this and adding the dangers from dust and exposure, are all typical examples. Recently it has been pointed out that the latest form of popular entertainment, the moving picture show, is liable to be more of a menace to health than any of the popular amusements of recent years. This is all the more serious because of the wide vogue that the moving picture show has obtained in the last year. There is scarcely a village of more than 2,000 inhabitants in this country now that has not its moving picture show, and they exist occasionally in even smaller towns, while the larger towns possess them in ever increasing numbers. It is probable that the fad will die out in the course of the next few years, but in the meantime it is evident that great harm to health may be worked by them, for they are maintained as a rule under the worst possible

hygienic conditions and nearly everything about them favors the spread of disease.

As a rule the buildings in which the moving picture shows are given were not constructed for amusement purposes and so have many disadvantages and sanitary dangers in the housing of crowds. They are usually buildings in the middle of blocks, with no ventilation except from the front and rear, and as any freedom in this matter would give rise to drafts ventilation is strictly limited. The shows themselves are conducted in the dark, even during the daytime, and therefore evidences of uncleanness about the place are to a great extent obscured. Crowds keep moving in and out, succeeding one another at intervals of about an hour all day, and thus raise much dust, grind up under their feet any sputum that may be present, while the comparatively high temperature maintained, partly because of the absence of proper ventilation and partly because of the heat of the moving picture apparatus, is sure to make everything dry and therefore more suitable for the dissemination of dust. It is in this dust-laden atmosphere that the audience, mainly women and children, are seated for an hour or more, breathing in contamination from the breath of others and from the lack of cleanness in the place.

It is easy to understand all the dangers to health that are contained in such places. Most of the audience cough without taking any precaution to prevent the dissemination of any bacilli that may be in their mouths or in their lungs, and not a few of them do not hesitate to expectorate on the floor, usually near the angles of seats or along the iron supports, just where it is most difficult to secure its thoro removal. Any one who has been present at the moving picture show knows that usually the conclusion of the show is the signal for an outburst of coughing, especially during the winter time, that has been suppressed before because of the interest, but is now increased beyond what is even necessary by the fact that coughing, like yawning and sighing, is contagious. For such a place to be reasonably healthy the greatest care would have to be exercised in securing thoro ventilation and frequent cleaning. We would not think for a moment of permitting schoolrooms to get into the condition in which most of the moving picture halls are, yet it must not be forgotten that a great many children spend several hours each week in these places and that no precautions at all are taken to keep them from being sources of danger for one another.

Our experience with the examinations of school children for infectious diseases of various kinds in recent years has shown us that these diseases are not transmitted to any extent thru the air, but by actual personal contact of a victim in the early stage of the disease or in the convalescent stage with healthy children. The greatest of care is exercised now to prevent schools from being such a medium of contagiousness. When children feel a little ill, however, or when they are convalescing, it is almost the rule that they should be given the opportunity for some amusement by being taken to moving picture shows. They crave it, mothers find it hard to forbid them, and as there is no rule against it and no one to say anything about it, it is easy to understand how often at least the minor children's ailments may be thus diffused. There is no doubt that they furnish besides an excellent opportunity for the distribution of various kinds of vermin and that the intimate contact, so much more close than that of the schoolroom, has ever so many more dangers, tho there are no safeguards against them because this new form of amusement has not as yet been with us long enough to be submitted to sanitary regulations.

The most important feature of the danger from disease in these places is undoubtedly tuberculosis. When we recall that about one in eight of our city population dies of tuberculosis and that at least twice as many sufferers from it are in an active stage of the disease at all times, so that probably one in four of the population, especially in poorer districts, may be sources of tuberculous contagion, it becomes easy to understand how much risk there is from this disease in such crowded places. The one hope of preventing an accumulation of tubercle bacilli in such a place would be to have absolutely free advent of sunlight for some hours every day, but this, of course, owing to conditions, is quite impossible. The only other thing that would make

such crowded rooms reasonably safe would be frequent cleansing and a liberal use of strong antiseptics. This latter precaution is practically as impossible as sunlight because the odor of most disinfectants renders it impossible. Moving picture places then very readily become foci for the dissemination of tubercle bacilli. That this is no mere theoretic but on the contrary is an actual danger can be best appreciated from the experience of physicians who have under treatment some of those who sing in these exhibition rooms, and especially those who tend the moving picture apparatus itself. It is a very common experience to have these people acquire tuberculosis as the result of their long hours in these places. Dr. Howard D. King, in a recent number of the *Journal of the American Medical Association,* has found that a majority of the attendants at these shows who applied to him for treatment are sufferers from tuberculosis.

It is evident then that definite precautions to prevent these places from becoming disease distributors must be taken. Boards of health must insist on more ventilation than at present, and probably will have to find some way of preventing the constant use of rooms for exhibition purposes to which the sunlight does not occasionally gain access. Careful precautions might be taken with regard to expectoration not only by notices but also by the presence of attendants who warn offenders of their violation of the rules of the Board of Health. Probably also the hours during which shows are given will have to be shortened in order to permit thoro cleansing of the premises with a vacuum cleaner. If some such rules are not enforced most of the good that we are accomplishing by the recent thoro organization of school physicians will be neutralized by the opportunities for the dissemination of disease presented in the moving picture shows.

Ex-Secretary Shaw's Warning

Ex-Secretary Shaw might be in better business than prophesying war with Japan. Japan wants, he says, to monopolize trade all about the Pacific Ocean. He complains that we do not control more than 6 per cent. of the thousand million dollars of imports along the Pacific Coasts. Well, why don't we get more? Simply because we create conditions that exclude our commerce, while Japan does not. Japan encourages what we discourage. We had ocean trade once. The quarrel, what quarrel there is, is over Manchuria alone, where Japan and Russia claim and try to exercise special rights, as they do over their own territory. But Manchuria is only one province of China, and a very small fringe of the Pacific Ocean. With all the rest that does not rightfully belong to Japan we have the same right and chance as Japan has, if we have the sense and energy to use them. We regret to see Mr. Shaw stirring up terrors and ill-will.

Reform in the Marriage Service

One of the minor disadvantages of the Established Church of England, yet serious enough, is that its clergy have no liberty to modify the marriage service, which is so archaic that it ought to be obsolete. No change can be made without the greatest difficulty. A member of Parliament has introduced eight bills into the House bearing on the rights of women, one of which asks the bishops in Convocation to draw up a new marriage service that will not be degrading to women. The service makes the woman promise such submissive obedience to her husband as she cannot perform. Lady McLaren, wife of the member who presents the bills, declares that women are treated in so humiliating a way by the working classes, and by other classes, because the Church, especially in its marriage service, encourages such treatment, and bases its teaching on the conditions which Paul found to exist in Corinth. If women have to make a false vow in marriage, Lady McLaren says the same is true of men. The husband says, in the presence of God and the assembled multitude, "With all my worldly goods I thee endow," which is, she says, "a great thumping lie." Women married in Catholic, Jewish and Nonconformist Churches can, she says, keep their vows, while a woman married according to the rites of the Church of England cannot. She can, of course, be married by a magistrate, but that does not befit a fine social function.

Senator Jeff Davis's Perversity

The amazing consistency of the perversity of Senator Jeff Davis had another illustration the other day when he declared that he was lawyer for a company in Arkansas which was seeking favorable legislation in Congress. And, again, he was foolish enough to try to get his statement falsified in the *Record*. Such cases of insistent wrongheadedness pass the limit of blundering, but they occasionally have been found in history or literature. Somewhere Dionysius of Halicarnassus says of Hegesias:

"Was he so dense, so devoid of artistic feeling, as not to see which the ignoble or noble rhythms are? Or was he smitten with such soul-destroying lunacy, that tho he knew the better, he nevertheless invariably chose the worse? It is to this latter view I incline. Ignorance often blunders into the right path; only wilfulness never does."

And Dryden says of Shadwell:

"The rest to some faint meaning make pretense;
But Shadwell never deviates into sense."

And Dr. Johnson said of Thomas Sheridan:

"Why, sir, Sheridan is dull, naturally dull; but it must have taken him a great deal of pains to become what we now see him. Such an excess of stupidity, sir, is not in nature."

So the Senator from Arkansas is not unique.

College Scholarship and Athletics

A committee of the Harvard faculty has been investigating the relative standing in the Law School of those who attained or failed to attain honors in college for scholarship, and the result does not support the claim that excellence in athletics promises excellence in the professional school. Out of 127 college men who obtained the law degree with honor, there were 57 who had gained the highest honors for scholarship in college, 40 who had gained high honors, 20 who had simply gained honors, and only 7 who had failed of honors and had graduated simply *rite;* and of these last 7 some had entered college in their senior year and so were not eligible for honors. These figures prove that the man who wins honors in the law school without having first won them in college is rare, while the "sport" of really low standing in college, but who wakes up and achieves honors in the law school is, as the committee finds and declares, simply a myth. By far the overwhelming number of those who acquire distinction in subsequent life are of those whose scholarship gave them distinction in college. They had native ability, and they added to it a genius for application, for what is disparagingly called "grind." President Lowell makes the following admirable comment:

"Almost every undergraduate would be proud to be told that he was destined in after life to write a remarkable history, or to make a notable scientific discovery, and would be shocked to hear that he was to be the best professional baseball player in the world; yet he commonly submits willingly to drudgery that would tend to prepare him for the latter, though recoiling from study that would fit him for intellectual work. This shows a disproportion between immediate ambition and relative permanent values, even as they stand in the mind of the undergraduate himself."

In other words, they can't look an inch before their noses.

Discrimination Against Hawaii

The law which is used to prevent passengers to or from Hawaii to engage passage on a vessel which carries a foreign flag is simply outrageous in its enforcement. For example, the recent treatment of the passengers on the steamship "Cleveland," who were refused the privilege of landing at Honolulu but were met by no obstacle at San Francisco, puts the Federal Government in the unenviable light of discriminating illegally in favor of the latter. The law was used as a threat to prevent a number of passengers stopping there whose only reasonable life-chance to see Hawaii was to land then, but the same law was not applied in the case of the mainland city. Not only are residents marooned in Hawaii by the coastwise law, but Americans are kept from entering when at the door and longing to enter in by this same iniquitous statute which evaporates when its provisions bear hardly upon a mainland port. If the law had been enforced at San Francisco a howl would have been raised against it thruout the Union, for some forty States were represented

among the 650 passengers on the "Cleveland," and States have votes in Congress. Poor Hawaii, with none, doesn't court, and hence to enforce the law would not menace its unjust continuance.

The Pity of It

The miserable folly of the system of war which holds in terror the nations of the civilized world is evident in the article on "Australian Defense," by Dr. Burgess. Australia does not want to fight, has no thought of attacking anybody, but is terribly apprehensive that Germany or Japan will some day pounce down on the coast, capture the unprotected cities, and burn them or demand a big ransom. Accordingly, first, Australia will build and command its own squadron, one armored and three unarmored cruisers, six destroyers and three submarines. How easily they would be captured if Japan or Germany were to send that way a really respectable fleet! Then these thirteen—yes, thirteen, vessels, will require 23,000 men to man them, taken out of productive industry, and supported in busy idleness at a cost of $3,750,000 a year to be raised by taxation, while the thirteen vessels will hardly last ten years before they are obsolete or worthless. Then, next, Australia must create an army of militia, every male citizen of military age compelled to join it, and to give ten or twenty days every year to military training. Thus not only are the 23,000 men of the fleet taken out of the productive and taxpaying population, but from two and a half to three and a half weeks of working time is taken out of the year of the most active workers. But this is not all. The young boys in school are to train half an hour every day to learn how to fight, and boys from fourteen to eighteen years of age will be organized in battalions and trained for sixteen days in the year, this to be increased after the age of eighteen. That is, boys are to be taught to be soldiers, fighters, to learn the military taste of war, and all out of fear of some other nation that is equally afraid that it will be attacked. It is a most unfortunate condition, utterly unchristian, but supposed to be a sort of national insurance, and therefore worth while. It is all a burden, a nuisance, a terror, an obsession; and the most important duty of statesmen is to see to it that it comes to an end, and speedily. Then our squadrons can go to the scrap heap, and we can close military and naval academies and let the boys learn some productive industry, and spend our taxes for the public benefit.

Religious Amenities

In certain sections of our country great debates between rival denominations is still one of the institutions which attracts the multitude, and sects support their champions as they do their revivalists In such sections the bitterness between them sometimes is extreme, but we have observed nothing else equal to that displayed in certain journals which support the remnant of the Cumberland Presbyterian Church which refuses to unite with the Presbyterian Church. We have in hand two numbers of *The McGhee Observer,* from which we cull such ill-smelling flowers of rhetoric as the following: "Ecclesiastical hyena snarling and snapping," "devilish and out-deviled plans," "church hyenas," "infernal church beasts," "fiendish and hellish scheme," "piratical Presbyterian Church," "a worse gang of nullifiers and ecclesiastical despots than the Reelfoot Lake murderers." The writer, the Rev. J. L. Goodknight, LL. D., from whom we have picked these posies, undertakes to explain why the Presbyterian Church has "become one of the most immoral organizations that has ever been in the United States." It is because that is its nature:

> "Can it be accounted for? Here is its source. The doctrines of Calvinism were inspired by the Devil—and the Devil inspired the writing of the Westminster Confession of Faith. . . . The Devil got in some of the best days' work in modern times while he was a member of the Westminster Assembly when it was writing the Confession of Faith. . . . I affirm that you cannot account for this lawless and law-defying spirit in the Presbyterian Church upon any other grounds than that it is inspired of the Devil."

We fail to discover in such language the fruits of the Spirit, which are love, joy, peace, long-suffering, kindness, goodness, meekness.

One may doubt, if he will—for it takes will—whether the increased output of gold has any effect on prices; but the increased amount mined and put into circulation startles one who remembers how silver fell in value because of the product of the mines. The *Engineering and Mining Journal* gives the figures which show that from 1894 to 1909 the gold product of the United States has risen steadily from $39,500,000 to $96,500,000; that of Africa from $41,700,000 to $168,830,000, and that of Australasia from $40,271,000 to $71,980,000, or a total increase for all countries from $181,175,000 to $457,567,000; that is, every year has seen an increased output of gold, until now it approaches three times what it was fifteen years ago. It is not strange that gold should have become cheaper and goods bought with it dearer.

There are many men of distinction and wealth whose death does not require mention from us, but the death of Dr. Klopsch does call for it, altho he was not a man known in the field of politics or literature or finance. He was the plain publisher of a religious journal, *The Christian Herald*, and he had overmastering ambition, to help needy people. So he used his journal for this purpose Were there a massacre in Turkey or a famine in India, or a flood in China, he asked his readers for money, and he got it, four million dollars of it, and he sent it freely where it was needed. We have had no man like him, and his memory is blessed the world over.

If, as proposed, English farmers should make a secret understanding that they will exterminate the foxes that harry their poultry, it would destroy a great English institution, that of the fox-hunts, with packs of fox-hounds, which supply dukes and lords with so much enjoyment for their guests in the holiday season. The farmers would have to kill off the foxes surreptitiously, for the law protects these vermin. But would not the consequent reform of the habits and pleasures of the rich be a greater advantage than the protection of the fowls? Raising foxes to be hunted is not a noble pursuit, and the pheasants would be left to be shot, which can at least be eaten.

The contradictions of courts are the scandal of the law. The large majority of the Cumberland Presbyterians desired union with the Northern Presbyterians, and they united. But there was a minority left, and they appealed to the courts to declare the union illegal and to take the property. Five State Supreme Courts have declared the union legal, but the Supreme Court of Tennessee says the reverse. That means that the minority take possession of *The Cumberland Presbyterian*, of Nashville, and the editor, the Rev. James E. Clarke, must go. But his subscribers will follow him to his new paper, *The Presbyterian Advance*, a good name, published in the same city. We wish him all success.

There has been a quarrel between some benevolent people who wished to establish in the outskirts of Lakewood, N. J., a sanatorium for children threatened with tuberculosis, but so much opposition was aroused by some of the citizens that the matter was referred to the Legislature of New Jersey, which has enacted what is called a compromise measure. The compromise is of the sort described by a man suing for divorce. "My wife," said he, "wanted linen sheets and I wanted cotton; and we compromised on cotton." The sanatorium is to be moved to another town.

The French Parliament has past a law which initiates a new feature in the protective system. Every employer is taxed who employs more than five foreign workmen. The workmen employed are mostly Italians and Belgians, and it would be the simplest thing for Italy and Belgium to retaliate. Think what a ruin would fall on American industry if such a law were enacted here. What contractor would pave our streets.

So Commander Peary was not willing that his negro companion, Henson, who went with him to the Pole, should lecture on the subject. It has been well said of Dr. Cook that he was a liar and a gentleman.

Ex-President Eliot denies that he made the criticisms on the proposed Rockefeller Foundation that were ascribed to him a week ago.

INSURANCE

Loans on Life Insurance Policies

THE original idea of a life insurance policy did not carry the idea of a loan, with the policy as security. When a man insured his life it was for the purpose of providing protection for his wife and family or other beneficiary. The policy was regarded as more or less sacred, and the payments were made with the idea of preserving the protection it signified without forfeiture if such a thing was possible. It is only within a comparatively recent period that policy loans have had considerable place in the insurance world. They are one of the results of competition and legislation. At times, however, policy loans have proved exceedingly helpful. During periods of financial stringency, when it was impossible to obtain loans in any other way, the various life insurance companies have loaned immense sums on their policies. The one vital objection to a life insurance policy loan is that a very small percentage of such loans is used to pay premiums. Such loans, in a great majority of cases, simply serve the selfish purposes of the head of the family. They tend to multiply lapses and neutralize the agent's work and service by the depletion of his renewal list. Furthermore, a very small percentage of such loans is ever paid in cash. For the most part they are for miscellaneous purposes, or in too many cases have the loan funds been lost in speculation. If death comes during the loan period, it is true in the majority of cases that families are left to face hardship, distress and misfortune because of these policy loans. In the event of the death of a policyholder who has procured a loan on his policy, his beneficiary receives just so much less than the face of the policy as is represented by the amount of the loan. To that extent the original purpose for which the insurance is placed is diverted. THE INDEPENDENT strongly believes that a policyholder should borrow on his policy only as a last resource. Loans on policies are not only bad for the policyholders, but they are liable to react as a detriment to the company making these loans. In the recent panic, for example, some companies were forced to sell some of their gilt-edged securities at a sacrifice to provide funds for borrowers under their policies. The real function of life insurance is, after all, to pay death losses and not to make loans to the detriment of life insurance protection. In connection with the subject of policy loans it is interesting to note in passing that the Supreme Court of the United States has recently ruled that policy loans or premium lien note loans of life insurance companies are not liable to local taxation. This decision was arrived at in a case at issue between the City of New Orleans *vs.* The New York Life Insurance Company. It was held by the Court that policy loans were not loans in the ordinary sense of the term, but were rather in effect partial and anticipated settlements rather than mere loans. It is a good thing to take out a policy of life insurance, but it is a very bad thing to negotiate a loan on the life insurance policy after it has been written.

A COURSE of ten lectures on the theory and practice of life insurance by leading insurance men will be given at the Central Branch of the Y. M. C. A. of Philadelphia beginning March 11 and continuing on successive Fridays. Among those who will participate in the course are L. G. Fouse, president of the Fidelity Mutual Life Insurance Company; William S. Ashbrook, of the Provident Life and Trust Company; J. Burnett Gibb, actuary of the Penn Mutual Life Insurance Company; Nelson F. Evans, superintendent of agents of the Prudential Insurance Company of America, and others.

DISPATCHES last week from Chicago set forth that the St. Paul Mining Company has entered into negotiations with counsel in regard to the settlement of the claims of widows and other relatives of Cherry Mine disaster victims on the basis of a flat rate of $1,800 per man. This rate of settlement was agreed upon at a conference between attorneys representing the widows and others interested and counsel for the Mining Company after sundry payments of indemnity ranging between $800 to $1,200.

FINANCIAL

Banks and Speculation

JUDGE COXE, of the United States Circuit Court, in the course of a decision last week, overruling a demurrer of the defendants in a suit brought by the shareholders of the National Bank of North America against Charles W. Morse (now in the penitentiary) and Directors Havemeyer and Flagler, to recover money alleged to have been lost in speculation by Curtis, the president of the bank, and Morse, the vice-president, spoke plainly about speculation with the funds of such institutions. It was alleged in the complaint, he said, that in various transactions pointed out with great particularity the funds of the bank had been used in the purchase of stocks of a highly speculative and fluctuating character; also that the defendants knew of these transactions and ratified them. If these allegations were true, the liability of the defendants was established. He continued:

"Stock speculation is no part of the business of a national bank. Directors who engage in or knowingly permit it are unfaithful to their trust, and are liable for losses thus occasioned. They are chosen as the guardians of the funds of the bank to protect them from forbidden and unlawful uses, and are not permitted to subject them to hazardous and *ultra vires* risks for their own benefit or for the benefit of others. If they knowingly permit the funds, which it is their duty to guard, to be plundered, they are liable and must restore the lost property."

Wages

IN Trenton, N. J., the street railway employees gained by a strike, last week, a wage increase of 15 per cent. Whereupon the corporation controlling similar railways in Reading, Pa., and Wilmington, Del., granted an equal advance to their men. There are indications that higher pay will be demanded and probably obtained by the employees of many trolley companies. The action of the Lehigh Valley Railroad Company and the settlement of the Baltimore & Ohio controversy probably foreshadow concessions by all the Eastern trunk roads to their trainmen, altho this is not yet admitted. The Lehigh Valley gives an increase ranging from 7 to 12 per cent. to its conductors and engineers, with a better arrangement of hours. Mediation in the Baltimore & Ohio dispute has given much that the men demanded, and the basis of settlement may be accepted on other roads. The company's concessions are both in wages and in hours. It is probable that the bituminous coal operators will find it necessary to grant at least a part of the increase demanded by the miners. Owing to the higher cost of living and to the discussion of the causes of it in legislative bodies and elsewhere, corporations will find it difficult to oppose successfully the demands for higher pay, especially if they are increasing dividends, and some increase in the general average of wages will be shown before the end of the year.

....Orders for 10,100 steel cars, the cost of which will be about $12,000,000, were placed in Pittsburgh last week.

....Owing to a shortage in the flaxseed crop, the price of linseed oil is higher now by about 50 per cent. than it was six months ago, and the prices of paints and other commodities of which the oil is a part have been affected.

....One hundred men prominent in Wall Street affairs have organized a company to build automobiles for their own use. After the wants of the one hundred stockholders have been supplied, the company will build machines of the same kind for the public if there is a demand for them.

....In the last ten years the cost of cross ties for railroads has increased about 35 per cent. The Pennsylvania Railroad Company, which spent $2,129,630 last year in renewing ties between New York and Pittsburgh, began in 1902 to plant trees which would eventually furnish ties. It has planted 3,482,186 trees, 1,054,010 of which were set out in 1909.

....About 300,000 corporations have made returns to the Internal Revenue Bureau, as required by the new law imposing a tax on their net incomes, and returns from about 25,000 more are expected. It is thought that the tax will yield this year a little more than $25,000,000. Argument as to the constitutionality of the law is to be made in the Supreme Court this week.

VOL. LXVIII NEW YORK, THURSDAY, MARCH 24, 1910 No. 3199

Survey of the World

Revolt Against Speaker Cannon

A very exciting contest in the House of Representatives at Washington ended last Saturday afternoon with the passage, by a majority of 36, of a resolution reorganizing the powerful Committee on Rules and providing that the Speaker should not be a member of it. Immediately thereafter, a resolution deposing Speaker Cannon and ordering that a new Speaker be elected was lost by a vote of 155 to 191. Nearly all of the Republican insurgents who had stood with the Democrats in demanding a new Rules Committee, from which Speaker Cannon should be excluded, voted to retain him in his office. The remarkable contest began on the 15th, when a combination of Democrats and Republican insurgents overruled, by a vote of 163 to 111, a decision of the Speaker relating to the consideration of an unimportant resolution concerning the census. About 40 Republicans voted with the Democrats. This action of the House opened the way for the insurgent attack upon the Speaker and his Rules Committee. Mr. Norris (Republican) of Nebraska, on the 17th offered a resolution abolishing the present Rules Committee of five (the members are appointed by the Speaker, who is chairman), and providing for a committee of fifteen, to be nominated by geographical groups and to be elected by the House, the Speaker being excluded. The regular Republicans were taken by surprise. Their ranks were not full. One of them, Mr. Dalzell, raised a point of order against the revolutionary resolution. The Speaker withheld his ruling on this point of order, and a long debate upon the merits of the controversy ensued. In the meantime, the Cannon men strove to bring to the House several of their associates who were out of town, realizing that no member on their side could be spared in this battle, which was to decide the fate of the Speaker and his organization. Many earnest speeches were made. Insurgents criticised the Speaker's exercise of his great power. Regulars defended him and urged all Republicans to be loyal to their party. Mr. Cannon frankly explained why he had discriminated against certain insurgents in committee appointments, saying that they had bolted their party caucus and refused to abide by its decisions. Several motions for a recess were defeated by small margins. Night came. A few absentees returned. At 2 a. m. on the 18th there was no quorum, and a call of the House was ordered. It is said that the quorum was broken by departing regulars. Mr. Cannon was in his place all night. At 7.30 a. m. on the 18th a quorum was shown, but it could not be retained, and at 2 p. m. a recess until 4 p. m. was ordered. Assembling at that hour, the House soon adjourned until noon on the 19th. Then there were conferences looking to a compromise. The main obstacle was the demand of a majority of the insurgents that Mr. Cannon be at once excluded from the committee. His friends would not consent to this, but would accept an enlarged committee, elected by the House. On the 19th, the Speaker sustained the point of order against the Norris resolution and was promptly overruled, 182 to 160, by the insurgents and Democrats. Debate followed. Several supporters of the resolution said they opposed not Mr. Cannon, but the system.

The resolution was adopted by a vote of 191 to 155. Forty Republicans were counted for it. About two-thirds of them are from Wisconsin, Minnesota, Iowa, Nebraska, Kansas and the Dakotas. The Speaker made a long address, pointing out the responsibility of a majority, saying that there was no longer a coherent majority of Republicans, and denying that he had used his power unjustly. He had decided that he would not resign, and thus by his own act precipitate a contest which would delay action upon measures which he, as a loyal Republican, desired to see enacted. Moreover, resignation would be a kind of confession or apology, neither of which was required by his acts. But he would entertain a motion to declare his office vacant and to elect a new Speaker. Indeed, he would welcome such a motion. Responsibility should be placed with the real majority. Whereupon, against the protests of several other Democrats, Mr. Burleson, of Texas, offered such a resolution. It was promptly voted down, 155 to 191. Only 9 of the insurgents were counted for it. Adjournment followed, and Mr. Cannon received the congratulations of his friends. The Norris resolution was amended before final action upon it was taken. It provides for an elected committee of ten.

The President's Speeches

President Taft left Washington on the 16th for Chicago, having promised to attend there the St. Patrick's Day banquet of the Irish Fellowship Club. On the 17th he made eight speeches. Addressing the Chicago Newspaper Club, he said he valued the opportunity to speak to the men who did the work on the Chicago papers, but were "not responsible for the editorials." He had seen, he continued, "so many apocryphal statements, so many unsound arguments and unjust conclusions, that they must have come from some other source than this distinguished and intelligent audience":

"The newspapers, of course, are essential. We say we do not read them. Well, we have to read them. There is a distinguished member of one of the tribunals in Washington who says he never reads the newspapers. Whether he gets his news thru his wife, or how he acquires the information as to the progress of the world, I don't know. The difficulty that I find is that I have to read them, and after a time of sensitiveness—what shall I call it?—of a sense of injustice, one's skin grows thicker, one is able to forget phrases of contempt and criticism, and one realizes that if one can only survive two or three days of attack and assault and unfounded statements most people will forget it.

"Now, I don't know whether you number among your newspaper members not only newspaper men, but men who combine the profession of the press with statesmanship, whether you have among you the men who are reformers down to the ground and at the same time are engaged in handing out their views and news suited to their views as statesmen-correspondents. If you haven't you lack a distinguished type of newspaper man, a distinguished type, which, I am bound to say, has not contributed to the accuracy of the news furnished the public, for the reason that a newspaper man who does his task rightly is a man who furnishes the facts as they are without respect to whom they may hurt or help; while the man who is preaching an evangel or who is helping a cause, and especially the one who takes himself seriously, is about the worst witness of events with respect to those whom his views reach.

"I speak with some knowledge, because I have had to examine that character of statesman close at hand, and I think he centers about Washington; therefore, I believe I am addressing pure newspaper men, men who don't exaggerate merely for the purpose of helping or marring a cause, but men who are in search of news to present it to the public."

The public, he added, was now, he thought, taking editorials as they appealed to the reason of the reader, and not because they were editorials or because they were printed in a particular paper; the public was also beginning to discriminate with reference to the news. In closing, he said he had learned a good deal more in the first year of his term than he was likely to assimilate in the next three. Afterward, speaking before the Traffic Club, he referred to his consultation with railroad men concerning railroad legislation:

"It seems to be in the minds of some gentlemen in responsibility that the people who are to be consulted are not those directly affected; that if in the recommendation of legislation affecting railroads you venture to consult railroad men, this is enough to condemn all the legislation which you recommend. I am ready to condemn railroads when they violate the law. I am ready to pass laws that will so regulate commerce as to make all things equal. But every man is entitled to his day in court, and I should feel a coward if I hesitated to say that in recommending legislation I consult every interest.

and, when an interest presents an argument that I think fair, yield to it. I am not afraid of the people of the United States. They are fair, and when you go to them and present to them the facts and invite them to do justice, they will do justice. The trouble is in getting to them the facts.

"Time was in this country when it was most difficult for any railroad man to conduct his business within the law. I have worked to bring it about so that he may conduct his business within the law and so that the law shall be fair; but so that he shall be made to feel the penalty of the law when he steps outside of it. I believe there is legislation we may have that will bring that about, and I hope that I may be always able, no matter what the result to me, to do justice between the great interests of this country, the people, the shippers, and the railroads; that business may go on, that we shall all be within the law, and that every man shall see that it is to his ultimate advantage to uphold that law and preserve it and make it inviolate."

He also spoke at a conservation mass meeting, where he said:

"The conservation movement owes its beginning to Theodore Roosevelt, who was inspired by Gifford Pinchot to that wonderful activity of mind and body with reference to it. [Applause.] I am in favor of giving credit where credit belongs [applause] and of withholding it where it does not belong. There are people in Congress, conscientious, hard-working, prominent statesmen, who look at the question of conservation as it might have been looked at twenty or thirty years ago. They say that I don't understand and that we in the East don't understand the situation because we don't breathe the atmosphere of the West. Well, I think we are convincing a good many of them that we are right and they are wrong; but there are some of them who are perfect Ajaxes in debate and who say they will continue to debate this question and will stand against the conservation program as long as the leather of their shoes will last. What I want to get is an act of Congress that shall invalidate all of the withdrawals of land that have been made and shall give me power to make such further withdrawals as ought to be made until Congress has determined upon the proper disposition of those lands."

His address at the banquet of the Irish Fellowship Club had for its subjects, he said, "the history of that beautiful island, 'with her back toward England and her face to the West,'" and "the part that St. Patrick played in her civilization and development." The latter had "laid the foundation of a culture and a progress which put Ireland in the forefront of civilization for a thousand years." But her history thereafter had been a sad one, "a tale of sorrow, of injustice, of outrage, of poverty, suffering and neglect":

"Certainly not until the nineteenth and twentieth centuries have governmental measures been adopted in Ireland with any view to bettering the conditions of the Irish people. During the centuries preceding the nineteenth and clear back to the times of the Tudors they have been subjected to legislation the whole purpose of which was selfish exploitation for the benefit not of the Irish people but of the dominant country. The result has been that Irishmen have gone to other countries."

In all our wars the Irishmen had been at the front, and their love for their adopted country made them, in the Union army during the Civil War, soldiers than whom no others were more daring or effective. On his way eastward from Chicago, the President spoke before the Rochester Chamber of Commerce, reviewing the legislative program of the Administration and saying that Congress should support it. Some had called him a poor politician because the corporation tax had excited the hostility of corporations, the explanation of the postal deficit had offended the magazines, the duty on print paper had displeased the newspapers, and the postal savings bank bill had displeased bankers. "But the measures that we promised," said he, "ought to be adopted, not because they will give us political strength, but because they are right. And if they are right the people will find that they are right, and that's the best politics in the end." One great difficulty about being President was that the President was the titular head of the party and was made responsible for the party's legislation and its promises. If he should carefully recommend a fair law, some would say that he was not going far enough, and others that he was trying to force his views down the throats of unwilling Congressmen. There should be teamwork in Congress by the party's representatives. Extremists on each side should yield something and enact a compromise measure of real improvement. He explained the pending railroad bill and other important measures. Some had asked why we should pass the injunction bill if it did not satisfy the labor unions or the employers:

"I am tired of consulting particular interests to see whether or not a thing ought to go

thru. I am in favor of consulting every interest to see what its argument may be, and I want to give justice to every interest. I want to know whether a thing is right. If it is right we can convince the people that it is right, and they will be with us."

Albany Legislative Scandals

In the Allds investigation at Albany, all the testimony has been taken and the arguments of counsel will be made this week. Senator Allds, while under cross-examination last week, was asked to account for a cash deposit of $4,200 on May 29, 1909. He admitted that the money was part of a fee of about $7,000 which, as counsel for the Argus Publishing Company, he had received for services in relation to the company's suit to collect from the State a claim of $34,705 for printing. Legislation designed to promote the collection of the money was pending at the time. His employment as counsel had not been made known in the official record of the case, the attorney of record having been George E. T. Kelly, who was an associate of Mr. Allds in the Rules Committee of the House in 1901, when, if Senator Conger tells the truth, Allds received the bribe of $1,000.—— Interesting facts were brought out last week by Superintendent Hotchkiss, the head of the New York Insurance Department, who is making an investigation concerning the relation of certain fire insurance companies to legislation at Albany. E. R. Kennedy, a fire insurance broker and a member of the legislative committee of the New York Board of Fire Underwriters, testified that in 1901, as a representative of the companies, he expended $13,311 at Albany, in connection with the passage and enactment of a bill designed to exempt the reinsurance reserves of fire companies from taxation; that about $5,000 was paid to influential politicians; that $5,000 was given to the Republican State Committee, and that the remainder was used in entertaining members and for various expenses. To George W. Aldridge, a member of the State Committee, who is sometimes called the boss of Rochester, $1,000 was paid, this witness said. Mr. Aldridge has since admitted that he received the money. He explains that it was "used for the benefit of the Republican party" in the county where he lives. Kennedy testified that the contribution to the Republican State Committee was made at the suggestion of Reuben L. Fox, the committee's secretary, at a time when the bill in question, having been passed, was in the Governor's hands. It is asserted that the Governor intended to veto it, but was induced by Mr. Kennedy's arguments upon the merits of the measure to give it his approval.

The Strike in Philadelphia

At the end of last week there were some indications that a settlement of the railway strike in Philadelphia would soon be reached. Thruout the week there was comparatively little disturbance of the peace. The order directing all organized bakers, grocery clerks, and carriers of milk to quit work did not seriously affect the situation, the number obeying it appearing to be small. By resolution the Central Labor Union directed that all workingmen should withdraw their deposits from the banks, because the banking interests had shown sympathy with the company. The resolution asserted that the banks rested upon money deposited by workingmen. At last accounts no general movement for withdrawals has been reported. Having 5,000 men, the company needed 1,600 more, but was operating nearly the normal number of cars. On the 14th, at the suggestion of men prominent in the Stock Exchange, and with the approval of George H. Earle, a well-known banker and one of the city's representatives on the company's board, there was a conference between the company's president and the president of the union. No basis of settlement was considered, but the discussion was of a friendly character. This conference was disapproved by Mayor Reyburn and several of the directors, who held that the company was steadily moving toward victory and should make no concessions. On the 15th, the president of the State Federation of Labor issued an order directing all unions in the State to take a vote upon a State-wide sympathetic strike and to hold themselves in readiness to obey a call for such a movement. This was approved by the street railway men

in Pittsburg by a vote that was almost unanimous. On the 17th the president of the Federation announced his purpose to call a State-wide strike on the 21st. At the same time United States Senator Penrose, State Senator McNichol (the local boss) and other politicians arrived in the city and took an interest in the proceedings. On the 19th Penrose, McNichol, the president of the union and the president of the company were in conference. It was reported on the following day that the company was willing to take back all strikers for whom places could be found, to place others on a waiting list at $2 a day, and to increase wages to 23 cents an hour, with an understanding that half a cent should be added each year for four years. The strike was precipitated by the dismissal of 173 union men "for intoxication, for 'knocking down' fares, and for the good of the service." The strikers had insisted that these men be reinstated and that each should have a trial. It was said on the 20th that the company offered to submit the cases of these men to arbitration. Thus far, the cost of the strike, to the company, has been about $1,250,000.

The Islands

The House Committee on Naval Affairs has decided to report a bill providing for the removal of the wreck of the battleship "Maine." In a letter recently addressed to the committee, Secretary Meyer urged that he should be authorized to remove the wreck, which obstructs and endangers navigation in the harbor of Havana. The cost of the work, he thought, would be about $500,000. The bill will provide that $500,000 be appropriated. The bodies of sixty-seven American sailors or marines lie in or near the wreck.——In the Senate there was passed, last week, a joint resolution permitting a popular vote in Hawaii upon the question of prohibiting the sale of intoxicating liquors. Those parts of the original resolution which required the legislature to act in accordance with the result of the election had been stricken out.——Bubonic plague has appeared in Hawaii. There have been two deaths on the island of Hilo and two on Konakas.

Central and South America

President Madriz, of Nicaragua, has rejected all of Estrada's propositions concerning plans for a presidential election at which neither Madriz nor himself should be a candidate. Ex-President Zelaya, now in Paris, has finished the work of writing his memoirs, and the book will soon be published. The main purpose of it is to convince the public that the United States Government caused, or was responsible for, the revolution.—A minister of the Guatemalan Government asserted in New Orleans, last week, that Guatemala had completed negotiations for a loan of $40,000,000, to be used in refunding the foreign debt and reorganizing the country's financial system.——The American Minister to Santo Domingo, Mr. Knowles, was attacked a few days ago, while riding in the street, by one Castillo, a brother of the Governor of the province in which the capital is situated. The man is said to be insane. Mr. Knowles reports the renewed activity of revolutionists.——Service on the street railway in Bogota, the capital of Colombia, has been discontinued, owing to the attacks of mobs upon the employees. The railway is owned and managed by citizens of the United States, who obtained from President Reyes a concession, the terms of which were not approved by the people.

Roosevelt in Egypt

Mr. Roosevelt on his voyage down the Nile is combining sightseeing, speechmaking and book-writing with his customary energy and versatility. His "self-denying ordinance" in regard to not discussing politics apparently does not apply to Egypt, for in his speeches at Khartum he has taken occasion to commend in the strongest terms the administration of the English in Egypt, and inferentially to condemn the Nationalist movement, which has for its ultimate object the overthrow of British rule. In speaking to native and Egyptian officers at the Sudan Club he said that any attempt to undermine the beneficent régime now established would be a crime against the country and humanity generally. He said:

"The soldier who mixes in politics be-

comes a bad politician and a poor soldier. So long as he wears his uniform a soldier is bound in honor to spend all his thought, will and energy in working for the greatness of the flag under which he has fought or has engaged to fight."

Mr. Roosevelt inspected the reconstructed city of Omdurman, the former site of the dervish power across river from Khartum, his guide being Slatin Pasha, now Inspector General of the Egyptian force. He delivered a stirring address on courage as the first of the Christian virtues before the American Mission School at Khartum and laid the keystone of an arch of the English Episcopal Cathedral. On the 17th, bidding goodby to his hunting companions, he continued his voyage down the Nile, stopping off to visit the ruins of Karnak and the great Assouan dam. In the engineering details of this he manifested special interest, because it is next in size to the Gatun dam now being constructed at Panama, and because of the large area of arid land which it has opened up to cultivation thru irrigation. He is expected at Cairo on March 24, where he will remain for a few days, reaching Rome April 3. Ambassador Leishman is arranging a plan by which Mr. Roosevelt can meet both King and Pope without offending the susceptibility of either Quirinal or Vatican, and so avoid the embarrassing situation in which ex-Vice President Fairbanks found himself when the Pope refused to receive him because he had spoken at the Methodist Mission in Rome. From Rome Mr. Roosevelt will spend a week on the Italian Riviera and proceed to Vienna and Budapest, then to Paris about April 21, where he will deliver an address in French before the Sorbonne. He will then visit Brussels and the Hague, arriving at Christiania, Norway, May 3, where he will deliver an address in English as recipient of the Nobel Prize for the promotion of peace. On May 9 he will go to Berlin, where he will speak in German, remaining a week, and then back to London for about a month. He is particularly anxious that his reception in America shall not partake of a political character, and on this point has made public the following statement:

Naturally, I am deeply touched and pleased to learn that my fellow-countrymen feel they would like to receive me on my return to New York. I shall be more than glad to see them, but my reception must be non-partisan. It must be participated in by Republicans, Democrats, Populists, and men of other or no political faith alike—in short, by all who care to take part in such a reception, whatever their politics may be, or whether they be Easterner, Westerner, Northerner or Southerner.

He is reported to be in excellent health and looking younger and less careworn after his year of hunting wild beasts in Africa than he did when he laid aside the presidency.

Bosnia and Herzegovina

The estrangement which has existed between Russia and Austria-Hungary ever since Count Aehrenthal precipitated the Turkish crisis by projecting a railroad thru the Sanyak of Novibazar has been ended at last and it is authoritatively announced that the two countries have come to an agreement in regard to their policies in the Balkans. The *status quo* is to be maintained and the two governments are to work in harmony. This will tend to relieve the strain of the European situation and to prevent any disturbances of the peace of Europe thru the disorders in Macedonia or Crete. It is, however, displeasing to the German party, which would prefer a *rapprochement* with Germany, and to the Poles, who wish to cultivate friendship with England. The annexed provinces of Bosnia and Herzegovina have been provided with a constitution carefully prepared to reconcile their diverse races and sects. A Diet is established, consisting of 72 elected and 20 *ex officio* representatives. 15 of the latter being dignitaries of the Mussulman, Serb, Orthodox and Catholic Croat religious communities. The presidential bureau, consisting of one president and two vice-presidents, is to be appointed annually by the Crown at the opening of each session. Each creed will be represented in the bureau, the presidential office being held by a Serb, a Mussulman and a Croat in annual rotation. The Diet has charge of such matters as civil, penal, police and commercial law, industrial and agrarian legislation, sanitation, communications, taxation, the provincial estimates, the issue and conversion of loans, and the

sale or mortgaging of provincial property, but all Government bills must receive previous sanction of the Austrian and Hungarian cabinets, whose assent is also necessary before the bills passed by the Diet can be sanctioned by the Crown. Of the 72 elective seats, the Serbs have 31, the Mussulmans 24, and the Catholic Croats 16, and the Jews 1. The seats are further divided into three electoral categories, the first class composed of the large landed proprietors and high taxpayers. In this women also possess the franchise, but exercise it thru a male proxy. The cities have 20 representatives and the rural districts 34. All male subjects except civil and railway servants and public school teachers have the franchise on their twenty-fourth year. In the first and second categories votes are recorded in writing, but in the third or rural category voting is oral, on account of the large number of the illiterate.

The Manchurian Situation

It is reported from Pekin that the Board of Foreign Affairs has been forced by strong diplomatic pressure to abandon further negotiations in connection with the proposed Chinchow-Aigun railroad. Our State Department is said not to regard this decision as final. Whether this means that Secretary Knox has been defeated in all his efforts to settle the Manchurian question or whether his proposals have already indirectly done all they were intended to do can only be surmised by the outside world. Nor is there anything more than the probabilities of the case to confirm the common belief that Japan and Russia have come to a complete and satisfactory agreement and are working together to their mutual advantage in Manchuria. The position of Great Britain seems to be an embarrassing one. There has always been a considerable element in England which has viewed with disfavor an alliance with an Asiatic power even for the purpose of checking the aggressions of a hereditary enemy. This party is becoming outspoken in its dissatisfaction and if it should turn out that Japan was playing into the hand of Russia and that the United States was likely to reap the benefit of it, the foreign policy of the British Government would receive severe censure. It will be remembered that in the fall of 1907 British capitalists secured from the Chinese Government the right to extend the North China railroad from Hsin-min-tun, 40 miles west of Mukden, to Fakumen. This the Japanese Government refused to permit, on the ground that it would parallel the South Manchurian railroad and interfere with its traffic, and Great Britain acquiesced in the veto. The next project favored by China was a more ambitious one, to traverse Mongolia and Manchuria from the Gulf of Pechili to the Russian frontier by a railroad from Chinchow to Tsitsihar on the Trans-Siberian railroad and thence north to Aigun on the Amur River, a distance of about 800 miles. This also the Japanese opposed, so it seemed that British financiers were to be prevented by their Government from taking any part in the railroad development of Manchuria and Mongolia. Their indignation may be imagined when they read Mr. Knox's announcement that an American syndicate had secured the right to construct this Chinchow-Aigun railroad from which they had been debarred. Exactly what the diplomatic pressure was by which China was forced to cancel this franchise is not known, but the proposal compelled both Russia and Japan to show their hands. Russia was frank enough to object to this project and to the supplementary proposal accompanying it that all the railroads in Manchuria should be neutralized and placed under international control, on the ground that it interfered not only with her commercial but her strategic interests. As an alternative, Russia proposed a road northwest from Pekin thru Mongolia to Lake Baikal. The next factor in the situation was a speech by Jacob H. Schiff, in New York, predicting a momentous struggle between Japan and the United States over commercial supremacy in the Far East, which would involve other Powers. Since Mr. Schiff was one of the leading financial backers of Japan during the war and had therefore contributed materially to Japan's success, the utterance excited widespread comment. Then Secretary Knox came forward with a proposal for a permanent court of arbitration to settle any questions which may threaten to disturb the

friendly relations of Japan and the United States, and there are rumors that a Japanese-American alliance is in contemplation on the basis of an agreement between the two countries already existing. Some of the Japanese papers favor cooperation with this country and others express themselves in opposition. Further evidence is being produced to prove that Japanese trade is securing unfair advantages in Manchuria in spite of the open-door policy professed to be maintained. It was probably on account of the uncertainty as to Manchurian railroads that the $30,000,000 loan which had been arranged for the construction of a railroad from Hankow to Sze-Chuen is still being held up.

The Diet and the Reichstag

The electoral bill which has caused so many riots in Germany since it was introduced by Chancellor von Bethmann-Hollweg into the Prussian Diet, was passed on March 16 by a vote of 238 to 168. The veteran Socialist leader, Herr Liebknecht, made a long and powerful speech denouncing the Government for its refusal to grant equality of suffrage to workingmen and threatening them with the wrath to come. His allusion to the Diet as a den of hucksters who had sold out the rights of the people precipitated a storm of indignant shouts, and the conservative members left the house in a body. Similar disorders have occurred in the Reichstag, and it is becoming generally realized that the maintenance of the present restrictions of the suffrage in Prussia is a matter that concerns the whole Empire and not a local question, as the new Chancellor holds. The fiery conservative cavalryman of the Reichstag, Herr von Oldenburg, who recently asserted that the Kaiser must have the right to send a lieutenant and ten men to close up the Reichstag whenever he chose, upset the House a second time by charging that his opponents were devoid of anything approaching honor, and then, when called to order, challenging by name four of them to duels. Herr Bebel announced that the challenge was respectfully declined by the Socialists.

THE FRANZ HALS FAMILY GROUP.
Purchased last week for $500,000 by Otto H. Kahn, the highest price ever paid for a painting.

The Japanese War Scare

BY THE HON. JOHN W. FOSTER

[His experience as Secretary of State, and in a large number of diplomatic relations, gives Mr. Foster especial authority to treat of a subject which needs public consideration at the present time.—EDITOR.]

THE renewed talk of an impending war between Japan and the United States, which seems to have received a fresh impetus of late, is worse than nonsense—it is wicked. It is absolutely without foundation and without reason. There is no danger of war, but there is danger that the continued agitation, especially by men of standing and by the responsible press, may lead to irritation and estrangement where there has been heretofore harmony and warm friendship.

It is hardly conceivable that hostilities between these two peoples should be the culmination of more than half a century of active good will and cordial and intimate relations; a period marked by many acts of international friendship. Besides the notable event of Commodore Perry's mission, our Government for many years stood alone in advocacy of the release of Japan from its exterritorial vassalage to the Western Powers. It returned a war indemnity which other Powers withheld. Japan showed its appreciation of our friendship and its confidence in us above the European Powers by entrusting its interests in China and Russia to our ambassadors and consuls during its war with those countries. Americans contributed largely to the development of Japan in modern government and society. Many Japanese have been educated in American schools and have returned to take a prominent part in administration, cherishing cordial feelings toward our country. Considerable numbers of American missionaries are laboring in all parts of Japan. Not long ago the whole body of them signed a statement that the Japanese people had faith in the traditional justice and equity of the United States, and that they regard the Americans as their truest and best friends. Recently the leading journal in Yokohama said: "Before engaging in a war with America Japan would have to divest herself of the strongest sentiment of friendship which she entertains toward any foreign country."

It is true the foregoing are merely sentimental reasons for preserving the peace, but they are not without weight among intelligent and well-meaning people. Between nations entertaining such sentiments nothing but a question of the gravest importance can lead them into hostilities. There is no such question existing or likely to arise between us and Japan. Immigration is the only matter about which there has been any indication of divergence of views, and that should not present any trouble between the authorities of the two governments. Under international law and usage every nation has the right to determine for itself what class of foreign immigrants it will admit into its territory. Japan has recognized by treaty the exercise of this right as against laborers, and has undertaken to restrain such immigration. If she should fail at any time to discharge this duty, the United States would be entirely justified in exercising it, and there would be no occasion for displeasure on the part of Japan unless it should be exercised harshly and with injustice.

The Japanese are a patriotic and brave people, but they are not, as is alleged, an aggressive nation, as an examination of their history shows. For more than six hundred years, up to the war with China in 1894, Japan had lived in peace with all foreign nations. No country in Europe or America can point to any such record. The war with China was not an aggressive one on her part. Li Hung Chang, the great viceroy, during the course of the peace negotiations at Shimonoseki, declared that it ought not to have occurred, and that he did all that was possible to avert it, but the authorities at Peking overruled him.

The conflict with Russia, ten years later, regarded from a political standpoint, seemed inevitable. It was Russia

that deprived Japan of the most valued of her conquests over China. She was forced to surrender Port Arthur and the Liaotung Peninsula, which she had purchased with an enormous sacrifice of blood and treasure, and underwent a humiliation in the hour of her triumph over the beaten foe such as no self-respecting nation could be expected to forget or forgive. The immediate cause of the breaking out of hostilities was Korea. Japan could not permit the occupation or control by Russia of that helpless and dependent country without the ultimate loss of her own independence. The world cannot reproach her, under the circumstances, for her courageous challenge of the Giant of the North. And the close of that war afforded her an opportunity to manifest her regard and respect for the United States. In the hour of her triumph, when she had driven the last Russian army from the field, she heeded the call of President Roosevelt for peace and sent her plenipotentiaries to negotiate on our soil.

No nation controlled by sane rulers and advisers ever enters willingly upon a war which is likely to prove disastrous to its interests. Japan could hope for no adequate compensation as the result of a conflict with us. Even if it were possible to destroy our navy, her forces could make no permanent lodgment on our shores. But her military and naval men understand full well that it would be a hopeless task to send a fleet across the broad Pacific to invade our territory or to attack the American navy. Besides, a war with us would mean the destruction or paralysis of her vast merchant marine, built up with so much cost, time and labor. Lines of Japanese-owned steamships of most modern construction are now maintained to Siberia, Korea, China, Formosa, India, Australia, Europe, Seattle, San Francisco and Spanish-American ports. These lines represent a vast amount of Japanese invested capital, large Government subsidies, and the employment of many seamen. Japanese statesmen fully understand that in engaging in a war with the United States they would leave in the rear two inveterate enemies, Russia and China, ready to avenge their defeats.

Even a bankrupt nation under patriotic impulses might rush into a conflict which meant certain destruction, in order to defend its honor or its independence; but wise rulers usually do not deliberately go to war with a foreign power without first counting the cost, and being assured that they have resources sufficient to maintain the contest. Japan is in no condition to carry on a war with the United States for financial reasons. The Russian war strained its credit to the utmost. It now carries a national debt heavier in proportion to its population and resources than almost any other nation, being $21.50 for every inhabitant; and the taxation is estimated to be 20 per cent. to 25 per cent. of the people's income. Baron Shibuzawa, the head of the commercial delegation which recently visited our country, says: "The present rate of taxation in Japan is indeed extremely high, and more than the people at large can bear." A similar declaration is that of the *Kokumin Shimbun,* a leading journal of Tokio: "The heavy debts of Japan are more than the nation can endure." Notwithstanding the Imperial Diet is usually subservient to the wishes of the Government, the last budget of the Cabinet was reduced by it $5,000,000, and a further reduction of the land tax is demanded. A war with the United States would call for a larger financial outlay than any which the Island Kingdom has ever heretofore experienced. In the present condition of its revenues, well might the late Ambassador to the United States declare, "War with America is impossible."

There are other controlling considerations which make a war with the United States on the part of Japan suicidal madness. It finds not only its best but the chief market for its export products in our country. To destroy the silk and the tea industry of Japan would be to bring incalculable distress upon its people. Over 70 per cent. of this trade comes to us, and its destruction would mean bankruptcy to the leading industries.

Japan is largely dependent for its food supply on foreign sources. The islands proper only have in cultivation

25,000 square miles[1] (and this largely in tea and silk), less than the area of a single one of our smaller States, with a population of approximately 45,000,000. It may readily be seen how a war with our country might materially affect this supply, bring great distress upon the inhabitants, and seriously cripple the Government.

The great need of Japan—in fact, a necessity to its existence as a nation—is a long era of peace to enable it to carry out its administrative program, develop its resources and establish its credit on a secure basis. In addition to its internal problems, which are by no means insignificant, it now has on its hands the assimilation of the large island of Formosa with its Chinese population, the government of the suzerain kingdom of Korea, and the administration of its complicated interests in Manchuria, a heritage of its late war with Russia. These are sufficient to tax to the utmost the wisdom of its statesmen, and are likely to need the support of its army and navy. It would be the hight of folly to imperil this program by a war with the United States.

It has been suggested that the alliance of Great Britain with Japan, which still exists under treaty stipulations, would enable Japan to act with a free hand toward us. This alliance cannot change the conditions above described which make war on the part of Japan almost impossible, but the British alliance can never lead to a war with America. What it is likely to do is to support Japan in its opposition to certain projects for the exploitation of Manchuria. The competition or strife for concessions in China should not be permitted, and is not likely to ruffle the friendly relations of the respective governments, and certainly ought not to result in hostilities. The British-Japanese alliance should more properly be regarded as a guaranty of peace in the Pacific. Neither the present nor any possible Ministry in London would encourage or permit an aggressive war by Japan upon the United States. If the state of affairs in the Far East in itself did not counsel against it, certainly the interests of the two English-speaking countries on the Atlantic and with coterminous boundaries on this continent would positively forbid it. The two most friendly nations on the earth are and should ever be the United States and Great Britain. Hence we must interpret the Anglo-Japanese alliance as a pledge of peace for us as well as for the allies.

The foregoing review of affairs in the Far East has been given in the hope that it may quiet the fears of any Americans who have been made anxious by certain of our orators or after-dinner speakers and by press reports that a war with Japan was certain and was imminent. But such a review is a work of supererogation if there exists between the two peoples a sincere and cordial friendship. Certainly with the great mass of Americans there is no other sentiment toward Japan than the most friendly feeling. No one who will investigate with an open mind the state of public sentiment in Japan can reach any other conclusion than that a similar feeling of friendship prevails there toward America. The Japanese Minister of Foreign Affairs, Count Komura, doubtless reflected the real sentiments of both his Government and people when he said recently: "The friendship between Japan and the United States is of traditional standing, and it is absolutely essential to the common interests of both states not only to maintain unimpaired those sentiments of amity, but to extend and strengthen them by every possible means." And his latest utterance is still more emphatic: "I am convinced there is nothing in American-Japanese relations to cause uneasiness. War is inconceivable. It would be a crime without excuse or palliation." Our late Ambassador at Tokio, Gen. Luke Wright, said on his return: "The talk of war between this country and Japan isn't even respectable nonsense. Japan no more wants war with us than we want one with her; and the idea that there is an impending conflict is ridiculous." The testimony of these distinguished statesmen will have more weight with the American people than the orators and writers who are clamoring for a larger army and a greater navy to resist the coming Japanese invasion.

WASHINGTON, D. C.

[1]Indebtedness is acknowledged for a number of facts and statistics to a recent publication in Japan by Rev. H. Loomis, long a resident there.

Easter Song

BY CLINTON SCOLLARD

EASTER!—and the umber mold
Feels a kindling thrill of gold,—
Gold upon the willow tips,
Gold upon the crocus lips;
Feathery gold of catkin-ore,
And the colt's-foot by the shore!

Easter!—and the bluebird's wing
Shows an azure shimmering;
On the robin's breast there glints
Presage of the rose's tints,
While the grackle's prismy throat
Glistens with each warbled note.

Easter!—and the lyric stream
Wakens from its winter dream;
Every strain the south wind breathes
Some fond prophecy bequeathes;
Every bough, a throbbing lyre,
Voices some aroused desire.

Easter!—and the wondrous clue
To the marvel ever new—
Earth's renascence, wherein we
See revived mortality,
As in root and branch and bole!—
Easter—and the quickened soul!

CLINTON, N. Y.

The Cost of Living.—VII.

[This is the seventh article in our series on the increased cost of living. Those already having appeared are: "The Remedy for High Prices," by Prof. J. Pease Norton (February 10); "The Crisis in American Home Life," by Prof. Simon N. Patten (February 17); "The Tariff and the Cost of Living," by Byron W. Holt (February 24); "An Old Fashioned Theory of Prices," by Professor Franklin H. Giddings (March 3); "Prices and Incomes," by John Bates Clark (March 10); "Economy in Diet," by Russell H. Chittenden (March 17).

Does Increased Gold Production Increase Prices?

BY STEWART BROWN

[Mr. Brown is a New York banker of wide experience in Great Britain and in this city. Finance he has made his especial study, and he spent three years visiting all the leading countries of the world investigating their banking and financial conditions.—EDITOR.]

IN examining this question, I start from the original foundation of all commerce, viz., *barter*.

The early settlers exchanged existing "commodities" among themselves, the "unit of exchange" being weights, quantities and numbers, and the vehicle of exchange being the wagon.

Village life evolved and produced the general storekeeper as the clearing house for exchange of existing "commodities," "so much for so much."

Next appeared the delivery by the storekeeper to consumers of certain existing "commodities" in exchange for "future delivery" to him of certain other then non-existing "commodities," the "unit of exchange" being weights, quantities and numbers, and in these transactions the storekeeper became also the banker. Next appeared precious metals as the least bulky and most desirable medium of exchange—first copper, next silver and then gold, each by weight, but the basis of the exchange value of "commodities" was labor. The law of supply and demand in exchanging "commodities" was absolute, as was the "quantitative" theory of "commodity" exchange.

Next appeared "coined gold" as the medium of exchange.

Up to this point gold, whether exchanged by weight or at its face coinage value, was only a "commodity" and any excess produced that was beyond the requirements of the producers of other

"commodities," the less value gold had in exchange for such other "commodities."

Producers delivered their excess existing "commodities" to the storekeeper, receiving in exchange other existing "commodities" or part existing "commodities" and part credit—or all credit expressed in dollars on the storekeeper's books, who lent his credit to such producers as a bank now lends its credit to its depositors who deposit their commodity, capital or stored labor. Other producers wanted from the storekeeper existing "commodities" in exchange for the future delivery of then non-existing "commodities," the storekeeper borrowing such producer's credit as a bank now borrows the credit of the borrowers.

Stored labor, otherwise capital, became divided into two great divisions: real property and tangible personal property; they in turn produced two great subdivisions. (1) Stocks, bonds and other evidences of indebtedness representing real and tangible personal property. (2) Book credits representing any or all of the above.

As banking became more complex some means had to be found for trading, exchanging or transferring book credit, and while the wagon, railroad and steamship could transfer actual "commodities," they could not transfer book credit, and necessity forced the use of paper money and checks as the vehicle for transferring credit from one to another in an endless chain of credit transfers, but the basis of and reason for bank credits, paper money and checks is exchange of "commodities." The ultimate, final and only settlement of credit must be made in actual "commodities," no matter how often or how long the final settlement is postponed. The bank of today is simply the clearing house for credits.

In the complex finance and commerce of today, the dollar, the pound sterling, the franc, the mark, etc., *per se,* are the "unit of exchange," and have no value *per se,* but are like the meter or yard stick. They are not the measure of exchange; the measure or basis of exchange is the relation that one commodity bears to another commodity. Fixt or eternal values do not exist; everything in life is relative. Gold is not the basis of value and cannot be made so, but it is the basis of the "unit of exchange." The basis of value is *labor.*

In examining the question of what effect gold production has on prices the following uses to which gold is put must be considered.

Uses to which gold is put which have no effect on prices:

(1) Used in the arts.

(2) Used in circulation as coin or as coin or bullion as a basis for paper money circulation, which does not make the aggregate money in circulation in excess of the demands of commerce.

(3) Used as bullion or coin to strengthen Government or banking reserves not in excess of absolute safety requirements.

Uses to which gold is put, which have no effect on prices, but which some people think have:

(1) Used in circulation as coin or as coin or bullion as a basis for paper money circulation, which makes the aggregate money in circulation in excess of the demands of commerce. It is impossible for the aggregate money in circulation to exceed the demands of commerce, because as soon as it does so, the excess comes into the banks as deposits.

Use to which gold is put which may be debatable as to whether it increases prices or not: Used as bullion or coin to strengthen Government and banking reserves in excess of absolute safety requirements. My opinion is that this does not increase prices, as banks can expand credits without this increased reserve.

The following conclusion forces itself upon one as being the true relations between gold, commerce and prices.

So long as gold in bullion or coin had no free coinage or legal tender qualities, it was a commodity like all other commodities, subject to the law of supply and demand, and its value in exchange for other commodities depended entirely on its volume.

When gold was given free coinage and made legal tender, it ceased from that moment to be a commodity like other commodities, and the law of supply

and demand did not apply. The gold used in the arts is a commodity, but unlike other "commodities," has a first value in exchange for other "commodities" by reason of its "free coinage." The quantity of gold produced annually that foes into the arts has no bearing on prices.

The quantity of gold produced annually that does not go into the arts, but is used in circulation as coin or as a basis for paper money circulation, or for Government and banking reserves does affect prices to the extent of the labor paid for mining and refining it, plus the profit, being the difference between its labor cost and its coinage face value. Labor producing such gold might just as well be building mountains and pulling them down, digging holes and filling them up, as mining gold for storage purposes. Labor mining such gold is fed, clothed and housed, at the expense of the community, and gives nothing in return, and to this extent it has a tendency to raise prices, and probably has done so, but such increase has been offset by other factors, as if we take the world's average price level for the past thirty years, we find that it has not increased in proportion to the world's annual increased production of gold, in fact in many years the average price level has gone down, while gold production has gone up.

Gold, whether bullion or coin, in circulation or in storage, irrespective of its volume, has no more effect on prices than if it was still in the bowels of the earth, and the proof is to be found in the following two facts. The world's aggregate existing quantity of gold for currency purposes shows an annual average increase of less than 5 per cent. over each preceding year, and in no year exceeds that percentage, which increase is infinitesimal when compared with the world's increase in commerce and in commercial and financial transactions during the same period. As stored labor increased enormously, as represented by the increase of commerce, banking credits increased correspondingly and would have increased if there had not been a dollar of gold in the world; the world's banking credit increased in volume irrespective of the increased annual production of gold or of the aggregate existing quantity of gold.

The world's volume of gold in circulation or in storage must, therefore, be eliminated entirely as a factor affecting prices and must be treated as part of the world's banking credit or capital.

I believe that the world's credit system will evolve so that in time we shall have a world's "unit of exchange," say the dollar, as a mental concept only and gold will be relegated to a commodity as of old. As domestic and international credits are from time to time placed on a more scientific plane, the necessity for using gold is being gradually eliminated. The following is one example of the possibilities of the future: Chile at one time for some years was on an irredeemable paper basis, legal tender for debts and taxes, but as the aggregate paper money was not in excess of the demands of commerce it was at a premium over gold, the premium being the cost of shipment to Europe plus insurance. Bank credits expanded and contracted during this period just as they did in gold basis countries.

We next come to examine the effect the bank credits have on prices. Bank credits are simply stored labor. Bank borrowers borrow stored labor for the purpose of exchanging it for present or future labor in the shape of existing commodities, commodities being or to be produced. The borrower must pay over to labor the stored labor he has borrowed. He does not borrow it, pay interest on it and let it lie idle. If banks unduly extend credits it is for the purpose of borrowers paying labor. The greater the aggregate credit paid to labor the more the recipients have to exchange for existing commodities, thereby forcing up prices and at the same time attracting more persons to the pursuits that banking credits are developing.

Too much of the world's capital and too many of the world's workers are at present employed in industrial, transportation and commercial development and too little of the world's capital and too few of the world's workers are employed in producing foodstuffs; until

this condition rights itself, prices, especially of foodstuffs, must rise, and will rise higher and higher.

In the United States rising prices are greater than in other countries by reason of the following. For some years past, American syndicates had been borrowing billions of capital from the balance of the world and pouring it into rebuilding old and building new enterprises of every kind and nature, except in foodstuffs production. We have had a financial debauch of the worst kind, but the entire American people got their share of the proceeds, with the result that the entire nation has become extravagant, luxuries have become necessities, and with increased demand therefor, prices for everything have been forced up.

The demand for labor increasing, it combined for higher wages and shorter hours, and got both; the demand for luxuries and semi-luxuries increasing, the producers of such combined and forced prices up; the demand for foodstuffs increasing, the distributers, the middlemen and retailers of such, combined and forced prices up. Any old price that was asked for any old thing was gladly paid, and people wondered why they were not charged more. People called higher prices the proof of the prosperity of the great American people.

The bubble was punctured by the panic of 1907. European banking capital was called in and new capital could only be obtained in small amounts, development work was reduced, or stopped entirely, but extravagant living continued—combinations to keep up wages and prices continued—and we are now up against the fact that the American people must come down to a much lower plane of living; but instead of doing so, and in order to continue to live as extravagantly as before and even more so, they want wages increased—thereby adding fuel to the flame.

New York City.

A University Education for Negroes

BY BOOKER T. WASHINGTON, LL.D.

Of Tuskegee Institute, Ala.

[The inauguration of Dr. George A. Gates, lately of Pomona College, on March 31, as president of Fisk University, gives special timeliness to this article. Dr. Washington's defense of higher education for negroes shows how mistaken is the idea that he is concerned only in the industrial training which will fit the race to support themselves in a humble station of life.—Editor.]

FISK University, located in Nashville, Tenn., was founded by the American Missionary Association in 1866, and it is under its fostering care that it has done its work up to the present time. It began in an abandoned army barracks, took its name from Gen. Clinton B. Fisk, who was at that time stationed at Nashville, and its first permanent buildings were erected on the site of Fort Gillam.

Coming thus on the heels of the war, it was one of the first tangible fruits, so far as the negro is concerned, of emancipation.

Those were wonderful days, directly after the war! Suddenly, as if at the sound of a trumpet, a whole race that had been slumbering for centuries in barbarism awoke and started off one morning to school.

It was a sight to stir the heart and, moved by a generous enthusiasm, hundreds of young men and a still larger number of young women, came from the North to help the newly enfranchised race on its road to freedom. It was under these conditions, and by men and women of this type, that Fisk University was founded and, in sending out year after year since that time, into all parts of the South, young colored men and women who were inspired with the enthusiasm and high purpose of

those early teachers, this school has performed a service to the negro race and the South greater than can be measured in definite terms.

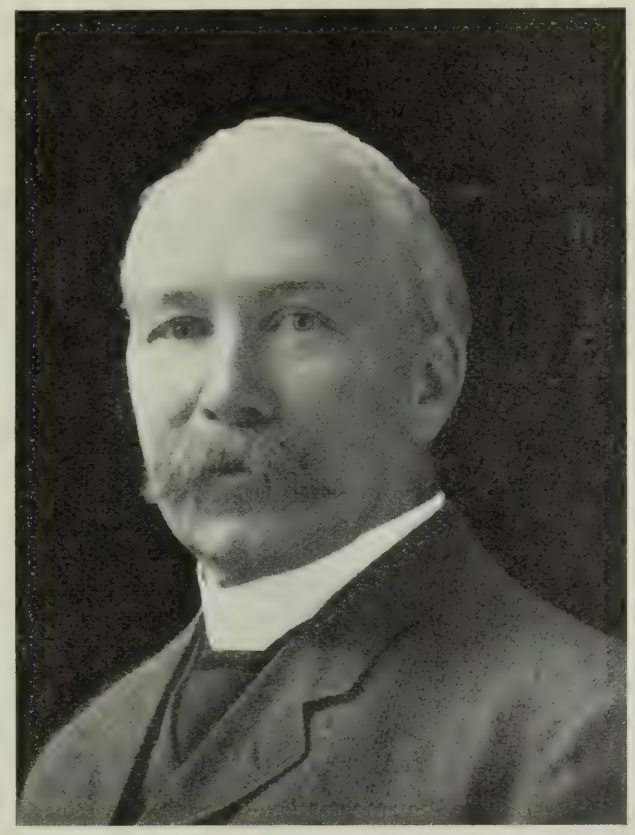
A few years ago there was not a school for negroes in the South so well known as Fisk University. It gained its fame thru the singing, by its students, of the old slave songs which the young freedmen had learned in the laps of their slave mothers. The Jubilee Singers, in the course of a seven years' campaign, made Fisk University known all over the world and brought back $150,000 to the school to help erect its first permanent buildings. If Fisk had done nothing else or more, its work in gathering and popularizing these folksongs of the race has entitled it to be remembered with gratitude by the negro people and the world.

Thruout the South, and in other parts of the country as well, the colored people cherish a feeling of love and even reverence for Fisk University that is not generally understood by the rest of the world. It is a great advantage to a school to have gained that sort of a reputation among the people for whom it exists.

Fisk has, in this respect, an additional advantage. From time to time, as I have gone to Nashville, I have been careful to note how highly the work of this school is esteemed by the white people in Nashville and thruout that part of the State. I have never heard a white person in Nashville speak in any manner except in the most friendly way of Fisk University. As between the Southern white people in Nashville and Fisk University, there is little or no race feeling and their relations do not, as is sometimes the case elsewhere, constitute a special problem that has to be considered and solved. I have been at Fisk on public occasions when I have seen every inch of space in the auditorium crowded by the best white people in Nashville. This fact needs to be considered in estimating the value and usefulness of this school.

Mrs. Washington and I recently spent two days in Nashville, during which time we had an opportunity to go thru every department of the college in company with the new president, Dr. George A. Gates. I confess that I was surprised that any institution, with so little means, could do so much work and such good work, and care for so large a body of students, as is the case here.

Fisk University, because of the work it has already done and because of the high place that it holds in the hearts of the colored people, is in a position where, if its work could be enlarged and perfected, it could and should be of vastly greater service in the future than it has been in the past. The fact is, however, that it has reached a point where it is clear to any one versed in educational matters that the school must have more money or it must go backward instead of forward.



From the first, Fisk University has been most fortunate in the type of its instructors. The late president, Dr. E. M. Cravath, was a high example of what I mean. More than to any one other single individual, Fisk University is indebted to Dr. E. M. Cravath for the character of work done and for the atmosphere which surrounds the university. The son of Dr. Cravath, Mr. Paul D. Cravath, of New York, one of the most eminent lawyers in the country, is a trustee of Fisk and has been deeply interested in keeping the university up to the standard of usefulness which it reached when his father lived. Following President Cravath the standard of the university was maintained under the late Dr. James G. Merrill.

The new president, Dr. George A. Gates, whose formal inauguration will take place Thursday, March 31, altho he had been at the institution but a short time, had already, when I made my visit there, gotten a firm grip upon his work and had found a strong place in the hearts of both faculty and students as well as the citizens of Nashville. In this respect the university seems to have held its own.

The faculty is divided between white and colored professors. The white people are now, as they have always been, men and women of an exceptionally high character and purpose, who are in the work not for dollars and cents, but for the good that they can

accomplish. The colored professors for the most part are graduates of Fisk University.

It was a pleasure for me, during the two days that we spent at the school, to mingle freely among the students. They are a fine lot. Nothing bumptious or foolish about them. They seem to have but one object in view, that of preparing themselves for service to their race. In looking over the list of the Fisk graduates, I find that considerably more than half of them have gone out into different parts of the South as teachers. Some of the strongest men who are leaders in education, religious work and in the professions are graduates of Fisk University. In my recent trips thru Southern States, I have been surprised as well as gratified at the large number of Fisk men and women whom I have met, and almost without exception I have found that they are leading useful and honorable lives. For a number of years, we have had from twelve to fifteen Fisk men and women at Tuskegee, in different departments. For example, Mr. Clinton J. Calloway, who has been so largely responsible for the organization and upbuilding of the rural schools thruout Macon and other counties in Alabama adjoining Tuskegee, is a Fisk graduate.

DR. GEORGE A. GATES,
President of Fisk University, Nashville, Tenn.

It should be remembered that the responsibilities, as well as the opportunities, of the colored teacher are greater than are those of the white teacher who is engaged in the same kind of work. For example, in Alabama, and I hope it will soon be so everywhere thruout the South, a teacher who goes out into the rural districts is generally expected, in places where school exists for only three or four months, to extend the term to six or eight months. In order to do this it is necessary, of course, to devise some form or method of voluntary taxation. Frequently the raising of this money is the most important work a teacher has to do, because upon these voluntary contributions, not merely the character, but the very existence of the school depends.

On the other hand, a teacher may go into a community where there is no school building or where the building that has been used is so worn and old that it is no longer fit for use, and a good many of the country schools are in that condition In such a case, the teacher is likely to be called upon to raise money and erect a new building or repair the old one.

In many parts of the South in the country districts, the burden of erecting and maintaining the school system, so far as it touches the negro, is thrown largely upon the negro teacher. Not only this, but to a very large extent the success of negro education in the South depends upon the character of the individual teacher and the spirit in which he or she undertakes the work. If the teacher has learned to bring education so into touch with the life of the community that the people, both black and white, can be made to feel and see the effects of it in their daily life, then education will become popular in that community, and white people, as well as the colored people, will be glad to support it. Altho conditions are somewhat dif-

ferent in the cities the negro teacher there—to a much larger extent than the white teacher—has the responsibility of showing, by the results of his teaching, the value of the kind of education that he is giving his pupils.

I mention these things in order to emphasize the fact that when his responsibilities are the same or greater, the negro teacher or the negro doctor ought to have just as sound, just as complete and just as thoro an education as the white man who performs the same work or shares the same responsibilities.

It sometimes seems to me that we spend too much time in the discussion of the relative value of higher education and lower education for the negro. As a matter of fact, it does not make so much difference whether education is high or low, professional or common, but it does make a great deal of difference whether the education the negro receives is real or mercly a sham. If we are to have negro doctors, then I think every one will agree they should be good doctors. If we are to have negro teachers, ministers, bankers and business men, they should be just as efficient and just as moral as those of any other race.

For this, if for no other reason, we must keep up the standard in our schools. We must not draw the color line in the negro colleges as we will do if we voluntarily accept a low standard or less complete preparation in negro colleges than is required in the schools of any other race.

This is a matter, let me add, that touches the white man just as closely as it does the negro. We are all bound together in a system of relations; we cannot tear asunder if we would. Disease draws no color line. If a contagious disease breaks out in the part of the city inhabited by black people, it is pretty sure to reach, sooner or later, the part of the city inhabited by white

FISK UNIVERSITY CAMPUS, SHOWING CHAPEL.

people. The negro doctor, in looking after the health of the individual negro, to a certain extent is looking after the health of the whole community. Morality draws no color line. If one portion of the community is living in helpless ignorance and degradation, every other portion of the community will sooner or later be infected with these conditions. For this reason, it is important that the negro teacher and negro preacher should be properly trained.

It is just as true in business, and in all the economic relations of life, as it is in the matter of disease that the success and prosperity of one part of the community is dependent upon the success and the prosperity of every other part. If one part of the community performs its work and fulfils its obligations in a slipshod, careless way, the whole community will feel the effects. For this reason, it is important to every one that we should have in every Southern community well-trained, enterprising, thrifty and honest negro business men who will serve as examples to the other members of their race.

In all these respects Fisk has been, to a certain extent, a model for the other colored schools in the South. For its effort to maintain its standards under peculiar disadvantages Fisk deserves especial credit. As indicating what those disadvantages are, let me make a comparison.

FISK UNIVERSITY BUILDINGS.
Gymnasium. Library. Livingston Hall.

Thirty years ago, the University of Chicago was, like Fisk, a comparatively small and unimportant school. Without pretending to any definite knowledge of the facts, I believe I am safe in saying that Chicago University was not, at that time, much ahead of Fisk either in the character of its work, in the number of its students or in the extent of its influence upon the communities. That

was the day of small colleges. I do not believe there was a university in the country that had much over a thousand students.

How do the two institutions compare today?

According to the report of the Commissioner of Education for 1908, Fisk had 516 students, while Chicago had 5,617, which is but 2,882 less than the number of students in the twenty negro colleges reported by the United States Commissioner of Education. The total annual income of Fisk in that same year was $24,590. The value of its scientific apparatus, library and buildings was estimated at $419,000, of which $400,000 was buildings. The total annual income of Chicago University in 1908 was $1,772,015. The value of its scientific apparatus, library and buildings, exclusive of its endowment, was estimated at $10,320,036.

In order to show just what this means, let me make a further comparison. While the income of Chicago University in 1908 was $1,772,015, the total annual income of the twenty negro colleges mentioned in report of the Commissioner of Education was $804,663. In other words, the annual income of a single school in the North was more than twice as large as that of all the negro colleges in the United States.

Fisk University has an endowment at the present time of but $60,000. The total endowment of the twenty negro colleges reported by the Commissioner of Education in 1908 was only $1,383,726. In that same year, $1,468,129 was added to the endowment fund of Chicago University, while the total endowment of that school was $14,000,000.

I have mentioned Chicago University because it is a convenient illustration of the rapid development of the larger educational institutions in the North, not only with respect to the size of the plant employed, but in respect to the character of the teaching and the influence of these schools upon the community. But Chicago University is by no means exceptional. There are at least fifteen larger institutions of learning which expend more money every year for current expenses than is expended for all purposes by negro colleges in the South. Several of these large institutions expend annually twice, and one of them, Harvard University, nearly three times as much, as all the negro colleges in the United States.

In addition to the fifteen larger universities to which I have referred, there are at least seventeen other and smaller institutions, among them technical schools and agricultural colleges, which spend nearly or quite as much as any ten negro colleges south of Washington, D. C. One of these schools to which I refer is an agricultural and mechanical college for white students in the State of Mississippi.

In the matter of endowment, Chicago University is not exceptional. The University of Pennsylvania, for example, has an endowment of $12,000,000. The endowment of Harvard University amounts now to over $20,000,000; that of Columbia is $23,000,000, and Leland Stanford has an endowment of $24,000,000.

In making these comparisons I do not intend to reflect in any way upon the work of the colored colleges. From all I can learn, most of them are doing the best they can. In pointing out the difficulties under which these schools labor, my purpose is to make the world understand their needs.

I would not take a single dollar from any of the institutions in the North to which I have referred. They are doing a good work and need even more money, but I am using their names simply for comparison.

In all the discussion which is taking place as to the effect of one kind or another of education in solving the negro problem, we should bear in mind that education of no kind has been tried on a sufficiently large scale or with a sufficient consideration of what are the actual needs of negro people to show what education for the masses of the people will do. There are ten millions of negroes in the United States today. Why not have somewhere—in the South—at least one large, thoroly equipped university where the actual needs of the negro people could be studied and where such of them as desire to be teachers, doctors or ministers of the gospel could be thoroly equipped for their work?

Of Middle Age—and Spring

BY WILLIAM GARROTT BROWN

Author of "The Lower South in American History," Etc.

HAVE you been standing it well—the Spring?

Of course, if you are still young—that is to say, not yet much beyond the third of the higher milestones—the question is hardly for you. You might not even understand it. Nor is it meant for you if you are old, either; that is to say, passed on into the sixties and seventies. But if you are come to forty year, or nearing it, and have not yet go so far beyond it that it begins to look as twenty looks to thirty-five, or as fifteen to twenty, or as eight to ten, then not only is the question for you, but you will know that it is for you. You will yourself—tho perhaps not altogether consciously—have been asking it of your heart.

For of all the tests and searchings of man's heart, none, surely, is deeper and shrewder than this of the coming of the full tides of spring. The other seasons have also, no doubt, their challenges to the human spirit. But spring does not challenge; it invites. With its sheer sweetness and allurement one cannot deal as one deals with summer's heat, and winter's cold, and autumn's saddening. One cannot resist or struggle. One can only accept it all, or else shrink away from it—back into one's self. That is why the poet who has phrased the springtides best of all has called them "the Lord's returns." And that is why one must have come to forty year, or near it, even to understand how spring may be so daunting. For one must have come to forty year to understand how it is precisely the exquisite and dear things of life that are also the most dreadful—if life goes wrong. There is no deeper wisdom in man than to know how much more terrible than an army with banners a weak woman or a little child may be; and akin to this is the knowledge that it needs a stouter heart to welcome spring aright than to face the blight of autumn or endure the winter's long denials.

Only a Greatheart, a Happy Warrior, can fully meet the test. The terror and daunting of spring to middle age does not lie merely in the sense it brings that one's own powers, unlike Nature's, have reached or passed the full, and cannot have renewal. That knowledge does, indeed, cut deep. It is not a little thing to feel:

"The foot less prompt to meet the morning dew,
The heart less bounding to emotions new,
And hope, once crushed, less quick to rise again."

But even that is not quite the final pang and sadness of the passing of young manhood and young womanhood. The true mark of their passing is this: You have come at last to know in your heart what youth can never quite acknowledge—that whatever life holds of disappointment, disaster, failure, shame, may actually come into *your* life, may actually happen to *you*. Hardly ever will that unwelcome maturity be won by less than half a lifetime's experience; and hardly ever will the dear skeptic pride of youth outlive the period. Extreme good fortune and a ceaseless absorption in activities may keep it a little longer alive; and misfortune, if it be fairly enamored of your parts, will sometimes bring it a little earlier to its end. But for most of us it dies at forty year. And with what face, what heart, once it is dead, shall a man face the springtides?

Why not "a man or a woman," rather than "a man," is it asked? And it were not unreasonable, indeed, to consider the tragedy greater in woman than in man. For the bitterness of a man's knowing that he is at the summit of his strength, and must henceforth decline, cannot be greater than that other, that supreme agony of a woman's parting with her queenhood of youthful charm. It is less, in fact. Life in its ordinary course has nothing wherein the sting of decay is keener than in the fading of a woman's cheek, the coming of the first silver into the glory of her hair. But that inner and deeper paling and shuddering before the sense of the inescapable sure-

ness and impartiality of fate—this, it would seem, is somehow tempered to the woman's nature. She is religious—instinctively, irresistibly—as modern men so rarely are; and endowed, besides, with an immense compensating genius of acquiescence. Such, at any rate, is most men's notion of how she faces life. If it is not so, then her heroism is so much greater than man's—as, indeed, her need of it is so much greater, since so great is her capacity for loving, and of the pain of it, that there is no homage too extravagant for her superiority. This may be the teaching concerning the modern woman of our greatest American work of art; a piece which may in fact not unfitly stand for all modern as against all ancient art, and for the troubled modern view of life—St. Gaudens's figure of the hooded woman in the Rock Creek Cemetery at Washington.

But to take that view would add too much to a man's own heaviness of disillusionment. He must fortify himself at least with the one illusion—if such it is—that only he sees clearly the ghastlier truths. He must himself draw strength or its semblance from the old instinct and *devoir* of protectiveness. In this, as in so much else, it may be that his artifice is wasted, his guile a mere boyish and amusing self-deception, which never once deceives the quiet eyes he fancies he keeps bright with his own courage and cheerfulness. But this he could hardly bear to know. He must have his heartening from the belief that to womanhood, as to childhood and youth, the countenance of fate is never quite unveiled.

But that assurance—or self-deception—will not alone suffice to keep in play the fountains of hope and cheer and courage in man's heart. The Happy Warrior may fight alone, with no heartening whatever from the clinging to him, in any sweet and personal dependence, of the hands of any woman or any child. Greatheart spreads his strength about chance wayfarers, not merely about his own kindred, his own beloved. The peace of resolute and nobly cheerful spirits comes, after all, from within; the self-sufficing and therefore helpful personality draws its strength rather from some life-principle of self-dependence than from any skill or trick of extracting comforts from the accidents of human destiny. The true source of that strength—and this is the kind of truth which forty year compensates for other disillusionments by making us at last perceive—is nothing more or less than goodness. No; there is an old word, which the fashion of speech has made strangely rare, that is better still for what we mean. It is virtue.

Virtue—and a certain modesty which is at bottom a sense of proportion, and implies a sense of humor. Who has this last will see life large, since he will see it as a whole, and invested, for all its meannesses, with the form and dignity, and the never-failing beauty, which it is art's great office forever to display; and he will see his own life—for all the poignancy of pain and pleasure in it—no bigger than it is, taking up no more than its rightful space on the great stage, and bulking in the vast *ensemble,* no larger than countless other lives. This is the faculty that shall enable its possessor, when earth turns once more green and fair, and grass and tree and flower renew their glory, and there stir again within him the old aspirations, which life denies, to keep himself serene; not indeed to escape the pang of remembrance, the ineffable and exquisite pain of the revival of old longings and old loves, but to feel his own sorrow at once belittled and glorified by a wide vision of all human fates, a generous sympathy with all his fellows' disappointments, a quiet acceptance of the common lot. The mood need not be—it should not be—crassly contemptuous of self, or coarsely humorous with life. It is bitterness and bravado, not manly resignation, that breeds guffaws. A rueful smile at the thought of what has come of big ambitions—of the ditches one has tumbled into while gazing at the stars—is better. It need not even be without its tremor of tenderness and pity for one's lost younger self. For at forty year one *does* remember, when one thinks, that one's youth was half divine; and half its divinity was precisely in that sublime assurance wherewith it assaulted the impregnable, sought the unattainable, soared away for the stars. It is enough

if one only remembers, without envy, that it is now the turn of others to be young, and how much it meant to one's self, twenty years ago, to find a smiling sympathy in older eyes.

For the true and only atmosphere of this virtue and humility we find so needful at forty year is merely love—the wide charity and impartial warmth of the great and everlasting *homo sum.* This is that to which the springtide calls with all its gentle voices, which it wooes with all its myriad invitations. While this lasts, no fate is quite so cruel but a man's spirit will answer back, bravely and unenviously, and not without some throb of joyousness, to the beauty before his eyes, the tenderness that clings about his feet. It is because, in spite of sorrow, disillusionment, defeat, he has kept himself resolutely human,—not because of any refuge he has taken in separateness from his kind,—that the heart of him may yet again be glad.

LAKEWOOD, NEW JERSEY.

The Land-of-Far-Away

BY CARABEL LEWIS MUNGER

OH the freedom of that land
Where the sugar maples stand!
Land of laughter, land of rubber boots and play,
Where each hour enfolds within
Joys quite sane and genuine;
Merry, care-free, happy Land-of-far-away.
Land of riotous March days
Fringed with pussy-willow sprays,
When the brown along the hills begins to show;
Then I mind me of one day
In the Land-of-far-away,
When I lunched with darling Bessie in the snow.

It is then that I would fain
Find again the happy lane
Which will lead me to a forest old and gray,
And my heart with longing fills
For that gateway in the hills;
Beyond it lies the Land-of-far-away.
Ah, the call of hills and trees!
Is there any lure like these?
With the incense fires of sugar camps aglow,
Woodland silence everywhere
(Sweet ambrosia, nectar rare),
When I lunched with darling Bessie in the snow.

Soft flakes flutter idly down
On black streets of the town,
But the country lanes are sparkling, smooth and white.
They are tapping trees galore!
Tapping trees! then tapping more!
Over yonder in the valley of delight.
It is March! why should I wait?
Why not chuck cut glass and plate
And the palm-set rooms of staid Delmonico?
Fun and rubber boots for me,
Joy and glad hilarity,
I will lunch with darling Bessie in the snow.

DEWITTEVILLE, N. Y.

Easter Blossoms

BY JULIE M. LIPPMANN

When upon that cruel day
Christ upon the cross was nailed,
Heaven, his disciples say,
Wept and was in darkness veiled,

And its tears fell to the earth,
—Burning stars of shame and guilt,—
That for sinners, little worth,
Blood so precious should be spilt.

But the Christ held sinners dear,
Wherefore, from his Father's throne,
He did bless each fallen tear,
Till like purest gold it shone.

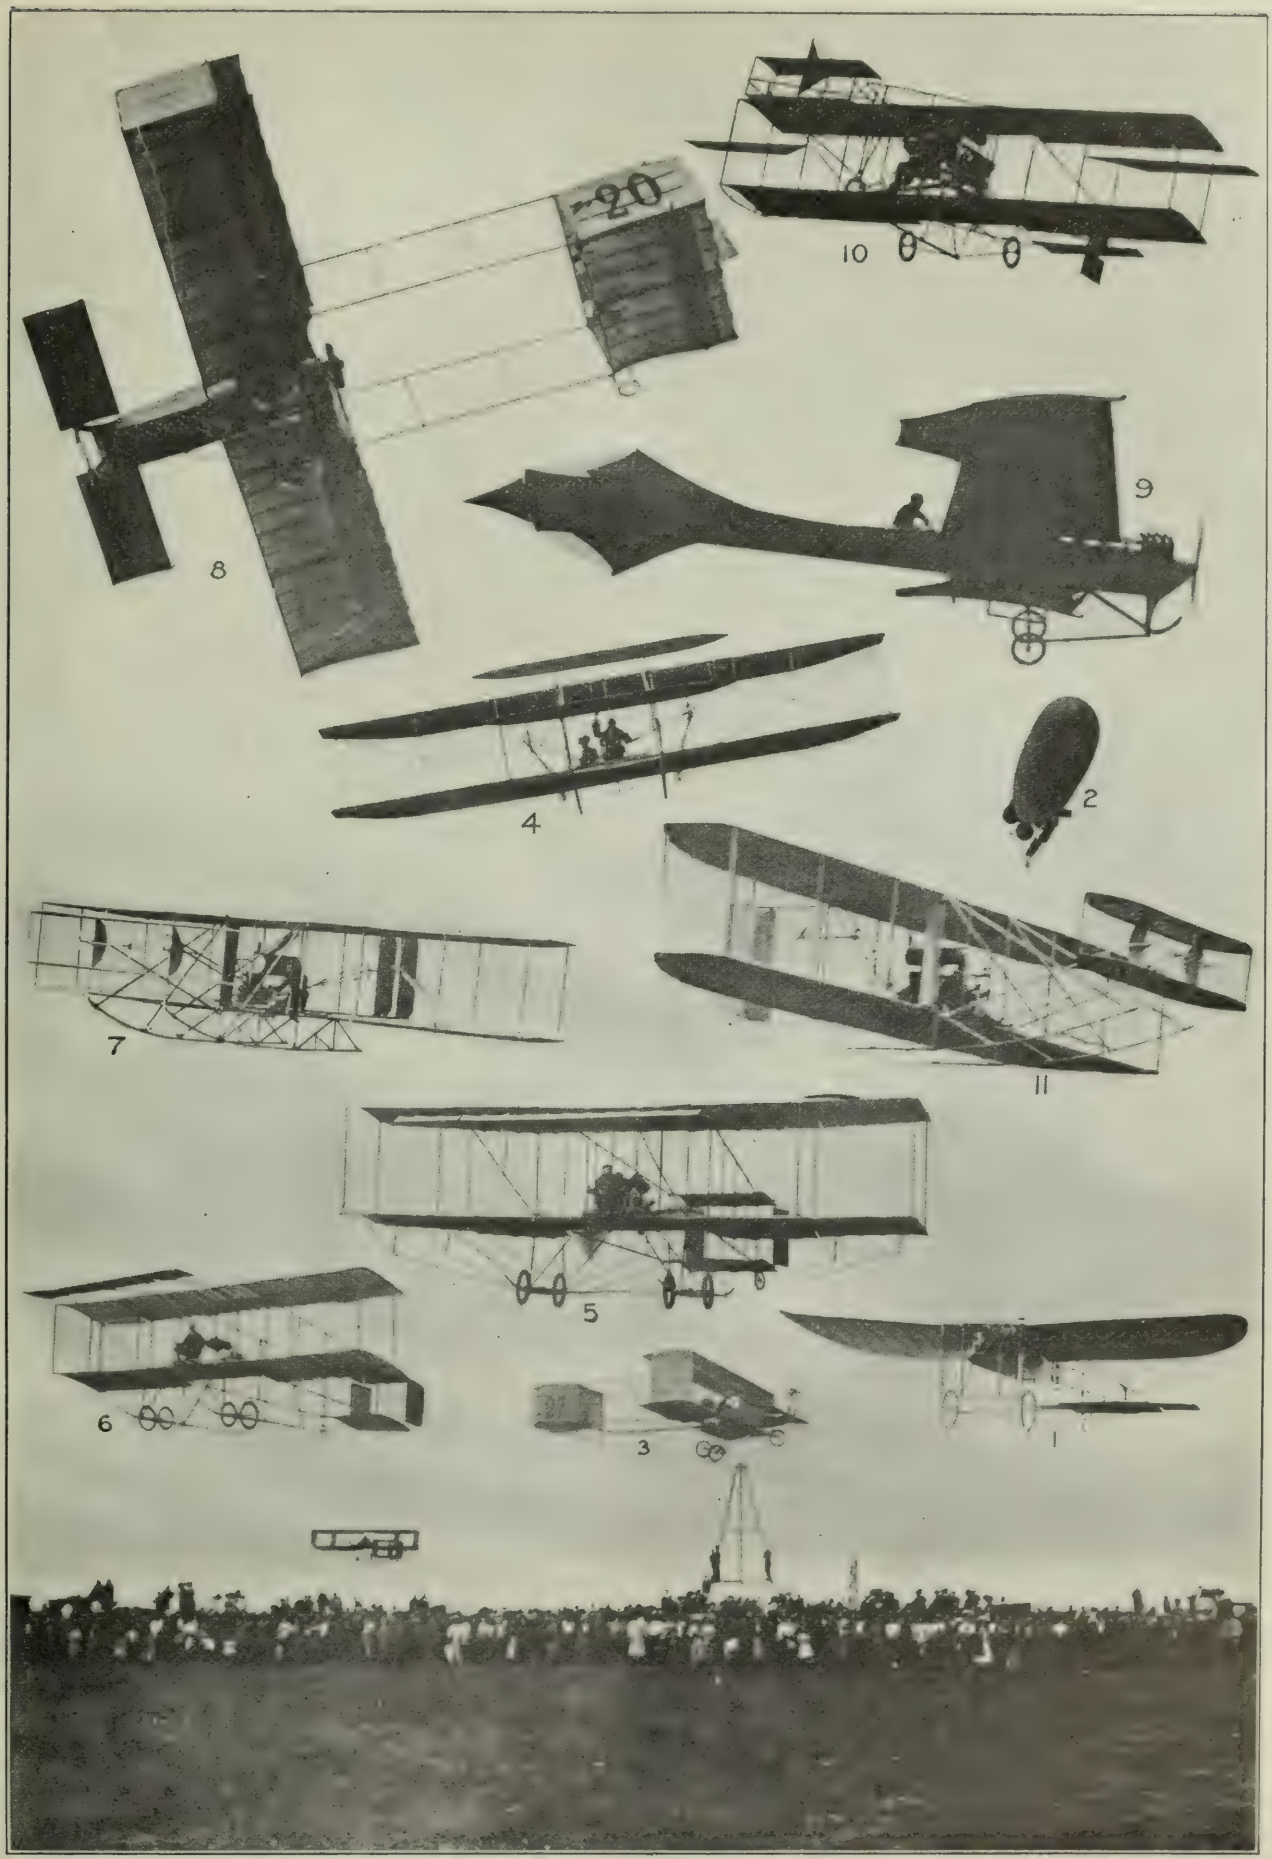
Thus it is at Easter-tide
That the blessed flood o'erfills
All the land, and far and wide
Jonquils bloom, and daffodils.

New York City.

A Ramble in the Aeronautic Field

BY LUKE J. MINAHAN

President of the Pittsfield Aero Club.



TO fly or not to fly is no longer the problem. Late events have decided the matter in our favor—that we can fly.

We are no longer like fledglings, flying from branch to branch only in propitious weather; I would not dare to say that now—not after the splendid results obtained at Los Angeles; not now that one of our intrepid French *confrères*, being invited to a hunting party, has used his aeroplane to convey him to the hunting grounds, and kept his appointment, arriving on time, and with less exertion, apparently, than if he had used any other means of conveyance.

The outlook for aviation in general was never better. The list issued by the International Aeronautical Federation for meetings to be held in 1910 includes fourteen meetings, with over four hundred thousand dollars in prizes to be awarded to successful aviators. The complete list is as follows:

April 10 to 25—Nice; $46,000.
May 10 to 16—Berlin; not exclusive.
May 20 to 30—Verona; $42,000.
June 5 to 15—Budapest; $120,000.
June 18 to 24—St. Petersburg; not exclusive.
June 28 to July 10—Rheims; $40,000.
July 11 to 16—England.
July 14 to 24—Automobile Club of France; $40,000.
July 24 to August 4—Belgium; $40,000.
August 6 to 13—England.
August 25 to September 4—Deauville; $48,000.
September 9 to 18—Bordeaux; $40,000.
September 24 to October 3—Milan.
October 18 to November 2—America; Gordon Bennett Cup in the last week.

The ugly talk of war, using airships for infernal work, is quietly dying away—as it should. True, an article appeared in a good magazine last month wherein flying machines were made to do some awful work of destruction. But that need not alarm us; that article has probably been awaiting publication for a year, and at that time flying was yet a closed book. Besides, as Mr. Hudson Maxim tells us, the part flying machines would play in the war game has been greatly exaggerated. He especially scouts the idea that the flying machine seals the doom of the battleship, and

1—Bleriot. 2—Renaud. 3—Bunau-Varilla. 4—Tissandier. 5—Farman. 6—Sommer. 7—Lefebvre. 8—Paulham. 9—Latham. 10—Curtiss. 11—Lambert.

PRINCIPAL TYPES OF FLYING MACHINES.

asserts that: "As a matter of fact, it might rain 10-pound bombs for a week on the modern battleship without any other results than the marring of its paint and a few slight bruises on its superstructure. Such bombs would not even disturb the siesta of the marine below decks."

While most of us would like to see the costly Dreadnought eliminated—in a peaceful way—it is gratifying to see that the flying machine has lost some of its infernal characteristics. That makes it easier for us to turn it into a dove of peace.

But peace, with flying machines hovering around, is *impossible,* say some alarmed prophets. Strange, but not long ago scientists even proved that flight with heavier than air machines was *impossible,* yet we fly! Maybe we will have peace after all.

It is true that, like a rude iconoclast, the airship has broken some of our deep-set images and has forced upon us a number of new problems. But let us not cry over it; we can rebuild those images and rebuild wisely; we can solve those problems and learn by our experience.

The airship has forced us on a strenuous journey, but it leaves to us to make the goal. Shall we make that goal a monument of peace?

PITTSFIELD, MASS.

Two Imperial Rescripts of Japan

BY BARON DAIROKU KIKUCHI

[Baron Kikuchi is now President of the Imperial University of Kyoto, was formerly President of the Imperial University at Tokyo, and later Superintendent of Public Instruction of Japan. He is perhaps the most eminent scholar in Japan, and is a brother of Dr. Kakichi Mitsukuri, who died last year, and who was the leading man in Japanese science, and for a long time dean of the School of Science in the Imperial University. This article we are able to give our readers by the courtesy of President Jordan, of Leland Stanford University. It was delivered as an address to the students of the university, and the stenographic notes were revised by Baron Kikuchi, who gave permission for its publication.—EDITOR.]

WE Japanese have sometimes been considered to be an aggressively militant people. No sooner was our war with Russia over than we were supposed to be eager and ready to go into war with some other nation. Such talk is absurd; and to talk of war between America and Japan is not only absurd; it is wicked. Such ideas arise from want of proper knowledge of our Japanese character and history. It is true that within the last fifteen years we have fought two very great wars, not to mention the Boxer affair, in which, on account of our proximity to the scene of events, we had to take a very prominent part. These two wars were none of our seeking. We sought earnestly for a *modus vivendi;* we yielded up to the point to go beyond which would have endangered our very existence; but all conciliations were in vain, and we had to either fight or become a mere cipher on the face of the world. This will be shown by an impartial inquiry into the negotiations which took place before the war in either case.

So far from our being a militant people, we Japanese hold the record of the world for peace. In the seventeenth century—in 1637, to be exact—an order was issued by the Japanese Government of the time forbidding all Japanese to go abroad, or even to build big ships by which they could go abroad,

under penalty of death; and we also forbade all foreigners to come to our shores, except the Dutch and Chinese merchants, who were allowed to trade in the single port of Nagasaki. This measure was adopted to avoid any complications arising from either Japanese going abroad or from foreigners coming into Japan. We deliberately cut off all intercourse with the outer world and shut ourselves up within our islands, in order to avoid foreign complications. Then, for two centuries and a half after that, until the coming of Commodore Perry, in 1853, we were in profound peace. There was not a single instance of fighting during all that time; and it was not peace of sloth and indulgence; it was a period of utmost activity—activity in education and in industry. It was the training and development during those years that enabled us to face the world when we opened our doors again. Now I think I may say, as I have done, that we hold the record of the world for peace, for what nation can point to two centuries and a half of profound peace? Then came Commodore Perry, and we opened our doors to foreign commerce. History, it is said, repeats itself; and only within the last year our Government has issued an order forbidding certain classes of Japanese to come to America, thus restricting emigration to America in order to avoid any complication with the people of America. Have we not shown an earnest desire to be at peace?

There have been many other charges made against us. We have many faults which we are very willing to amend. We are glad to have them pointed out to us; we are always eager to find out what our shortcomings are, and what other nations have got to teach us, and we try to follow in the footsteps of those whom we consider our superiors in intellect and morals, and to avoid the shortcomings. What we protest against is the wholesale condemnation of Japanese people on account of traits and actions of few, or comparatively few, individuals, which are generalized to be national characteristics or results of deliberate policy. Such charges are due to misunderstanding, or to the want of knowledge of our usages, customs, our ideas and our traditions. I may take only one example—the question of the "open door" in China. The Japanese Government has always been an advocate of the open door policy in China; I may say that it is to the advantage of Japan to have the open door there. We hold to the policy of the open door, not only because we think it just, but because we think it is to the interest of Japan to have the open door in China. There is a fine market in China, and every nation is eager to find an outlet for its produce there; hence competition is naturally very keen; and where there is such keen competition, disagreements are likely to arise, and many charges have often been made by different individuals or people against one another. Now, facts will bear me out in saying that there has not been a single case substantiated that the Japanese Government has knowingly, deliberately been guilty of breach of faith in violating its solemn pledge of the open door, and I have no hesitation in saying that there will not be one. There have been many charges made, but on investigation it has been found to be due to misunderstanding or due to the act of some single individual.

I have stated that we Japanese feel very friendly toward Americans; we regard you with special good will. This is due to the steady liberal attitude of the American Government and people toward Japan. Altho Commodore Perry did force open our doors against the wishes of the Government of the day, we have reasons to be thankful for his tactful and conciliatory attitude. We are glad that our first treaty of commerce concluded with foreign nations after two hundred and fifty years of seclusion was concluded with America, for her representative, Townsend Harris, was a fair and just man who did not try to take advantage of the inexperience and weakness of the ministers of the Shogun's Government to get from us a treaty which might have been very disadvantageous to us. We think that we might not have fared so well with another nation. Then the Americans who came over, Americans who came to teach us, were men of fine personality; we have learned to respect them, and their good works live still among us. I

cannot refrain from mentioning a few names. There was Dr. Hepburn, whose dictionary—Japanese-English dictionary—is still one of the best dictionaries that we have. Then there were Dr. Brown and Dr. Verbeck, whose names are still honored among Japanese students. These and many others stand forth to the present day as having enkindled the feeling of respect that we have for the American nation. Nor are the good will and friendship which I said exist in Japan toward America confined to the higher classes, but extend to the very lowest. You will find that the Americans are regarded with good will even among people that do not know much about the world. And we want you Americans to feel as friendly toward us as we do toward you; and I therefore take this opportunity to tell you something about us, because, as I have said before, misunderstandings arise from want of knowledge of our ideals, traditions and feelings. I want, then, to tell you something about ourselves, but I shall not have time to go into many things, so I shall tell you today about the relation between the imperial house and the Japanese people, because that relation is the foundation of all our political, moral and social relations, and it is a thing which you cannot have a conception of, because there is no such thing here. Incidentally, I shall speak to you about our reverence for ancestors, which is very intimately connected with that relation.

I must begin with a short account of the Restoration, as we call it, of 1868. At that time the Shogun (which means literally generalissimo) and his ministers were *de facto* rulers of Japan; they managed the affairs of the state. There was an Imperial Court in Kioto, which was revered and honored, but which had very little to do with the practical affairs of the nation. As to real authority, that was invested in the hands of the Shogun and his ministers. Then there were military lords—some three hundred of them—dividing the whole land of Japan between them. They had vast territories and were autonomous within these territories, having power of life and death even over the people. Then under these were four classes of people—the samurai, the farmers, the artisans and the merchants, in the order mentioned. The samurai were practically the ruling class; it was in their hands that all political power was invested; they were politically and socially the leaders, and therefore they deemed it due to themselves and the country that they should be intellectually and morally superior. Their education was far better than that of the rest of the people, and their ethical code, which you perhaps have heard of, called "Bushido," which means "The way of samurai," was the code of ideal man, somewhat corresponding to what would be called here the ideals of a gentleman. The chief motif of this code was self-sacrifice and self-control. They held everything belonging to themselves as nothing compared with their loyalty and their honor. This system of government was very similar to what is called the feudal system in Europe. During the two hundred and fifty years of peace, as I have mentioned, there had been intense intellectual activity, and the study of the Japanese history gave rise to the proper understanding of the national constitution of the Japanese empire, and there came a conviction among the more advanced that the usurpation of the authority of government by the Shogun was an unrighteous act, and that his power ought to be returned to the Emperor. Several of the more powerful military lords, or daimios, as we call them, united together to effect this restoration, and the last of the Shoguns resigned his power at the end of 1867. He had the power, even at that time, at the time of the decadence of the Shogun's authority, to call military lords to his standard, and to involve Japan in a most disastrous civil war, but he had loyalty and patriotism enough to see that such a course would be unrighteous and disastrous to Japan, and he quietly resigned the power of Shogun, which had been in his family for nearly three hundred years, and restored it to the Emperor. This is the first of the acts of self-sacrifice which constitute the whole history of the Restoration. I will mention others as I go along.

In the beginning of the year 1868, from which the present era of Meiji—the era of enlightened government—is to be counted, the first act of the Em-

peror, when he assumed this authority placed in his hands, was to swear what is known as the Imperial Oath of Five Articles. I give these five articles, because they are very important as enunciating the policy which was to be pursued hereafter, and has been followed by his Government.

1. Deliberative assemblies shall be established, and all measures of government shall be decided by public opinion.

2. All classes, high and low, shall unite in vigorously carrying out the plan of government.

3. Officials, civil and military, and all common people, shall, as far as possible, be allowed to fulfil their just desires, so that there may not be any discontent among them.

4. Uncivilized customs of former times shall be broken thru, and everything shall be based upon just and equitable principles of heaven and earth.

5. Knowledge shall be sought for thruout the world, so that the welfare of the empire may be promoted.

In accordance with the oath, great and radical changes followed, the greatest of which was the abolition of the feudal system I have just sketched. Several of the largest daimios memorialized the throne, that they thought it just and righteous that they also should give up their land and their power into the Emperor's hands, and that everything should come under the direct control of the central government. Then a conference of daimios was summoned, and in 1871, in accordance with the recommendation of this conference, the feudal system was abolished. The daimios were relieved of all their power—power of life and death, as I said, over their people. They gave up all their privileges and became simply private subjects. They did all this because they deemed it just and righteous. I think this, as an act of self-sacrifice and loyalty, is not surpassed in the history of the world. Then there were other changes, chiefly tending to the encouragement of commerce and industry, as, for instance, traveling, which had been restricted so far, was made free; post and telegraph service was established, railroads began to be constructed, lighthouses to be built; banks came into existence. In every way industry and commerce were encouraged. Then came the prohibition of wearing of swords by the samurai. The swords were regarded as the soul of the samurai, and they held it a very great privilege to wear these swords, in distinction from the other classes. This prohibition gave offense to the more conservative samurai, but it was the more necessary because of this. Then conscription was established, by which every subject of Japan is liable to be called into military service. Now, the prohibition of the wearing of swords and conscription, the two together, gave all the privileges and all the duties, which belonged to the samurai alone, to all people, without any distinction. It meant the leveling up of the whole people; it meant the raising of the status of the people to that of the samurai. The general morality, which was not so high as the morality of the samurai, was raised, because now the Bushido was to be the standard of all the people of Japan. The samurai entered the ranks of business men, and, altho they were at first not very successful, yet a great many of them have succeeded, as, for instance, the chairman of the delegation over here, Baron Shibusawa, and many others of the eminent business men were formerly samurai. All these reforms for the raising of the whole people to a common level were made by the leaders of this movement, and those were old samurai. They though nothing of their own interests; they were made by them solely because they deemed it for the welfare of the empire.

Amid all these changes, education was not neglected. From the very beginning of the Restoration, schools and colleges were opened, foreign teachers were engaged, students were sent abroad, and in 1871 was issued the first education code, which placed education on a modern basis. This education code has been altered a good deal, but the underlying principle of it — that of educational equality—has been maintained ever since. According to this, education was to be universal. Everybody was to receive primary education, without distinction of class, occupation or sex; and as for higher education, equal opportunities were to be given to all, without any dis-

tinction; facilities for higher education were to be open to all. There were perhaps two things wanting in this first education code. Sufficient regard was not paid to means for culture and moral education, but this did not arise from contempt of culture and moral education; it was rather due to the want of knowledge of proper methods. In the old feudal days, the education of the samurai consisted in study of Chinese literature, and in training in military arts. Chinese literature was studied, not as much for literary purposes as for culture and practical moral training. Books of Chinese philosophy were read by them that they might thereby be helped in guiding their own conduct, in regulating their family relations and in performing their share in the administration of the government of their lords' territories, and if necessary, in helping their lords in wider sphere of national administration. History was not studied for the historical facts, as for the precepts or examples that might be seen of how in old days wise men governed their people; what were the causes of the rise, prosperity, decline and fall of various states. So also training in military arts did not mean merely making them expert in those arts, but included the inculcation of discipline and habits of endurance. They were taught self-reliance, coolness in danger, etc. Thus, culture and moral training formed a large part of the education of the samurai, and it was supposed that education meant culture and moral training. So in some of the schools established according to the new code young men were made to read books of Rousseau, Montesquieu, Mill, Spencer, etc., and they took to these just as they had formerly taken to Chinese classics. The result was a sort of moral disorganization. We seemed to have cut adrift from our old moorings and to be drifting away no one could say where. It was felt that there was a need for general reorganization of moral education. We wanted some basis for our moral education. Some said that we should go back to the old Chinese philosophers, to the teachings of Confucius, for our basis. Some thought we ought to teach Christianity; those who did not believe in Christianity themselves nevertheless thought its ethical standard would form a good basis for our moral education. Others were for having a new religion. Happily, the old tradition of reverence for the imperial house, of loyalty and filial piety, was still preserved among the elder generation, and then gradually came a clearer and truer appreciation of our valuable inheritance from the past, and this inheritance was formulated in the imperial rescript which was issued October 30, 1890. As this rescript forms the basis of our moral education at the present time, I am going to read it to you:

"*Know ye, our subjects:*

"*Our imperial ancestors have founded our empire on a basis broad and everlasting and have deeply and firmly implanted virtue. Our subjects ever united in loyalty and filial piety have from generation to generation illustrated the beauty thereof. This is the glory of the fundamental character of our empire, and herein also lies the source of our education. Ye, our subjects, be filial to your parents, affectionate to your brothers and sisters; as husbands and wives be harmonious; as friends true; bear yourselves in modesty and moderation; extend your benevolence to all; pursue learning and cultivate arts, and thereby develop intellectual faculties and perfect moral powers; furthermore, advance public good and promote common interests; always respect the Constitution and observe the laws; should emergency arise, offer yourselves courageously to the state; and thus guard and maintain the prosperity of our imperial throne coeval with heaven and earth. So shall ye not only be our good and faithful subjects, but render illustrious the best traditions of your forefathers.*

"*The way here set forth is indeed the teaching bequeathed by our imperial ancestors, to be observed alike by their descendants and the subjects, infallible for all ages and true in all places. It is our wish to lay it to heart in all reverence, in common with you, our subjects, that we may all thus attain to the same virtue.*"

Such is the rescript which forms the basis of our moral education at the present time. You will observe that the two cardinal virtues are loyalty (which with us is the same as patriotism) and filial piety. These precepts are nothing new,

but teachings which have been bequeathed to us by the imperial ancestors, and the Emperor urges us to obey these precepts by appealing to our loyalty and filial piety, meaning thereby not filial piety to our immediate parents alone, but to our ancestors for generations. The message which the rescript conveys to us cannot be properly understood unless you know the relation between the imperial house and the Japanese people. Our empire dates back some twenty-five centuries, and beyond that, by traditions, back to the mythological age. The relation between the Emperor and the people is not simply a relation between the present Emperor and the present generation, but a relation between his ancestors and ours for many generations. We are, as it were, one family, of which the Emperor is the patriarch. I think that you will perhaps understand something of this relation if you can imagine a Jewish empire, whose emperors descended from Abraham in one unbroken line, and whose lands have never been desecrated by a foreign invasion. It is from this national spirit that the peaceful abolition of the feudal system came; that our constitution was given by the Emperor as a free gift to his subjects. The imperial oath and speech on the occasion of its promulgation breathe this spirit; as also the preamble, which runs thus:

"Having by virtue of the glory of Our Ancestors, ascended the throne of a lineal succession, unbroken for ages eternal; desiring to promote the welfare of and to give development to the moral and intellectual faculties of our beloved subjects, the very same that have been favored with the benevolent care and affectionate vigilance of Our Ancestors; and hoping to maintain the prosperity of the State, in concert with Our people and with their support, we hereby promulgate," etc.

You will see that the Emperor regards his subjects as members of the family. Such is the spirit of the imperial rescript, which forms, as I said before, the basis of our moral education.

I shall now conclude by reading another remarkable imperial rescript, issued only year before last, which will show the continuity of the enlightened and peaceful policy of the empire as set forth in the imperial oath, and which serves as a fitting supplement to the rescript on education:

"We are convinced that with the rapid and unceasing advance of civilization, the East and West are bound by common interests thru mutual reliance and reciprocal services. We expect to join in a long participation of all the blessings thereof by entering into closer and closer relations and strengthening our friendship with other Powers. Now, in order to move onward along with the constant progress of the world, and to share in the blessings of civilization, it is obvious that we must develop our national destiny; our nation, but recently emerged from an exhausting war, must put forth increased activity in every branch of adminstration; it therefore behooves our people, from the highest to the lowest, to endeavor with one mind to pursue their callings honestly and earnestly, to be industrious and thrifty, to abide in faithfulness and righteousness, to be simple and warmhearted, to put away ostentation and vanity, and strive after the useful and solid, to avoid idleness and indulgence, and to apply themselves to strenuous and arduous tasks.

The teachings bequeathed by Our Sacred Imperial Ancestors and the facts of our glorious history shine like the sun and stars. The basis of the development of our national destiny is to be found in attending to them, sedulously and faithfully. In face of the present conditions, we purpose, relying on the co-operation of Our faithful subjects, to renew and enlarge the Imperial plan of the Restoration, thereby to render illustrious the glorious virtues of Our Ancestors. Ye, Our subjects, take to heart these Our wishes."

KYOTO, JAPAN.

April

BY ALICE E. ALLEN

WHAT dreams were yours, as you slumbered,
O butterfly now on the wing?
And lilies, that blossom unnumbered,
What carol of joy do you sing?

O robin, this morning returning,
What ecstasy sweet do you know?
And heart, with unsatisfied yearning,
What whisper you tender and low?

This—this is earth's anthem, strong, fearless—
The hope that forever is ours—
The earth knows no winter so cheerless
That ends not in April and flowers!

LOWVILLE, N. Y.

A Jewish Commentator of the Gospels

BY ISIDOR SINGER

[Dr. Singer was the originator and managing editor of the Jewish Encyclopedia, and has written much on Jewish matters.—EDITOR.]

FOUR years ago, shortly after the completion of the Jewish Encyclopedia, I proposed to its publishers to launch a translation and commentary of the Apocrypha and the New Testament, by a group of eminent Jewish scholars, and suggested as the fittest candidate for the editor-in-chief-ship the very man who has now, almost single-handed, brought out the first instalment ("The Synoptic Gospels," in three volumes) of the great enterprise —Claude G. Montefiore.

It would only be human if the president of Funk & Wagnalls Company felt somewhat sorry that Macmillans got ahead of him, but I am sure that he, personally, welcomes with the same satisfaction as the writer of these lines, the splendid achievement of the Anglo-Jewish Luther and his faithful Melanchthon, Prof. Israel Abrahams, of Cambridge University—and even if they did their work without us.

Having but quite recently had the opportunity to lay before the public my personal views on the desirability of "tearing out the white leaf which separates Malachi from St. Matthew," and in view, further, of the small space allotted to me, I hasten to present to the reader as briefly as possible the personality of the first Jewish commentator of the Synoptic Gospels, winding up with an *exposé* of his religio-historical and religio-philosophical platform.

Claude Goldsmid Montefiore, grandnephew and heir of the famous English banker and philanthropist, Moses Montefiore (1784-1885), was born in 1858, and educated at Balliol College, Oxford, where he came under the influence of Jowett and T. H. Green. Being originally intended for the ministry, he studied theology at the Berlin Lehranstalt für die Wissenschaft des Judenthums, the progressive rabbinical seminary of Germany, corresponding to the Hebrew Union College in Cincinnati. Unable, however, to sympathize with the arrest of the Reform Movement, as presented by his teachers, he devoted himself to scholarly and philanthropic pursuits, continuing to be, tho in a lay capacity, a spiritual teacher and preacher.

In 1892 he delivered the Hibbert lecture on "The Origin of Religion as illustrated by the Ancient Hebrews." Together with his friend, the above-mentioned Israel Abrahams, professor of Talmudic literature at Cambridge, he published, in 1894, a volume of sermons under the title of "Aspects of Judaism." In 1896, the first volume of his "Bible for Home Readings," forming a commentary on the Bible with moral reflections from the standpoint of higher criticism, appeared, the second volume following in 1899. From 1890-1908, he published, at his own expense, and edited, aided again by his literary associate, Abrahams, *The Jewish Quarterly Review*, which has since been taken up by the Dropsie College of Philadelphia—which might also, sooner or later, see its way clear to open—the first of all Jewish theological institutions—a chair for New Testament and the history of Christian theology, both, of course, to be expounded purely from the historical and philological standpoints.

Claude G. Montefiore, who is one of the leading philanthropists of the Anglo-Jewish community (he was elected, in 1895, president of the Anglo-Jewish Association; and is a prominent member of the Council of the Jewish Colonization Association), several years ago founded the Jewish Religious Union, a kind of Reform congregation, and in his recently published pamphlet, he threw down the gauntlet to Jewish Orthodoxy in a manner which stirred the Jewish commonwealth of the British Empire to its very depth.

He had, of course, to suffer the consequences of his bold step of denying the divine origin of the Pentateuch, and throwing off, with one mighty shrug of the shoulders, the entire oral law as rep-

resented by the Talmud. He was expelled from the Jewish Religious Education Board and is, in a general way, considered by the ultra-conservative party as a kind of religious outcast.

And now, first, a few words about the makeup of this first Jewish Gospel commentary, entitled "The Synoptic Gospels," in three volumes. For the benefit of his Jewish readers, for whom his book is especially intended, Montefiore has given the translation of each Gospel separately and as a whole before the commentary upon it, the author being anxious that the reader should first of all read the story as it stands, undisturbed by breaks or verse divisions or remarks. The translation is then repeated before each section of the commentary.

Montefiore starts his introduction by the confession that his book is fragmentary and tentative, he being in many respects a pioneer:

"For of Jewish exposition of the Gospels there has been little. Jewish scholars have usually taken up an attitude toward the New Testament, and more especially toward the Gospels, which does not lend itself to impartiality. It has not been a very fruitful and light-giving attitude. A main effort has been to show that to various admittedly admirable sayings of Jesus reported in the Gospels there are excellent parallels in the Old Testament or the Rabbinical writings. An atomistic treatment has usually been adopted. The teaching of Jesus has not been much discussed and appraised as a whole. And where it has been so discussed, the line has been rather to depreciate or to cheapen. Jewish writers have either looked for parallels or for defects.

"It may be added that till just recent times it was scarcely possible for Jews to dissociate the Christian claim that Jesus lived an exceptional life, and that his teaching was uniquely great and original, from the further Christian claim that he was divine, or indeed that he was God. It was the divinity of Jesus that was for Jews the true stumbling block to any scientific estimate of his teaching. If all Christians had been Unitarians from the first, a drawing together and a good understanding between the Jew and Christian as regards the place of Jesus in the history of Judaism and of religion would have been far easier. The objections to Jesus as a heretic, or as an iconoclast, or as a critic of the law, would not have been so insuperably difficult. Moreover, for many centuries to say that Jesus was a good man and a fine teacher, but not divine, was exceedingly dangerous. It meant the stake or the sword. Hence, to keep complete silence was much easier, and this negative attitude gradually became extremely general. And when the danger of speech was removed, the old objections and stumbling blocks were still in force." (p. 18)

At the risk of displeasing both the Jewish and Christian Pharisees among his critics, Montefiore sends off the following arrow:

"I do not want to depreciate the rabbis or their teaching, but I have no desire unduly to exalt them. And at the same time I do not want to depreciate Jesus or unduly to exalt him. . . . Yet I know that one cannot get rid of one's upbringing, one's origin, and one's own peculiar point of view. . . . That I shall, then, seem to Jewish critics too Christian, and to Christian critics too Jewish, is, I trust, likely, and is to me a source of some hope that now and then I may have said the truth."

So much stated, may I be permitted to cull at random a few isolated paragraphs from the lengthy introduction (108 pages), representing so many glimpses at the Jewish commentator's attitude toward the Gospels and their central figure, Jesus:

"The author of the Gospel of Matthew appears to have been of Jewish origin, and to have been especially interested in the Jewish aspect of Christianity. He probably thought that Christianity—for by this time one can speak of the new religion as distinct from the old—was the true development of Judaism, the fulfilment and consummation of the Law and the Prophets.

"The author was much interested in the showing (according to the usual strained and arbitrary exegesis of his time) that the main incidents of Jesus's career were a fulfilment of Old Testament predictions. Hence it is in Matthew that we have the largest number of Old Testament quotations. 'Matthew' wrote in Greek, and many of his quotations are taken from the Septuagint. But others seem translated direct from the Hebrew."

In brief, Montefiore subscribes to Burkitt's view of Matthew that "no book of the New Testament is so full of thoughts and expressions which have a real parallel in Rabbinical literature. The Evangelist is, so to speak, a Christian rabbi, tho no doubt he would have disclaimed the title. If the Gospel of Mark is most closely in touch with history, the Gospel of Matthew is most closely in touch with the Talmud" (pp. 54-55).

Montefiore makes this defense, or apology, for the Pharisees:

"What the Evangelists say, and what Jesus is made to say, about the Pharisees, the Rabbis and the Jews generally is naturally to be taken with the greatest caution and suspicion. What Catholics say about Protestants, or Protestants about Catholics, or Jews about Christians

(quite admit that this hits me), or Christians about Jews, must always be very critically regarded. But the evidence of the Gospels comes very much under this category. It was inevitable that the Pharisees and the Rabbis should be presented as worse than they really were." (p. 75).

And now, what does our author think about the position of Jesus in the history of Jewish prophecy and the possibility to bridge over the chasm yawning since well nigh 1800 years between the Synagogue and its daughter, the Church:

"Jesus seems in many respects to take up the rôle and to continue the teaching of the eighth and seventh century prophets, of Amos, Isaiah, Jeremiah and Ezekiel. But Jesus was not merely the prophet of collective or general doom. He is much more the teacher of the individual than was Amos or Isaiah. By this time religion was individualized; the process which had begun with Ezekiel was completed —or shall we say completed by him? Jesus, like Ezekiel, is the watchman; he is to warn the wicked and to turn him from his evil way.

"He is sent, as he himself says, to the lost sheep, to the sinners. But to them his message is not merely one of denouncement. He goes among them and eats with them. He will touch their heart in a number of different ways; he will touch it by arousing admiration, hope and love, by encouragement and consolation, by powerful suggestion that the bonds of sin can be, and have been, broken, and that a new life can be and has been begun. Like the God of whom Ezekiel teaches, Jesus has 'no pleasure in the death of the wicked,' he is desirous 'that the wicked turn from his evil way and live.'" (pp. 84-85).

The following *obiter dictum* will certainly meet with the disapproval of our missionary societies:

"Two things, at any rate, seem clear. First, that Jesus himself never dreamed of any preaching outside Israel (either directly or by his disciples). Secondly, that no universalistic element in his teaching constituted any part of the conflict between himself and the Jewish authorities, whether Sadducean or Pharisaic" (p. 85).

And the Jewish Orthodoxy will certainly find distasteful the following statement:

"Jesus resumes the role of the prophets, but since Amos and even since Jeremiah spoke, how immeasurably great was the difference! For Amos and Jeremiah spoke when there was no universally accepted code, no Mosaic law, regarded on all hands as perfect, authoritative and divine" (p. 86).

"Thus Jesus, with his clear prophetic insight, his pure religious spirit, is brought up sharp against a tremendous obstacle. The law does not indeed say that it is more important to observe the Sabbath than to 'love mercy'; it does not indeed say that not to eat rabbits is of greater consequence than to 'walk humbly with God.' But it does say that all its ritual and ceremonial commands are the direct ordainment of the perfect God, and that they were to be perpetually observed thruout all the generations of Israel. Was then the law not divine? Or had Jesus power to abrogate it? Here comes in the tragedy; here is the great dividing line between the New Master and the old teachers. Here is where the conflict begins. What was the attitude of Jesus toward the law? How is it that the law is to be both disobeyed and obeyed? To be honored in its breach as well as in its observance? We can now see that to the mind of Jesus there was, as it were, set an impossible task. It was impossible for him to be wholly consistent; impossible for him to formulate any consistent theory. *Upon the rock of law the new prophet was bound to stumble*" (p. 86).

By this time the reader will, I hope, be convinced that the best way to obtain a real insight of the makeup of this epoch-making work is to read it in its entirety.

Before concluding, however, this fragmentary "Anzeige" I wish to quote the following passage which sums up not only Montefiore's but, as I tried to show in my own above mentioned article, the platform of many of the leading spirits of the liberal Judaism of today:

"Taken all in all, it seems probable that Jesus was not the conscious founder of the Christian Church. He was and meant to remain a Jew. Or rather the question of separating from the Synagogue never presented itself to his mind. He wanted to purify, to quicken, to amend, but not to break away and make a fresh beginning. He continued the work of Amos, Hosea and Isaiah. His Kingdom of God, from one point of view, was a reformed Judaism. And possibly it may come to pass that in his teaching there may be found a reconciliation or meeting point between a Reformed or Liberal Judaism and a frankly Unitarian Christianity of the distant future. *That* Judaism and *that* Christianity may find that they differ in name, in accent and in memories rather than essentially or dogmatically. *That* Judaism and *that* Christianity may both claim Jesus as their own." (p. 101).

The Instincts of Birds

BY BURT E. POWELL, Ph.D.

PSYCHOLOGISTS have studied the infancy of wild animals but little. They have rather taken two things for granted: first, that instincts spring into being in their final form and ready for practical action. The gradual acquisition of a given piece of behavior has been considered one of the criteria of its intelligent instead of its instinctive character. Second, that in the beginning wild animals fear everything unusual in their environment, but later, as life gives associations, they fear only those things that experience teaches them are harmful.

These theories have been, for the most part, the results of observations upon adult animals. For obvious reasons, it is difficult to make the young of wild beasts in their native haunts the subject of study. Yet psychologists have been coming to the conclusion that it is the only way to ascertain just what acts are instinctive and how and when they appear. The young of birds present the best field for observation. They are helpless in the nest for a few days at least. To be sure, their parents are not exactly willing to have their household arrangements pried into; but if, like managing husbands, it can be done without their knowledge, the prying is not impossible.

RED-WINGED BLACKBIRD.
Normal undisturbed attitude.

For two summers Dr. Fred Kuhlmann, of the psychological department of the University of Illinois, has spent his time observing wild birds from the time of hatching until a few days after leaving the nest. His special purpose was to ascertain the relation of instinctive to intelligent behavior. The first summer, in Massachusetts, he observed the rose-breasted grosbeak, the chipping sparrow, and the robin; the second summer, in Nebraska, the red-winged blackbird, the brown thrush, and the mourning dove. His method differed only in detail from other observers. He did not remove the nests and place them nearer the ground, as has been done, but fastened a mirror about a foot back of and a little above the nest. Then from an observation tent he could, with the aid of a pair of field glasses, see in the mirror everything that went on in the nest. He fastened a camera cloth in a nearby tree before the eggs were hatched, that he might be ready to take pictures of the young birds at every stage of their behavior. The old birds, thru their power of learning, soon came to regard these motionless objects as part of the landscape. In all, about twenty nests were observed systematically and continuously; in a few instances the observations being continuous thruout the day. Usually, however, four or five hours a day was all the time a single nest received.

Now, in all animals the first instinct that appears is the food reaction. Every boy, tho only a tomboy, has observed this in young birds. The newly hatched is a shapeless mass of big head and long neck-connected pot-belly, the former opening entirely to afford ingress into the latter. Observations upon this first appearing instinct began as soon as the shell gave up its occupant, and theory number one, that instincts appear in their final form and ready for practical action, received a decided jolt. At first, to be sure, the food reaction was purely instinctive. Every sound the bird heard, every jar it noticed, and open flew its hungry bill. It responded quite as eagerly to the cluck of the investigator or even to his hand-

RED-WINGED BLACKBIRD.
The development of fear. Attitude and look of alarm.

clap, whistle, hiss or jar of the nest with a pencil, as it did to its parents' food chuck or jar made when alighting on the nest. By the third day a change appeared. The food reaction was given as generously as ever to the clap, the whistle or the imitated cluck, or the jar, *but refused entirely to the hiss.* Another instinct was appearing and modifying the first, namely, fear. A possible explanation to be given for this refusal to respond to the hiss is that nests always are in danger from snakes, which hiss before despoiling them. In this case the young birds can have had no experience with snakes, hence the refusal to react to what at first had stimulated seems to mean that a second instinct is appearing and modifying the first. By the fourth day the cluck of the investigator met with no response, nor did his jarrings of the nest. The young birds were making some progress in discrimination. They were learning to distinguish between the sounds and jars of the parent birds when alighting and other sounds and jars. Experience and association now were influencing the first instinctive food reaction. After the fourth or fifth day none of the artificial stimuli received a response, except occasionally the sight of the hand with extended finger, which, in some cases, aroused the reaction from the seventh to the tenth day. Usually, however, the response it aroused was an expression of the instinct next in apearing, fear. Hence it seemed from the observation of the first instinctive reaction that instincts do not spring into being developed in their final form and ready for practical action, much as the fair Minerva is said to have sprung well educated and stylishly dressed straight from the head of her father Jupiter. On the other hand, it seemed that instincts are modified not only by other instincts, but also by experience and association. Nor did the observations upon the instinct of fear refute this, as will be seen later.

As to the second theory, that animals at first fear everything strange or unusual in their environment and later only those things which experience has taught them are harmful, direct observation led to a change of view. The first part of the theory undoubtedly holds, that at first animals fear everything unusual in their environment; but, and this is significant, later they continue to fear *everything except those things that experience teaches them are not harmful.* That is, unless some circumstance arises serious enough to induce an animal to inhibit its fear of a particular thing, it will continue to fear it for all time. The hunger impulse and the parental impulse are in birds the two strongest forces. Hunger may compel a bird to feed from a man's hand, and, having found it can do so in safety, it may thereafter eat from his hand fearlessly. But had not strong compulsion arisen in the first instance, the bird never would have inhibited its original fear enough to make the trial. This view would seem to have the greater value biologically than the one more gen-

erally accepted. If animals outgrew their original instinctive fear for everything except for the few things that experience taught them were dangerous, most of them would lose their lives before acquiring their education; for by the time experience had taught them what things were and what were not to be feared, the stronger beasts would have them devoured.

As to the first theory, that instincts appear in final form, what did the study of instinctive fear show? Scientists have thought that for the class of birds under consideration fear appeared about the time the wing feathers developed; that is, in general, a few days before leaving the nest; and that it appeared abruptly. Now, undoubtedly, this would seem to be the case if young birds were observed only when influenced by natural and usual stimuli. There then would be nothing in their environment to call forth fear. The artificial stimuli used to obtain the food reaction also showed that the instinct of fear exists some time before it has been supposed to be present. Fear also showed a gradual development appearing in all the species studied, except the mourning dove, in five different manifestations of instinctive fear. The mourning dove is not fed like the other birds, but is given great quantities of regurgitated food morning and evening, consequently it would not notice stimuli that aroused the food reaction in other species. The manifestations of fear as observed were: 1. The refusal of the bird to give the food reaction to stimuli that at first aroused it is probably the first expression of a latent fear instinct. The picture shows that two birds refused to give the food reaction to the hiss, while the two a day younger gave it enthusiastically. 2. A momentary shrinking to a stimulus, consisting of a sudden contraction of the muscles and immediate relaxation. It never was aroused by any of the stimuli except the hiss, and belongs to a period ending with the fifth day. 3. The crouch, or attempt to hide in the nest, which is very different from the preceding manifestation. The limbs and head are drawn in, and the birds hug the bottom of the nest, closing the eyes and lying perfectly quiet for some time after the stimulus. This appeared sometimes by the sixth day, and by the seventh it was well established. 4. A brief period during which the birds may or may not crouch, but remain on the alert watching moving objects in an attitude of alarm;

ROBIN.
Fighting reaction of fear.

moving objects in an attitude of alarm; this is a development of the preceding. 5. Now there is an attempt on the part of the birds to fly and escape when approached. If they drop to the ground from inability to fly or from fatigue, they will run to cover, hide and crouch close to the ground. In the case of the robin, a sixth manifestation of fear should be added, fighting fear. The transition from one manifestation of fear to the next frequently was very abrupt, often being entirely established within twenty-four hours. Experience could not have taught the birds to express their fear in these several different ways nor to make the changes at just the periods observed. There had been, moreover, nothing in their experience to make them fear the artificial stimuli used in the first place. Fear and its development, therefore, is purely instinctive, influenced by association only on the side of inhibition.

Observation made upon the growth of the birds showed that there are three definite periods and that there is a relationship which may or may not be merely incidental, to the development of associations and to fear. First is a period from the first to the fourth day, characterized by a slow but rapidly increasing rate of growth; then from the fourth to the seventh, a period of constant and maximum rate; and, third, a period of decreasing rate after the seventh day. In making these observations the young of twenty nests were weighed daily, in the absence of their unscientific parents, it is hardly necessary to say. During the first period, as has been seen, the first crude discriminations and associations are established. The food reaction had ceased for those stimuli most unlike the natural ones. During the next period of growth the food reactions were given more readily than at first to the imitated cluck and the jarring of the nest with a pencil. The bird was hungrier and more vigorous but learned to make no discriminations, nor was there much progress in the development of the manifestation of fear beyond its first crude expression. With the beginning of the last period of growth comes an abrupt change in all the reactions. The food reaction no longer is given to the artificial stimuli, except occasionally to the sight of the hand with extended finger, and manifestations of fear appear definitely and quite abruptly in the form of crouching in the nest, which now very rapidly becomes the predominant reaction to all the artificial

BROWN THRUSH.

First two giving food reaction to the imitated cluck, the two older ones failing to respond.

stimuli, followed in rapid succession by the other forms of the manifestation of fear.

Besides this apparent relation between growth and the development of associations and of fear, the periods of growth were fairly closely correlated to the stages observed in the acquisition of motor co-ordinations. Again there were three: (1) From hatching to the fifth day; (2) from the fifth to the seventh day, and (3) from the seventh day to maturity.

ORPHANS GIVING FOOD REACTION TO EXTENDED FINGER.

When the young birds are hatched they are nearly inert. The legs and wings project loosely from the body, and the head is curled toward the abdomen. The legs are of no use whatever. There is but one co-ordinated movement present, the food reaction. This is a complicated movement involving the stretching of the neck, the wide gaping of the mouth, and the bracing of the body with the stubby wings. The second or third day the head is uncoiled, the shape of the body changes somewhat, presenting a wider and flatter abdominal surface, and the birds can right themselves without much difficulty when turned over, as the pliant viscera of the pot-belly is beginning to serve as ballast and a foot for keeping the bird in position. By the fifth or sixth day the first stage in the acquisition of motor co-ordinations is completed. The legs are now drawn in and folded under the body instead of extending loosely. The long, lonesome looking neck is pulled in and there is a marked increase in neuro-muscular strength. When arranged in the nest with the heads away from the center, which is a position the young birds begin to take by this time, the pushing of the wings against the sides of the nest often enables them to raise themselves upon end. The legs do not assist in this, remaining folded against the body. The second stage, from the fifth to the seventh day inclusive, the birds become more active and vigorous, but otherwise the nature of their movements does not change noticeably. By the seventh or eighth day this stationary period is broken. There is rapid progress in motor co-ordinations. The birds begin to use the legs to raise the body, the leg from the first joint down being treated as all foot for several days. By the eighth day the little fellows will grasp a stick with their toes and remain, if carefully placed there, altho their bodies will settle down flatly upon it. By the tenth day they can stand and sit somewhat erect when placed upon a stick. Between the ninth and twelfth day the grosbeak, chipping sparrow and redwing leave the nest; the brown thrush, robin and mourning dove leave it two to five days later. At this time they can fly from a few feet to a hundred yards, depending upon whether they leave the nest early or

late. The manner of flying is easily distinguished as that of a young bird. It is slow and the body is carried more in a diagonal than a horizontal position, as is the case of the adult bird.

Now, in all these co-ordinations exercise seems to play little or no part. The food reaction is made with no hesitation from the first. From the eighth to the tenth day such activities as preening the feathers and scratching the head appear, and, except for a bit of wobbling, due to lack of strength, these movements are made as skilfully as by the adult bird. Also before there is strength to raise the body to the feet, all the necessary co-ordinated movements are present. The wings, likewise, are used in a co-ordinated way for flying before flight is possible. The peculiar manner of flight of the young birds, too, does not seem to be due to hesitation in making the co-ordinated movements. Strength and wing feathers, not skill, seems to be the lack. Expressing this in a sentence, co-ordination, that is, the ability to use the right muscles in the right combinations and order, appears before the neuro-muscular strength necessary to make the movements effectively. In all probability this is an adaptation to environment. It is necessary that the wild bird should not, like the barnyard chick, kick out of its shell and run off to engage in the practical affairs of its world within the hour. If it did it soon would meet destruction, and it is this motor immaturity alone that saves it. On the other hand, it could not exist if it were not able to make the food reaction from the first. Sometimes movements will be observed that look like wrong co-ordinations. For instance, a redwing six to eight days old was observed when placed upon a smooth surface to crawl backward, which looked like a clear case of improper muscular co-ordination. But upon examination the backward movement proved to be due to the fact that the body was raised only slightly, and the direction of force from

BROWN THRUSH.

The development of fear, crouching in the nest to the hiss. All other stimuli did not arouse the crouch until several days later.

the contracting leg muscles threw it back, leaving the feet in a forward position. Further attempts to stand then pushed the body backward. The failure to advance, however, was not comparable to a baby that does not know how to use its legs, but to a man enfeebled whose legs will not obey his will.

Besides the young birds that Dr. Kuhlmann studied in their nests, he stood in place of a mother to a score of orphaned redwings. Any man who feels like a hero because he has helped bring up a pair of twins on a bottle will have to own himself outclassed. These bird infants clamorously demanded food from every five to twenty minutes thruout the day; and for several days after leaving the nest they expected their lunches to be poked down their throats. All they expected to do was to let their self-elected foster mother know when they were hungry, and to perform the act of swallowing. The rest was his responsibility entirely. A number of them will serve the cause of psychology in the laboratory this winter by demonstrating their ability to learn.

UNIVERSITY OF ILLINOIS, URBANA, ILL.

The Repenting Sinner

BY COUNT LEO TOLSTOY

TRANSLATED FROM THE RUSSIAN BY HERMAN BERNSTEIN.

A CERTAIN man lived on earth for seventy years and spent all his life in sins. And that man grew sick, but did not repent of his sins. And when death came he began to cry at the last moment and said:

"Oh, Lord, forgive me, even as you forgave the murderer upon the cross!"

No sooner did he utter these words than his soul departed. And the soul of the sinner began to love God, and, believing in His mercy, it came to the gates of Paradise.

And the sinner began to knock at the gates and to beg for admission into the kingdom of Heaven.

And he heard a voice from beyond the gates:

"Who is knocking at the gates of paradise? And what has that man accomplished during his life?"

And the voice of the prosecutor answered, enumerating all the sinful deeds of that man. And he did not mention any good deeds.

And a voice from beyond the gates answered:

"Sinners cannot enter the kingdom of Heaven. Begone!"

And the man said:

"Oh, sir! I hear your voice, but I do not see your face and I do not know your name."

And the voice replied:

"I am Peter, the apostle."

And the sinner said:

"Have mercy on me, Apostle Peter; recall the weakness of man and the mercy of God. Were you not a disciple of Christ, did you not hear His teachings from His own lips and did you not see the example of His life? Recall that when His soul was opprest and weary, and when He asked you thrice not to sleep, but to pray, you slept, for your eyes grew heavy—and He found you asleep thrice. The same is true of me.

"Recall also how you promised Him unto death not to deny Him, and how you denied Him thrice when he was led to Caiaphas. The same is true of me.

"Recall also how the cock crowed and you went out and began to cry bitterly. The same is true of me. You have no right to refuse to admit me."

And the voice beyond the gates of Paradise became silent.

After a brief pause the sinner commenced to knock again on the gates and to beg for admission into the kingdom of Heaven.

Then another voice was heard from beyond the gates, asking:

"Who is this man, and how did he live on earth?"

And the voice of the prosecutor replied, repeating the evil deeds of the sinner, and not mentioning any good deeds.

And the sinner said:

"Oh, sir, I hear your voice, but I do not see your face and I do not know your name."

And the voice replied:

"I am David, the king and prophet."

The sinner did not despair, nor did he go away from the gates of Paradise. He said:

"Have mercy on me, King David, and recall the weakness of man and the mercy of God. God loved you and exalted you before mankind. You had everything: a kingdom, fame, wealth, wives and children, and when you saw from your roof the wife of a poor man you were overcome by sin, and you took unto yourself the wife of Uriah and killed him by the sword of Joab. You, being rich, took away from the poor his last lamb and killed him. I have done the same.

"Recall also that you repented and said, 'I confess my guilt and repent my sin.' So do I. You have no right to refuse to admit me."

And the voice beyond the gates grew silent.

After another brief pause, the sinner commenced to knock again and to beg for admission into the kingdom of Heaven. And a third voice answered from beyond the gates, saying:

"Who is this man? And how did he live on earth?"

The voice of the prosecutor answered, enumerating for the third time his evil deeds without mentioning any good deeds.

Then the voice beyond the gates replied:

"Begone! Sinners cannot enter the kingdom of Heaven."

The sinner said:

"I hear your voice, but I do not see your face and I do not know your name."

And the voice replied:

"I am John, the favorite disciple of Christ."

And the sinner rejoiced and said:

"Now you will surely admit me. Peter and David will allow me to enter because they know the weakness of man and the mercy of God. And you will admit me because you possess so much love. Did you not write in your book that God is love, and that he who does not love does not know God? Did you not say toward your declining days, 'Brethren, love one another'? How can you despise me now and drive me away from here? Either renounce that which you have said yourself, or show me your love and permit me to enter the kingdom of Heaven."

And the gates of Paradise were opened and John embraced the repenting sinner and admitted him to the kingdom of Heaven.

YASNAYA POLYANA.

Daybreak in Spring

BY L. W. ZOCHERT

'TWAS just at break of day,
While yet the gray
Mist mingled with the sun's first ray:
While yet the dew
Mirrored its million worlds of green and blue;
While yet the symphony of Spring's sweet song
Rose from a thousand feathered throats the trees among!

The sun rose higher—and behold!
The million worlds of green and blue were changed to gold.
Hushed for a moment was the birds' sweet caroling.
In silent song my heart rejoiced: 'Tis Spring.

ROSELLE, ILL.

Literature

Travelers Many

ONCE more the season of travel is upon us, and once more readers turn to the multitude of counselors who stand ready to advise and guide them. The choice is endless within the confines of this small planet of ours. Some solve the problem of where to go by returning year after year to the same spot, familiars of two countries. Italy exacts this divided allegiance from the English; England and Italy both demand it from Americans. The claim of Paris is a social, a frivolous, rarely a sentimental one; and Berlin and Munich and Dresden make only an intellectual and artistic appeal. The day of Japan appears to be over, for the moment, as the objective of esthetic pilgrimages, while, on the other hand, Spain appears to be destined to receive an increasing share of the tourist's patronage, tho not an enthusiastic one, at least not until the country has prepared itself a little better for the accommodation and entertainment of its visitors. Unlike Italy, Spain has for us no cherished traditions of history or habits and customs; its monuments appeal to our intellectual curiosity only; for the rest, the more modern comfort Spain can substitute for her old ways, the better we shall like it. As for travel at home, that continues to be thoroly neglected by the American with leisure and money at his command.

A MASSAI BEAU AND BELLE.
From Bronson's "In Closed Territory." (McClurg.)

One cannot help thinking, however, that Agnes Deans Cameron's *The New North*[1] will rouse the interest of many

[1] THE NEW NORTH: BEING SOME ACCOUNT OF A WOMAN'S JOURNEY THROUGH CANADA TO THE ARCTIC. *By Agnes Deans Cameron.* Illustrated. D. Appleton & Co. 8vo.

an American to the point of suggesting a summer's outing in her footsteps. Here is a novel tour to be made on this continent, a voyage of discovery filled from first to last with the pleasures of the unknown. So novel is this trip, indeed, that even Cook & Co. could not furnish a route when the author entered their offices, and said, "I want to go from Chicago to the Arctic by the Mackenzie River, returning home by the Peace and the Lesser Slave. Can you tell me how long it will take, what it will cost, and how I make my connections?" But the route was found in Winnipeg, in the offices of the Hudson's Bay Company:

ESKIMO KAYAKS AT THE ARCTIC EDGE.
From Cameron's "The New North." (Appleton.)

"They plan your journey for you, give you introductions to their factors at the different posts, and sell you an outfit. Moreover, they will furnish you with a letter of credit which can be transmuted into bacon, beans and blankets, sturgeon-head boats, guides' services, at any point between Winnipeg and that point in the Arctic where the seagull whistles over the whaling-ships at Herschel."

Mrs. Cameron records what she saw on her trip thru this new America of the north, our granary of the future, visiting Saskatchewan, Alberta, Mackenzie, and going on until the Polar sea barred her way at the mouth of the Mackenzie River. She knows how to combine in her narrative the romance of the last frontier with the chronicle of progress: Indians, French Canadians, half-breeds, Eskimos, British masters of the country, and the immigrants of many races mingle in her narrative; but here, as always in books of American travel, it is not the new country itself, but what man—its invading master, not its son—is making of it that furnishes the real interest. A readable book, and an informing one. The author furnishes a helpful route, with modes of transport, distances, time, and tariffs.

Mr. E. V. Lucas loves his Paris, and knows it. His many merits as a travelling companion have been lauded ere now in these pages; it should suffice the knowing to be told that a volume of his, *A Wanderer in Paris*,[2] has appeared to take its place beside his books on London and Holland. He catches the spirit of the City of Light on his very first page, awakening the memory of it in those who, too, have felt its irresistible charm, while making it understandable to the reader who never yet has been the city's guest. He wanders through old Paris and new, recalls history and its romance, visits Tuileries, Pantheon and the Bastille, and looks on at the life of the Parisians on the great boulevards, in the Latin Quarter, at Montmartre,

[2] A Wanderer in Paris. *By E. V. Lucas.* Illustrated. Macmillan Co. 12mo. $1.75 net.

and elsewhere, drawing occasional comparisons between London and Paris and French traits and English. The Louvre he "does" with genuine enthusiasm; everywhere in his pages one has the fruitful companionship of a richly stored mind of insatiable intellectual curiosity. The illustrations consist of reproductions of masterpieces of art in the Louvre, and of sixteen delightful original drawings in color by Walter Dexter.

An informing and interesting historical guide to the monuments of Rome will be found in the *Rome*[3] of Mr. Edward Hutton, whose chapters are linked together by his basic idea of the continuity of the story of the Eternal City as the center of the world. He begins with the ancient capital, with Capitol, Forum, Colosseum and Pantheon, the column of Trajan and the Palatine Hill, tracing their history to the dawn of Christianity, and finding in the Catacombs a logical transition to the Rome of Christianity, the seat of the new religion. Thus the city's many churches are traced as they rose one by one, St. Peter's being reached last, and then the Vatican. There are chapters on the art of Rome, its fountains, palaces and villas, and the Campagna. This book, which presents in readable form the results of an enormous amount of research and study, is abundantly illustrated in monotone, and with sixteen pictures in colors by Maxwell Armfield.

The *Cathedral Cities of Spain,* by W. W. Collins, R. I.,[4] illustrated with no less than sixty full-page reproductions

ARTIFICIAL TERRACING IN CHINA.

Saving what is left of the soil when the forests are gone. From Quick's "Inland Waterways." (Putnam.)

of his own water-colors, is a handsome book, which traces the evolution of ecclesiastical architecture in Spain thru its successive phases in the country's cathedrals, from the ninth century thru the Moorish dominion to the Romanesque and the succeeding Gothic influence, which, in its turn, gave way to the Renaissance. The distinguishing features of the Spanish cathedrals are the choirs and the *retablos,* the latter of Dutch or Flemish origin. To these, and to the art treasures the churches contain, the author devotes special attention in the brief articles accompanying his pictures.

Delightfully picturesque in its colored illustrations, which are numerous, Mr. and Mrs. Stokes's *Hungary*[5] furnishes pleasant reading, and some useful information concerning the country and its people. Unfortunately the Hungarian, in his patriotic zeal to place his fatherland in the front rank of modern nations, is too much inclined to doubt the value of the strongly individualistic note of his country, its dress and customs as possible evidences of provincialism, of backwardness, and to strive consequently for the hideous uniformity of civilization. No doubt it will ere long be the ambition of the Hungarian farmer's wife, as it is already of the Dutchwoman, to discard her beautiful national costume for cheap imitations of the fashions of Paris. But Hungary is still one of the most interesting countries which the tourist can visit, whether it be in the towns or in the vast, fertile plain that is the original home of the race. And the far-famed Hungarian hospitality is still kept alive.

Pierre Loti is the spiritual brother of the late Lafcadio Hearn, whose preference for alien races he shares. His is a curious, unreasonable attitude: instead of regretting the inevitable changes that are being wrought in Egypt, the disappearance there of the old before the new, he resents it, and he pities the fellaheen, who, surely, are better off today than they have ever been before thru their unchronicled history, which is counted by millenniums. One sympathizes with him when he anathematizes the underbred tripper who outrages the faithful at prayer in the mosque with vulgar laughter and contemptuous curiosity, but to him Cook and all his works are an abomination, and European civilization on the banks of the Nile an eyesore. But *Egypt*[6] is a work of rare poetic beauty, if strongly tinged with his morbidity, for it makes us see the grandeur, and the mystery, and the overpowering dignity of the vanishing Egypt, the land of the dawn of civilization. A hearty word of thanks is due to the translator for his deft, delicate rendering of the original—a task of great literary difficulty.

No greater authority than Sir Francis E. Younghusband could have been found to write the text to Major Edward Molyneux's seventy pictures, reproduced in colors, that adorn *Kashmir,*[7] the title referring to Kashmir proper. The author compares the beauties of the country with those of Switzerland, then discards the comparison for one with "the smiling, peaceful Thames valley, with a girdle of snowy mountains." The excellent illustrations bear him out. Aside from its descriptive chapters, the book deals with the history of the country, its people, administration, products and manufactures, progress, etc. And, of course, this being an English book, there is a chapter on sport.

While Mr. Menpes's sixteen colored plates and sixty-four black and white drawings furnish the reason for the publication of *China,*[8] a new volume of the Menpes Crown Series, the text is not a mechanical piece of hackwork, but an excellent condensed survey of Chinese life and character by an eminent British administrator, an ex-governor of Hongkong. Of course, Sir Henry Blake deals only with large outlines and broad generalizations, but what he says is of value and interest; he, too, draws a picture.

British East Africa is certainly hav-

ing its "boom." Here is another book on a region that was long neglected in the literature of travel, and, most appropriately, it is chiefly a book of sport. *In Closed Territory*[9] is a record of hunting and travel and adventure in the territory recently visited by Mr. Roosevelt, its author being an American, Mr. Edgar Beecher Bronson, who has produced as satisfactory a work of its kind as one can well desire.

What would travel be without Messrs. Cook & Co., despised of M. Loti, or without Herr Karl Baedeker, who, no doubt, stands no better in his eyes? Here is the fifteenth revised English, which means the twenty-ninth German, edition of his *Northern Germany*,[10] brought down to date with his usual accuracy, which deserves to be made proverbial. Romantic Baedeker is not, but he is such a comfort to the innocent abroad!

Meredith as Poet and Novelist

THE late George Meredith was a poet before he was a novelist, and he continued to write poetry after he stopped writing novels. The *Poems* of 1851, his first book, despite sympathetic reviews by Charles Kingsley, in *Fraser's Magazine*, and W. M. Rossetti, in *The Critic*, was so badly received that, with the exception of a few copies distributed to friends, the author burnt up the whole edition. It was never reprinted in his lifetime, and today that thin little volume is a much besought bibliographic rarity that has brought in the London market as high as thirty pounds! The Messrs. Scribners' latest sheaf of Meredith poems,[1] probably the last of the sort that will ever be made, proves these early verses to have deserved better than their holocaustic fate. They are decidedly worth keeping. The handful of lyrics, each called simply "Song," all dainty enough and beautiful enough for musical setting; the exquisite "Angelic Love," the "South-west Wind in the Woodland," the "Twilight Music," and "The Rape of Aurora" would be enough to make a name and reputation for a young poet of twenty today. The first draft of "Love in the Valley" is, too, a thing of beauty, as well as an interesting contrast with what became in its final shape one of Meredith's best-loved poems. Simple, youthful, and naive, as most of these poems are, as compared with the writer's later work in verse, which traveled far at times from their lilting sweetness, the lofty poetry of the Love of Earth of his prime is foreshadowed in this "Song"—

No, no, the falling blossom is no sign
  Of loveliness destroy'd and sorrow mute;
The blossom sheds its loveliness divine;
  Its mission is to prophesy the fruit.

Nor is the day of love for ever dead,
  When young enchantment and romance are gone;
The veil is drawn, but all the future dread
  Is lightened by the finger of the dawn.

Love moves with life along a darker way,
  They cast a shadow and they call it death:
But rich is the fulfilment of their day;
  The purer passion and the firmer faith.

The poems omitted from later editions of the volume called *Modern Love and Other Poems* are also too good to lose, and among the *Scattered Poems* are the early "Chillianwallah," the "Lines to a Friend Visiting America," the splendid sonnet "On Hearing the News from Venice" (the death of Robert Browning), and the swinging and philosophic "Stave of Roving Tim" with its optimistic ending:

Lord, no, man's lot is not for bliss;
  To call it woe is blindness;
It's here a kick, and it's there a kiss,
  And here and there a kindness.
He starts a hare and calls her joy;
  He runs her down to sorrow;
The dogs within him bother the boy,
  But 'tis a new day tomorrow.
    So, I at helm, cries Roving Tim,
      And you at bow, old raven!
    The wind according to its whim
      Is in and out of haven.

Dr. James Moffatt's *Primer*[2] (as it is lettered on the back) to the Meredith novels is another of those critical expositions of the purpose, philosophy, and method of the master English novelist of his time, which have been appearing

[9] IN CLOSED TERRITORY. *By Edgar Beecher Bronson.* Illustrations from Photographs by the Author. Chicago: A. C. McClurg & Co. 8vo. $1.75 net.

[10] BAEDEKER'S NORTHERN GERMANY. Fifteenth Revised Edition. Imported by Charles Scribner's Sons. 12mo. $2.40 net.

[1] POEMS WRITTEN IN EARLY YOUTH (published in 1851). Poems from "Modern Love" (first edition) and Scattered Poems. *By George Meredith.* New York: Charles Scribner's Sons. $1.50 net.

[2] GEORGE MEREDITH. INTRODUCTION TO HIS NOVELS. *By James Moffatt.* New York: Hodder & Stoughton. $1.25.

at increasingly frequent intervals for the last ten years or so. Dr. Moffatt evidently knows his Meredith well. He outlines succinctly and in chronological order the plots of all the novels and stories; and to his critical summaries prefixes an "Introduction" that reads as if it might have been prepared as a lecture (and a good one it is) on Meredith as Novelist. His final words are:

To stir the mind's interest by a vital and varied application of "the comic spirit" is the motive of George Meredith. He would make his prose both voice and force. If readers fling down his works without being pushed an inch or two nearer sanity and sincerity, or without suspecting that these are a goal, or even without dreaming that for them a goal exists at all, then a fault lies somewhere. But the fault is not wholly Meredith's.

FLOODS ON PANAMA RAILROAD, 1906.
From Hall & Chester's "Panama and the Canal." (Newson & Co.)

Panama and the Canal. By Alfred B. Hall and Clarence L. Chester. Cloth, 246 pp. New York: Newson & Co. 75 cents.

This is a very valuable and interesting little book on the past and present of Panama. It is written in a very simple style, and its subdivision into epochs and topics makes it suitable for the schoolroom. The early history of Panama and the varied events of the Spanish occupation are interestingly sketched. The work of the French and Americans in constructing the canal is told in a graphic and not too technical manner. The future of Panama is prophesied by the authors. Pennsylvania, they say, has 6,000,000 inhabitants, and Panama is two-thirds as large with only 350,000. Coal and oil and the precious metals are known to lie buried underneath the hills, and the soil is rich. There is no reason why Panama should not be the prosperous home of millions. The authors estimate the probable receipts from the canal at $150,000,000 in the first ten years. It costs the average vessel $10,000 to go thru the Suez Canal, and $385,000,000 have been collected since the opening. The book is excellently illustrated with numerous photographs and maps.

American Inland Waterways. Their Relation to Railway Transportation and to the National Welfare; Their Creation, Restoration and Maintenance. By Herbert Quick. With 80 illustrations and a map. New York: G. P. Putnam's Sons. 8vo, $3.50 net.

An excellent general survey of the important subject of *American Inland Waterways* is furnished by Mr. Quick in this elaborately illustrated volume, which is destined for general reading, or, in other words, for the enlightenment of the average American, whose vote ulti-

mately decides, or at least can decide, all questions of public policy. Mr. Quick deals with the economic and technical sides of his subject, with the attitude of the railroads toward canals as competing carriers of trade, with the conditions that must be met to make canal transport profitable, and with the need of the inland States of this class of transportation for their merchandise if they are to reach their full commercial and industrial development. The freight car shortage of 1906-07 is one of the arguments he adduces. On the technical side he points out that canalization requires reforestation, and brings with it the creation of water power, which may be turned to industrial uses. The problem of the inland waterway is considered here as an important factor of the wider question of national efficiency and conservation of resources.

A Book of Precious Stones. The Identification of Gems and Minerals, and an Account of their Scientific, Commercial, Artistic and Historical Aspects. By Julius Wodiska. With 46 illustrations in color and in black and white. New York: G. P. Putnam's Sons. $2.50.

There is much to interest the curious in this volume, altho Mr. Wodiska, himself a New York artisan, manufacturer and gem importer of thirty years' experience, has had the jewelry trade and the purchasers of precious stones chiefly in mind. The chapters on the diamond are the fullest. They include the discovery and working of the famed South African mines, the history and methods of the diamond cutters' guild in Amsterdam, and an account of the control of the world's diamond market by the De Beers Syndicate of London. The methods of the latter are arbitrary as those of any other trust, and we have seen recent complaint in the newspapers that it was forcing inferior stock on the American buyers. Mr. Wodiska declares that the utmost perfection in diamond cutting is now to be had in the United States. The Amsterdam cutter saves the weight of the stone at the expense of beauty; but the Yankee cutter, catering to the extravagant tastes of Western millionaires, hews to the line, let the precious chips fall as they may. An edifying part of the book instructs the reader how to tell true stones from false. This is a harder job than formerly, for the chemist's retort is turning out sapphires and rubies, at least, which it is difficult to distinguish from the mined product. The artificial ruby now commands a large sale, and its manufacture brings the precious gem, in the subscription book publishers' phrase, "within the reach of every home."

DESIGNS FOR JEWELRY.
From "A Book of Precious Stones." (Putnam's.)

Each for All and All for Each. By John Parsons. New York: Sturgis & Walton Company. $1.50.

As society becomes more huge and complex the apparent importance of the

ordinary man grows less. The pioneer, living in a hut of his own fashioning, separated by miles from a neighbor, dependent on his gun and arm for dinner day by day, facing the elements with the courage of Ajax, defending himself from foes, —this man grows into a well-marked individual, self-reliant, strong, distinctive. But a factory hand in a city, doing one job monotonously year after year, defended by policeman and judge, unable to snare a rabbit, lost in a crowd, of what value is he to the world? Is he not just an interchangeable bit of a machine, unimportant, easily replaced if lost? Mr. Parsons, in *Each for All and All for Each,* brings cheer to this man and to all men. The purpose of the volume, to "enforce and illustrate the importance of the individual in the social order," is well achieved. In simple language, with copious illustration drawn from all ages and countries, he demonstrates that our vast, complicated civilization has been produced by individuals, is maintained by individuals and ministers solely to individuals. Take out fifty men from the history of France and the contribution of that most civilized country to culture and progress would evaporate. Science, art, literature, law, are not abstractions, gifts of the gods; they mean Darwin, Raphael, Goethe, Marshall and the troop of their dazzling colleagues. Even men of average stature

COVER CUT OF MURPHY'S "IN UNFAMILIAR ENGLAND." (L. C. Page.)

"The rude peasantry, their country's pride,
When once destroyed can never be supplied."

In proportion as civilization expands the scope and possibilities of the individual are increasing. "Social progress is seen to provide for individual progress." The book is a useful antidote to the prevalent view of nature, red in tooth and claw, as a harsh stepmother, because

"So careful of the type she seems, so careless of the single life."

In Unfamiliar England. By Thomas D. Murphy. Boston: L. C. Page & Co. $3.

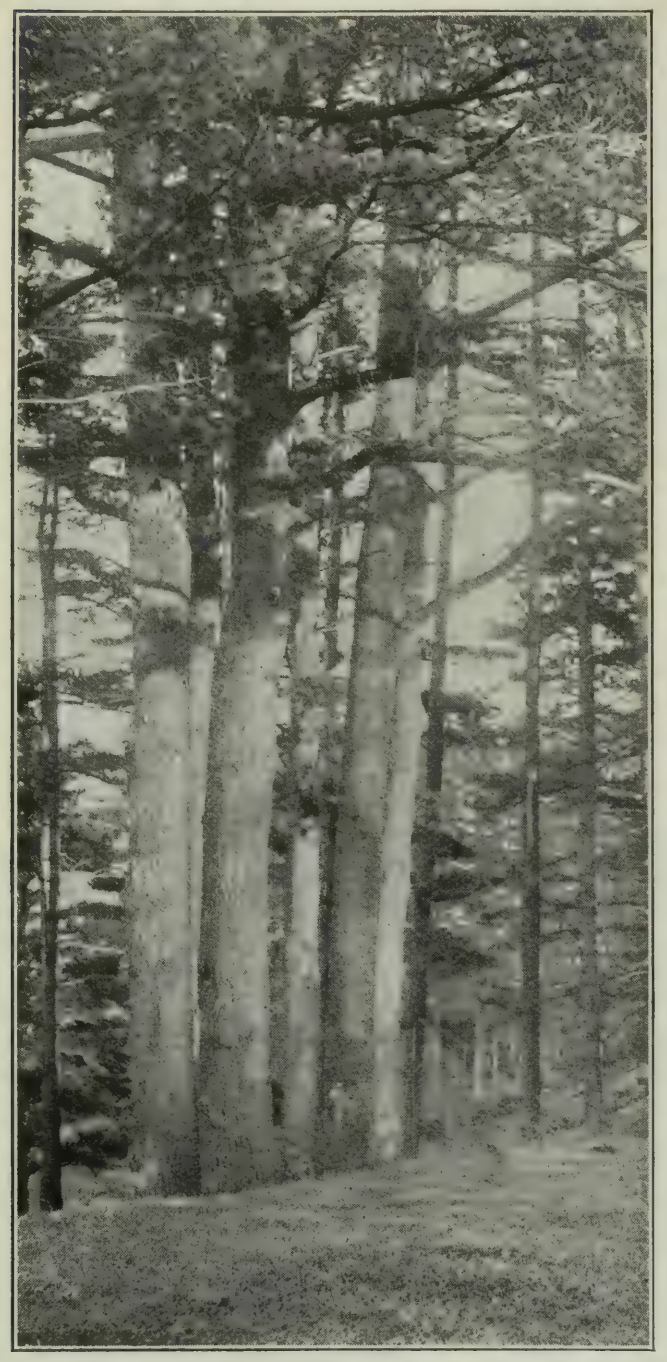
There is already a motor-car literature. The Williamsons write the fiction, and various authors its travel and description. It only awaits its adequate poet! In *Unfamiliar England* we have a running comment on rural England as seen from a tonneau. By motoring to unfrequented spots the author found much of interest and novelty, and has traced pleasant lines of travel for future motorists. The volume is sumptuously illustrated with color plates and duogravures from excellent paintings and photographs. The journey included runs thru Southern Ireland, and across the border into Scotland and Wales; also a day's jaunt in the Isle of Wight, covering seventy miles of picturesque roads and memories of Keats and Tennyson. It would be difficult to imagine a more delightful summer than one spent in wandering thru the little climbing lanes and level roads of rural England in a "wind-footed" motor car, and enjoying to the full the treasures of history, art and literary association of the landscape-garden that we call our mother country.

Eight Essays on Joaquin Sorolla y Bastida. By Aureliano de Beruete, Camille Mauclair, Henri Rochefort, Leonard Williams, Elizabeth Luther Cary, James Gibbons Huneker, Christian Brinton and William E. B. Starkweather; followed by Appreciations of the Press. (Two vols.) New York: The Hispanic Society of America. $7.50 net.

The exhibition of some 350 paintings by the modern Spanish master, Joaquin Sorolla, at the museum in New York of Mr. Archer M. Huntington's Hispanic Society in February-March last year, awakened a livelier popular interest than any other showing of pictures ever made in America. In the trifle more than one month, from February 4 to March 8, inclusive, that exhibition was visited by 159,831 persons — beyond any doubt

breaking all records for any thing of the kind in this country. As a fitting aftermath of the exhibition the Hispanic Society has now published, in two handsome and well-printed octavo volumes, a symposium of biographical, critical, and appreciative papers on the artist and his work, the like of which has fallen to the lot of very few, even of the greatest painters, in their lifetime. In these eight essays, in Spanish, French, and English, and in the accompanying newspaper reports and critiques printed at the time of the exhibition, every phase of Sorolla's art is discussed, his training, his inspirations, his sympathies, his technic and methods of work, are all dealt with in most interesting and entertaining fashion. And it all amounts to the exposition and embellishment of the theme that here is an artist who, after years of labor, has achieved a personal vision, and has accomplished something of the impartment of his vision to the rest of the world. It is remarkable, yea, a wonderful achievement, this, for a man yet in his early prime (Sorolla was born in 1863), and who is capable of producing other hundreds of beautiful pictures. He is certainly one of the half-dozen supreme masters among living painters, and assuredly is worthy of the tribute of such an anthology of appreciation as this. The books contain half-tone reproductions of all the pictures in the New York exhibition. Some of these are much better than others and serve to give an inkling of subject, composition and line, but many are so inadequate as to be almost meaningless; and of course even the best of them cannot convey any hint of that brilliance of color which is one of Sorolla's chief characteristics. This multitude of half-tones required the use of a super-calendered paper that bulks into the cumbrous weight of nearly three pounds to the volume; but this is our only complaint. The publication enlarges the already heavy debt of gratitude owing the Hispanic Society of America for bringing the Sorolla pictures to these shores.

The Landscape Beautiful. By Frank A. Waugh. New York: Orange Judd Co. $2.00.



This is a book for landscape lovers, a series of graceful essays by the professor of landscape gardening in Massachusetts Agricultural College, printed in

ILLUSTRATION FROM "EIGHT ESSAYS ON SOROLLA."

Copyright, The Hispanic Society.

antique type with uneven lines on deckel-edge pages and interspersed with photographic illustrations. Professor Waugh argues in favor of the conservation of scenery and the right of the people to the free enjoyment of the beauties of nature. He gives us lessons in the art

PINE TREES FROM WAUGH'S "THE LANDSCAPE BEAUTIFUL."
(Orange Judd Company.)

of appreciation of landscapes, both the real and the pictorial, and shows how teachers may cultivate the faculty in their pupils, recognizing that the prosperity of his own profession depends upon such popular appreciation. Such efforts to draw attention to the esthetic side of gardening and forestry are just now much needed and Professor Waugh's work is justified, even tho his lines are not.

Diplomatic Memoirs. By John W. Foster. 2 Vols. Boston and New York: Houghton Mifflin Co. $6.00 net.

The career of John W. Foster, entertainingly described in his two volumes of memoirs, has not been of that shirt-sleeve variety so frequently referred to and so rarely existing in important posts. He was, it is true, pitchforked into the Mexican mission by President Grant as a reward for political services in Indiana. Morton, the strenuous, secured the place for him; Fish regarded him as one of his protégés. But Mr. Foster's life in Indiana as soldier, editor and politician was an excellent preparation for the work to come. Never in the years following had he the good (or bad) fortune to be the center of public interest. Yet his various services at Mexico, St. Petersburg, Madrid, London and Paris, to say nothing of the Far East, The Hague, and Washington itself, allowed him to develop into a professional diplomat of high order. With the exception of Johnson, he bore a public commission from every President from Lincoln to Roosevelt. Without possessing unusual distinction, his volumes have the grace and charm that have always been the mark of his writings. They may be commended to those who read biography or want to know how the diplomatic machine works. They are not without their real contribution to our knowledge of those episodes in which the writer had a part.

The Tories of Chippeny Hill, Connecticut. A Brief Account of the Loyalists of Bristol, Plymouth and Harwinton, who founded St. Matthew's Church in East Plymouth in 1791. By E. LeRoy Pond. New York: The Grafton Press. $1.00.

The title of Mr. Pond's little book fairly states its contents, since the story is of that group of loyal Anglicans who stuck out for their Church and their convictions in troublous times. It is today easier to find books dwelling on the good points of the Tories than it was a generation since, when patriotism found its easiest expression in detestation of England and her adherents. Mr. Pond

tells simply and sympathetically, with more than one picturesque touch, the story of his group.

Some Spring Books

For the convenience of readers who, for various reasons, have to keep track of the new publications in the different departments of literature as soon as they are announced, a selected list of the more important books to be issued this spring is presented here. It includes both new works by authors of established standing, and titles that are of interest in themselves, and promise well. No critical selection can be made, of course, in the case of books that have not yet appeared. Reviews of most of them will follow in due time in these columns; but even as it stands, the list will, we believe, be of service as a first guide to the new output.

ART — *Manet and the French Impressionists*, by Th. Duret (Lippincott); *Promenades of an Impressionist*, by James Huneker (Scribner); *How to Visit the Great Picture Galleries*, by Esther Singleton (Dodd, Mead); *The Master Painters of Britain, The Water-Color Drawings of J. M. W. Turner, What Pictures to See in Europe in One Summer* (Lane); *The Boston Museum of Fine Arts*, by Julia De W. Addison (Page).

BELLES-LETTERS, ESSAYS, POETRY — *Yet Again*, by Max Beerbohm (Lane); *An Approach to Walt Whitman*, by Carleton Noyes (Houghton, Mifflin); *The Master Singers of Japan: Verse Translations from the Japanese Poets* (Dutton); *The Inspiration of Poetry*, by G. E. Woodberry (Macmillan); *The Frozen Grail, and Other Poems*, by Elsa Barker; *Russian Lyrics and Cossack Songs*, done into English verse by M. G. D. Bianchi (Duffield); *Songs of Cheer*, by John Kendrick Bangs; *Excursions of a Book Lover*, by F. R. Marvin (Sherman, French); *The Comfort of the Hills*, poems by Dr. S. Weir Mitchell (Century); *Women as Letter Writers*, edited by Ada M. Ingpen (Baker & Taylor); *The Echanted Island*, by Alfred Noyes (Stokes); *Leading American Novelists*, by John Erskine, *Leading American Essayists*, by W. M. Payne (Holt).

BIOGRAPHY — *Robert Dodsley: Poet, Publisher, Playwright*, by Ralph Strauss, *Robert Herrick*, by F. W. Moorman, *Simon Bolivar*, by F. L. Petre (Lane); *My Army Life on the Plains, and the Fort Phil Kearney Massacre*, by F. C. Carrington (Lippincott); *Henry Clay*, by T. H. Clay, and *William H. Seward*, by E. E. Hale, Jr., in "American Crisis Biographies" (Jacobs); *Recollections of a Varied Life*, by George Cary Eggleston (Holt); *The Diary of James K. Polk* (McClurg); *Porfirio Diaz, President of Mexica*, by José F. Godoy (Putnam).

ECONOMICS, SOCIOLOGY — *Highways of Progress*, by James J. Hill (Doubleday); *Ancient and Modern Imperialism*, by the Earl of Cromer (Longmans); *Personal Power*, by William J. Tucker; *The Health of the City*, by Hollis Godfrey; *Wool-Growing and the Tariff*, by Chester W. Wright (Houghton, Mifflin); *The Indian and His Problem*, by Francis E. Leupp; *Privilege and Democracy in America*, by F. C. Howe (Scribner); *Types from City Streets*, by Hutchins Hapgood (Funk).

FICTION — *Country Neighbors*, by Alice Brown; *The Twisted Foot*, by Henry Milner Rideout (Houghton, Mifflin); *Little Aliens*, by Myra Kelly; *Once Upon a Time*, by R. H. Davis (Scribner); *The Butterfly Man*, by G. B. McCutcheon, *The Voice in the Rice*, by Gouverneur Morris (Dodd, Mead); *Simon the Jester*, by W. J. Locke, *The Thief of Virtue*, by Eden Phillpotts (Lane); *The Deeds of Denry the Audacious*, by Arnold Bennett (Dutton); *The Illustrious Prince*, by E. Phillips Oppenheim, *Just Between Themselves*, by Anne Warner (Little, Brown); *The Green Mouse*, by R. W. Chambers, *White Magic*, by D. G. Phillips (Appleton); *A Modern Chronicle*, by Winston Churchill, *Lost Face*, by Jack London, *An Interrupted Friendship*, by E. L. Voynich, *The Undesirable Governess*, by F. M. Crawford, *A Life for a Life*, by Robert Herrick, *A Brood of the Eagle*, by J. L. Allen (Macmillan); *The Fascinating Mrs. Halton*, by E. F. Benson, *The Personal Conduct of Belinda*, by Eleanor Hoyt Brainerd, *Lady Merton, Colonist*, by Mrs. Humphry Ward (Doubleday); *The Adventures of Mr. Polly*, by H. G. Wells, *The Emigrant Trail*, by Geraldine Bonner (Duffield); *The Sheriff of Dyke Hole*, by Ridgwell Cullum, *The Great Natural Healer*, by Charles Heber Clark (Jacobs); *Kilmeny of the Orchard*, by L. M. Montgomery, *My Heart and Stephanie*, by Reginald W. Kauffman (Page); *Franklin Winslow Kane*, by Anne Douglas Sedgwick, *The House of Mystery*, by Will Irwin, *Mr. Carteret*, by David Gray (Century); *By Inheritance*, by Octave Thanet, *The Girl from His Town*, by Marie Van Vorst, *The Beauty*, by Mrs. Wilson Woodrow (Bobbs-Merrill); *The Crowds and the Veiled Woman*, by Marian Cox (Funk); *The Achievements of Luther Trant*, by E. Balmer and W. McHarg (Small, Maynard); *Samuel the Seeker*, by Upton Sinclair (Dodge); *The Unknown Quantity*, by Gertrude Hall (Holt); *Kavanagh—Forest Ranger*, by Hamlin Garland; *Cumner's Son*, by Sir Gilbert Parker (Harper).

HISTORY — *Garibaldi and the Thousand*, by G. M. Trevelyan (Longmans); *Republican France*, by E. A. Vizetelly (Appleton); *The Foundations of the Nineteenth Century*, by H. S. Chamberlain (Lane); *With Mulai Hafid at Fez: Behind the Scenes in Morocco*, by Laurence Harris (Badger); *History of the Irish Parliamentary Party, 1870-1890*, by F. H. O'Donnell (Longmans); *The Revolution in Turkey*, by Sir W. M. Ramsay (Hodder & Stoughton).

MUSIC — *Some Musical Recollections of Fifty Years*, by Richard Hoffman, *Wagner's Judaism in Music* (Scribner); *Handel* by R. A. Streatfield, *Hugo Wolf*, by Ernest Newman, *Unmusical New York*, by Hermann Klein (Lane); *Music: Its Laws and Evolution*,

by Jules Combarieu (Appleton); *Elektra,* by Hoffmannsthal, Strauss and Symons (Brentano's).

RELIGION AND PHILOSOPHY — *The Development of Religion,* by Irving King, Ph.D., *The Religions of Eastern Asia,* by H. G. Underwood, D.D. (Macmillan); *The Church and Labor,* by Charles Stelzle (Houghton, Mifflin); *Modern Belief in Immortality,* by Newman Smyth. D.D. (Scribner); *A Search After Ultimate Truth,* by A. M. Crane (Lothrop); *The Spiritual Unrest,* by Ray Stannard Baker (Stokes); *Charms of the Bible: A Fresh Appraisement,* by Jesse B. Young (Eaton); *The Lord's Prayer,* by Charles F. Aked, *A History of Protestant Missions in the Near East,* by Julius Richter (Revell); *Building a Working Faith,* by Newell Dwight Hillis, *The Gospel and the Modern Man,* by Shailer Matthews (Macmillan); *Social Relationships in the Light of Christianity,* by W. E. Chadwick (Longmans); *The Principles of Pragmatism,* by H. H. Bawden (Houghton, Mifflin); *Nietzsche in Outline and Aphorism,* by A. R. Orage (McClurg); *Light from the Ancient East,* by Adolf Deissmann (Hodder & Stoughton).

SPORT AND ATHLETICS — *The Big Game of Africa,* by R. Tjäder (Appleton); *Hunting in British East Africa,* by Percy C. Madeira (Lippincott); *Camera Adventures in African Wilds,* by A. R. Dugmore (Doubleday); *Swimming,* by Edwin Tenney Brewster (Houghton, Mifflin); *The Healthful Art of Dancing,* by L. H. Gulick (Doubleday); *Swedish Folk Dances,* by Nils W. Bergquist (Barnes); *Golf for Beginners,* by M. Whitlatch (Outing).

TRAVEL AND EXPLORATION — *The New Baedeker,* by Harry Thurston Peck (Dodd, Mead); *Lake Victoria to Khartoum,* by Capt. F. A. Dickinson (Lane); *Sport and Travel in the Far East,* by J. C. Grew; *The Russian Road to China,* by Lincoln Bates, Jr. (Houghton, Mifflin); *Roman Cities of Northern Italy and Dalmatia,* by A. L. Frothingham (Sturgis & Walton); *Up the Orinoco and Down the Magdalena,* by H. J. Mozans (Appleton); *A Transformed Colony: Sierra Leone,* by T. J. Alldridge (Lippincott); *Benares, the Stronghold of Hinduism,* by C. P. Cape (Badger); *Cathedral Churches of England,* by Helen M. Pratt (Duffield); *Prehistoric Rhodesia,* by R. N. Hall (Jacobs); *A Vagabond Journey Around the World,* by H. A. Franck (Century); *Camp and Camino in Lower California,* by A. W. North (Baker & Taylor).

MISCELLANEOUS — *The Subconscious,* by Hugo Munsterberg, and others (Badger); *Chats about Astronomy,* by H. P. Hollis, R. A. (Lippincott); *Comets,* by Henry W. Elson, Ph. D. (Sturgis & Walton); *Descriptive Meteorology,* by Willis L. Moore (Appleton); *Self Help and Self Cure: A Primer of Psychotherapy,* by Eliz. Wilder and Edith M. Taylor, *A Simple Explanation of Modern Banking Customs,* by H. Robinson (Small, Maynard); *Intracellular Pangenesis,* by Hugo de Vries (Open Court).

Pebbles

No woman is as old as she looks—in the morning.—*Lippincott's.*

LOVE is when two people get the idea they can't see enough of each other nor too little of other people.

A LOVE-SMITTEN youth who was studying the approved methods of proposal asked one of his bachelor friends if he thought that a young man should propose to a girl on his knees.

"If he doesn't," replied his friend, "the girl should get off."

LECTURE upon the rhinoceros.

Professor.—I must beg you to give me your undivided attention. It is absolutely impossible that you can form a true idea of this hideous animal unless you keep your eyes fixt on me.—*The Christian Instructor.*

SHERIFF.—Hi, thar, what you doin' with them thar worms?

Fisherman.—I'm putting a new worm on my hook. That confounded perch got away with the last one.

Sheriff.—I guess you'll have ter come along with me. Don't ye know that rebates is agin' the laws of these here United States?

AMONG the words given out for analysis recently by a district school teacher in Pennsylvania was "bank-note." The instructor's astonishment may be imagined when one male pupil turned in the following unique paper:

"Bank-note is a compound, primitive word, composed of 'bank' and 'note.' 'Bank' is a simple word, meaning the side of a stream; 'note,' to set down. 'Bank-note,' to set down by the side of a stream."—*Lippincott's.*

PROF. WILLIAM LYON PHELPS, of Yale, was recently erroneously reported to have stated before a class of graduate English students that "if you could take twenty best formed and best looking women you can find today and stand them up beside a Grecian woman of old, the women of today would look like caricatures." Even if what he was reported to have said had been true, the women of today have at least one advantage over their classic sisters. The modern women are alive, while the ancient ones are dead ones.

FORMER President Patton, of Princeton University, once delivered a sermon at Fifth Avenue Collegiate Church, his subject being "Faith." He spoke of the blind faith of the client who puts himself at the mercy of a lawyer in preparing an action for trial, and the confidence of the sick in entrusting themselves to the physician.

"A case of blind faith," said the clergyman. "The doctor writes out a prescription. Oftener than not you cannot read it; you don't know what it is. He tells you to take it. 'Yours not to reason why, yours but to do and die.'"

Whether or not Dr. Patton meant it, there was a distinct ripple thruout the congregation. —*Illustrated Sunday Magazine.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Speaker and His Power

THE present rules of the House of Representatives were devised to promote the orderly and prompt transaction of business. Experience had shown that such rules were needed. We think this is realized by the leaders of the present Democratic minority and by many of the Republican insurgents. During the debate accompanying the revolt which has taken from Speaker Cannon a part of his power, members repeatedly asserted that they were aiming at the system and not at the man. We do not mean to question the sincerity of those utterances, but we are convinced that it was the man's use, or abuse, of the system that made it intolerable to a majority of the Republicans who voted with the Democrats to exclude Mr. Cannon from the Rules Committee. If the late Mr. Reed were now Speaker, there would be no attempt by thirty or forty members of his party not only to oust him from the Rules Committee, but also to make a new Rules Committee in which he should have no voice.

Mr. Cannon is far from being an ideal Speaker, or leader of the majority in the American House of Representatives. His ways at times do not commend him to persons of refinement. Bred in the old school of intensely practical partisan politics, he is never in sympathy with the modern and progressive element of his party. With advancing age his reactionary tendencies have been accentuated, his contempt for such independence as a reasonable loyalty to a party and its guiding principles will permit has become more pronounced, and his reliance upon the force of parliamentary despotism more complete. We suspect that his resentment of criticism and opposition in his party has recently been sharpened, and that he has made enemies by inflicting punishment when he might have made friends by argument and persuasion. He has frequently been painted in colors that are too dark. We have seen no proof that his attitude toward legislation has been determined by considerations of personal gain, or that he has deliberately and consciously sought and accepted the control of interests hostile to the public welfare. But, accustomed to rely in politics upon force of one kind or another, he has not discriminated, or thought it worth while to discriminate, with respect to the forces that were offered. He has the defects of the political school in which he was trained. They do not necessarily indicate that he is willing to be unjust.

If to such a man is given the great power which a Speaker exercises under the present rules of the House, he will surely at times use it unjustly or without due and decent regard for the interests of a majority which includes many members of a more modern and progressive type. He will exercise it, thru a Rules Committee whose members he selects and of which he is chairman, to prevent action upon measures which he dislikes and to favor the progress of others which he approves. Frequently the course to be taken will be determined by him alone, for the conditions are such that his associates, chosen by himself, either have similar views or prefer not to oppose him. The substance of it all is that concentration of power, as provided by the present rules (which may need amendment), is required for the orderly promotion of legislation; that the man placed in the Speaker's chair should

be one who will use power intelligently, justly and in sympathy with true progress and reform; and that Mr. Cannon is not the right man for the place.

He retains his office, but a considerable part of his power is gone. The present committees were appointed by him, but the members of them do not look to him for additional favors, for it is plain that this is his last term as Speaker. From the new Committee on Rules he will be excluded. In other respects the changes ordered by the House may not be revolutionary. In place of the present controlling majority of three there will be a controlling majority of six, nominated by the caucus. During the remainder of the term of this Congress, continued domination of the committee by the "regular" element of the majority cannot be expected, but if the same method shall be adopted at the beginning of the next Congress, we may guess that the majority which elects a Speaker will choose six members of the Rules Committee who will be substantially in agreement with him. At that time, however, other changes may be made. A fair representation of all sections and interests in such a committee is, of course, to be desired, and there should be found some way of insuring such representation without impairing the efficiency of the directing power.

The effect of this successful revolt in the Republican majority cannot be foreseen. By the insurgents the prediction is made that the party thruout the country will gain by the movement, and that it will hasten favorable action upon the Administration's measures now pending. We do not feel sure that they are right. Much will depend upon the attitude of the two factions toward each other hereafter. Such bitterness as was shown in last week's controversy does not quickly die out. The results of such a division, when a minority of the dominant party wins by an alliance with the party in opposition, have sometimes been quite unfortunate. The situation calls for conciliation. What was done last week should not be permitted to prevent action upon those measures to the support of which the Republican party, for the good of the public, is committed.

A Homily for the Thursday Before Easter

THIS present issue of THE INDEPENDENT bears the date of the day before the crucifixion, the Thursday before Easter, the day on which our Lord offered that wonderful prayer for his disciples and for the unity of all his Church in all its history. That prayer will be fulfilled. It is not yet answered, and the Church is sadly to blame for it. We do not wonder that at this Lenten season men's thoughts turn to that prayer, and they ask how the divided Church can be made one.

It is well, then, that over a dozen clergymen and laymen, representing diverse schools in the Episcopal Church, met for two days in Trinity Church for the purpose of drawing up a basis for bringing together the branches of the Christian Church. Most admirable was the purpose, altho the result formulated in seventeen elaborate propositions can please few and help none. Even *The Churchman* condemns it as futile.

Such a basis of union ought to be short and crystal-clear. Such is the Lambeth Quadrilateral. This is prolix, difficult to follow, and manages to include indirectly a large body of dogmatic terms, such as the Trinity, the Incarnation, the Virgin Birth, the Holy Catholic Church, Baptism in the Name of the Trinity, the Apostles' Creed, and the Nicene Creed, the Lord's Supper to be administered by an ordained priesthood, and finally, the historic episcopate. This is the substance of it; but it is held together by continuous links of the word *"fellowship,"* beginning with the statement that "the life of the blessed Trinity in unity is a life of fellowship" (which we know nothing about), and ending with the assertion that ordination "by the laying on of hands of the historic episcopate and prayer," "if restored to the whole fellowship, would be an effective band of unity in Christ." We may illustrate the prolix obscurity of the whole seventeen propositions by quoting one:

"6. Our fellowship with God is in Jesus Christ thru the oneness in Him of all mankind. This fellowship is a mystery so far above our natural state that by our own

strength we cannot attain unto it. It is God's free gift originating in His creative will and purpose, and administered by the presence and power of the Holy Ghost."

Can any one tell what all that means?

By this succession of seventeen elaborate stages or steps we are supposed to rise to a grand and splendid conclusion, which will bring the Christian Church into a great organic unity; and when we reach it and look at it, it is only the trivial, formal, rejected device of the "historic episcopate." We had followed the road which began as wide as the infinity of God till it dwindled to a squirrel track and ran up a tree. By no such doubtful chain of mitred links is the vast Church to be bound together or the world to be saved. The historic episcopate is a historical problem about which idle minds busily contend to nobody's profit. Does the chain hold? Is it broken in a dozen places? Who handles this end of it—Anglicans, or Romans, or Copts? What is the business of the Church? Is it not to bring in the kingdom of God, righteousness and peace and joy in the Holy Spirit, and can it be that it is to be achieved by any fixt, adamantine notion how one bishop is to succeed another, or whether there is to be any succession of bishops at all? That is not the way Jesus talked when he preached the kingdom of God. He came out at no such lame conclusion. He ended the Sermon on the Mount with the impressive, the imposing picture of the saved or the lost soul, as a house standing safe or swept away in the crash of storm. And, before his crucifixion, and in the assurance of his triumphant resurrection and enthronement, he concluded his long address to his disciples with that yet more majestic drama of the final judgment, of the salvation or the loss of all humanity, not because they had held or failed to hold the historic episcopate, but because they had loved or failed to love and serve their fellow men. It is sad, very sad, to see intelligent men so blinded that they imagine the salvation of the world and the maintenance of the Church to depend on a particular tactual order by which its teachers shall be inducted by a special class of officers. Have they not eyes to see that the Church does continue and flourish in other ways?

But this is not the worst of the blindness. They do not see that the unity of Protestant Christendom, of which they are a part, is already nearly accomplished, and they are hanging back. A magnificent federation of our denominations has been achieved, by far the most important movement of our generation, one that expresses and creates the very unity which these belated gentlemen wish to secure. Here it is already; come into it. The Episcopal Church is in it only by indirection, by the act of one of its standing committees, and by no act of its General Convention. They received invitations to join, but they forgot to consider them in either the House of Bishops or the House of Delegates, as they had too much to do about their own matters to think of their brethren. These dozen or more men are away behind the times. They don't know what is actively going on. While other Churches have moved forward, and together, they have been left behind —they and the Southern Baptists. It is time that they waked up, that they put in the foreground in their coming Convention their official union with the other Churches in this great Federal Council. Union is already achieved, and on a broad basis. Let them come frankly in with the rest of the great Catholic and United Church, and talk no more about union on the basis of the most disputed ritual ceremony which divides Christendom. On that side lies schism.

The Finer Democracy

It is H. G. Wells, philosopher, who sets forth, in his book of "First and Last Things," a more discriminating notion of democracy and aristocracy in their modern manifestations than we remember to have seen elsewhere.

Not that there is anything really new in Mr. Wells's conception. Aristotle, more than two thousand years ago, pointed out the vital distinction between an aristocracy of intelligence and character and an aristocracy of rank, created by power and buttressed by privilege. James Harrington, in the *Oceana,* described "a

natural aristocracy among men" as the perfect product of favorable historical conditions, and described an organization of the state which might be expected to give to the natural aristocracy a preponderating influence.

Mr. Wells ingeniously shows how the evolution of a true natural aristocracy comes to the same thing in the end as democracy of the better sort; how democracy, as it acquires a meaning finer than its first crude intentions, becomes at length in accord with the finer conception of aristocracy.

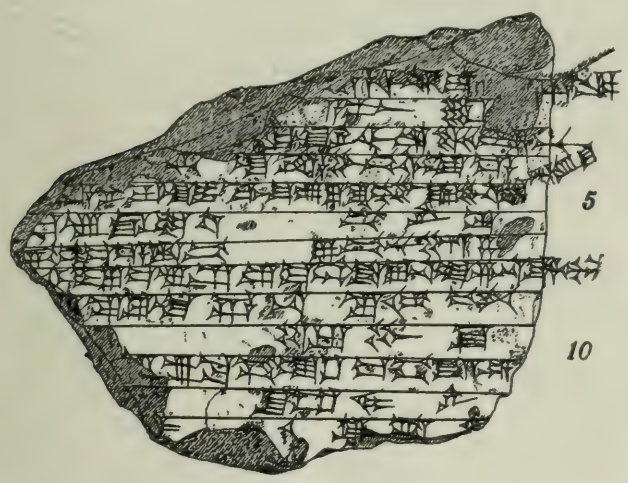
The test of "this quintessential democracy" is fellowship. It cannot be satisfied with voting merely, or the majority rule. It is incapable of arrogant bearing toward any, whether regarded as superiors or as inferiors. It presupposes frankness and veracity in intercourse and a "general rightness of living."

Mr. Wells does not think that America is superabundantly blessed with this sort of democracy today. "In America," he says, "the vulgar individualist's self-protective exaltation of an idealized Common Man has worked and is working infinite mischief." We are still sensitive, apparently, to adverse criticism by our English kindred, and Mr. Wells's view of us in this latest utterance, indicating, as it does, that he has not changed the opinions that he held when he wrote his book on "The Future in America," will be resented by such as feel that loyalty requires them to defend American life and character on all occasions. There is, however, a natural aristocracy in America, as elsewhere, and all who belong to it will admit the truth of Mr. Wells's picture of a kind of democracy which he cannot admire, and which, notwithstanding his optimistic socialistic faith, he fears.

The true name of this false democracy, he says, "is insubordination." Confident in its own perfection and adequacy, "it resents rules and refinements, delicacies, differences and organization." A more precise account of a certain spirit which has obtrusively announced itself in every part of this republic within a generation has not before been made in so few words. It is a spirit which, not content to assert excellence of character and of intention, vaunts itself in conceit and asserts equality of ability:

> "It takes refuge from all superiority, all special knowledge, in a phantom ideal, the People, the sublime and wonderful People."

This is an unpleasant portrait, but we can do better than be angry or resentful over it. We may wisely turn attention to the reasons which Mr. Wells suggests for making the most of natural superiority among men instead of denying or ignoring it. Let us grant, he says in effect, that the end toward which social evolution should move is a collective being, gathering experience and developing will, to which every life shall be in an ethical sense subordinated: we do not thereby preclude belief in progress by an aristocratic method. In our relation to plants and to animals, we recognize the facts of superiority and inferiority. Why should we not likewise think of our relations to other men? There are clearly great differences of capacity and of experience, great differences of initiative and of power. Why should we be disturbed by the idea of the intellectual subordination of some individuals to others, if thereby all can better help along the nobler achievements and the general purpose?



To such as can view these things with detachment, broadly and without prejudice, the philosophy of aristocracy and democracy in these days of turbulent American activity, as in the ancient days of smaller things, would seem to be in substance this: Men are not equal by nature. There is no wisdom in despising or ignoring superiority of ability. We lose the most beautiful things out of our lives if we resent differences, delicacies and refinements. Yet we may wisely establish an objective equality, an equality of opportunity, to the end that natural superiority may win proper recognition and assert its useful leadership, and not be held down by any artificial aristocracy of privilege.

On Hilprecht's Announcement

We are indebted to the courtesy of Dr. H. V. Hilprecht, of the University of Pennsylvania, for an advanced copy of his valuable paper announcing the discovery of a fragment of the Babylonian story of the Flood. The discovery was given to the public at a meeting of the Acorn Club, of Philadelphia, and

the next morning the newspapers had full accounts of it. The value of this fragment is said to be that it is of the age of Abraham, several centuries older than Moses, and that it agrees more closely with the biblical account of the Flood than does that in the Eleventh Tablet of the Gilgamesh Epic, our copies of which are as late as the seventh century B. C.

This Eleventh Tablet is a long poem, in which the Babylonian Noah tells how he escaped the Flood, and thus achieved immortality. It has wonderful resemblances to the Genesis story, in the announcement of its coming, the command to build the ship, the gathering into it of

the family of the patriarch and of all sorts of animals, the overflow of waters, the landing of the vessel on the summit of a mountain, the sending out of three birds, and the final sacrifice. It differs chiefly in the lack of ethical spirit and in its crude polytheism. It has been perfectly well known since 1872 that this was an ancient story, copied from much more ancient tablets, as is stated by the scribe.

Nevertheless, it has been greatly desired that we might find one of those earlier accounts, which might give a variant version, just as we long for a Hebrew Old Testament manuscript that might go back to the time when the Septuagint translation was made. This wish had been partly met by the discovery of two fragments of an older Babylonian version of the story, one of which is in the Berlin Museum, and the other in the J. Pierpont Morgan Library. The latter is luckily dated in the reign of Ammi-zaduga, whose reign has been usually fixt at about 2100 B. C. Both of them are of the age plausibly assigned by Dr. Hilprecht to his new fragment, so that, so far as age is concerned, this one simply adds evidence to confirm what was previously certain. It is past all question that as early as the time of Abraham the people of Mesopotamia had a familiar legend of the Flood.

Now let us turn to this new text and see what there is peculiar about it. Dr. Hilprecht thus translates it:

". . . thee . . .
[The confines of Heaven and Earth] I will loosen,
[A deluge I will make and] it shall sweep away all men together;
[But thou seek] life before the deluge cometh forth;
[For over all living beings], as many as there are, I will bring overthrow, destruction, annihilation.
. . . Build a great ship and . . .
. . . total hight shall be its structure.
. . . It shall be a houseboat carrying what has been saved of life.
. . . with a strong deck cover [it].
[The ship] which thou shalt make
[Into it bring] the beasts of the field, the birds of heaven,
[And the creeping things, two of everything], instead of a number
. . . and the family . . .
. . and . . ."

The words in brackets are conjecturally supplied by Dr. Hilprecht; but without them there is no question that it belongs to the same story of the Flood. It is a part of the address of the god to the Babylonian Noah, Ut-napishtim. It varies from the story as given by George Smith, which at this point quotes the god Ea as saying to Ut-napishtim:

"Build a ship
Leave what thou hast: save thy life.
Sell thy goods and save thy life—
Bring living creatures of all kinds into the ship."

And it goes on to enlarge on the threatened overflow of waters and to give the size of the ship. Now what do we find that is new in Dr. Hilprecht's fragment?

It is to be observed, first, that his is only a tentative translation, and will have to be verified or corrected by other scholars. The miserable condition of the tab-

let makes translation difficult. The mention of "two of every kind" is in brackets and thus uncertain. The word "houseboat" will have to be considered. The "strong deck" he also translates as a "strong roof," and he translates the corresponding passage in Gen. 6:16: "A roof shalt thou make to the ark, and its (entire) length thou shalt cover it." The Revised Version reads: "A light shalt thou make to the ark, and to a cubit shalt thou finish it upward"; but the Brown-Driver Hebrew Lexicon allows the special meaning *roof*. The word translated "roof" by Dr. Hilprecht and "light" by the Revisers, is *tsohar*, and usually means *brilliancy, glory,* a strange word for *roof,* which shuts out the brilliancy. But one may think of the roof as a deck, a sort of sun-parlor. Dr. Hilprecht offers quite as surprising a new translation for verse 20, to fit his Babylonian texts—"instead of a number." Where the Hebrew and the English tell us that Noah was to bring in birds, beasts and creeping things, two of each, "after its kind," he makes it read that two were to be taken "instead of a number." That would require an utter reconstruction of the original text on the basis of the resemblance of the word *mîn,* kind, to the root of *mana,* to number; but this is hazardous, and we do not see how the word can mean *number* where it occurs so often in the first chapter of Genesis.

Dr. Hilprecht thinks he sees in his fragment a closer resemblance to the Genesis story in its more monotheistic tone. The fragment is too brief to make this clear or even probable. In the longer recension it is Ea that speaks after the consultation of the gods, and the same may easily be the case here.

It is easy to make too much of resemblances or coincidences in the comparison of pagan and Scriptural myths or legends. We know perfectly well that there never has been any such Flood as that which Genesis describes as having taken place at a little over 2000 B. C. There has been no such Flood since the Glacial period, and then not one that covered all the mountains so that the Ark could rest on Mount Ararat. It is a good biblical story, with a good religious drift to it, and it is well worth being in our Bible, but confirmation is impossible. As an anthropological fact it is very interesting to learn that it was familiar in Babylon long before Genesis or Moses, and in all probability in Canaan also; but whether the Genesis writer got it from Babylonia or from Canaan we do not know; probably from the latter. There is nothing against it.

We thank Dr. Hilprecht for this discovery. It is not as important as he makes it, but it is of real value, and it encourages us to hope for more. It was quick and capable scholarship which made him detect the value of the almost obliterated fragment from catching simply the word *abubi,* which means *Deluge.* We hope he may find more and more important texts to illustrate Scripture or increase our knowledge of the beginnings of history and human culture.

The English Divorce Law

CONSIDERING the frankness and frequency with which the English express their disgust at the divorce law—or, rather, laws—of the United States, the proceedings of the royal commission as now reported from day to day in the London *Times* make interesting reading to us Americans. This commission, composed of nine men and two women, is charged with the duty of examining into the working of the present law, with a view to the recommendation of any needed changes. The evidence taken at the hearings is most conflicting, but none of the witnesses examined are satisfied with the law as it is. Mrs. Humphry Ward has not been called nor has her "Marriage à la Mode" been introduced as evidence of the perfection of the British system.

One fault that is found with it is the expense connected with divorce suits. The only competent tribunal is the Probate and Divorce Division of the High Court of England, consisting of only two judges sitting in London. Consequently, the cost of divorce is prohibitive to a large proportion of the population, particularly in the country districts. In the most favorable cases of undefended suits the expense amounts

to $150 or more. As a consequence, there are a great number of illegitimate unions and a growing tendency among certain classes to disregard the marriage tie. Sir John Bingham, one of the divorce judges, however, took occasion to deny the charge that there was "one law for the rich and another for the poor." The law was the same, he gravely explained, for rich and poor, only the poor were not able to avail themselves of it. As a remedy, it is suggested by some witnesses that the county courts be given power to grant divorces, but this is strenuously opposed by others, because it would introduce diversity of practice and because the county judges are not believed to be expert enough to handle such a difficult matter.

Most of the witnesses advise the abolition of the dual standard. According to the present law the unfaithfulness of a wife is grounds for divorce, but not the unfaithfulness of a husband. A woman can only get a divorce when cruelty is added to her husband's other misconduct. This cruelty is interpreted in a purely bodily sense. However flagrant and offensive a man's conduct may be, his wife cannot free herself unless he so far forgets himself as to touch her rudely, or deserts her for two years. Mental suffering does not count. As Sir George Lewis put it in his testimony:

"Imagine the position of a young woman whose separated husband has been living in a course of misconduct while she was unable to remarry, unable to have children, and was in fact neither married nor unmarried. She could never be free from him. Perhaps the husband would fail to pay the allowance or would disappear; still she was chained to him. A man may stay at a hotel with a woman and pass her off as his wife, but if the wife goes to the Divorce Court and asks for relief all they can do is say to her, "You can live alone for the rest of your life, your husband can continue to outrage and insult you in every way, but that is the life you are to live."

Legal separation, which is often advocated in this country as a substitute for divorce, is a failure in England. Practically all the witnesses agree that it is conducive to immorality to have in the community a large number of persons of both sexes who are capable of anything except legal marriage. A woman who forgives her husband or who consents to a separation when she could get a divorce is ever after bound to him whatever he may do.

In Scotland ever since the Reformation marital misconduct on the part of either husband or wife has been grounds for divorce, as it is in the United States. It seems almost incredible to us Americans that in a civilized community in the twentieth century a law of such manifest injustice as that of England should find defenders. Nevertheless it does. Sir John Bingham, for instance, argued before the Commission that man is morally weaker than woman and is subject to more temptation, so a lapse from virtue on his part is to be looked upon as accidental and not nearly sufficient to justify so drastic a remedy as breaking the marriage tie. It was a wife's duty, as one of the other witnesses said, to forgive and forget. We are not disposed to question that this may in some cases be a wife's duty, but we maintain that she, equally with her husband, should have the privilege of not forgiving. It is because the laws of England are full of such unjust discriminations against women that the movement for equal rights has there assumed a more violent form than here.

Another point brought out in the evidence is the frequent use of the divorce court for blackmail. Several lawyers testified to paying out thousands of pounds in behalf of innocent clients who were threatened with being named as corespondents in a divorce suit. In the opinion of some of the witnesses the publicity given by the newspapers tended to promote morality, while others held that it had no restraining influence or had an evil effect. There was a similar conflict in regard to collusion. Some believed that it was desirable that the husband and wife seeking a divorce should be in communication with each other, for very often the quarrel was made up. Others were insistent upon throwing a case out of court when any indication of collusion could be detected, apparently holding that if one party wanted a divorce it should be granted, but if both wanted it it should be denied them.

Most of the witnesses so far heard from favor the extension of the grounds for divorce to include incurable insanity,

long term imprisonment, wilful desertion for a year or more, habitual drunkenness, adultery on the part of the husband, and persistent cruelty. So if the Commission reports and Parliament acts in accordance with the evidence divorces in England may be obtainable as freely as in the United States. It is possible also that a system of compulsory civil marriage will be introduced, for the gap between Church and State started by the passage of the Deceased Wife's Sister bill seems destined to be widened. On this point the recommendations of Mr. Eyre, of the Poor Man's Lawyer Department of Oxford House, is worth quoting:

"He would take away from the Church the legal duty of marrying people, as marriage was complete in the eyes of the secular law without the Church, and he would leave the Church free to regard remarriage of divorced persons as irregular and to excommunicate the parties if it thought fit. If divorces were increased in number, the clergy would be in an almost intolerable position *qua* civil functionary, because the State would oblige them to do things which, in the eyes of their own Church, they ought not to do. He would make the civil marriage compulsory. That was the tendency of legislation thruout the world. It was scandalous that in lighthearted, frivolous marriages the most sacred words and sanction should be employed. In the case of the marriage of divorced persons the Prayer Book service was inaccurate and a mockery. He would dissolve the marriage for a breach of the contract, and, as it was a contract, both parties should be put upon an equal footing in regard to it."

Education Under Difficulties

THE difficulty of the men who are determined at all hazards to give their countrymen an education may be gathered from the following facts relative to the establishment of "The People's University" in Samara, Russia. The government recognizes the necessity of educating the people, but it knows that cannot be done by its own staff of officers. At the same time it is jealous of all private organizations and lays its heavy hand on any private society on the slightest pretext. Those in charge of them have to avoid the slightest word or act that can be twisted to indicate a criticism of the ways, methods, or persons supported by the government. No lecturer may refer in the most remote way to the present political situation.

Work for the People's University was begun two years ago, with no capital, a debt of $7.50, and a membership of fourteen ladies and gentlemen. Since then they have collected and spent on educational work more than $25,000 and more than 120,000 people have attended the lectures. There are more than 350 members of the society. The average attendance of children in the summer kindergarten was about 400 daily, running up to 800 sometimes. Only two or three rich merchants have given as much as $2,000. The rest of the expenditure has been covered by the entrance fees, 15 cents, for each lecture. Hall hire has been a great expense, but since the governor of the province may at any moment dissolve the society, if he chooses to do so, and there is no appeal from his decision, there has been no attempt to build a structure for this great work. Disobedience to the orders of the governor would mean heavy fines, imprisonment, or banishment.

These are hard conditions, yet plenty of workers have been found. At the head are two men of the nobility. The rest are school teachers, business men, and physicians, who can give only their spare hours, the time they really need for rest and relaxation. Some of them help with evening classes, some write articles for the fortnightly paper, some attend to correspondence with lecturers from St. Petersburg, Moscow and elsewhere, or supply magic lanterns, slides, chemicals, blackboards, or whatever may be needed for the lectures. The library is in the hands of ladies. The work is voluntary. Except the bookkeeper, the errand boy, and the head of the kindergarten there are no paid workers in this noble attempt to give popular instruction to the masses of the people. To bring it to its present plane after two years has meant continuous and tireless effort, yet all of that work would have been easy had the conditions not been made so difficult by the Russian government. As our informant says, "One cannot imagine what a continual strain that brings on nerves that are already overworked." Compare the opportunities in Russia with those of the Russians in New York who attend the lectures devised for them by Dr. Leipziger!

A Boss Justified

For once the power of a boss has been justified. The long and bitter strike of the trolley car men in Philadelphia may be settled, and settled very fairly, and mainly in favor of the men, but not by any conference between the men and the corporation—that was hopeless; and not by any committee of clergymen—they amounted to nothing; and not by any influence of the Mayor or any imposing committee of leading citizens; but by the imperious will of the State boss, Senator Penrose. He came down from Washington, summoned the officers of the company, smote the table with his fist, and told them they must yield, and do it immediately and completely, or he would smash their whole concern. He let them know that he could do it and would do it. He could control the State Legislature and the Philadelphia Common Council. They saw the point and they capitulated most unwillingly. So far all well. But the way it was done is most humiliating. Must Pennsylvania have a dictator? Must such a dispute be settled by a political boss? Can we give such power over business as well as politics to the chief of a party? Speaker Cannon was too much of a tyrant and the House rebelled; is Pennsylvania willing to be ruled even more imperiously? Let us look into the Canadian law for strikes and see if we cannot find a legitimate authority in place of an assumed and illegitimate one. Nevertheless, we thank you, Senator Penrose, for using a giant's strength so usefully. But can you make the men accept your will? We shall see.

Cannon and Cannonism

The conflict in the House of Representatives the past week proves that a good fraction of the Republican party may tacitly endure Cannon the man, but rejects what he stands for—standpatism. and all conservatism. They believe so absolutely—or many of them do—in tariff reduction, in the control of corporations, and in the progressive measures generally that President Roosevelt urged and pressed, that they were not afraid to join the Democrats in the purpose to carry them out. So there has come this sharp division between the insurgents and the old guard. And it has serious consequences in prospect. It shows that the East is not to rule the West. The West has its own interests, as producers of food and consumers of manufactures, and is beginning to claim its regency. And this schism in the Republican party—is it permanent? Does it not make it probable that what their Representatives have done in Congress the people will do in the next election, join the Democrats and give us a Democratic House to plague President Taft during the latter half of his term? It has been unfortunate for the President that, while no one has reason to question his genuine loyalty to the Roosevelt measures, his desire to accomplish them thru the support of the regulars has led him to give his praise to those who have stood pat in defense of the old tariff and the old corporate influences. It is too early yet to know whether his administration will successfully carry out what the Republican platform demanded, but we know that on the matter of the tariff it was far from successful; and the West knows it and is in rebellion.

Booker T. Washington on Higher Education

As an example of what a college for negroes in the South can be and do Dr. Booker T. Washington in this issue chooses Fisk University, which is certainly one of the very best of its class, and he tells of its work and its needs. Dr. Washington has been much misrepresented as one who is so devoted to industrial education that he feels no interest in the higher education of his people. This article will show the contrary, and he has willingly accepted the position of trustee for Fisk University as well as for Howard University at Washington. Our correspondent would have been glad to write more at length on the needs of Fisk University if space had allowed him to tell of the serious need of repairs in the buildings, of the lack of sewerage, water, lighting and heating, by which the health of teachers and scholars is endangered. Dr. Washington tells us that apart from these needs, of chief importance, in view of the fact that so large a number of its graduates will be teachers, is sufficient means to bring its work in closer touch

with the work and the problems of city and summer schools. Yet the graduates are by no means all teachers. In recent years nearly 60, out of something like 700, have entered the Meharry Medical School at Nashville, taking up courses in medicine, pharmacy or dentistry. Dr. Washington speaks of the large number of teachers at Tuskegee Institute whom he has drawn from Fisk University. We believe his wife also is a graduate.

A Visit from Lord Rosebery

It comes from San Francisco, and we take no stock in it, that Lord Rosebery will head a party of British noblemen who will visit this country to witness the prize fight between the two brutes, Jeffries and Johnson, one white and the other black. Of course, the men who have put up the money and who are anxious to get rich out of it, will take any means to call attention and to bring spectators to the ring. Such a fight is criminal and forbidden in most of our States. It appeals to the lowest brutal passions of humanity. It is almost, if not quite, incredible that a distinguished and refined gentleman like Lord Rosebery, formerly Premier of Great Britain, the ablest man in the House of Lords, should traverse half the world to see such a disgraceful sight, in which two big beasts will try to batter each other into insensibility. Anything so inhuman ought not to be allowed anywhere, and we are ashamed that it is allowed in California. We can believe that there are British "noblemen" who might wish to come to the show, but when Lord Rosebery comes we shall be ready to believe that not a shred of the hereditary principle should be left to the House of Lords.

Catholicity

We have received a notable paper on "Practical Catholicity," read by Thomas J. Packard, D. D., before the Episcopal Seminary of Virginia, which we would like to quote, but we have room only for the following from an introduction to it by Bishop A. M. Randolph, of the diocese of Southern Virginia:

"Unity cannot be attained by building a wall around ourselves, so that those outside cannot come to us, nor can we go to them.

"When we erect barriers between ourselves and our brethren of the great Churches around us, shutting us out from the sympathy and the warmth and the light which may be kindled by their fervor and animated by their zeal, we practically become our own prisoners, and we are in danger from the spirit of apathy which is the natural consequence of our voluntary isolation. To hear young students at our seminaries, or our ministers in orders in our Church, designating the great Methodist and Presbyterian Churches as 'the Sects' or 'the Denominations,' is surely a pathetic exhibition of intellectual ignorance and spiritual bigotry, which awakens apprehensions for the future for them and for the Church they represent to the people of our generation.

"Intercommunion, which obtains between the other orthodox Churches around us, has in no way compromised their mutual independence, and it is neither intelligent nor intelligible to suppose that it would not accomplish good and blessing to our own communion."

We know that such fraternal expressions as these will seem rank heresy and treason at Fond Du Lac, but it is good Christian doctrine. By the way, we observe that by the grace of the year book published by *The Living Church* the Episcopal Church has an archbishop at last. At any rate that "Annual" gives to the presiding bishop the title of "Most Reverend,' which is reserved for archbishops, while "Right Reverend" goes to ordinary bishops.

The Assassin of Prince Ito

Do our readers recall the intense passion which overflowed Japan when the news came that their greatest statesman, Prince Ito, had been assassinated by a misguided Korean youth? What might we have expected but a swift trial and swift expiation of the crime, and most probably the definite annexation of Korea to Japan, as Madagascar was annexed to France? But what do we see? The Japanese Government did not lose its head. It gave the assassin a very deliberate trial, with all the privilege of defense that could be asked for. A hundred days have passed by, and only now has the murderer been condemned and executed. Korea remains as it was. No such action has been taken as was taken by the Germans in China when some missionaries were killed, and this was made the excuse to take possession of the province of Kiauchau. Korea may be annexed later, but this will be only when it seems wise, and it will have nothing to do with this most deplorable event. Japan has done herself honor in this matter, and we doubt

if any other country could have done any better, if as well.

Italian Parliamentary Doings

First Act—A Socialist deputy rises and demands an explanation of the relations of an Italian general with a lady of Sienna and gives the names of both. The Under-Secretary of War, a general also, representing the War Department, rises and rejects the interpellation as an insult to the army. The Socialist repeats and amplifies. The President of the Chamber calls the Socialist "an ass." In his turn the latter gives the former just as good. Taking a further step, the Socialist brings in a duchess of Milan, naming her also. Her nephew, a member of the House of Deputies, takes up the cudgels for his aunt. The President rises and thus ends the session. *Second Act*—All are now in the lobby. The nephew of the Duchess strikes the Socialist member, who gives as hearty and as many blows in return. Friends separate the pair and the session is soon resumed, and in twenty minutes the Parliament adjourns. *Third Act*—Again in the lobby. The chosen seconds of the Under-Secretary of War and those of the duchess's nephew call on the Socialist deputy. Result, two duels. Conclusion: No one upholds the virtue of the general, the Siennese lady or the duchess. All were so well known that their names were bandied about freely. A fresh confirmation of the eleventh commandment: Thou shalt not be found out.

Once more we have in this State evidence that many thousand dollars were contributed to the Republican campaign fund, a few years ago, by the combination of fire insurance companies to control legislation affecting their interests. It is not clear in this case that there was personal bribery—perhaps not. It appears that the Governor of the day kept a veto *in petto* of a law which the insurance companies wished passed until after a sufficient contribution had been made, and then signed it on presentation of arguments in its favor. Here is another illustration of the evil of bribery by means of a lump payment to the campaign managers, to be later distributed by them.

The same old guard, centering in Boston, Moorfield Storey, Gamaliel Bradford, Edwin D. Mead, and Winslow Warren, with some seventy other men and women from all over the country, but mostly from Massachusetts, have renewed their petition to Congress that this country shall definitely proclaim its purpose to withdraw from the Philippine Islands and grant them independence. But they also ask that the United States should continue to forbid any other nation to take possession of them. The proposition is impracticable and would be most unfortunate for the people themselves.

While Dr. Washington writes for THE INDEPENDENT this week for Fisk University, a most imposing list of names is signed to an appeal for his own institution at Tuskegee, asking for a large adequate permanent endowment, ultimately to amount to $3,000,000. It is signed by President Taft, ex-President Roosevelt, Governor Comer, of Alabama, Governor Hughes, Seth Low, Robert C. Ogden, Clark Howell, and Henry Watterson, editors of leading Southern journals, and other distinguished citizens. It is a weighty appeal for a great institution and carries our sympathy.

It is not a bad idea of Dr. Wiley that the public should put a social ban on all persons found guilty of adulterating food. He does not like it that when a boy picks up a transfer and rides on it and robs a corporation of two cents, he is liable to a $500 fine and a year in the penitentiary for his offense against a corporation, while if a corporation adulterates the food of the people, stealing their money and health, the fine is only $200. That does not seem fair.

Doubtless General Lee was conscientious in fighting for Virginia against the United States; but the arbitrament of war was against him, nothwithstanding all his military genius; and the voice of the united country is against his course. Good man as he may have been, it does not seem to us fitting that his statue should be set up in the Capitol. We say it without ill-will to him or his section; it is simply not becoming.

Financial

Union Dime Savings Bank

THE Union Dime Savings Bank has moved from the junction of Broadway, Sixth avenue and Thirty-second street, where it has been since 1876, to its new building at the corner of Sixth avenue and Fortieth street, which is one of the most imposing banking edifices in New York. The cost of the building was $400,000, and with the land represents an outlay of $1,000,000. The Union Dime was chartered April 12, 1859. Its first home was in a small room at the corner of Canal and Varick streets, in the Ninth Ward, or the great American ward, as it was called, because so many native-born Americans lived there. Owing to the John Brown excitement many wanted the bank called the Union Bank, and others wished to use the word "Dime," but by compromise the name Union Dime was given to the bank. In 1866 the bank built its own building at the corner of Canal and Laight streets, where it stayed for ten years or until it moved to Thirty-second street. The presidents have been Eder V. Haughwout, 1859; John McLean, 1867; Napoleon J. Haines, 1872; John W. Britton, 1878; Silas B. Dutcher, 1886; Gardner S. Chapin, 1891; and Charles E. Sprague, 1892. Mr. Sprague's term of service, eighteen years, has been longer than that of any other president. The deposits of the Union Dime are $29,693,122; its surplus is $2,005,274, and its total resources are $31,818,181.

NEW BUILDING OF THE UNION DIME SAVINGS BANK,
Sixth avenue and Fortieth street.

The Hocking Pool

THE brokerage firms that were thrown into bankruptcy by the collapse, on January 19, of the Hocking pool have found much that is interesting in the testimony given last week by James R. Keene, the veteran manipulator whom they employed to manage the undertaking. There had been some mystery about the immediate cause of the sharp and disastrous fall of the stock. It now appears that short sales were made, at the top of the market, by Mr. Keene's brokers (without his knowledge, he asserts), and that about 4,000 shares owned by him were used in making the deliveries. The profits of the transaction were about $300,000. Mr. Keene's explanation did not satisfy the attorney of one of the bankrupt firms, who declared he had proved that the pool manager violated the pool agreement; in other words, that the manager had turned against his employers and associates. All the facts in this case should be brought to light by litigation or otherwise. They will serve as a warning to brokerage firms that desire to avoid bankruptcy, and will tend to discourage that manipulation which the Stock Exchange authorities should directly and emphatically denounce.

Steel Corporation's Year

THE report of the United States Steel Corporation for the calendar year 1909 exhibits clearly the operations and financial condition of this great company, which represents a very large part of a highly important industry. Recovery from the effects of the panic, so noticeable in 1908, is shown by the figures, altho the gross and net earnings of 1907 and 1906 were not reached. Totals for the last two years are given below:

	1909.	1908
Gross earnings	$646,382,251	$482,307,840
Net earnings	131,491,414	91,847,711
Wages paid	151,663,394	120,510,829
Balance for dividend on common stock	53,854,018	20,509,037
Number of employees	195,500	165,211

Gross earnings in 1907 were $757,014,767, with $160,964,674 net. In 1906 the corresponding totals were $696,756,926 and $156,624,273. Speculation in the common shares and the successive increases of the dividend (which is now at the rate of 4 per cent.) attract attention to the fact that the balance available for dividends on the common, $53,854,018, was equal to about 10½ per cent. of the par value of the stock outstanding. With this fact, however, should be considered the record which shows larger balances in 1906 and 1907, the available sum having been 14.3 per cent. in the first of these years and 15.7 per cent. in the second. It is noticeable that the average price received from all rolled and other finished products sold in this country was less by 14.3 per cent. than the average in 1908, and that the average on export shipments (which increased by 26 per cent. and were 10 per cent. of all shipments) was less by 7.8 per cent. Of $75,500,000 authorized to be expended for additions, improvements, etc., but not yet used, about $60,000,000 will be expended this year. Expenditures on account of the new industrial city of Gary thus far amount to nearly $54,000,000.

....The oldest bank in the United States is one hundred and twenty-nine years old and is a Philadelphia bank, the Bank of North America, established by the Continental Congress in 1781.

....Harris, Winthrop & Co., bankers and brokers, of New York and Chicago, have published a carefully written and admirably arranged review (by months) of the financial operations, industrial movements, and stock and grain markets in the year 1909. It is compact, instructive and useful for reference.

....The complete rehabilitation of the Knickerbocker Trust Company, which closed its doors (after a memorable run upon its resources) on October 22, 1907, testifies to the ability of its officers and the loyalty of its many friends. On the 14th it paid off the last of its depositors' claims. Nearly a year ago it had anticipated by sixteen months the interest-bearing certificates representing 70 per cent. of the $35,000,000 of deposits. The payments made last week related to another class of certificates, representing the remainder. It has more depositors now than it had before the failure. It is in a strong position, with clean assets, excellent management, a capital of $3,200,000, a surplus of $5,750,000, and $35,000,000 of deposits.

Insurance

Insurance Taxation

THERE has been a growing tendency toward the imposition of taxes upon insurance companies. President John F. Dryden, of the Prudential Insurance Company of America, speaking on this subject not long ago, said: "The burden of insurance taxation tends to increase from year to year, and the taxing powers of State and local authorities are being strained to the utmost to draw upon the income or the funds of life insurance companies as a convenient source of general revenue. Heretofore, except during time of war, insurance has been exempt from taxation by the Federal Government, but in 1909 the United States Congress enacted a corporation tax law, including insurance, which will materially increase the amount and rate of taxation without conferring the slightest corresponding benefit upon the companies and their policyholders. This enactment according to President Dryden, was ill advised, and that portion of the law which applies to life insurance companies should be repealed. L. G. Fouse, president of the Fidelity Mutual Life Insurance Company, of Philadelphia, Pa., in a reference to the same subject in his thirty-first annual report to the members of his company, said as follows: "Taxation is the item to which policyholders should give their closest attention. By creating a public sentiment in favor of fair and equitable taxation they can directly benefit themselves. Life insurance was not established to create revenue for the state; it was established to protect widows and orphans and to prevent them from becoming a charge upon the public when the breadwinner is gone. The object and purpose at once claim exemption from taxation, and yet the life insurance interests have been perfectly willing that a moderate tax—enough to cover the cost of supervision—should be imposed. They are absolutely unwilling, however—and in this the policyholders should join with all the force and vehemence at their command—that life insurance should be converted at the expense of a part of the citizenship into a revenue agency for the benefit of the whole people of any sovereign State." *The Insurance Spectator,* of London, says that: "A tax on life insurance premiums is a tax not only on thrift and forethought, but also on morality and rectitude, and savors altogether more of the dark and unhealthy centuries when widows even were taxed than of these later enlightened times. The English Government exempts from taxation one-sixth of a man's income, provided it be invested in life insurance. From a social and economic point of view, the state is materially benefited by the operation of life insurance companies. The army of agents employed in the interests of saving and uplifting provides a higher degree of citizenship and encourages thrift and independence, all of which operate to the advantage of the state and the entire people. It is rare indeed that the man who acquires the habit of saving and paying the instalment premiums for his dependents becomes a charge on the public. This is a feature that is too often forgotten or overlooked, but it is fundamental and is an essential part of a high state of civilization." In the same connection, President Jenkins, of the Security Mutual Life, of Binghamton, has pointed out that in Germany the expenses of government are generally considered high, and yet life insurance companies pay only 24 cents there as against $2.26 in the United States. In the United States life insurance companies were required to pay, by the way of taxes, fees, license, etc., in 1909, over $12,000,000, or about 2¼ per cent. on their entire premium income. This percentage has nearly doubled since 1890, while interest earnings on investments, lawful for companies to carry, have materially decreased. The dividends, no matter in what state you may live, depend in part on the proportion of the general expenses of your State required to be paid by life insurance companies. The higher the taxes the higher must be the premiums.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, MARCH 31, 1910 No. 3200

Survey of the World

Effect of the Revolt in the House

After their victory in the House, on the 19th, the insurgent Republicans decided that they would make no further demands at present, and would not insist that one of their group be made a member of the new Committee on Rules. This was the attitude of a large majority of them, represented by Mr. Norris and Mr. Murdock. On the 23d a Republican caucus was held, to select the party's six members of the new committee. It was a peaceful meeting. The insurgents were present, and so was Speaker Cannon, but he took no part in the proceedings. Mr. Tawney, who has been intimately associated with him, proposed six names, which, it is understood, had been selected by the regular Republicans in conference. These were the names of the members afterward chosen by the caucus, but Mr. Tawney withdrew the list because objections to a "slate" were exprest. Nominations were made, and after several who were nominated (one of them being Mr. Norris, the insurgent leader) had withdrawn their names, votes were cast for nineteen men. The following were chosen:

Walter I. Smith, of Iowa, 168 votes; John Dalzell, of Pennsylvania, 146; George P. Lawrence, of Massachusetts, 126; J. Sloat Fassett, of New York, 113; Sylvester C. Smith, of California, 136; Henry S. Boutell, of Illinois, 108.

The first four were chosen on the first ballot, the remaining two on the second. Mr. Dalzell and Mr. Walter I. Smith were with Speaker Cannon on the old committee. Their four associates have been prominent in the regular majority. The largest number of votes cast for an insurgent was 33. After the caucus, insurgent leaders said the action had been fairly taken, altho they would have preferred other men. On the following day the Democrats, at their caucus, selected the following by secret ballot, no nominations having been made:

Champ Clark, of Missouri, 125 votes; Oscar Underwood, of Alabama, 102; Lincoln Dixon, of Indiana, 99; John J. Fitzgerald, of New York, 98.

Mr. Fitzgerald was a member of the old committee, and in March last was the leader of a group of Democrats who voted against their party when an attempt to change the rules in a revolutionary manner was made. At the caucus Mr. Sims, of Tennessee, offered a resolution instructing the four to work for a rule taking from the Speaker the power to appoint the standing committees and giving it to a Committee of Committees, to be elected by the House. This was declared to be out of order. Mr. Sims may try to have another caucus called for the consideration of his proposition. By unanimous vote, on the 25th, the House elected the ten members named above, and the committee elected Mr. Dalzell to be its chairman. Mr. Tawney asked why Mr. Fitzgerald's name had been reported at the bottom of the Democratic list, saying that the Republican rule as to seniority, term of service, and connection with the old committee would have placed it at the top. He was told that only the number of votes cast had been considered. Some have said that he desired to see Mr. Fitzgerald (who had once assisted the regular Republicans) in line for the chairmanship if the Democrats should carry the House at the coming election. Congressional advisers of the President,

it is reported, assure him that the situation in the House favors satisfactory action upon bills representing his policies. Insurgents say that Speaker Cannon may yet be deposed. In a speech at a meeting of the Illinois Republican Association, he called a majority of the insurgents cowards because they voted to keep him in the chair. This speech was disapproved by many regular Republicans. It is predicted that the insurgents in the Senate, led by Messrs. Dolliver, Cummins and La Follette, will soon seek to renew the tariff debate, upon a motion relating to a tariff commission, and will criticise the tariff speeches made by the President at Winona, Providence and elsewhere.

Prosecution of the Beef Trust

At the close of an investigation which had consumed eight weeks, a Federal grand jury in Chicago, on the 21st, indicted what is called the Beef Trust (the National Packing Company and ten subsidiary corporations) for violation of the Sherman Anti-Trust law. At the same time the Government filed a suit in equity, asking for a dissolution of the National Packing Company. The companies indicted are as follows:

National Packing Company, Illinois; G. H. Hammond Company, Michigan; Anglo-American Provision Company, Illinois; Omaha Packing Company, Illinois; Fowler Packing Company, Illinois; United Dressed Beef Company, New York; Western Packing Company, Denver; New York Butchers' Dressed Meat Company, New York; Hammond Packing Company, Illinois; St. Louis Dressed Beef and Provision Company, Missouri.

In the suit for a dissolution of the combination the defendants are the companies named above, together with the following persons and corporations:

Armour & Co., Swift & Co., Morris & Co., Continental Packing Company, Colorado Packing and Provision Company, Louis F. Swift, Edward F. Swift, Charles H. Swift, J. Ogden Armour, Edward Morris, L. A. Carton, Frank A. Fowler, Arthur Meyer, Thomas J. Connors, Thomas E. Milson, L. H. Heyman.

It is alleged by the Government that prior to May 10, 1902, the Armour, Swift and Morris companies were parties to an unlawful combination; that as a result of the Government's suit in that year an injunction was granted on April 4, 1903; that two weeks earlier the three companies had organized the National Packing Company, all of the stock of which they own, and that to this company was given control of a number of packing concerns which had been competing with each other and also with the Armour, Swift and Morris companies. ——In New York City, last week, what is called the Poultry Trust was indicted for violation of the Anti-Trust law of the State. There are eighty-seven defendants, these being members of the New York Live Poultry Commission Merchants' Protective Association, the East Side Live Poultry Dealers' Association, and the Harlem Poultry Dealers' Association.

Municipal Corruption in Pittsburg

Owing mainly to the confession of John F. Klein, formerly a Councilman in Pittsburg and recently convicted of receiving and giving bribes, the authorities of that city have obtained evidence against not less than eighty persons. Among these are several bankers, but a large majority are former or present members of the Select or the Common Council. Large sums were paid by six banks to procure ordinances making them depositories of city funds, and by the late Dallas G. Byers (who died in Switzerland while under indictment) for an ordinance vacating a street which he desired to use. Klein was one of those who distributed the bribe money. He had kept complete records, and he told the whole story after the bribers and the bribed had refused to give $60 a month for the support of his wife and two young children during his term of three and one-half years in the penitentiary. His confession has since been supplemented by the confessions of two of his former associates in the Council, Joseph C. Wasson and William Brand, both of whom were recently convicted. After he had told his story to the grand jury and the District Attorney, the latter, on the 20th, invited all the bribetakers to confess in open court, promising to favor confessing men and to prosecute those who should remain silent. On the 21st ten came before Judge Frazer and

confessed. One of them, Isaac Mathias, fearing that his opportunity would be lost, dropped on his knees and begged the Judge to hear him. These men (one excepted) had, as members of the Council, sold their votes for sums ranging from $80 to $500. The exception was Dr. W. H. Weber, who had received $10,000 in the Byers matter, had given $6,000 to Klein and had distributed $4,000 among forty members. Frank Bonini, a rich fruit merchant, had sold his vote for $80.10. In the three following days, twenty-four more confessed to the judge. One of these, named Anderson, fainted and fell on the floor. The sums they had received ranged from $50 to $1,100. In the meantime the grand jury was indicting men by the score. On the 25th, when the indictment of thirty-one was ordered, the jury in its presentment told how the banks had bought legislation. It also demanded that the directors of the six banks named as city depositories should investigate concerning the action of the officers of the institutions and report in writing. These banks are the Farmers' Deposit National Bank, the Second National, the German National and the Columbia National, all of Pittsburg; the German National and the Workingman's Savings and Trust Company, both of Allegheny. The Comptroller began to withdraw from these banks their deposits of city money, amounting to $3,640,320. In the interest of these banks, $102,500 was paid in bribes. For three of them, $52,500 was turned over to Charles Stewart (one of Klein's associates in the Council) in a New York hotel by a person representing the late James W. Friend, banker, and others. William Martin, sent to the penitentiary three or four years ago for receiving and distributing bribes in connection with a street railroad franchise, was to have $2,500 of the money. It is said that Martin, who has served his time, received $30,000 for refusing to betray his associates. The grand jury publishes a list of fifty-four Councilmen, with the sums they received (ranging from $50 to $500) for the passage of one ordinance. Max G. Leslie, a prominent politician, recently acquitted, is accused again. The bank directors (there are fifty-nine of them) are required to visit the grand jury room. They represent $200,000,000 in wealth, and among them are officers of the Steel Corporation, the Westinghouse Company and the Carnegie Institute. This exposure of corruption is due to the efforts of the Voters' League, who employed Robert Wilson and other detectives who had done good work in Scranton. With the approval of several hundred business men, the League has recently made a new contract with Wilson.

*

Insurance Companies' Money at Albany

Much testimony was taken last week in the course of the inquiry which the New York Superintendent of Insurance is making with respect to the expenditures of fire insurance companies on account of legislation at Albany. It was shown that large sums had been contributed by various companies and placed in the hands of a legislative agent, but it seemed impossible to ascertain how the money had been used. As a rule, it was accounted for under the head of legal expenses. E. R. Kennedy, the legislative agent who had testified concerning payments to the Republican State Committee and to George W. Aldridge, was succeeded in that office by the late George P. Sheldon, president of the Phenix Insurance Company, who died while under indictment. A letter written by an officer of a prominent company was read. In it the assertion was made that a certain bill, known as the Grady bill, had been "bought thru" the Legislature. But no positive proof in support of this assertion was produced. Much of the testimony has significance only with those who are familiar with the records and reputation of certain legislators and with the history of the lobby at Albany. It is not convincing evidence. Parts of it point to the use of money for the suppression of "strike" bills. During the six years ending with 1906, the companies represented in the New York Board of Fire Underwriters paid something more than $100,000 in "legal expenses" at Albany or in conection with legislation pending there. Sheldon employed William H. Buckley, a lobbyist, who had been a subordinate officer in the Insurance De-

partment. Buckley admits that in one year he received from the companies $27,000 for legal services, altho he did not appear in any proceeding as attorney of record. It was shown that in 1901, while he was in the Insurance Department, he borrowed $61,000 from the Phenix Insurance Company. The money was repaid, but $26,000 of it was returned in checks given by Edward E. McCall, then a practicing attorney and now a Justice of the New York Supreme Court. Judge McCall is a brother of the late president of the New York Life Insurance Company. Superintendent Hotchkiss, who is conducting the investigation, said it looked as if Mr. McCall had assisted Buckley in deceiving the department concerning the loans. The Judge explains that his name was used merely to facilitate a transfer of the loan. He did this in a friendly way for Buckley, who had a desk in his office, but paid no part of Buckley's debt, he says. As his explanation is regarded by some persons as unsatisfactory, he may become a witness in his own behalf.

The Islands

The House, at Washington, has passed a bill appropriating $100,000 for raising and removing the wreck of the "Maine." Upon the motion of Mr. Sulzer, an amendment providing for "raising" as well as "removing" was adopted, in order that the wreck might be examined.——Representative Martin, of Colorado, speaking in the House last week, attacked Attorney-General Wickersham, asserting that the latter had been counsel of the Sugar Trust before entering the Cabinet, and that he recently misconstrued the law in an opinion approving the sale of 55,000 acres of the friars' estate lands to persons representing the same Trust.——Senator Crane has presented in the Senate a petition signed by Alton B. Parker, Moorfield Storey, David Starr Jordan, Bishop McVickar and others identified with the anti-imperialist movement, asking Congress to "declare in unequivocal terms" the purpose of the United States to grant independence to the Filipinos, and to procure by treaties with other nations the neutralization of the islands.

Central and South America

An old controversy between Panama and Costa Rica concerning the separating boundary has been referred by agreement to Chief Justice Fuller, of the United States Supreme Court, as arbitrator. Panama inherited this controversy from Colombia. It is reported that the army of President Madriz, of Nicaragua, is moving slowly eastward, and that Estrada, who has about 3,000 men and has recently secured fresh supplies of ammunition, is confident that he can defend Bluefields. General Gordon, a soldier of fortune from Texas, has recruited in or near New Orleans several hundred soldiers for Estrada. Señor Corea, who represents Madriz at Washington, has been seeking to prevent the sailing of these men from New Orleans on a ship chartered by Gordon. It is said that American merchants at Bluefields are paying the expenses of this filibustering movement.——Anti-American feeling in Bogota, the capital of Colombia, is still shown by riotous demonstrations. On the 22d, two English girls were mobbed and beaten because they were believed to be Americans. The Minister of Finance has resigned, protesting against the Government's imposition of a transportation tax upon American flour brought from the coast to interior markets.——Peru has withdrawn her Minister from Chile, owing to the recent expulsion, by Chile, of Peruvian priests from the provinces of Tacna and Arica. Chile asserted that the priests were conducting a propaganda against Chilean rule. It is reported that Chile has sent 15,000 rifles to Ecuador and is supporting Ecuador in her boundary controversy with Peru.

Roosevelt in Cairo

Ex-President Roosevelt, in his voyage down the Nile, stopped to visit the site of ancient Thebes and the ruins of Karnak and Luxor. From Cairo he made a trip to the pyramids of Gizeh and the tombs of Sakkara, near ancient Memphis, he and Kermit riding upon camels furnished by the Khedive. Visits were exchanged in Cairo between the Khedive and Mr. Roosevelt. The native press had manifested some animosity to Mr. Roosevelt

on account of his outspoken approval of the English rule in Egypt, but an interview with him by fifteen Egyptian editors in large part removed the unfavorable impression. Mr. Roosevelt received them with great cordiality, explaining that he was a newspaper man himself and talked to them on the importance of preserving peace between Moslem and Christian. One of the Nationalist editors exprest his opinion after the interview in the words, "Mr. Roosevelt does not know what he is talking about, but he means well." An address was given Monday by Mr. Roosevelt at the Egyptian University in Cairo. Mr. Roosevelt was met in Cairo by Oscar Straus, American Ambassador to Turkey, and by Wu Ting-fang, formerly Chinese Minister to the United States. Mr. Pinchot, ex-Chief Forester of the United States, has sailed for Europe to meet Mr. Roosevelt. There has actually been an abundance of surmise as to the political significance of these movements and of the action of the Kaiser in doing Mr. Roosevelt the unprecedented honor of inviting him to stay at the royal palace when he visits Berlin. Emperor William will attend the lecture of Mr. Roosevelt at the University and will give him the opportunity of seeing some military maneuvers, infantry, artillery, cavalry and airships. There will also be a gala performance of "Sardanapalus," the opera which was staged under the direction of the Emperor.

Etna in Eruption

Mount Etna is in a state of violent activity and sending streams of lava down toward the sea. Three large craters have burst open and a dozen minor openings and the flood of molten rock from these has united and is flowing to the southward, winding thru the valleys in a stream about 20 feet high and 1,000 feet wide. During the first two days the lava advanced three or four miles from the central crater, but is now slackening and hardening. It had destroyed in its course Casa del Bosco and seemed likely to overflow the villages of Borello and Belpasso, toward which it was directed, but advance was stayed at a distance of about a mile from these places thru the interposition, according to the Sicilians, of Saint Agatha, whose veil was brought by Cardinal Francisco-Nava, Archbishop at Catania. Accompanied by large crowds of the terrified inhabitants of the threatened villages the Cardinal advanced toward the front of the fiery stream and prayed for their deliverance. The earthquake authorities regard the present eruption as a sequel to the abortive outbreak of April, 1908, but they are uncertain whether the slackening of the lava stream is due to a cessation of internal activity or to a temporary clogging of the orifice which will be followed by a more violent eruption and earthquakes. Large crowds of American and British tourists have gone to Nicolosi, a town near Belpasso, but protected by hills from the overflowing lava.——King Victor Emmanuel has exprest his intention to go to Sicily to encourage and share the danger of his subjects if the eruption continues. Premier Sonnino is extending Government aid and protection, altho he and his Cabinet have resigned. The Cabinet found it could not command a majority in the Chamber of Deputies because of the opposition of the Socialists, Radicals and Republicans, therefore it retired without awaiting the formality of an adverse vote on the pending question of the subsidy of $6,000,000 in aid of Italian steamship companies. Since Premier Giolitti lost office on the same question, it will be difficult to find a satisfactory ministry in this crisis.

Reform of the House of Lords

Premier Asquith gave notice in the House of Commons of his resolutions limiting the power of the House of Lords. The first resolution declares that it is expedient that the House of Lords be prevented by law from rejecting or amending a money bill, but that such limitation shall not in any way diminish or qualify the existing rights of the House of Commons. The second resolution calls for the restriction of the powers of the House of Lords in regard to other bills, so that any such bill passed by the House of Commons in three successive sessions and rejected by the House of Lords in each of these sessions shall become a law without the consent of the Lords, provided that at least two years have elapsed between the date of introduction of the bill and its third pas-

sage by the Commons. The third resolution proposes to limit the duration of each Parliament to five years. The prospects of the Government are believed to be better than they seemed a few weeks ago, as it is rumored that an agreement has been reached with the Irish members by which the budget may be passed before adjournment.——The select committee of the House of Lords which was appointed in 1907 and reappointed in 1908 to consider the suggestions which have been made from time to time to increase the efficiency of the House of Lords, has made its report. Its most important recommendation is that the possession of a peerage should not in itself give the right to sit and vote in the House of Lords. As reorganized, according to these recommendations, the House of Lords would consist of three peers of the blood royal, two hundred representatives elected by the hereditary peers, one hundred and thirty qualified hereditary peers, ten spiritual lords of Parliament, and five lords of appeal in ordinary. To this may be added four life peers every year up to the number of forty, making the total membership somewhat less than four hundred. The representative peers are to be elected by the whole body of hereditary peers, including those of Scotland and Ireland. The spiritual lords of Parliament would be reduced to the two archbishops and eight members elected by the bishops to represent them in each Parliament. The committee adds that it would gladly see within the House of Lords representatives of the other great Churches of England, Scotland and Ireland, but that it had not been 'able to formulate any definite recommendations with that object. It is recommended that official representatives of Canada, Australia, New Zealand and South Africa be admitted to the House of Lords. India, however, is supposed to be adequately represented by the presence within the House of ex-viceroys and other persons connected with the administration of India. The one hundred and thirty qualified peers are to be appointed from among those who have served as cabinet ministers, viceroys or governor-generals of the colonies, as vice-admirals in the navy, or lieutenant-generals in the army, or have filled other important political, administrative and judicial offices in Great Britain and the crown colonies. An effort was made to secure a greater representation from the cities by providing for the appointment of peers elected by the town councils in proportion to their population, but such proposals failed to receive a majority in the committee.——Lord Rosebery was chairman of this committee, but his plan is not exactly the same as that recommended by the committee. He brought the matter before the House of Lords by presenting the following resolutions:

1. That a strong and efficient second chamber is not merely an integral part of the British Constitution, but is necessary to the well being of the State and the balance of Parliament.

2. That a second chamber can best be obtained by reforming and reconstituting the House of Lords.

3. That a necessary preliminary to such reform and reconstitution is the acceptance of the principle that possession of a peerage shall no longer in itself give the right to sit and vote to the House of Lords.

The first two resolutions have been accepted by a vote of the House of Lords, but the third, on the hereditary principle, is now under discussion. Lord Rosebery, in introducing his resolutions, urged the necessity of the Lords undertaking the reform of their own House. If the House of Commons passed the resolution depriving the House of Lords of its veto it would be absurd for Mr. Asquith or anybody else to propose later a reform of the House which they had rendered powerless. He denounced the single chamber idea, saying that the only models which they had to follow in such a course were Greece and Costa Rica, and the history of these Governments had not been such as to commend the advantages of the system. If Mr. Asquith's resolution should pass there would be nothing to prevent the House of Commons from putting an end to the Lords at any time. He recalled the famous resolution passed by the House of Commons February 6, 1649:

"Resolved that the House of Peers in Parliament is useless, dangerous, and ought to be abolished, and that an act be brought in for that purpose."

He also called the attention of the Lords to the fact that on the next day the fol-

lowing resolution was passed by the House of Commons:

"Resolved, that it has been found by experience, and this House does declare, that the office of King in this nation, and to have the power thereof in any single person, is unnecessary, burdensome, and dangerous to the liberty, the safety, and the public interests of this nation, and therefore ought to be abolished."

Lord Crewe said he did not believe that the hereditary principle in itself was unpopular in England. Both the recent study of history and the study of heredity have shown the importance of a good pedigree. Lord Courtney, of Penwith, questioned whether the House of Commons could be regarded as satisfactorily representing the opinion of the country and he pointed out that shifting 8,000 votes in the districts where the contest was close in the recent election would have wiped out the Government majority or would have doubled it.

To Assist Liberia

President Taft has sent to Congress a message transmitting the report of the commission which was sent to investigate conditions in Liberia. The commission found that the independence of the republic was threatened by pressure of neighboring Powers and that the employment of British officials in reorganization of its finances and police had been unsatisfactory. The commission found that the Liberians had been successful in maintaining an orderly government and relatively high degree of civilization in spite of the overwhelming numbers of the native population and that they were deserving of assistance from us. Accordingly they made the following recommendations:

That the United States extend its aid to Liberia in the prompt settlement of pending boundary disputes.

That the United States enable Liberia to refund its debt by assuming as a guarantee for the payment of obligations under such arrangement the control and collection of the Liberian customs.

That the United States lend its assistance to the Liberian Government in the reform of its internal finances.

That the United States lend its aid to Liberia in organizing and drilling an adequate constabulary or frontier police force.

That the United States should establish and maintain a research station in Liberia.

That the United States reopen the question of establishing a naval coaling station in Liberia.

Foreign Notes

The Hungarian parliament was dissolved on March 22 amid a tumult unprecedented even in that most riotous of chambers. The Premier, Count Khuen Hedervary, on reading the royal decree, was attacked bodily as well as verbally. Some of the radical members threw books and inkstands at the Ministers, and the Premier was knocked down and his face cut by the missiles. Count Serenyi, Minister of Agriculture, was struck in the eye by an inkstand, and it is feared that his sight may be destroyed. Fist fights between the members took place in the chamber and lobbies. Some of the members afterward apologized to the chairman for their violence, but the police authorities have instituted proceedings against the assailants of the Government.——The German Chancellor, Dr. von Bethmann-Hollweg, is now in Italy, presumably negotiating for the renewal of the triple alliance in 1913. He has had an audience with the Pope. The Chancellor has announced to the Reichstag his intention of introducing a bill providing for the revision and development of the constitution of Alsace-Lorraine. He exprest his regret that no improvements had been made since 1879 and his opinion that the time had come for an extension of the privileges of these provinces. It was not necessary to wait until every voice joined in a chorus of praise for the Fatherland. Sporadic manifestations of anti-German feeling ought not to be taken too seriously, but the empire had a right to demand sincere loyalty to crown and country as the condition of autonomy. The Reichstag passed a resolution asking for a bill making Alsace-Lorraine a federal state, with the same rights as other states of the empire.——A resolution introduced by a Socialist member was passed the same day demanding the introduction of a bill making the Chancellor responsible for all the political acts and omissions of the Kaiser. This was the result of the movement begun in November, 1908, when the London *Daily Telegraph* published an interview with Emperor William calling the English mad for suspecting him of inimical intentions.

The Cost of Living.—VIII.

[This is the eighth article in our series on the increased cost of living. Those already having appeared are: "The Remedy for High Prices," by J. Pease Norton (February 10); "The Crisis in American Home Life," by S. N. Patten (February 17); "The Tariff and the Cost of Living," by Byron W. Holt (February 24); "An Old-Fashioned Theory of Prices," by F. H. Giddings (March 3); "Prices and Incomes," by John B. Clark (March 10); "Economy in Diet," by R. H. Chittenden (March 17); "Does Increased Gold Production Increase Prices," by Stewart Brown (March 24). We shall close this series very shortly with a symposium of letters from our readers.—EDITOR.]

High and Low Prices

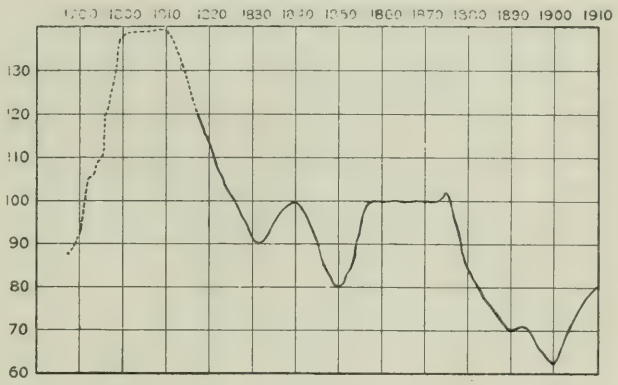
BY EDWIN R. A. SELIGMAN, LL.D.

McVICKAR PROFESSOR OF POLITICAL ECONOMY AT COLUMBIA UNIVERSITY.

IN the present discussion of the increased cost of living there are four fundamental problems:

First, What are the facts?
Second, What are the results?
Third, What are the causes? and
Fourth, What are the remedies?

I. As to the facts of the case, two considerations stand out prominently; namely, that there has been a general rise in the price level in all civilized countries, and that the increase of prices has been especially marked in certain classes of commodities. Whether we take the figures for America, for England, or for any other country, the facts are strikingly similar. From 1896 to 1910 there has been a rise of from 50 to 60 per cent. in the general price level thruout the world. Yet everywhere certain classes of commodities have risen more than others. As Mr. Frank Greene, of *Bradstreet's*, has recently pointed out, utilizing the figures of his journal, which show a general increase of 61 per cent. in the price level from 1896 to 1910, naval stores—that is, principally lumber—have increased 136 per cent.; live stock, 116 per cent.; and breadstuffs, 100 per cent.; while goods like sheetings have increased only 50 per cent.; ginghams, 40 per cent.; and glass, 23 per cent. Other commodities, like coffee, sugar, tea, raw silk, have even decreased in price. In England, according to Sauerbeck's figures, the index number for animal food increased during the period 1896-1908, from 73 to 89, and for vegetable food from 53 to 70; while for textiles it increased only from 54 to 62, and for sugar, coffee and tea it decreased from 59 to 48.



It is obvious, therefore, that at the very outset it is necessary to distinguish between prices of individual commodities and the general price level. In the ordinary play of the market, prices of every commodity are subject to continual change, whether these changes are due to mere oscillations in temporary demand and supply, or to the more deep-seated reasons connected with cost of production. But when the great mass of commodities rise in price simultaneously, even if unequally, and if this rise is a world-wide phenomenon, the facts acquire an added significance.

This phenomenon, however, is not a new one. Most of us think only of the great increase of price since 1896. We forget that the preceding period, from 1879 to 1896, marked a corresponding fall in prices. In fact, as far back as accurate records go, we notice these periodic fluctuations in the price level. In the sixteenth and seventeenth centuries general prices in Europe increased, not as they have done in the last decade, by 60 per cent., but by several hundred per cent., and the increase was so prodigious that we ordinarily speak of the period as that of the great price revolution. During the nineteenth century we have had several such cycles

of price changes. Between 1790 and 1810 prices rose about 80 per cent. Between 1810 and 1850 they fell about 60 per cent. From 1850 to 1860 they rose about 20 per cent. From 1860 to 1873 the price level remained relatively stable, apart from the speculative movement which culminated in the panic of 1873. From 1873 to 1896 prices fell almost 60 per cent., and from 1896 to the present prices have again risen about 60 per cent., altho by no means having attained the level of 1870. According to the chart printed herewith, we have a rough indication of the fluctuations of general prices in England from 1790 to 1910.

From 1820 onward the chart is based on the index number published by Sauerbeck, which takes the period from 1860 to 1870 as representing the base line of 100. Before 1820 the figures are those worked out by Jevons. According to this chart, therefore, we see that the price level of 1910 is approximately that of 1790, and that the nineteenth century has been characterized by several period of oscillations now in one direction and now in the other. We happen at the present time to be in the rather developed stage of a single series of fluctuations.

II Let us now consider the results of a period of rising prices. Are rising prices a good or a bad thing? In approaching this question we must distinguish between rising prices in a country whose general level of prices has been considerably lower than that of its neighbors, and rising prices in a country which is on a parity with its neighbors. It is notorious, for instance, that in poor countries prices, including, of course, the wages of labor, are comparatively low; and that in rich countries prices are relatively high. In Germany, for example, before the great development of the past generation, prices were exceedingly low as compared with England; and in Japan, until the last few years, the price level was ridiculously low, when compared with American, or even with European, standards. The rise in the price level in Germany, and more recently in Japan, is due to the introduction of modern industrial methods. As Ricardo pointed out over a century ago, if country A suddenly makes improvements in the production of goods previously imported from country B, these goods will fall in cost, but not in price. For A will now import less of these goods from B, or perhaps even now export them to B, and B must make good this relative deficiency of exports of goods to A by exporting gold; with the consequence that the increase of the money supply in A will inevitably raise all prices, including that of the improved product. Any form, hence, of advance in industry or in banking, or in transportation—anything, in short, which tends to lower the cost of production in A, tends to raise general prices; and this increase in the price level in the hitherto poorer country will continue until the general price level

SAUERBECK'S AVERAGE PRICES OF FORTY-FIVE COMMODITIES.
(Dotted line covers period previous to Sauerbeck's figures.)

throughout the civilized world is approximately reached. Such an increase of prices in a backward country is therefore a benefit, because it means an increased output of wealth, at a lower cost. Increased prices are always followed by increased money wages. But increased output, with lower cost, will ultimately mean increased real wages The higher prices which go with the introduction of modern industrial methods into a hitherto backward country mean not alone higher wages, but an increase of capital, lower interest and more wealth. The rise in prices, such as took place in Germany after 1870, or in Japan after 1900, is an evidence of substantial progress.

The situation is, however, different when we deal with a country like the United States, where modern methods of industry have long since been in vogue, and where the price level, if anything, is somewhat higher than that in

other countries. What is the significance of a change in the price level here?

It is obvious that rising and falling prices help or harm different classes in the community in turn. In a period of falling prices such as that which culminated in 1896, it is primarily the producer who suffers. Falling prices are almost always attended by "bad times." Bank reserves decrease and loans are called in. Speculators, first in securities and then in staple commodities, tend to sell their holdings at a sacrifice, profits are curtailed in some business and enterprise slackens. Altho raw materials are cheaper, the manufacturers cannot find a satisfactory market for their goods, and the farmers find difficulty in meeting the interest on their mortgages. Even tho wages are perhaps the last to fall, the laborers suffer because the employers either work on half time or close their shops. Borrowers are embarrassed because they must work harder to pay back an equivalent sum of money. Owners of land and of corporate shares get less rent and less dividends. Falling prices, hence, produce almost universal stagnation. It is only the recipients of fixed incomes to whom any benefit accrues, and that only temporarily.

A rise of prices, on the contrary, injures not the producer, but the consumer. The producer is satisfied because business is good. The consumer grumbles because it always takes some time for wages and salaries to adjust themselves to the new scale of prices. The serious feature of the situation consists in the discomfort of this period of transition. Ultimately the country will be as well off as before, whether with high prices or with low prices. But in the interval of the fluctuations the hardships are apparent.

The period of falling prices culminating in the early nineties engendered the silver movement, which was started primarily by the small agricultural producers in the West and the South. The present period of rising prices is causing an added unrest primarily in the ranks of the wage earners. Perhaps the most serious aspect of the situation is the fact that whereas the ordinary industrial employer will be enabled to pay higher wages because he secures higher prices for his goods, the great mass of public service corporations, and primarily the railroads, whose charges are fixed either by law or by custom, find the greatest difficulty—a difficulty only partly overcome by the increased volume of business—in meeting the legitimate demands of the laborers without trenching unduly upon their profits. In the public service corporations there is no such automatic change in the price level of what they have to sell as there is in the price level of what they have to buy. While, therefore, rising prices in the main mean an increase of business prosperity, they are a matter of serious concern not only to the whole class of consuming wage earners, but also to a by no means insignificant section of the business interests of the country.

III. What, now, are the causes of this rise of prices? As we pointed out above, it is necessary here to distinguish between general prices and prices of individual commodities. There may be causes at work which tend to enhance or depress prices in general, and at the same time there may be other causes which tend to enhance or depress the prices of some particular commodities more than others. It is obvious that the rise of price of meat, for instance, is in some measure due to an increase in the cost of production. We know that with the progress of agriculture, the free range in this country has been considerably reduced, and this difficulty of finding free or cheap feeding for the cattle has inevitably been transmitted right along the line until it reaches the final consumer. In the same way it is notorious that the reckless cutting of our forests has so diminished the timber supply that the price of woods has increased enormously. So the butchery of our virgin soil, which for the time being kept down unduly the price of agricultural staples, is working out its own Nemesis, with a sharp reduction in the yield per acre, and a corresponding increase in the cost per bushel. We might go thru the whole range of individual commodities and show that in many cases the rise in prices is due, in part, at all events, either to a falling off in the demand or to an increase in the cost of production.

This explanation, however, is utterly

unavailing when we come to a consideration of the rise of prices in general. If all commodities in the world tend to rise in price at the same time, it is obvious that there is some cause which cannot be explained by the conditions of any particular commodity. The progress of invention, for instance, often tends to reduce the cost, and therefore the price, of particular manufactured commodities; and the pressure of population on the means of subsistence frequently tends to increase the cost of food and other materials. But if we find that the prices of all foodstuffs and of all manufactured commodities tend to rise together for a long period, or to fall together for a long period—even if they rise and fall in somewhat unequal proportions—it is clear that some other explanation must be sought. Indeed, most of the current particular explanations are inadequate. To say that the present high prices are due to trusts will not explain the similar rise of prices in cases where there are no trusts in those particular commodities of this country, or no trusts at all in other countries where the rise of prices is also well marked. To say that high prices are due to the tariff does not explain the similar rise of prices in England, where there is no protective tariff. To say that high prices are due to labor unions does not explain the rise of prices in the Orient, where there are no labor unions. To say that the rising prices are due to the growth of population, or to the pressure upon the means of subsistence, does not explain the rise of prices in those manufactures where the raw material has only slightly risen in price, and where the wages cost is relatively low; nor does it explain the falling prices of a decade ago, when population increased at virtually the same rate. During the free silver agitation the argument of men like David A. Wells was that falling prices are due to the progress of inventions; yet the progress of inventions has continued unabated during the past twelve years, and still prices have risen, instead of falling.

While all these alleged reasons may constitute a partial explanation of a rise of particular prices, far above the general level, they do not avail to explain the change of general prices. Prices of commodities are their values exprest in terms of money; that is, under modern conditions, of gold. A general rise of prices must therefore mean a depreciation of gold, and where there are no marked changes in the conditions of credit, or no sudden diminution in the volume of business transactions, a fall in the value of gold is always the result of an increase in the output. Unless there is some change in the supply of (or the demand for) gold, there can be no change in the general price level.

Prices of some things indeed can go up independently; but with the same supply of money, the increased price of some commodities must mean the decreased price of others. If a community with a given supply of money has to spend more for, let us say, wood and wheat, it will have less money for other things; and with the falling off in demand for these other things their prices will decline. As wood and wheat go up, some other things must come down. Or, at all events, there will be either less wood and wheat consumed at the higher price, or less of the other commodities at unaltered prices. In other words, the total number of commodities, multiplied by their price, will be precisely as before. The index number formed by weighting commodities according to their relative consumption will be unchanged. The only way in which all things can rise in price simultaneously, even tho some rise more than others, is thru a relative increase in the supply of gold.

Toward the end of the sixteenth century there was intense excitement in France, culminating in riots, over the prodigious rise in prices. Some writers denied that there was any such rise; while others alleged precisely the same variety of causes which we find advanced today. Among such causes we find stated, first, the great monopolies, or the trusts of that day; second, the conditions of foreign exchange; third, the extravagance of the court and of the people; fourth, the abandonment of the wheat fields for the sheep walks; and so on. This led the philosopher, Jean Bodin, to write a special treatise on the subject, which may well be called the earliest investigation as to fundamental economic

causes. In this remarkable book, Bodin advances the statement that:

"The principal and well-nigh sole cause of the increased cost of living that we see about us, to which no one has hitherto adverted, is the abundance of gold and silver, which is today in this kingdom far greater than it has been in the preceding centuries."

In his elaboration of this statement Bodin not only lays down what has since come to be universally acknowledged by all economic historians to be the true cause of the great revolution of prices, but he also advances arguments which are equally applicable today. Would that all of the writers who are discussing this problem so voluminously might read "La Responce de Jean Bodin au Paradoxe de Malestroict touchant l'enchérissement de toutes choses et le moyen d'y remédier," published in Paris in 1578.

What was competent to explain the situation at the time of the great revolution in prices is equally competent to explain the situation in the present slight revolution in prices. At that time the discoveries of silver in the New World flooded Europe with an unheard-of addition to the stock of money. During the past fifteen years the invention of the cyanide process in the extraction of gold and the development of the mines in South Africa and Alaska have increased the yearly output of gold from $163,000,000, which was the annual average during the five-year period 1890-1895, to about $450,000,000 in 1909. Just as was the case then with the standard metal, silver, so now the standard metal, gold, is being turned out in such prodigious quantities that it is rapidly falling in value. But a fall in the value of gold, other things being equal, is tantamount to a rise in general prices.

Money or purchasing power in its broadest sense includes, however, more than the mere money metal. Business transactions take place not alone for cash, but also for credit. In considering the question of the supply of money or of purchasing power, we must therefore look not alone at the coin or cash, but also at the credit which is based upon the coin. Now, it is clear that with every increase in the quantity of gold in the reserves of the banks, the power of extending credit grows enormously. It is a well-known fact that banking and credit facilities thruout the world have recently augmented to a far greater degree than the increase in the output of gold. Hence, the secondary and additional reason for the general rise in the price level has been this augmentation in credit facilities. I call it a secondary reason not because credit today is, in its influence on prices, inferior to gold—for the very reverse is true—but simply because this great increase of credit is ultimately dependent for its very existence upon the increase in the output of gold. This does not, of course, mean that there may not be changes in credit conditions which are unconnected with or which even go contrary to changes in the gold supply. But such a situation is due to particular reasons which this is not the place to discuss. The broad fact remains that, taking it by and large, and apart from particular perturbations, a great change in the supply of gold will generally mean a corresponding change in the conditions of credit.

If we combine these two factors—the increase in the gold supply and the resulting increase in the use of credit—we see that we have at once an adequate explanation of the general rise of prices, compared to which the deviations in the prices of particular commodities are of very minor importance. The control of trusts, the lowering of the tariff, the disappearance of any alleged abuses on the part of the labor unions, even the application of more sensible methods to the tillage of the soil and the care of the forests—any or all of these together would make very little difference in the general scale of prices. In the face of an overwhelming general cause, all these special causes are of indubitable insignificance.

IV. What, then, is the remedy? In reality, if we are patient, the situation carries its own remedy with it. As prices rise, the same quantity of gold purchases less goods, and it no longer pays the man who is operating the poorest mine and just getting back his outlay, to continue. The relative lessening in the rate of output in the face of a steadily growing business prosperity must, after a time, check the rise in prices until a new equilibrium is reached. For as the force

of the inventions of new processes of gold extraction spends itself, and as the newly discovered mines are gradually worked out, the normal situation will slowly be restored, and the rise of prices will be checked. Unless, indeed, what is not at present to be anticipated, there should be another far-reaching discovery of new and easily procurable gold deposits, the rise of prices may be declared to have well nigh reached its term. No legislation can avail to prevent these periodic oscillations until the whole world—and not any single nation—gets ready to discard a particular commodity as money, and to replace it with an artificial and composite standard of prices. But that is something for the remote future to accomplish, and will come about only with the gradual cessation of international jealousies and the imperative need of international commercial stability.

What really should cause us concern is not the rise of prices (which will before long be followed by a fall, and which means no general change in the country's wealth or ultimate welfare), but the increase of cost in the sense of a lessening of the powers of man over nature, and the failure of the same exertion to yield corresponding results. Economy of production and economy of consumption spell progress and wealth. A prodigal waste of natural resources and reckless extravagance in outlay spell retrogression and ultimate poverty. A rising price level is not an unmixed evil, and in so far as it is an evil at all, it will correct itself. Increasing cost, in the sense of the necessity on the part of society of more effort to secure the same amount of wealth is both deplorable and remediable. High prices may mean low cost, and are generally characteristic of wealthy countries; low prices may mean high cost and are generally characteristic of poor countries. With the progress of population not only must the price of land always advance, but also the price of food, when not checked by the application of science to agriculture. With the progress of civilization, on the other hand, prices of manufactures tend to fall, and with each successive decrease in cost, human energy is liberated to seek new opportunities for augmenting the resources of mankind. Whether at any given time the rise in rents, in wages and in food is counterbalanced and more than counterbalanced by the fall in the prices of manufactured articles depends upon the relative progress that is made in the command of man over nature, and the forces at work in controlling population or raising the standard of life. The real problem of importance to the world is not that of high or low prices—for that is in large measure the result of an accident as to the supply of the money metal. The real problem is one of high or low cost. High or low prices will ultimately take care of themselves; cheap or dear cost means the entire difference between progress or poverty.

NEW YORK CITY.

Farewell

BY GERTRUDE HUNTINGTON McGIFFERT

FAREWELL, O little son o' mine!
Thou tak'st the heart o' me.
My life is as a fallen leaf
To blow to thee.

The time together twinkled by!
So flitting brief the space
We walked together e'er thou went'st
Beyond my pace.

I can no longer see thy path,
No longer choose thy way!
But love leaps out across the years,
And I can pray.

Who'll guard thee? Save thee an thou fall?
Who'll comfort thee in pain?
Oh, God—that I may never see
Thee home again!

Farewell! Farewell! Life trumpets thee!
These bursting tears but show
I would not, dare not bid thee stay.
Adieu, Dear. Go!

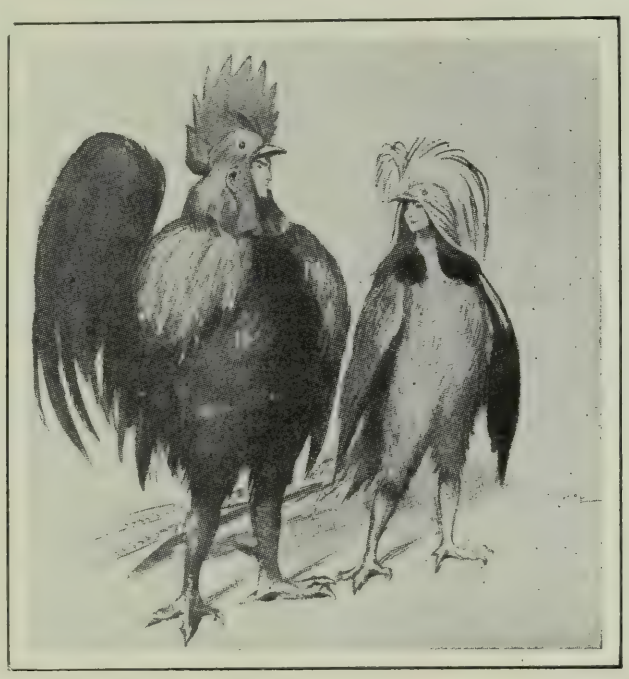
NEW YORK CITY.

The Bird of France

BY EDWIN E. SLOSSON, Ph. D.

IN passing from the eyrie to the barnyard for the scene of his drama has Edmond Rostand degraded his talents? So it seems to many people. It would not to Benjamin Franklin, he who proposed the turkey as the ornithological emblem of the United States, arguing that this stately, domestic and useful fowl would far more appropriately represent our country than that bloodthirsty robber, the eagle. It would be an interesting speculation in the psychology of heraldry to inquire what effect the adoption of Franklin's suggestion would have had on our national character and policy.

The history of France has been a fight between the cock and the eagle from the time when Cæsar's standards invaded Gallia. The revolution won its first victories under the flag of the cock, but the Roman eagles were distributed by Napoleon to his regiments when he set out to conquer Europe. The revolution of 1830 brought back the *Coq Gaulois,* but Napoleon III supprest it by his *coup d'état* of 1851, and took in its place the eagle of empire. But his eagle refused to perch upon the cactus and led him to Sedan, as it had led Bonaparte to Waterloo. M. Rostand has given us, in his "Eaglet," a character sketch of Napoleon II, and it may be allowable to surmise that in "Chantecler" he has in mind a patriotism purely Gallican, such as many leaders of French thought are preaching, now that the growth of Germany in wealth and population has rendered futile the policy of revenge in which this generation had been trained. The foreign fighting cock, which, thru the conspiracy of the Night Birds, is pitted to overthrow Chantecler, outclasses him in armament, but nevertheless Chantecler is victorious, for his opponent gashes himself with the long steel gaffs attached to his spurs.



In calling upon the animal world to instruct us M. Rostand is following a long line of illustrious precedents, from Esop and Bilpay to Kipling and Maeterlinck.

> "I will not ask Jean Jacques Rousseau
> If beasts can fabulate or no.
> 'Tis clear that they were always able
> To hold discourse, at least in fable."
>
> —COWPER.

In his costuming he goes back farther still, thousands of years before Aristophanes at any rate, for men have always envied the birds their feathers as much as their wings, and bird dramas are found in all primitive rituals. Unfortunately, so much has been said about this matter of costume by the European and American papers that the drama is rather spoiled for us in advance. We were admitted behind the scenes months before the curtain rose. What is the use of spending hundreds of dollars on a pheasant costume in order to create a certain illusion, and then have the illusion irreparably destroyed by the publication of a diagram showing how the actress gets into it and moves her wings. Fortunately, most of us will not be able to attend the performances at the Théâtre Porte-Saint-Martin, and so we have the opportunity of getting our first impressions of the drama thru reading it as it appears week by week in *L'Illustration,* or from the English version that M. Maurice Rostand is to make. One must have a poor imagination if he cannot conjure up for himself a more lifelike hen-pheasant than Mme. Simone can make, or a better dog than M. Jean Coquelin.

As one of the critics said on the night of the *première,* we cannot tell whether the play is a success or not until after its hundredth performance. Many years of anticipation, repeated postponements and fantastic rumors of the difficulties with which author and actors were struggling have launched it with unprecedented momentum, and it will be carried for-

ward for some time by curiosity alone. But there is no question about its success as a poem. It is a fascinating medley of sense and nonsense, of satire and symbolism, of quaint interpretations of animal life and acute reflections on human life, in which the sublime and the ludicrous are joined in the same couplet, and beautiful lyrics are interspersed with the badinage of the boulevards. It violates most of the rules of rhetoric except in prosody. On account of its puns, slang, symbolism and local allusions to literary and political controversies of the day it is essentially untranslatable. English has two vocabularies, a common one for everyday wear and a Sunday suit for poetry. French has no such choice of words, so Maeterlinck and Rostand can show us the poetry of common things without jarring our literary sensibilities, as an English poet is apt to do when he attempts the same. Besides, the French are tolerant of identical rimes and plays upon words in serious passages, such as we have discarded since Shakespeare. The translator will find that "rooster" has few suitable rimes and is not at home in an esthetic environment. Our "cock-a-doodle-do" will not fit into the verse as well as the French "co-co-ri-co," which has the double advantage of being more poetic and more onomatopoetic.

From *L'Illustration.*

CHANTECLER AND THE HEN-PHEASANT.

But "Chantecler" in a way has a broader human interest than "Cyrano" or "L'Aiglon," altho it has no men and women in it. We hear the voices of the people leaving the farm before the curtain rises, and at the end of the play we see the net of the fowler descend as a *deus ex machina* to catch the errant Hen-pheasant and restore her to an enforced domesticity. If we do not count the "honk!" and gasoline odor that play a part in the first act, and the shot that kills the Nightingale in the lact act, the human element is almost absent—ostensibly. The characters are birds and mammals, except the insect choirs, the toads, who form a chorus of croakers in the last act, and a tortoise, who does not appear on the stage because he cannot get there before the curtain falls. There is a friendly dog, a treacherous cat, a cynical blackbird, a pompous turkey pedagog, and fowl of all sort. Over this poultry yard Chantecler rules undisturbed until one day a hen-pheasant flies over the fence seeking shelter from the hunters.

This Hen-pheasant is intended as a satire on feminism, but it must be remembered that the word has a very different meaning in France than elsewhere. It does not mean there the quiet and impersonal expression of opinion by the direct method of dropping a ballot into the box, or the entrance of women into colleges and professions, but the domination of men by women by any methods, especially those in vogue in the court and salons of the time of Louis XIV. What we Americans call "the new woman" is not given to gaining her ends thru wheedling, and the love of finery is not her besetting sin.

But the Pheasant has assumed the golden plumage which immemorial custom has confined to the masculine portion of her race and has flown the coop in search of adventures. Chantecler is attracted by her exotic costumes and manners, and is led to confide to her the secret of his power. His voice is louder than that of other birds because he knows his own importance; he calls up the sun every morning. He digs his

claws deep into the soil until he feels rooted there, and the spirit of the world rising in him like the sap in the trees. A brief quotation may give the idea better, altho it is a hasty paraphrase of some scattered lines rather than a translation:

This perpetual cry that ascends from the earth
Is Love's quivering call that the light may have birth.
'Tis the frenzied, the agonized accent of yearning
For the gold we call Day with its largesse returning
To all who await it; the pine tree's rough boss,
Its roots in the wood path all covered with moss,
The delicate beards of the oat-heads erect,
The least little pebble with mica-scales flecked,
That beseech all the lovers of light who desire
Their luster, their tint or their plumes tipped with fire.
The grass wants a rainbow impearled on each glaive,
The forest, an altar-fire ending its nave.
This cry which mounts thru my throat to the Heaven
Is the cry of all nature which feels unforgiven,
As tho in disgrace shut away by the sun
And punished, unknowing what crime it had done;
All who suffer from weariness, cold and affright;
Deprived of their work and unweaponed by Night;
The shivering rose in the dark and alone,
The hay lying damp on the ground where 'twas mown,
The tools left outside by the reapers forgot
That rust on the grass and repine at each spot. . . . .
'Tis the cry of the field, all alive with its wheat
Pushing upward to revel in sunlight and heat;
Of the blossoming trees that would blossom still more;
Of green clusters of grapes that would ripen their store.
'Tis the cry of all health, of all joy and all beauty
For the light of the sun to illuminate duty.
The better to voice this multiple chorus
My soul swells within me and I send out sonorous,
Peremptory and proud such a clarion call
That crumbles the Night down like Jericho's wall. . . . . .
I call! and the trembling horizon obeys!
I call! Vainly Night tries to bribe me with grays.
I chant a clear note. All at once I am smit
And recoil with my plumage encarmined and lit
By the level light striking me straight in the eyes;
And I know that I, Chantecler, made the sun rise!

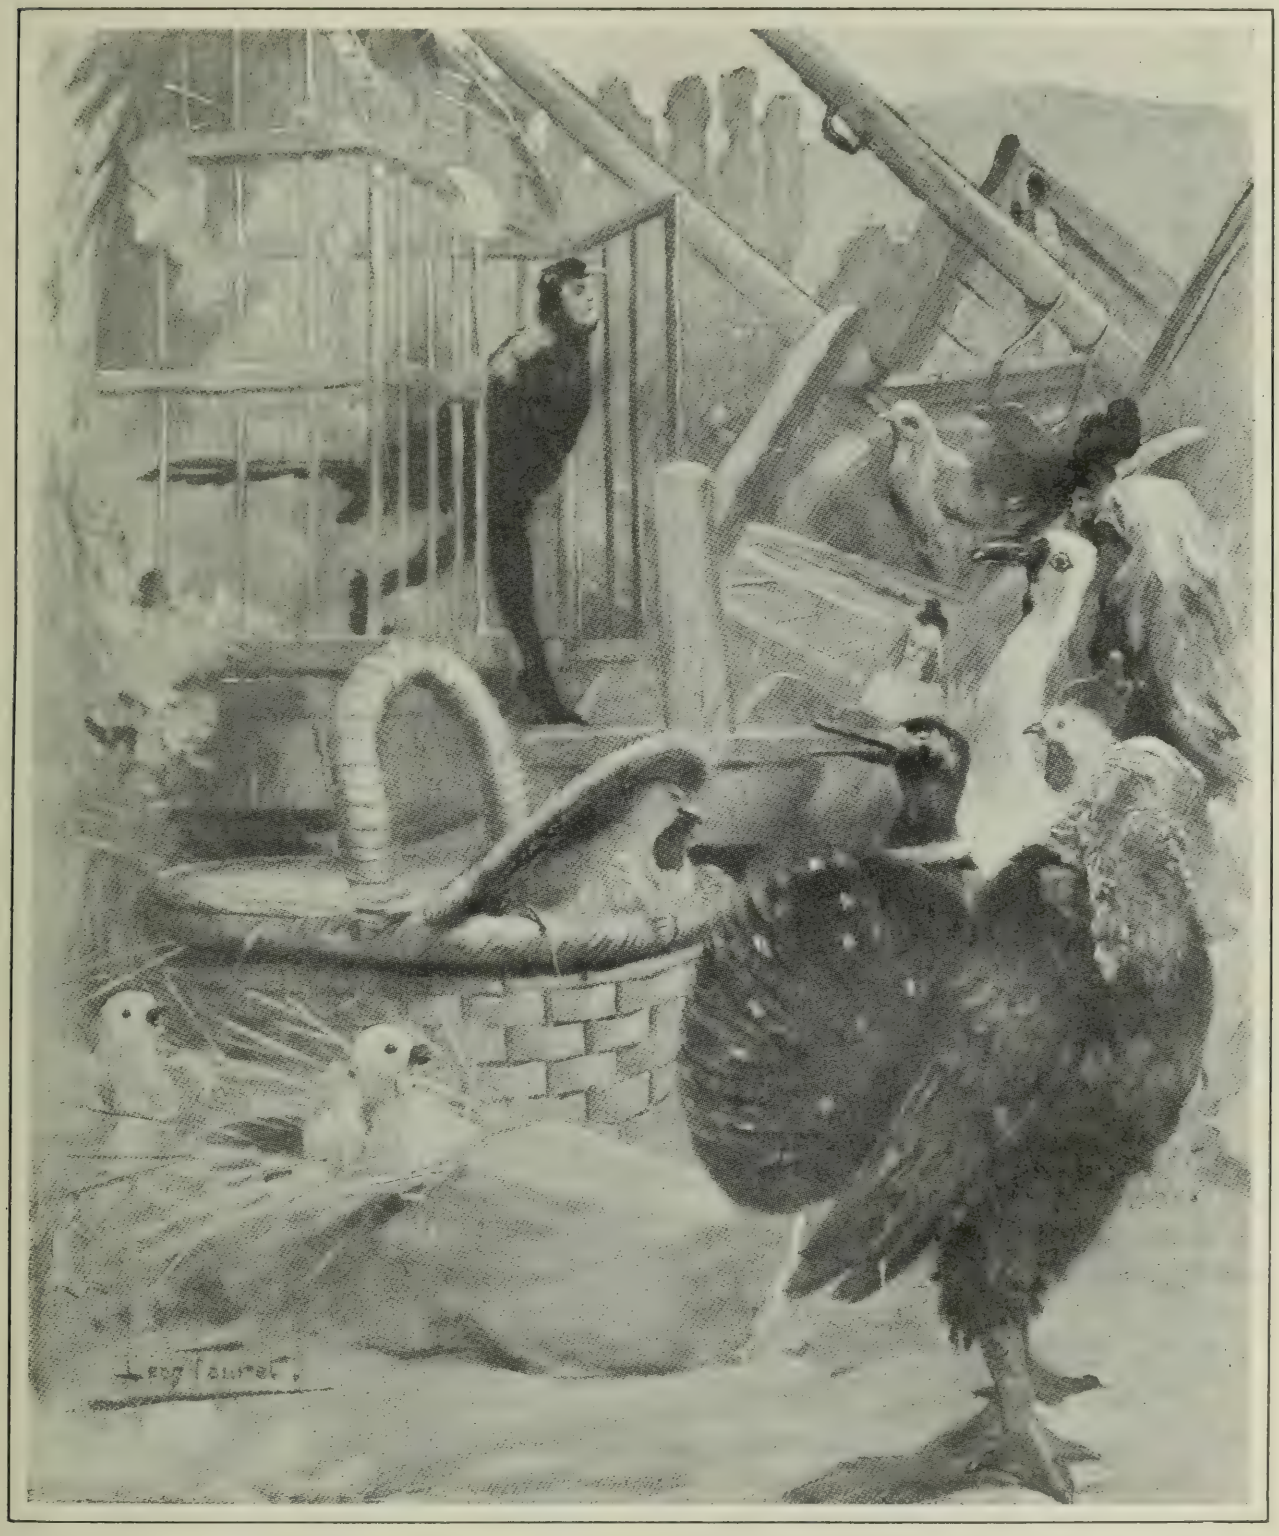
With all his vaingloriousness Chantecler is a dignified and in some aspects a pathetic figure, winning our sympathy thru his obvious sincerity and earnestness. As he explains to the Hen-pheasant he never, like some songsters, sings to the echo, merely to have the pleasure of hearing himself repeated faintly from a distance. He is the Awakener of the World, causing to open the flower, the window, the eye and the soul.

"But what wakens you?" asks the Hen-pheasant.

"The fear of forgetting," answers Chantecler.

To the astonished query of the Pheasant, "And you believe that at your voice the whole world is bathed in light!" Chantecler replies simply:

"I do not know very well how it is with the world, but I sing for my own valley, and I trust that in every valley there is some cock also doing his duty."



He looks upon himself as the official organ of the world, the vocalization of nature. Between his "cocoricos," he consults his constituents, quirking his head to one side and the other, listening to their mute appeals and answering with mysterious chuckles: "Yes, Briar!" "All right, Fern." "You shall have your ladder of gold, you Motes."

Then with gathering force he calls the sun from his hiding place behind the mountains, "Obey me! I am the Earth and Labor! My head bears the flame of the forge as a crest and I feel the soil rising in my throat."

The sun obeys him as tho he were a second Joshua. One by one at his command the peaks, the hills and the trees are lighted up and the landscape changes its tints in due order, for he resists the importunities of the Hen-pheasant to hurry the operation and to show favoritism to certain hills in which she has an interest. Nevertheless he is willing to call her his "Collaborator" and to ascribe to her influence the unusual beauty of this particular sunrise. He even goes so far as to intimate that he has ordered up the sun as much to bring out the golden sheen of her necklace as to light up his valley.

She on her part, notwithstanding that her plumage has given the impression that she has a masculine disposition, inspires and consoles him in the good old

feminine fashion, bestowing on him a caress for every crow, and laying her head on his breast in order that she may hear it before the world does; she would "listen to the sun rise first in his heart."

From *L'Illustration.*

THE BLACKBIRD COMES OUT OF HIS CAGE.

And then, when the roosters down below, tardily awakened, begin to crow, she is highly indignant at their presumption. Chantecler, however, is more tolerant. Let them join in the chorus; they all assist, tho unconsciously, in dissipating the darkness. He takes, nevertheless, a just pride in his priority and superior intelligence.

I sang to the dark as they sing to the light
I have faith to believe in the sun in the night.

This is very much like the saying of St. Bernard: "Those who preach the

word of God are like cocks; during the darkness of the night they announce the light of the future."

Chantecler does not care for appreciation, except perhaps that of the Hen-pheasant. He has no breath left to hail the sun, which, rising amid the general chorus of song, does not know what it owes to his efforts. His voice breaks as it has accomplished its purpose, and he sinks back exhausted. It is the reaction following a great triumph; the despondency of the artistic temperament. He fears lest his powers should fail next time. He even doubts the reality of his own achievement and beseeches the Hen-pheasant to encourage him with her confidence:

Chantecler. "Tell me again . . ."
Hen-Pheasant. "How handsome you are!"
Chantecler. "No, no, that doesn't matter."
Hen-Pheasant. "You have sung beautifully!"
Chantecler. "Say that I have sung badly, but tell me that I . . ."
Hen-Pheasant. "Yes, yes. I admire you."
Chantecler. "No! tell me that it is true, what I have been telling you."
Hen-Pheasant. "What?"
Chantecler. "That it is I who make . . ."
Hen-Pheasant. "Yes, my glorious Chantecler, it is you who make the sun rise."

The Guinea-hen holds a reception at five o'clock (a. m.), a literary salon at which the peacock is the lion, if that is not mixing metaphors. Here appear also all the strange fowl of a neighboring poultry fancier, cocks of monstrous shape and fantastic plumage. Their crows are as varied as their forms, and, what is worse, they all have theories about it, even that cock who, much to Chantecler's disgust, boasts that he never crows. In this discussion of "What is art?" poor Chantecler grows so confused by their paradoxes and heresies that when he wants to give vent to his feelings in the good old way, after his victory over the game-cock, he finds that he has forgotten how to crow.

He elopes with the Hen-pheasant to the forest, where, free from all domestic duties, he can devote himself to his art and to her. But she is jealous of his art and contrives to rob him of his confidence in himself—what Ibsen would call his life-lie. She covers his eyes with her wing so he does not see the sun rise until it is fully up, and he finds out that the order of nature is not dependent upon him. But he regains his courage in a measure. If his art is not so important to the world as he thought, it may not be altogether without value. Anyway, his duty is more to life than to art, and he will return to it. He has never, in fact, been so completely alienated from domesticity as the Hen-pheasant had supposed. Every day, unknown to her, he has telephoned to the farmyard by means of a morning-glory vine, to inquire how many chickens had been hatched and to give advice as to their training. He returns home a sadder and a wiser fowl, for he has learned some lessons in the forest. He has listened to the prayer that ascends nightly to the God of the Little Birds, asking for protection against their enemy, man, in the name of their patron saint, Francis of Assisi, who alone among men had preached to them. He had heard the nightingale sing and received a lesson not only in music, but in devotion to duty. As one nightingale is shot another takes up the song, "for there must always be a nightingale in the forest."

The main theme of the drama is, therefore, the fundamental problem of philosophy, the relation of man to the universe, about which materialist and humanist have their endless strife. To the humanist, man is the measure of all things, the center of the universe, its *raison d'être.* He has the power of controlling the future and re-forming the past. When the eye was created there was light, and Niagara made no sound until there were ears to hear it. To the materialist man is an adventitious addendum to the world of matter and motion, irrelevant, insignificant and impotent. Mind is an epiphenomenon, merely reflecting and recording the movements of the molecules of the brain, having no control over them nor over the sequence of its own thoughts. Both parties reject mediation and regard compromisers with contempt. They persist in saying they "have nothing to arbitrate."

But we who must compromise (as in practice the philosophers do, too) have an interest in Chantecler's future. Can he crow as lustily and faithfully as when he believed he ruled the heavenly bodies? Will he crow in the dark to keep his courage up? Or will he get tired of it and sleep late in the morning? Will the

hens and the chickens respect and obey him when they perceive he has lost faith in himself? Will they desert him for some other cock who has not had his eyes opened to his own insignificance? Ought Chantecler to confess to his flock his delusion and disillusionment? If he does not, can the Blackbird be relied upon to keep silence in regard to it? And if the truth gets out either way, what effect will it have on the *morale* of the poultry yard? If duty rests upon responsibility, and responsibility rests upon the knowledge of one's relation to the universe, and if that knowledge is unattainable by mortal mind, what support is there for duty?

Rostand is a true dramatist. He raises more questions than he answers.

Israel

BY HERMAN BERNSTEIN

Author of "Contrite Hearts," "In the Gates of Israel," Etc.

(Dedicated to the Jewish People Everywhere.)

ONLY a handful of souls, yet a thorn in other people's eyes, a nation of "leaders" with no one to lead, a nation of dreamers, a nation of practical bargain-drivers; a handful of souls, yet your financiers often decide the destiny of nations, your poets and prophets have sung and inspired the world, your tradesmen are perhaps more cunning, your millionaires perhaps more ostentatious, your poor starve more wretchedly — you great, petty, noble, miserable, rich, poor, ideal, cunning, eternal wanderer—Israel, O Israel!

Cursed and blessed, you who have given to the world your saints and your prophets, true and false, your heroes and your traitors, great and small, O nation of "leaders" with no one to lead; you whose consciousness was steeled in the fires of hatred and whose hearts remained tender thru the prejudices and cruelty of centuries; you who as a pitiful wanderer have begged for the right to live; you who are hated by the small and the envious; you who are loved by others because you are small; you who, armed with the Bible and the Talmud, passed unscathed thru the furnace of superstition; you whose bankers preach to you, and whose preachers bank on you—on the "Jewish" question, the eternal Jewish question, a football in the hands of friend and foe, rolled and tossed from side to side with mercy and without, O weak-willed, weary, tenacious wanderer, O nation of "leaders" with no one to lead! Some send you West, some drive you East, some would draw you back to your cradle, others plead with you that you forget your mother. O pitiful, strong, stiff-necked wanderer, Israel!

You who have been crucified for centuries, tho you bear the undeserved stigma of the most tragic crucifixion in history; last in war and first in peace; a storm-petrel; the barometer of history; sometimes a hero, sometimes a clown, always a martyr; ever organizing, ever preaching solidarity, yet none so helpless, so disorganized; torn asunder from within and from without; O nation of "leaders" with no one to lead! Some would awaken in you haughty pride because of your past; others preach to you humiliation, oblivion, self-destruction; some rouse you, others lull you to sleep; some attack you as if you were not human, others sing your praises as tho you were divine; some attack you for your separatism, others separate you by attacking you, O chosen people—chosen for suffering, marked for derision, even for slaughter; you who are as good as the rest and as bad as the rest! Can you find your way amidst the tumult and chaos created by your counselors, your organizers, your well-wishers, your destroyers, O nation of "leaders" with no one to lead? Do the "leaders" of Israel and the foes of Israel realize what they are doing with the clay and spirit that have been molded, thru the bonfires of persecutions and martyrdoms, by the hosts of great thinkers and dreamers and reformers since the times of Moses to this day?

New York City.

How Can Women Get the Suffrage?

BY MRS. OLIVER H. P. BELMONT

President of the Political Equality Association.

ONE fact may be accepted—that women intend to have the suffrage. There are very few of the most bitter opponents who do not admit that the most they can hope for is to defer as long as possible what they choose to term "the evil day when women shall vote." One of the highest church dignitaries said to me recently. "Of course we know woman suffrage is inevitable; the only question is how soon it shall come." This is the sole point at issue now between the suffragists and anti-suffragists—When will women get the ballot?

This question has been answered in New Zealand, Australia, Finland and Norway, where women now vote on exactly the same terms as men, except that in Norway there is a slight tax qualification for women. In Great Britain, Sweden, Denmark and Iceland the only question is, when shall women get the franchise for members of Parliament, as they now possess all but this? Such is partly the case in the Dominion of Canada, where in all the provinces women have school or municipal suffrage or both. It has been answered in four of our own States—Wyoming, Colorado, Utah and Idaho, where all women possess exactly the same voting rights as men and are eligible to all offices.

In the United States, therefore, women are confronted with the question, How shall we obtain the suffrage in the other forty-two States, and this at present must be answered by the women of each one separately, but the methods to be employed are the same in all. The women of some particular section may think their men are different, that the methods used elsewhere would not be suited to the men of their locality, but a little experience will prove that the opposition to woman suffrage is the same everywhere. It seems almost a truism to say that by far the most important need now is just what it has been in the past, namely that the demand must come from a larger body of women than has yet made it. The suffragists have ranked high in quality but not in quantity. In every community there have been a few women of mental ability and progressive ideas who have stood at the head of this movement, but their following has not been large enough to do effective work. The legislators have had no fear of it and the public has felt no special interest in it. The masses of women have directed their energies into other channels and naturally the masses of men have remained indifferent.

To awaken the interest of the public, to arouse the women to such action as would secure the attention and the assistance of men, to create a situation which would cause the press to take up the question—these have seemed to be the first and most important things to be accomplished. In the State of New York—to select a conspicuous illustration—the last year has witnessed a very great advance in the direction of all these achievements. It seemed to many who were well informed on this subject that the most important step which could be taken would be to establish the National Suffrage Headquarters in New York City. This would make it possible to direct the movement from this unequalled center, where are located the great press associations which distribute the news to the entire country. It would enable those who are at the head of it to come into direct touch with the large newspapers of this city whose influence reaches across the continent. Another influential motive was the hope of arousing the Eastern States to a serious consideration of this question which had always been looked upon as belonging more especially to the newer States in the western part of the country.

This scheme was put into operation by the opening of national headquarters in New York City last September, and the experience of the first half year has justified a hundred fold the hopes of those thru whose efforts they

were established here. The vast public which surges in and out of this big city sent scores and hundreds of people into the ten rooms filled with busy workers and they realized for the first time that the woman suffrage movement was an actual reality, a business proposition. Men saw that it was a force which would have to be reckoned with, and women saw that it was tangible, something they could really take hold of and work for. The press saw in it an element of news, not an abstract theory which they could not utilize. The immediate result was the forming of suffrage clubs among women in all classes of society and more suffrage meetings in the city and its environs within six months than had been held in any previous ten years. This question which always had been practically tabooed in social circles and ignored in clubs of both men and women, is now the principal topic of discussion. It crops out everywhere, at dinners, teas, card parties, club meetings—no matter what the people are gathered together to celebrate, they will talk about woman suffrage before they adjourn.

It is no exaggeration to say that in these past six months the newspapers of New York have given more space to woman suffrage than in all the previous years since the subject was first brought

before the public. While there has necessarily been some misrepresentation there has been a total absence of the caricature, ridicule and abuse of early days and it has been treated in much the same manner as other public issues. It is now almost impossible to supply the demand from the press associations which a short time ago would scarcely accept any suffrage matter. The result of all this has been to create a public sentiment which compared to that which existed even a year ago, seems almost a revolution. Because of this favorable change in public opinion it is now becoming possible to effect a thoro organization among women, the lack of which has been the great drawback to the movement. The time is near when every member of the legislature will meet a strong association of women demanding the franchise in his own district, and he will then find it safer as well as more agreeable to pay some attention to this demand which has so long been ignored. There has been no lack of effort toward this end in times past, but it was necessary for some decisive action which should popularize the movement before the masses of women would go into it and several occurrences of recent date have furnished the needed incentive.

A very important feature, it seems to me, is the establishment of "suffrage centers" in various parts of every city, places from which the work shall radiate and where those interested can assemble and feel at home. The experiment which I have made in New York this winter has strongly confirmed this opinion. A four-story house was remodeled and divided into club rooms, library, assembly rooms, etc., where the young people could gather for meetings, reading, concerts and occasionally a little dancing. It is known as the Political Equality Association of Harlem and the literature, lectures and all entertainments in some way strike the note of woman suffrage. This is a branch of the central association of this name which I have organized and it has been so successful that I hope to establish a number of others of the same kind. Another branch meets weekly in a hall engaged for the purpose in the opposite end of the city, known as the Lower East Side. An enthusiastic audience is always present and the suffrage speeches are followed by an eager discussion, the women especially showing a deep feeling on the question. Next season I hope to engage "suffrage halls" in various parts of the city where once a week, at least— and I wish it might be every night—the people may be sure of hearing woman suffrage doctrine set forth by good speakers.

An immense educational work can be done in this manner which is imperatively needed. It is amazing that after all these years of propaganda there should still be so vast an amount of ignorance and misinformation on this question. Even among intelligent people it sometimes seems as if kindergarten methods were necessary to explain its status. These efforts cannot be confined to any one locality or class of people because the matter will have to be decided by a majority of all. I have been very glad therefore to help the colored men and women form a suffrage league. Colored men will have a vote on the amendment when it is submitted by the Legislature and this race should be able to use its influence understandingly. For the same reason I have contributed as far as I could to every movement which would help convince wage-earning women of all nationalities that their possession of a ballot would be a great advantage to themselves and indirectly to the men who work by their side. Of course it goes without saying that I recognize the importance of church meetings in favor of this question whose results will be so beneficial that they might almost be called religious. I appreciate also the value of drawing-room and club meetings among those women who have the leisure and the means to promote whatever object they undertake.

At the request of the editor of THE INDEPENDENT I have tried to give a brief outline of a part of the work which I have been fortunate enough to have it in my power to assist in my own city and which I presume is just as much needed and could be just as effectively carried on in other cities. In addition I have contributed as far as possible to the broader effort that has been going on thruout the State—to the press work,

which is not outranked in importance by any other, and to the great and necessary task of organizing the various counties.

While woman suffrage is a moral and ethical question it is also essentially political in its nature and must have a strong organization back of it before it can attain success. New York is a large State and its sixty counties with their enormous population offer many serious problems. To these the State Suffrage Association has given many years of patient, persistent effort, accomplishing all that has been possible with the inadequate means at its disposal. Much yet remains to be accomplished but this will not have to be done under the hard conditions of the past. Women of wealth, executive ability and personal influence are coming to the assistance of those who have carried the burden so long and so bravely. The wonderful advance of the past year will be much more than duplicated in the coming year. It would indeed be difficult to prophesy the situation at the beginning of another spring. Should the pending bill pass the present Legislature the women of the whole State would be roused to such enthusiasm as never was known. Even should it fail, the movement is now too far advanced to be seriously retarded. Nothing can thwart the determination of the women of New York State to obtain the franchise. The recent organization of a Voters' League of representative men shows that henceforth women will not have to carry on this contest alone but will have the political influence they have so much needed. The only question is how long it must continue, for it will never cease until the suffrage is won.

New York City.

Effective Evening Services

BY HENRY A. STIMSON, D.D.

[We have asked Dr. Stimson to give this plain and detailed statement of the somewhat novel methods now being employed by the Manhattan Church to bring the influence of Christian people to bear upon the social problems of the day, because we regard it as a movement worthy of attention and aiso because we wish to get from our readers accounts of similar efforts to make church work vital and practical. We should be pleased to receive reports of any new and successful methods of which they can speak from experience. The letters should be less than 500 words.—Editor.]

THE Manhattan Congregational Church of this city inaugurated last autumn and has continued thru the winter a series of Sunday evening services of a somewhat exceptional character. From time to time in the past this church has had series of addresses on matters of public interest, sometimes delivered by the pastor, sometimes by prominent public men. It was noticed that however great the special interest might be on the particular occasion, it did not continue, and not infrequently, tho the speaker was well informed and the subject of much importance, it failed to interest any large number of people.

An investigation of the reason seemed to show that in the multitude of interests in the great city, and in the many opportunities that are afforded for free academic instruction, no subject, however important, will hold any large permanent attention. If anything is accomplished, it is necessary to give people something to do that is immediate and worth while.

A practical campaign for the common welfare was, therefore, planned. Topics at the hour uppermost, or soon to become important, for the general good are invariably selected. Speakers are chosen who are well informed, or officially connected with the work, and the aim is in each instance to secure as clear and emphatic a statement of facts as possible, coupled with an appeal for help in directions which are within the reach of the congregation. The address, which generally occupies thirty-five or forty minutes, is preceded by a brief religious service, and then followed by an after meeting in the lecture room, where the

speaker answers questions, and where there is free discussion and inquiry on the part of the audience. At the close a committee is appointed, different each night, for the purpose of conferring with the speaker and following up the subject in as practical a way as possible, reporting subsequently from time to time to the congregation. A leaflet is printed each week, calling attention to the various topics that are uppermost, presenting reports of the committees, and putting before the congregation such items of interest as will secure their attention.

The purpose of the meetings was announced at the beginning, and it has been closely adhered to. The interest has been constant. The audience has varied in size each evening according to the subject and the speaker, and has been singularly diverse in its makeup. The address has not been made an incident in a religious service, but the evening has been frankly given to the topic in hand, and the brief devotional service, which introduces it, and the briefer prayer and benediction, which close the final discussion in the lecture room, have simply served to note that the service was in a church and was held on Sunday evening. Neither has seemed out of harmony with the other, and the congregation has given no evidence of being conscious of any dissonance or incongruity. On the contrary, it has proved possible to consider in the directest and most earnest way a great variety of subjects affecting the public welfare, and to bring to their consideration and support the strength that lies in a Christian assembly. Several speakers, familiar with political and civic affairs, have called attention in their addresses to the fact that the influence of a church is far greater than that of any political or secular organization. Its place in the community, its freedom from selfish and personal interests, its permanence and its moral force, give it an influence which is at once recognized in every department of municipal affairs. This has been proved in a number of instances where the committee from the church has been able to get information which was not accessible to others, even official bodies, and to exert an immediate influence which was helpful, if not decisive.

Several weeks before the election addresses were delivered by Mr. Otto Bannard, one of the candidates for Mayor, and Mr. John Purroy Mitchel, a candidate for President of the Board of Aldermen, who spoke upon the needs of New York from the standpoint of the coming election. The meeting was followed by the appointment of a committee who at once secured information and prepared a list of the various candidates for the Assembly and for the Board of Aldermen from the three districts represented in the congregation. This was printed and widely distributed by mail as well as in the congregation. It was done without regard to the political connection of the different candidates and with the aim of laying their official records before the people, so that every voter should know for whom it was possible for him to vote.

This was followed by addresses by Comptroller Metz, speaking upon the needs of the city as seen from his department; by Assemblyman W. M. Bennett, speaking upon direct primaries; by Senator Brush, and Mr. W. J. Schieffelin, speaking upon the Aldermen as servants of special interests; by Dr. W. H. Allen, of the Bureau of Municipal Research, upon the need of economic municipal administration; by Mr. Homer Folks, chairman of the State Charity Commission; by Dr. Darlington, the Commissioner of the Board of Health, upon the functions of that board; by Mr. W. H. Edwards, Commissioner of Street Cleaning, upon the work of his department and the ways in which citizens can help; by Gen. Theodore Bingham, Commissioner of Police, discussing the relations of the police to the people; by Mr. George McAneny, the President of the Borough of Manhattan, upon the general situation in the borough; by Miss Rose Schneiderman, the leader of the Shirtwaist Workers' Union, describing the situation of her fellow laborers and the reasons for the strike in which they were engaged; by the pastor, upon the civic and political responsibility of the church; by Mr. W. M. Ivins, the chairman of the Commission for a New Charter for the City; by Judge Charles S. Whitman, the District-Attorney, upon the aspect of city life presented in his

office, and the help he desired from the citizens; by Miss Grace C. Strachan, president of the Inter-Borough Association of Women Teachers, presenting the question of equal pay for men and women; by Mr. B. B. Burritt, of the State Charities Aid Association, presenting the need of inebriates, with the policy proposed by the State in their treatment; by Mr. O. F. Lewis, of the Prison Association, discussing the treatment of minor criminals and vagrants; by Hon. John J. Murphy, the Tenement House Commissioner, discussing the minimum standard of living; by Mr. J. S. Whipple, the State Commissioner of Forests, and by Prof. Henry R. Seager, of Columbia University, chairman of the Commission on Employers' Liability.

Besides the special committees which were appointed in connection with these addresses, there is a standing committee, which keeps track of bills introduced in the Legislature affecting the interest of the city, and calls the attention of the congregation, from time to time, to the duty of immediate action in promoting or defeating such bills as in their judgment are important. The special committees have been particularly useful in connection with the milk question; with the strike of the waist workers, and with the magistrates' courts; they are still engaged with other subjects which have not yet reached their decisive stage. Our representatives, both in the Board of Aldermen and in the Assembly, have shown themselves responsive and desirous of the help of the congregation in matters of common concern.

It it, perhaps, too soon to say what the permanent result will be, or how wide is the influence of the meetings; but the congregation has shown constant interest, and is certainly being informed with an exceptional fulness and thoroness upon the affairs of our municipal life, and the people are made to feel that they not only have a concern with such matters, which is real and permanent, but also that their influence is an important factor and can be made effective in almost any direction.

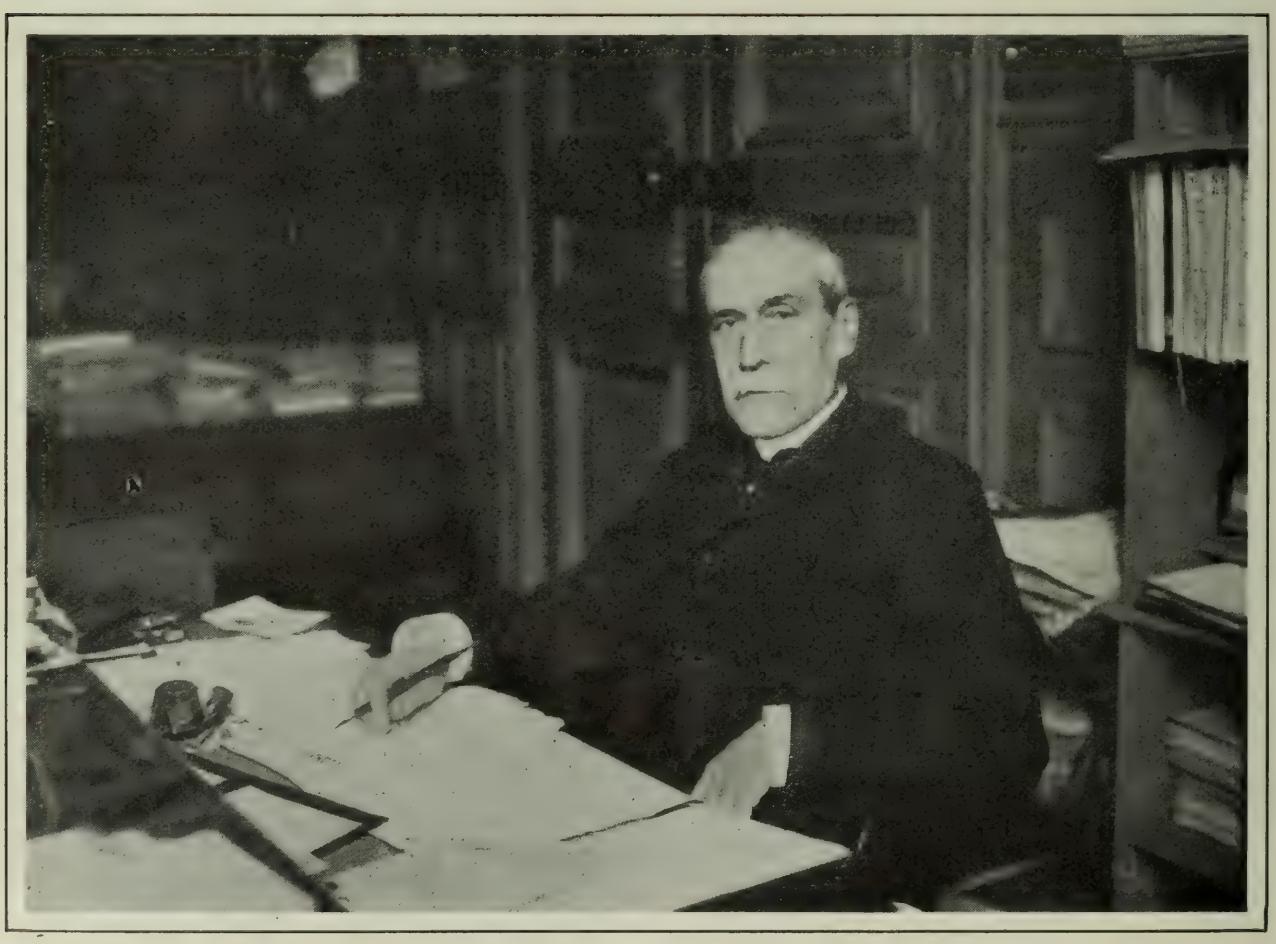
The movement is certainly contributing to the growing sentiment in favor of better administration of our public affairs. Its immediate effect upon the church itself is perhaps to be chiefly estimated in the growing intelligence of the congregation in civic matters, and in the fact that the movement has had the heartiest support, not only of the officers of the church, who discussed it at the beginning and approved it, but of the entire membership, so far as any expression has been made. It has brought a great number of people to the church, for one meeting or another, and has at least served the purpose of showing to the community that the church is deeply interested in matters of public concern and is trying to do its part in promoting the general welfare.

The obvious limitation is that it supersedes a Sunday evening service devoted especially to preaching, but as the attendance at such services had come to be very small, and there seemed to be a widespread determination on the part of Christian people in this part of the city not to attend a second preaching service, this loss at present, at least, does not appear serious, and the present program certainly is quite as valuable, even religiously, as miscellaneous musical services, even of cantatas and oratorios, or lectures on Palestine or the Yosemite.

It has not been used in any direct sense for the support of the church. The church at all services is free, and the offerings that are taken at these evening services are used solely for the expenses of the special committees that are appointed, and for the printing and distributing of their reports.

The congregations in but two or three instances have been large, and sometimes have been small, but the interest has been constant, and the expressions of approval that have come from people of every class, and especially from the men and women who are foremost in striving to better conditions of life in New York, have been uniformly of hearty approval. We are hearing much less than we used to hear of the supposed indifference of the churches to the condition and needs of the people.

New York City.



A French Apostle of Liberty

BY ALVAN F. SANBORN

[Professor Boutroux has just arrived in this country, where he is giving a course of lectures at Harvard University under the auspices of the "Alliance Française."—EDITOR.]

IN 1874 Emile Boutroux, a young teacher of philosophy at the University of Montpellier, published a little book entitled "De la Contingence des Lois de la Nature," which was destined not only to secure him a professorship at the Paris Sorbonne, but to exert a profound influence upon the evolution of the thought of his countrymen. Before going to Montpellier, he had studied at the Ecole Normale Supérieure under Jules Lachelier and at the University of Heidelberg under Eduard Zeller, and had taught philosophy for three years at the Lycée of Caen. "La Contingence" was one of his two doctor's theses, the other being a masterful critical exposition of Cartesianism. At that time the dialectic philosophy of which Victor Cousin had been the leading exponent, tho still dominant in official circles, had lost its grip upon the more vigorous minds, and was rapidly being supplanted by a highly aggressive determinism. Dissatisfied with the self-complacent emptiness of the declining school and with the arrogance of the rising school, young Boutroux undertook to harmonize philosophy and science in a synthesis (based upon a critique of both reason and the sciences) which denies that determinism is a consequence of evolution and affirms that man is free and God is free, that man and God alike are the authors of their own characters and of their own destinies.

M. Boutroux's writings are so marvel-

E. BOUTROUX.
In his office at the Foundation Thiers.

ously compact that it is next to impossible to summarize them; but the following brief citation from his *confrère,* Raymond Thamin, gives an approximation to his attitude and his thought as they are revealed in "Contingence" and in his later works:

"It is in the name of science that necessity is postulated. Now, for M. Boutroux there is indetermination in things from the point of view of science itself. The cause never explains all its effect. If the effect is identical with the cause it merely makes one with it and is not a veritable effect. If the effect is distinct from the cause, the cause does not contain that in which the effect differs from it. Hence, at every step, there is something new in the world, and newness is contingence. Contingence, when consciousness is added to life; contingence, when life is added to matter; contingence, when, in matter, physical and chemical properties are added to mathematical properties. Mathematics itself is not deduced rigorously from logic, nor existence from the possible. The diverse laws which preside over these successive forms of being constitute irreducible types, at the basis of each one of which is an unforeseeable experimental fact. Therefore, the idea of law and the idea of necessity are far from being identical ideas.

"In discovering all these fissures in the geometrical construction of things, M. Boutroux opens to liberty, of which contingence is, so to speak, the sign—and by liberty must be understood both human free will and divine Providence—all the possibilities it needs."

Obviously there is a certain relationship between M. Boutroux's doctrine of contingence and pragmatism. And inasmuch as Poincaré and Bergson, to whom William James (by his own admission) owes much, proceed directly from Boutroux, it is not unfair, perhaps, to conclude that this relationship amounts to a kinship of the very closest sort.

M. Boutroux is no less eminent as a historian of philosophy than as a philosopher. Since 1902 (when he retired from the Sorbonne) he has been the head of the Fondation Thiers, an institution designed to aid young men without means to devote themselves to the pursuit of pure learning. He is a member of the Academy of Moral and Political Sciences, and came very near being elected, a year ago, to a place among the Forty Immortals.

PARIS, FRANCE.

Insurgents We Are Watching

BY A WASHINGTON JOURNALIST

Senator La Follette.

INSURGING grows in popularity. Insurge against something, if you would be popular. And this is not such a bad condition, for, politely paraphrased, it simply means that the man of the hour is the man with convictions—and the courage of them. This is but the natural result of the fact that, during the strenuous few years past, we emerged from innocuous desuetude. We have acquired a taste for "something doing" and an appreciation of the man at the wheel who is doing it, even tho we may not always approve of the course he takes. We have discovered that the man who makes the wheels go round is the man to watch—the man worth watching—whether we support or oppose him; and that the consensus of insurging effects composite progress.

To this changing viewpoint is partially—not wholly—due the increasing strength and influence, in the Senate, of Robert M. La Follette, of Wisconsin.

La Follette is still serving his first term, but he began early and often, and in living down—and up to—that vigorous opening he has to his credit a greater victory in the Senate itself than he or many of his friends fully realize. He Lochinvared into Senate shades with the flush upon him of five triumphant years as Governor of Wisconsin, where he had accomplished so many things—all making for good government—that his name was already a watchword. Wonderful things were spoken of him—and more expected of him the moment he wrapped the toga about him. La Follette himself expected too much of himself—too speedily, at least—and in an effort to come up to those expectations

ROBERT M. LA FOLLETTE.

he overshot the mark a little before he found his footing on the new soil. He came charged with the mission with which he had forged his way to the front in Wisconsin, in the course of which Wisconsin assumed the foremost place among the States in progressive legislation. He came—he said it to me himself—ready to sacrifice everything to the accomplishment of that mission. He was so eager, so enthusiastic, so determined, that he came near sacrificing everything all at once, himself and his mission included. Had it been any one but La Follette—had he been any less devoted to his convictions and courageous in them—he would have succeeded at least in completing the sacrifice; for he startled the sedate Senate, and several times called down upon himself incidents calculated to crush—any one but La Follette.

He has better than weathered the gale, for he is stronger in the Senate today than ever before—and he will be stronger tomorrow than he is today. More than that, his "mission" has materially broadened, and his methods of manipulation have materially improved, while his convictions and the courage of them have not flagged an atom. He has gathered about him a progressive element, in which he is recognized as the pioneer insurgent, who for some time insurged all alone; and the mighty, who hold the citadel, have to acknowledge that his power must be inventoried.

Outside the Senate La Follette was appreciated from the first. The people realized that his convictions were all for the public good and that he was their champion. He is an ideal insurgent—one of the most cordial men in all the world to meet; the smilingest reformer on record. His face is strong, round, smooth-shaven and made for smiles. He is short and solid, with lungs which harbor a voice that rolls like thunder when he rises to occasions. A shock of dark-brown, curling hair dashes back from his forehead like a lion's mane. He is frank, earnest and appealing to the last degree; a unique personality, sometimes difficult to understand, but scintillating energy, with endurance to speak for eighteen hours or more at a single stretch, and come up out of defeat at the end of it as genial and smiling as ever, with a fresh four-leaf clover in his buttonhole. He has frequently denied the perennial rumor that at some time past he was on the stage, but he cannot deny that in the comedy—or tragedy—of life he is essentially a great and effective actor.

La Follette is a product of Wisconsin from start to finish. He was born in Wisconsin fifty-four years ago, educated, college graduated and admitted to the bar in Wisconsin, and he thinks more of Wisconsin today than of anything else in the world except his mission. He is an insurgent for just so long as things that are conflict with his conviction of what they should be.

Augustus P. Gardner, M. C.

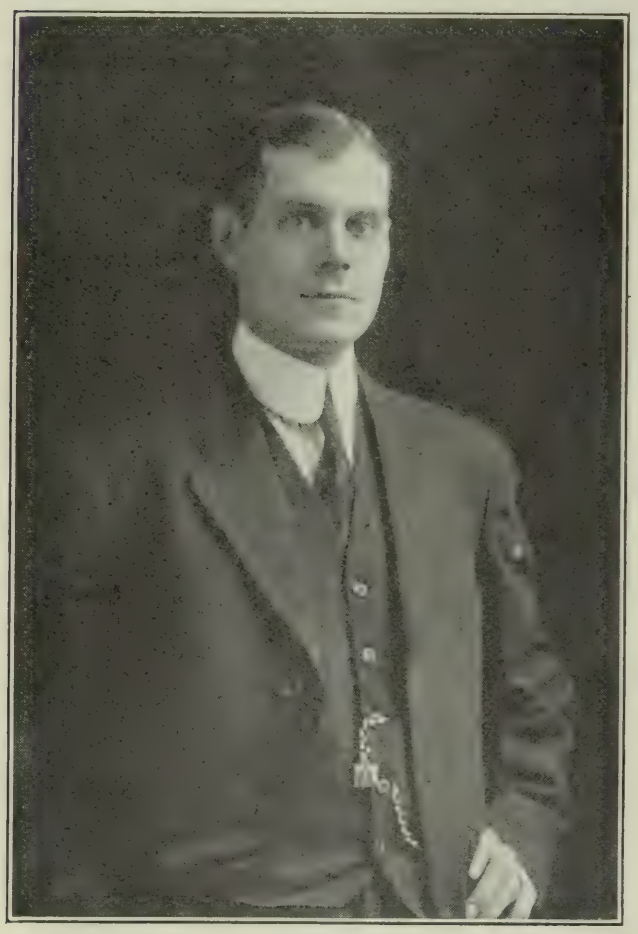
The big battle, temporarily suspended in the House of Representatives with the fall of the Committee on Rules, has brought graphically before the world the band of insurgents at the other end of the Capitol. More and more sharply defined among them is the figure of Augustus P. Gardner, of Massachusetts—

"Captain" Gardner they call him 'round Gloucester, where they pride themselves upon owning him. And that is all right, too, for he has been a soldier, and a good one. He was captain of Company E of the Eighth Regiment, and during the Spanish War got 'way beyond the breezes of Chattanooga, right out on the firing line, where he won high commendation from General Wilson, under whom he served as assistant adjutant-general.

Mr. Gardner is "a gentleman by birth and education," with all the requisite incidents and accessories—Boston born, 1865; Harvard graduated and degreed; member of the 'varsity baseball team, and one of the cracks of the famous Myopia Club polo team, with a life of indolent luxury wide open-doored to him. He looks the part better than he looks the insurgent, but he had it in him and it has come out effectively. He began at the start of life to take eager and active interest in affairs about him, and his vigorous characteristics have constantly inspired his associates to fresh energy; so that with every step he has taken into broader fields he has found himself welcomed as a valuable addition to progressive elements.

Copyright, 1901, by J. E. Purdy, Boston.
AUGUSTUS P. GARDNER.

Mr. Gardner is a shrewd and careful student of conditions and a fearless advocate of his convictions. He has pronounced views on all important subjects and is quick and keen in defending them. He is an exceptionally good speaker, well built and well voiced for impressing those who hear. He is instantly ready with the right words well woven into strong paragraphs. This was graphically illustrated when Representative Cooper suddenly called upon Mr. Gardner, during the recent all-night session of the House, to account for his loss of committee influence. It was one of the most dramatic incidents of the dramatic night. Standing less than five feet from the Speaker, tho an insurgent and in the heat of the insurgent fight, Gardner exonerated Cannon, declaring that he had himself requested the deposition that he might be free to act against the Speaker and the rules.



Mr. Gardner evinced the same qualities in the Massachusetts Legislature in 1900 and 1901, and when Justice Moody resigned from Congress to take a position in the Roosevelt Cabinet, he had made himself logical successor and came to the House of Representatives, where he is now serving his fourth full term. His most important work has been connected with the Committee on Immigration. It was in connection with his bill providing for an educational test that he first came into vigorous conflict with the Speaker and the oppressive power of the rules. He emerged from it not only victorious, but a convert to insurgency. His views upon the subject are clear, defined and even more revolutionary than those held by many of the progressive element; nevertheless there are few who are held in such high esteem by all members of the House. In evidence, Gardner has the unique distinction of being the only insurgent ever called upon by Speaker Cannon to preside in the chair during his temporary absence. It may have been coming events casting shadows. Who knows? Sure it is that a better or more generally respected Speaker it would be difficult to find.

Mr. Gardner has one rather serious handicap, however. He says that the

bitter is so overbalanced by the sweet of it that there is no comparison. Still it stands — Captain Gardner's handicap. He is a son-in-law of Senator Lodge. Careful investigation shows that he has always been capable of carrying his own colors, but whenever their ways go on together the glory naturally reverts to Lodge, and when they pull apart people are prone to say some other things. Obviously, in insurgency, Gardner stands upon his own feet, and it is worthy of note that he never stood firmer in his life.

Louis Russell Glavis.

Speaking of insurgents, with the courage of their convictions, young Glavis,

Copyright by Harris & Ewing.
LOUIS RUSSELL GLAVIS.

who occupied the witness stand in the Ballinger-Pinchot investigation for an interminable time, has made a name for himself, insurging against what his convictions condemned in the course which was being followed by the Interior Department. He insurged it all alone for some time, and gained a point or two; then, finding himself failing, he called on the Forest Service for help, and together they insurged *pro bono publico,* till the fight invaded too wide a field, and the whole matter has fallen into the hands of an investigating committee.

Glavis was born in Maryland some twenty-seven years ago. His father, George O. Glavis, was a prominent lawyer of Washington—leading representative of the transatlantic steamship companies. On the death of his father, 1898, Col. L. F. Livingston, Member of Congress from Atlanta, Ga., an intimate friend, became guardian of the son, and young Glavis was educated at private schools in Washington and at the Lawrenceville Academy, in Massachusetts. He was only seventeen when he started for the Wild West and began ranching in Idaho. Two years later he returned to Washington for appointment as examiner of the Chippewa Indian lands in Minnesota, which brought him into intimate familiarity with timber estimating and public land surveys. After two years at this he was made special agent of the General Land Office, and worked in Montana, Idaho, Washington and Oregon. In 1907 he was promoted to be Chief of the Field Division of the California Division of the General Land Office, in charge of special agents working in California and Nevada. He was later transferred to Portland, Ore. In 1908 he was given jurisdiction over Alaska and made his headquarters in Seattle.

Very few agents of the Government have traveled as extensively and carefully as Glavis thru all of the regions included in the controversy now waging, and few have practical information equal to the education he has received, first hand, during the performance of these duties. Neither was he a novice on the witness stand, for he assisted Francis J. Heney in most of the famous land-fraud trials in Oregon. He was well equipped to discover the course against which he protested so vigorously—even to taking his contentions to President Taft—and well prepared to defend them before the committee of investigation; but many a man even better fitted and equipped might have made a failure of it where Glavis won absolute admiration,

even from his most vigorous cross-examiners. He is as cool, careful and self-reliant a witness as ever occupied the stand. He was forced to cover a wide field of inquiry and cover it with absolute accuracy; with a dozen or more of the best lawyers in the country ready to discredit him, either from a sense of duty or inclination, and every one of them with specific tangles which he was called upon to untwist.

Glavis is not a large man. He has a boyish face, smooth shaven, with dark hair and eyes—earnest, frank and attractive. He speaks slowly and with evident care, impressing one with the fact that he believes what he says. His voice is always low, his good nature amazing, his memory and self-control something rarely equaled. The large room in the Senate Office Building was packed to suffocation every day when Glavis was on the stand, and no one listened thru those days without feeling that the quiet young fellow perched in the big armchair was a wonderful and interesting witness. Questioned and cross-questioned by Senator Nelson, one of the best lawyers in the country, pulled one way and another by Senator Root and Representatives Olmsted and McCall, and mercilessly quizzed by Vertrees, Secretary Ballinger's lawyer, he remained perfectly calm and deliberate, never trapped and never swerving a hair's breadth from previous assertions. Sometimes he played with a pencil, sometimes twisted a rubber band or turned the leaves of a book as the questions were fired at him; but always his answers were in the same quiet, courteous, self-reliant way, often accompanied by something very like a smile. Glavis was almost unknown six months ago, but he will go into history as a wonder among insurgents.

WASHINGTON, D. C.

Why East and West Differ on the Conservation Problem

BY LESLIE M. SCOTT

[The following article is by a member of the staff of the Portland *Oregonian* and gives an admirable summary of the Far Western view of the great problem of national conservation.—EDITOR.]

THE purpose of this article is to suggest that the Pinchot conservation idea of Eastern States antagonizes the Far Western idea of that subject.

In the East, Pinchot conservation means resistance to private greed and corporate fraud that have sought to despoil and waste the public domain, at the expense of the public.

In the Far West, Pinchot conservation is held to mean obstruction of settlement and public progress that comes from opening of new lands.

Far Western States, like Oregon and Washington, which contain the largest forest areas and the largest water powers in the United States, prefer State conservation to Pinchot or national conservation.

In the Western mind, purchase of land from the United States at $1.25 or $2.50 an acre for settlement is in accord with the good and lawful policy of the nation and should continue.

More than one-fourth the land of Oregon—16,221,000 acres—is locked up within government forest reserves; also more than one-fourth the land of Washington—12,065,000 acres. The Government holds other large slices in withdrawals for water power sites, unopened Indian reserves and irrigation projects, which latter, especially in Oregon, will be carried forward, goodness knows when. The Southern Pacific Railroad holds in Oregon, as a big reserve of its own, 2,000,000 acres of the finest land in the State, granted by Congress in the early '70s, and refuses to sell. Private and

corporate timber land tracts aggregate many million acres more. Five wagon road companies in Oregon own immense areas of Congressional-grant land.

In brief, out of 61,000,000 acres of land in Oregon, fully one-half, if not more, is locked up from settlement and much of the remaining half is arid, barren and bleak. Much of the forest reserve land could be opened to settlement without wasting timber wealth, for a large part of it has few or no trees and other areas, extending down to the base of the mountains and into the valley, will produce more wealth with cows and potatoes than with forests. Vast mountain regions are unfit for farming; fit only for forest. These conserved will yield the people timber forever. Pinchot officials say the law authorizes homestead settlement on government reserve land which is suitable for agricultural use, but determination of this matter rests with Pinchot officials, and few admissions into forest reserve land are desired by settlers, under conditions that prevail, and very few are allowed.

These same restrictions exist in other Western States, but the effects are nowhere more glaring than in Oregon. Here Americans organized their first political community on the Pacific Coast in 1843. Yet in population and growth Oregon is last of the Pacific Ocean States. Its aggregate area barred from settlement amounts to 50,000 square miles. This exceeds the total area of the State of New York, or Virginia, or Pennsylvania. It exceeds the combined areas of Connecticut, Massachusetts, Vermont, New Hampshire, Rhode Island, Delaware and New Jersey. It almost equals that of Alabama, Arkansas, Illinois or Iowa. The nation has bestowed vast parcels of Oregon on grabbers and selfish corporations; and now "Pinchotism" steps in to lock up the rest from the people's uses.

The taming of land requires patient, hard work and is accompanied by privation and stress bordering on poverty. This development Oregon and Washington need and demand. Land laws allow it, but officials have suspended the laws in answer to a clamor in the East from persons who know little and care less about Far Western efforts for progress and upbuilding, and imagine conservation means simply protection of the public domain from "spoliation." Meanwhile, tens of thousands of the most vigorous citizens of the nation—of the type that "saved" Oregon and Washington—are going to Canada to make homes under the British flag, on bleak and wind-swept wastes. This land they obtain by payment of a nominal sum of money—the Canadian Government virtually gives it to them, but they pay a higher price than any gold is worth, in frontier toil and suffering. The laws of the United States also virtually give wild land to settlers and have done so for generations in all the States west of the Alleghanies. But settlers paid for it amply in hardships and so they must still do. Yet a howl goes up in Eastern States against this application of the old law, from persons who do not understand. Busy officials think themselves called upon to stop this settlement of the public domain—this "robbery of the people," they hear it called.

The real robbery was perpetrated by land-grabbing syndicates, working under stupid laws of Congress. That law-making body and officials in the national capital blazed the way to the nation's land-fraud scandal. The lien land law was an incubator of fraud. Now the revolt against these abuses has rushed to the other extreme, to the detriment of Far Western States.

The people of Oregon and Washington think they should have something to say about control of their forests, lands and streams. Their efforts have given these resources most of their value, and, back two or three generations ago, their patriotism snatched this country from Britain to the United States.

Further, they want the resources of their States administered in accordance with local needs. In the office of the forest service in Portland is an army of "foreigners" ruling over their lands and forests and streams. In other words, the great resources are in the hands of men who have no abiding interest in the growth of this Northwest country. They wish to "hold their jobs," and to do this they seek to please their superiors in

Washington by showing how busy they are preserving the public domain from "spoliation." But they are men who keep the stable door locked after the horse is stolen. Big frauds have taken vast areas of the public domain, but on this account are settlers to be barred out of the remaining land, the laws suspended and a land system reversed that has made other States great and wealthy for generations past?

The people of the State of New York own 1,641,523 acres of forest reserves in the Adirondack and the Catskill mountains, according to the last message of Governor Hughes. The Governor urges a project for increasing this total area to 4,000,000 acres, and for developing 246,000 horse power from waters of Hudson River. This work in New York will be State conservation. It will be carried on for lasting benefit of the State of New York. Local desires and needs will be conserved along with the resources. The people of New York, of course, would not hand this business over to the Pinchot bureau in Washington; they have their own ideas of how they wish their resources conserved and what other things are to be safeguarded along with them. Resources of Oregon and Washington, and other Western States, however, are managed to suit non-resident ideas in the national capital. They are taxed to pay salaries of a host of officials whose purposes are elsewhere. The people of Oregon and Washington, unlike those of other States, must pay toll for the use of their own streams and forests to the people of the United States and a swarm of high-salaried officials.

Water power is a local utility; it cannot be transmitted long distances; its conservation is naturally a local matter, and the laws of the nation and the States have always regarded it as a subject solely of State supervision and legislation. The laws of Oregon and Washington are fully adequate to protect the public, perhaps more so than those of New York State are adequate to protect the public of that commonwealth. Just think of taxing the people of New York to pay an army of inspectors and agents and conservers in the national capital to look after the public forests in the Adirondack and the Catskill mountains and the water powers of the Hudson River!

National control of State resources is assumption of authority unauthorized by the Federal Constitution and violation of the laws and the precedents of the nation. This authority is not contained in the enumeration of powers conferred on the national Government. To make this doubly sure, two amendments to the national Constitution specifically declare: "The enumeration in the Constitution of certain rights shall not be construed to construe or disparage others retained by the people"; and "The powers not delegated to the United States nor prohibited by it to the States are reserved to the States respectively or to the people."

If Pinchot conservation is unconstitutional it is also contrary to the statutes of Congress. Altho the public domain is supposed to be administered according to the acts of Congress, the Forest Bureau makes rules and regulations which have all the force of such acts and even take precedence over them. The laws guarantee every adult citizen the privilege of acquiring tracts of the public domain by complying with the laws, but the Pinchot bureau steps in and suspends the acts of Congress. This is wrong policy. The old method should be restored. Settlement should be encouraged. It has built up every State in the Union. Then why not these Western States? The "people" would not lose. Receipts from land sales have fully indemnified the nation already. New land should be put to uses of wealth production. Cheap land, sale and use of lands containing the great resources of the country have given the nation its immense development. The policy has increased our population by tens of millions and our wealth by hundreds of millions. Yet Pinchot conservation tells us now that this was wrong; in substance, that the country would be better in its savage state. We are led to believe that it was a mistake to destroy the original fine timber that stood on the site of the metropolis of Oregon.

PORTLAND, OREGON.

Literature

Modern Religious Problems

THERE is no doubt that the religious life of the Western World is passing thru a great crisis. The progress of science, history and biblical criticism, all based on the doctrine of evolution and the uniformity of nature and all emphasizing the tendency toward democracy, have produced a new atmosphere of thought and feeling in which the old theological dogmas, which once were revered as the very voice of Jehovah, now produce the sensation of "sounding brass or a tinkling cymbal." For a long time the growing consciousness of the inadequacy of the old views produced little but destructive criticism, and in the confusion and uncertainty that have resulted many have lost their faith, some have doubted whether Christianity itself would be able to weather the storm, and all have looked with longing for some certain issues which would furnish a firm standing ground for future faith. To be sure, great religious leaders have long since arrived at conclusions adequate for the needs of a larger religious growth and activity, but in this new, democratizing age, wherein all religious authority is being slowly sapped away, nothing can be settled without an appeal to the people—"the common man." For a generation the prejudices and fears of the laity have been evoked to render inoperative the results of scholarship and to prop up a shaky dogmatism. Now the tables are turned and appeals are being made to the intelligence and moral earnestness of the average man to substantiate the claims of the new theology and to reconstruct religious life on this broader foundation. Since the beginning of the publication in Germany of the "Religionsgeschichtliche Volksbücher," many of the younger preachers and workers in America, who have been alive to the changing thought and new religious problems, have wished for a similar series of popular but authoritative books that would meet the conditions in the English-speaking world. With some encouragement from a group of such friends, and with the successful German endeavor before him as an incentive and a model, Dr. Ambrose White Vernon, the brilliant young pastor of the Harvard Church, Brookline, has undertaken the editorship of this series of handbooks on *Modern Religious Problems.** Dr. Vernon's intellectual equipment, acquired as a student in the best educational institutions of America and Germany, and his knowledge of the present need, obtained thru fourteen years of service in three pastorates and two professorships, are guarantees of a high standard of scholarship and a proper emphasis on things most vital, and encourage the hope that we may have here a worthy, consistent, and intelligible presentation of the advance positions in religious reconstruction. A careful reading of the volumes so far published satisfies all reasonable expectations. One is imprest with the fact that the editor has been able to enlist the services of such eminent specialists in this popularizing endeavor. The authors of these monographs are men of world-wide reputation as scholars and investigators in their special fields, yet their work here is, for the most part, untechnical, while bearing the stamp of a deep sincerity and thoro first-hand knowledge. It is surprising how much clear thinking and compact information Professor Knox has put into his hundred pages on *The Gospel of Jesus,* and no exposition of a theological doctrine has ever brought a deep subject more into touch with real life than President Hyde's admirable discussion of *Sin and Its For-*

*MODERN RELIGIOUS PROBLEMS. *Edited by Ambrose White Vernon.* The Earliest Sources for the Life of Jesus, by F. C. Burkitt, D. D., Professor of Divinity in the University of Cambridge. The Founding of the Church, by B. W. Bacon, D. D., Professor in Yale University. Paul and Paulinism, by Rev. James Moffatt, D. D., Scotland. The Historical and Religious Value of the Fourth Gospel, by Prof. E. F. Scott, Queen's University, Kingston, Canada. The Gospel of Jesus, by Prof. G. W. Knox, Union Theological Seminary. Sin and Its Forgiveness, by President W. D. Hyde, Bowdoin College. The Church and Labor, by Charles Stelzle, Superintendent of the Department of Church and Labor of the Presbyterian Church of the United States. Boston: Houghton Mifflin Company. Fifty cents net, each.

giveness. For a clear, succinct statement of the present status of the synoptic problem the intelligent reader may consult with perfect confidence Professor Burkitt's *Earliest Sources for the Life of Jesus,* and a reading of *The Fourth Gospel,* by Professor Scott, will reveal the larger religious possibilities of that book when critical results are accepted. Of course, not all the volumes attain the same high standard of excellence. Professor Bacon has too many technical allusions, and *Paul and Paulinism* is too abstract to prove easy reading, but the persevering reader will be repaid for his effort in working thru these books. Mr. Stelzle's *The Church and Labor* is a superficial handling of the subject, written from a confessedly partisan point of view, but perhaps its stimulating effect will lead to a more thoro application of the ethical principles of the Gospel which the new age is emphasizing afresh. The series is heartily commended to all who would understand the results of biblical criticism, and who desire to find the permanent foundations and vital power of religion as viewed by men who have been emancipated from traditionalism and who believe the changes in the modern world mean progress and not decay. The volumes are small, neatly bound, and finely printed on good paper at a price low enough to make them popular.

A Martyr of Women's Wrongs*

Had there been no marital and maternal tragedy in her life, Mrs. Norton would have been remembered as one of the Whig ladies who were active in support of the Reform Act of 1832, as the friend and confidante of Lord Melbourne, as an authoress of some note who wrote popular novels and songs, and as one of the beauties who graced English society in the first half of the nineteenth century. But Caroline Sheridan, at nineteen years of age, made shipwreck of her life by her marriage with George Norton, and Sheridan's brilliant, warm-hearted, hot-tempered, impatient granddaughter was made to feel to the utmost what the subjection of women meant in actual practice to the wife of a mean-spirited, jealous tyrant. Yet it was not as a wife so much as in her position as a mother that Mrs. Norton felt the injustice of English law. Had she had no children, or had she been indifferent to her children, she might have escaped from her husband's tyranny; in any case, he would have lacked the keenest weapon with which he was able to smite her. "A mother as such," wrote Blackstone, in his "Commentaries on English Law," which were published in 1765, "is entitled to no power, but only to reverence and respect." Reverence and respect were conspicuously absent from George Norton's treatment of the mother of his children, and Mrs. Norton was made to feel bitterly that she had no right even to see them, or to know of their well-being, when her husband's cruelty and ill-usage had forced her to leave his roof. To prevent his wife from obtaining access to her children, George Norton placed them in the care of his brother, Lord Grantley. He endeavored to blacken his wife's character and to destroy her reputation by bringing a suit for divorce. In those days divorce could only be obtained by Act of Parliament, and there were two preliminary steps to be taken before an act could be introduced in the House of Lords, where all the actual consideration of this class of legislation took place. The first step was to bring a suit for damages against the co-respondent, and this suit decided, an action had to be brought in the ecclesiastical court at Doctors' Commons. At first George Norton was at a loss to decide upon a co-respondent, and it was probably advantageous to Mrs. Norton that the choice fell upon a man so prominent in English life as Lord Melbourne, who had long held the position of family friend and fatherly adviser to Sheridan's granddaughter. No shred of evidence was forthcoming to support the accusation beyond the known friendship of Lord Melbourne for Mrs. Norton, and the suit was dismissed, leaving Mrs. Norton—who, being, according to the law, no party to the action, could have no one to represent her—with what was practically a complete vindication of her

*The Life of the Hon. Mrs. Norton. *By Jane Gray Perkins.* New York: Henry Holt & Co. Pp. xiv, 312. $3.50.

character. Foiled in this action, George Norton showed himself even more bitter and tyrannical. He seized her dresses, her jewelry, the wedding presents from her own family and the small amount of money left her by her father. All these things were legally his, and he even took possession of her manuscripts and copyrights. Caring comparatively little about these matters, Mrs. Norton now concentrated all her energies on obtaining an amendment to the law regulating the custody of children.

It was nothing new for an Englishwoman to interest herself in politics when Mrs. Norton began her agitation for the Infant Custody Bill. The latter part of the eighteenth century and the first half of the nineteenth was a time when the legal status of married women in England was at its lowest ebb. Dower rights in real property had gradually been legislated away. To personal property married women had no right either by statute or common law, and, as has been said, they had no rights whatever in their children, the husband and father being at liberty to send them away from their mother, or to place them in any custody that seemed good to him.

In 1838, within two years after Mrs. Norton had opened her campaign, a very small concession was made to the mothers of England in the Infants' Custody Act, which permitted an innocent mother, separated from a presumably guilty father, to retain possession of her children until they were seven years of age, and after that age to have a right of occasional access to them. Nearly twenty years later Mrs. Norton also helped to bring about the passage of the Divorce Act of 1857, which superseded the old plan of divorce by Act of Parliament. Under the new act it became possible for a woman, if she had money enough to stand the heavy costs of the trial, to obtain a divorce on the ground of adultery coupled with cruelty or desertion, while a man was given the right to divorce his wife for mere adultery. Divorces had been few in the years between 1715 and 1857, when relief could only be obtained by an appeal to Parliament. Only 250 divorce acts were passed in these one hundred and forty-two years, and of these 250 divorces, only four were granted to women. The unfairness of the new law seemed like justice compared with the unfairness of the House of Lords when it controlled divorce, and Lord Lyndhurst was not intending to cast any special reproach on the noble Lords in 1857 when, in debating the divorce bill, he quoted what he termed the "trite but not altogether unjust observation that men made the laws and women were the victims. It is true," he added, "that in old times the House, composed of men only, not exactly administering justice, but legislating on this subject, legislated in favor of their own sex and against the other."

Intimate Recollections of Joseph Jefferson. By Eugénie Paul Jefferson. New York: Dodd, Mead & Co. $3.50 net.

We do not believe that any new book about Joseph Jefferson will add much more to the personality of the actor; it is our feeling that he very fully and very excellently measured his own human and spiritual characteristics in his "Autobiography"—a document of unique perspective and of genial good will. William Winter's "The Jeffersons" clearly established the hereditary strain of comedy in this family, even unto the fourth and fifth generations. Francis Wilson's "Reminiscences of a Fellow Player" presented a many-sided view of the actor's tastes; finally, this recent volume by the daughter-in-law of Joseph Jefferson adds certain intimate lights and shades which only an inside association could gain. Still we feel that Jefferson is definitely "fixed"; whatever is published now only heightens at the risk of repeating. As an actor, he is one with Rip Van Winkle; some unthinking beings would believe him to be the author of this Katskill legend. As a writer he was confident that his life-fame would rest upon the "Autobiography." As a painter he excelled to a marvelous degree, being also a fastidious collector. As a clubman his name is part of the cornerstone of the Players. As a fisherman his person is linked with that of the ardent angler. Grover Cleveland. Mrs. Jefferson presents these phases once more, and tho often it is a twice told tale, it is holding in interest and fraught with delightful humanity.

The Conquest of the Missouri. By Joseph Mills Hanson. Chicago: A. C. McClurg & Co. $2.

Ostensibly a life of Capt. Grant Marsh, a famous Missouri River steamboatman, this book is much more than a biography. It is a series of historical sketches of the opening of the Missouri River country, more interesting than romance and yet scrupulously exact in statement. Few writers are at such pains to insure accuracy. Each of his chapters has been read and criticised by men and women competent, from first-hand knowledge, to pass upon his statements. The account of the Terry expedition and the Custer massacre of 1876 is particularly full and instructive. Much that is new—at least much that has not before appeared in relations of that tragic episode—is printed here, and many doubtful or controverted points are cleared up. The author does not deem it his duty to pass upon the matter of Custer's culpability. He quotes the unfavorable opinion of Captain Marsh, who commanded the supply steamer "Far West," which entered the Big Horn on the day of the battle, and which carried back Reno's wounded men; and he repeats from Captain Marsh's lips the statements of Gibbon and Terry. But he is careful also to show, from the journal of Lieutenant Bradley, what was the current feeling of the army, and to indicate, moreover, in various ways, the view that Custer did no more than was expected of him. The result could not have been divined since no one knew what an enormous force of Indians had left the agencies for the warpath. Tho the book is so largely a record of Indian campaigns, it does not forget its subject, the life of the steamboat captain, whose exploits it follows to the end of his active career. It is a fascinating work.

Social Development and Education. By M. V. O'Shea. Boston: Houghton, Mifflin Company. $2.

In *Social Development and Education*, Professor O'Shea brings together the results of his wide experience and observation. In Part I, he traces the social development of the child. He undertakes to determine the order of appearance of the child's instincts, and the natural order of their development; he tries to find out what the child is by nature, rather than what popular opinion says he ought to be. By far the best part of the book is the second part, in which the author undertakes to outline a plan and method of education, in the light of our knowledge of the developing child, that will lead to social efficiency. He makes a careful analysis of the causes of decay of ancient and modern nations. He finds that when a nation is young, her people are thrifty and efficient, possessing the better social virtues. But when the nation reaches maturity and achieves material success, her people begin to degenerate socially and morally, largely because they do not know how to use their leisure time. The remedy, we are told, is to develop and train the intellectual and esthetic natures of the people. This is the great function of education, to develop high ideals and to train for social efficiency. Professor O'Shea believes that after a child's twelfth year, all his studies should in some definite way train the child for his career, and emphasizes the importance of the manual training school. Greek and parsing and algebra will never keep the village boy from drink and things worse. There is a full and helpful bibliography and over a hundred pages of exercises and problems. The book is written in a popular style, and is intended to be useful to the parent and teacher as well as to the student of psychology and sociology. While the book is not science—there is as yet no science of social development—it contains the observations and opinions of a competent observer of children, and one of our foremost writers in the field of education.

Rara Arithmetica. A catalog of the arithmetics written before the year MDCI, with a description of those in the Library of George Arthur Plimpton of New York. By David Eugene Smith, of the Teachers' College, Columbia University. 8vo, pp. xiii-507. Boston: Ginn & Co. $4.50.

Such a volume as this is rarer than rare arithmetics. It is primarily the work of a great collector of school books from the beginning of printing and from the manuscripts that went before; and the present volume provides a sumptuous catalog of that section of his library

which has to do with arithmetic. This is by far the largest collection of old arithmetics ever made, and of the 550 works printed before 1601, Mr. Plimpton's library contains all but a very few, besides manuscripts on arithmetic. The oldest book is in Italian, printed in 1478, and then follow three others from Italy before we come to a German one. It is no small task in bibliography which Professor Smith has accomplished, to prepare so complete, so admirable a description of these old works; and very lavishly have its pages been illustrated with plates and fac-similes of the title-pages, and specimens of the mathematical processes, and also plates of the manuscripts included. Only two or three collections of the sort have been previously made, and these have been scattered by sale. Such another collection as this of Mr. Plimpton's can never again be made, and it is much to be desired that it may not follow their fate, but may finally reach a safe resting-place in a good library. We may add that the present volume is an admirable piece of book work.

English Spelling and Spelling Reform. By Thomas R. Lounsbury. New York: Harper & Bros. $1.50.

Nothing so comprehensive and so scholarly as this book has appeared on the subject of spelling reform. The language is not always as considerate as it might be; plain words are spoken to and of the typical champions of conventional orthography. But Professor Lounsbury confesses to impatience; he has heard and read so much of the ordinary dogmatism on the subject that he believes hard words are needed. He deplores the prevailing ignorance on the subject, and it is the hopelessly ignorant who are most determined upon retaining our present forms of spelling. "There is no subject upon which men, whether presumably or really intelligent, are in a state of more hopeless, helpless ignorance than upon that of the nature and history of English orthography." All the arguments—or what pass for such—of the conservatives he takes up and picks to pieces. He shows alike the absurdities of our spelling and the absurdities of the arguments for the retention of present forms. The anomaly of the fact that his book is printed in most orthodox orthography does not escape him; he admits his inconsistency, even cowardice; but he insists that in order to get a tolerant audience he must conform to usage. His hopes of reform are built upon the rising generation. Grown men and women are too much attached, from the sentiment of association, to the present forms. But the present situation cannot last. He writes:

> "I am confident that the English race will not be content to sit down forever with a system of spelling which has nothing to recommend it but custom and prejudice, nothing to defend it but ignorance, nothing but superstition to make it an object of veneration."

Virginia's Attitude Toward Slavery and Secession. By Beverley B. Munford. New York: Longmans, Green and Co. $2.00 net.

The publishers of this book have fortified the announcement which accompanies it with testimonials from a number of eminent gentlemen to whom its proof sheets were sent in advance. In the face of the formidable front which these present we rejoice in the anonymity which enables us safely to doubt whether scholars will read the book or laymen can. It is a disjointed agglomeration of quotations and ideas, many of them suggestive and some of them new, and all used to down an interpretation of Virginia history which no well-informed historian has ever held. It is quite true that Virginia was lukewarm in secession. Her social and economic cleavage had made a division in her councils for many years before the war. Her western end could not be detached from the Union even by the secession of the State. It is beyond question that Virginia did not join the Confederacy until coercion had been resolved upon by Mr. Lincoln. But who shall say that her loyalty to the Union and her indifference to slavery, upon which Mr. Munford insists so strongly, would have kept her in the United States if the Confederacy had got away? The book is a useful repository of quotations and exploits the results of wide reading, but its arrangement is very bad, and its main contributions are by no means as new as the author thinks.

Literary Notes

....The author of *The Essential Calvinism* (Pilgrim Press, 75 cents net), Rev. J. Selden Strong, shows a good deal of undigested knowledge about his subject, but his book fails to be interesting because of its chaotic arrangement, clumsy style and homiletic padding.

....Those of our readers who have been interested in the series of articles on the cost of living and wish to study the subject further will be glad to know that a *Select List of References on the Cost of Living and Prices* has been prepared by the Librarian of Congress and will soon be on sale by the Superintendent of Documents, Government Printing Office, Washington.

....The *Handbook of the United States Public Documents*, prepared by Elfrida Everhart and published by the H. W. Wilson Co., Minneapolis, is not only of great assistance to librarians in handling this chaotic mass of literature, but is of interest to any one as showing the astonishing extent and variety of governmental productivity. Besides annual reports, bulletins, and the like, we count eight periodicals of varied contents, issued monthly or weekly, and very similar to privately conducted magazines.

....It was a happy thought of Rev. Arthur Rogers to institute a comparison between Isaiah and Robert Browning. Both were men of rugged mold, of urgent speech, and of daring spirit. Mr. Rogers's comparative study, the Bohlen Lectures for 1909, are full of suggestion, and will appeal both to students of the greatest of the Hebrew prophets and to admirers of the most militant of the English poets. The volume is entitled *Prophecy and Poetry: Studies in Isaiah and Browning*. (New York: Longmans, Green & Co.).

....Rev. Charles R. Brown, the author of *Faith and Health* (Crowell, $1 net), claims the right to discuss his subject by virtue of a diploma granted him twenty-three years ago on completing the courses of study prescribed for a Christian Science healer, and a record of twenty-one years of work, uninterrupted by a day's illness, made possible by the use of "those methods of which Christian Science is only an awkward and confusing caricature." The book is discriminating and practical, regarding suggestion as a valuable healing agent, but the author deprecates the establishment of clinics by churches or ministers.

....The People's University Extension Society of New York, which is doing so much for manual training, has published a little book by Florence Kendrick Johnson, *How Shall the Little Ones Sew?* which is a practical text book for sewing schools and suggestive of new and better methods of work for all children of kindergarten age. Little children are not able to do fine work requiring tiny stitches without injury, and a sensible, physiological manual of work suited to their capacity is welcome. Little children should have large work; even their eyes are best suited for large general movements, and when the small hands have been called "clumsy," it is a confession of the educator's stupidity to be corrected by a more enlightened pedagogy. (Price, 10 cents.)

Pebbles

"Yes," said the reference, "when he was in our employ some years ago, he was not only trusted and tried, but also convicted."

Of all sad words
An agent e'er knew,
The saddest are these
I—O—U.

Hostess—It's beginning to rain. You'll get wet. I think you'd better stay to dinner.

Departing Guest—Oh, dear no! It's not raining so badly as all that.—*Sydney Bulletin.*

Casey—Ye're a har-rd worruker, Dooley; how many hods o'morther have yez carried up that ladder th' day?

Dooley—Whist, man! I'm foolin' th' boss. I've carried the same hodful up an' down all day, an' he thinks I'm worrukin'!—*Cleveland Leader.*

There once appeared at the back door of a house in Altoona a tramp who, to the mistress of the place, related a pathetic story of his troubles. This tale, however, did not greatly move the matter-of-fact woman, for she remarked dryly:

"That's the same story I had from the last hobo that passed."

"Indeed!" said the tramp. "Then, madam, I perceive that I have been unwise not to have had my history copyrighted."

Touched by his sad story, a Harrisburg woman recently furnished a meal to a melancholy-looking hobo who had applied therefor at the back door.

"Why do you stick out the middle finger of your left hand so straight while you are eating?" asked the compassionate woman. "Was it ever broken?"

"No, mum," answered the hobo, with a snuffle. "But during my halcyon days I wore a diamond ring on that finger, and old habits are hard to break, mum."

"He reminds me of Smith and his bad five-dollar bill," said Senator La Follette, in speaking of a corrupt politician who had come to grief. "Smith went to New York for the Hudson-Fulton celebration. He had in his pocket a bad five-dollar note. One night after a banquet he handed a cab driver this bad note by mistake. The driver gave him his change—a one-dollar bill—and whipped up his horse. Suddenly Smith realized what he had done.

"'Hey, there! Stop!' he shouted after the man. 'That bill's bad.'

"'It's good enough for you!' shouted back the driver, without stopping.

"And Smith, examining his change under a street light, found that it, too, was bad."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and club-bing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Holy Week in Pittsburg

A PURITAN progenitor of New England bore the name of Hate-evil Nutter. It was meant for a religious name, altho, accurately considered, it was merely ethical, for it bore no direct relation to God. An atheist could hate evil. Yet to hate evil is an obligation of religion as well as of ethics, for we conceive of God as absolutely ethical, and to be religious one must be ethical also. So Pittsburg celebrated Holy Week in a good, religious way. Its councilmen heard the preaching of John the Baptist, and they confessed their sins, dozens of them, in public, before the judge. And those that were still in office added their resignations from office to their confession of sin.

There has been no reduction, in hard times, of the old wages of sin; there has been no rise of its wages in prosperous times; for its wages remains fixt, permanent, established from the beginning at the highest notch in the scale. The Pittsburg sinners have begun to feel the death penalty. They have shivered in terror. They have fallen, struck insensible before the bar of justice. They have felt the fearful sting of shame following detected guilt. Worse than death is their plight. Their future life will be a living death. Wherever they go they will be crowned with a murky halo of confessed disgrace. They need no prison of stone walls and barred gates, for they have immured themselves apart from the sympathies of their fellow men, and have invited the whips of the furies to chastise them. The mark of shame they can never wash from their foreheads.

And yet they have confessed. But what a forced confession! In it is no healing. John the Baptist has done but half his work. There is a kind of confession that does not come from the heart, but from the scourge, and it worketh no real penitence, but only death. Even the John Baptist of Palestine was the imperfect forerunner, and his hastily baptized converts were to be followed by the disciples of a sounder teaching that really touched the heart.

Would we commiserate Pittsburg that she has gone out into the desert and confessed her sins? Not at all; we rejoice for her. We would that we might see the same sort of revival in Philadelphia and Albany and St. Louis and San Francisco. But no preaching of John the Baptist brings any such Lent of confessing crowds in these guilty cities. Happy Pittsburg! After her Good Friday may come her Easter of resurrection. Her confessions may be followed by another race of lawgivers, who shall extort no more than is appointed them, and shall be content with their wages. We shall have a cleaner Pittsburg, perhaps a cleaner Albany.

These corrupt, blackmailing councilmen, aldermen and legislators find their counterpart in corrupt promoters and lobbyists and corporate interests that try to buy legislation for their own profit. Not all of them; for there are those of less guilt who are held up, seized by the throat, and submit to purchase relief from mischievous legislation proposed just to extort money from them. They have not all the stern integrity of President Seward, who, with a true religious fervor, told his tempter to go to hell. It was the same answer that was once given before, "Get thee behind me, Satan"; and then Satan left the Master

and went back home. But there are those who do not wait to be held up and blackmailed by councilmen and assemblymen, who are not on the defense, but are themselves prowling about legislative halls, conscienceless wolves of finance, beasts of a fiercer breed, that feed upon the people. Those six Pittsburg and Allegheny banks were not held up and blackmailed; they were plain, dirty bribers, and they found men happy to be bribed—not so happy now, either the bank managers or the councilmen. Both sorts of criminals we are driving into retirement. Some confess; others are convicted. Whether it be confession or conviction, the April air will be clearer; the Easter season is happier.

Roosevelt's Anabasis

Mr. Roosevelt declares that he returns as a private citizen, but the people abroad will not have it so, nor hardly will the people here at home. The African natives insist that he is the American king, and the Egyptian authorities, Khedive and Sirdar, give him the honor they would give to a European monarch. It is curious, for he is a mere private citizen, like the rest of us, and he wants no more glory, but he cannot escape it. Here in the United States the politicians are keeping one ear open to listen for what he may say of conditions that he has not seen or heard of, as if wireless telegraphy had kept him in touch with every phase of politics that would have interested him mightily if he had been at home.

The reporters met him long before he reached Cairo, a crowd of them, but they got nothing. He was too wise to speak. He said before he left that any interviews with him that might be reported would be fraudulent. So now they have to concoct other stories out of meaningless events. For example, Secretary Straus has left Constantinople to meet him at Cairo, and there is much speculation as to what it means. It probably means nothing but mere courtesy. Mr. Straus was a member of President Roosevelt's Cabinet. He is now Ambassador to Turkey, and Egypt is nominally a part of the Turkish Empire. Mr. Straus goes to pay his respects to the distinguished visitor as he comes within the sphere of Turkish claims. Even more is made of the fact that Mr. Pinchot has gone to meet Mr. Roosevelt. So he has, and it may be that Mr. Roosevelt invited him—we don't know; but we are confident that it does not mean that the ex-President is about to join the insurgents in a denunciation of his successor or of any member of his Cabinet. He has a trust in President Taft, and will leave him to correct any mistakes into which his good nature may have led him.

President Roosevelt is a consummate politician of the best sort. He is a leader, not a trailer. He has broken more paths, set more precedents, than any of his predecessors. What he has done, not against the law, for the interests of the people, his successors will find or make law for. The people, even the people of the East, believe in him, and he, an Eastern man, is the idol of the Western States. So the politicians are anxious to learn what he will do, and the interests which he has attacked for the benefit of the people would be glad to sidetrack him, and do not like to see that he has returned in sound fighting trim from the jaws of the lion and the horn of the unicorn. But they are in a sad plight, for President Taft, tho in a different way, is carrying out the policy of his predecessor. We are not of those that after only one year of his term would allow that President Taft is a weak man, easily submissive to the influences that would divert him from his promised course. We will not hold him responsible for the sins of Congress in the new tariff law, even tho he has tried to make the best of it. It is not strange that he has sought to secure legislation thru the ruling Republican majority in Congress. It is not his business to make the laws; only to execute them. He does not think it his province to hold a whip or a club over Congress; it is enough to give recommendations and urge his measures. Other men, President Roosevelt and Governor Hughes, may appeal stoutly from their lawmakers to their people, and it is a good way, but not all executives believe it the best way. We shall give President Taft time to make good. He is not now a candidate for

the succession three years hence, nor is Roosevelt, and perhaps not Bryan. Let us be patient.

But Mr. Bryan's way is a good way, if one wishes to put himself in the way of being nominated as President. He goes on a trip about the world in the intervals between the nominations, but is back in time for the contest. Mr. Roosevelt comes back rather too early for such a purpose. And we have no idea that he intends or wishes to crowd out Mr. Taft as his own successor. And yet it will be in the mind of the people that Mr. Garfield went into the convention in honest support of another candidate, and was forced to take the honor himself. Precedents, however, are of no value, and prophesying so far ahead is futile. Mr. Roosevelt comes back from the Sudan with all his trophies, and while he is glad once more to shout "Thalassa!" as he comes out of the forest, and seems to see home near at hand, so we, the people, will respond "Roosevelt!" and give him the heartiest welcome.

A New Disfranchisement Plan

THE current and fairly successful way of disfranchising negroes in the Southern States is to make a general law excluding illiterates from the ballot, white or black, but putting the white voters back by a provision which admits those whose ancestors fought in the Civil War. These provisions are supplemented by the requirement of a receipt for a poll tax paid long before, and a system of registration so administered that it can shut out or admit a claimant at the will of the registrar. But these plans are beginning to fail, partly because the negroes are more ambitious to learn to read, partly because it appears that many white men are also disfranchised. Where the negroes are excluded the white vote is also very small.

This calls for some other scheme for restriction, and the Maryland Democrats have invented one. A bill for disfranchisement of the ordinary Southern sort was defeated at the last election, and now a new plan is presented, and is likely to be passed, which it is believed will make Maryland safely and permanently Democratic.

This, which was proposed by Delegate Digges, and which has been unanimously approved by the Democratic caucus, is as follows: Inasmuch as Maryland refused to ratify the Fifteenth Amendment, a law will be enacted which shall deny to negroes the right to be registered as voters in State elections. The Maryland Constitution gives the right of suffrage only to white voters; and after the law has come into operation excluding negroes from registration, a constitutional amendment like that lately rejected will again be presented, and can then be passed, as the negroes will be excluded from voting upon it. It is intended that these new measures will be applied only in State elections, while separate books for registration will be kept for elections for Congress and for President, at which negroes can vote, to avoid Federal interference.

Now, this plan has been approved unanimously in the Democratic caucus, and as Democrats have a three-fifths majority in both houses, it is expected that the measure will be enacted into law.

But would not a Federal court immediately pronounce it unconstitutional? The fact that Maryland voted against the Fifteenth Amendment does not justify Maryland in nullifying it. A State cannot nullify a provision of the Constitution of which it disapproves. The Fourteenth Amendment declares that "No State shall make or enforce any law which shall abridge the privileges of citizens of the United States"; and, if that is not definite enough, the Fifteenth Amendment is absolutely clear. It says:

> "The right of citizens of the United States to vote shall not be denied or abridged by the United States, *or by any State*, on account of race, color, or previous condition of servitude."

That is so plain that it cannot be dodged. The law would be a law nullifying the Constitution. It could not be maintained.

This illustrates the trouble with the Democratic party. Its strength is in the South, and in the South its main purpose is to draw a color line and shut out as many negroes as possible from the ballot. It is this perversity of the caste spirit, this flouting at democracy, which holds back many in the North from allying themselves with that party. Think

of the unanimity of this action in a border State, every single Democrat in the Maryland House of Representatives favoring this measure; not one to plead for equal justice for the colored man. And in the whole South no voice of a single leading Democrat is raised for equality of privilege. The negro has a long road before him before he can obtain a fair deal and secure equal administration of civil and political rights and privileges.

The Election of Mr. Foss

In the Fourteenth Congressional District of Massachusetts, last week, Eugene N. Foss, Democrat, was elected to Congress by a plurality of 5,640, to serve during the unexpired term of the late William C. Lovering, Republican, whose plurality had been 14,250. In sixteen months a Republican plurality of 14,250 had been displaced by a Democratic plurality of 5,640; the Republican vote had fallen from 20,959 to 9,340, and the Democratic vote had been increased from 6,709 to 14,980. The district is one in which a Democrat had never before been elected. In it are the three manufacturing cities of Brockton, Taunton and Attleboro. The political change which has taken place since the election of Mr. Lovering must be regarded as a very extraordinary and significant one, if it be assumed that voters were moved only by arguments concerning the new tariff law, commercial reciprocity with Canada, and the effect of Republican legislation upon the cost of living. These were the subjects of Mr. Foss's campaign speeches. For several years he has been known as an earnest advocate of reciprocity with Canada. He denounced the new tariff and ascribed the high cost of living in part to it and its predecessor. If such a revolution has taken place in one of the strong Republican districts of New England because of the new tariff and the cost of living, it foreshadows similar changes elsewhere.

But there were other factors and influences to which some weight must be given. William R. Buchanan, the Republican candidate, was not regarded as a Republican beyond question. He had assisted Governor Douglas, Democrat, in the latter's successful campaign, and afterward had been made the Governor's private secretary. He had procured his nomination by methods which many Republicans did not approve. Judge Harris, defeated candidate for the nomination, took no part in the campaign, and some of his friends exerted their influence against Mr. Buchanan. Judge Harris remarked that Foss was a better Republican. Three Republicans who had held the office of Governor declined, it is asserted, to assist Buchanan. On the other hand, Foss had been a Republican of the insurgent type until a year or two ago, and his candidacy appealed to discontented men in his old party. He was aided by his announcement that it was his purpose to serve only to the end of Mr. Lovering's term. It was seen that he would not be in the way of other aspirants. In the last week of the campaign a commercial war with Canada appeared to be impending. This was to the advantage of a prominent advocate of tariff reciprocity with Canada in a State where the policy for which he stands has much popular support.

The action of voters at the polls was affected in some measure to the advantage of Mr. Foss by the influences and incidents which we have mentioned. His success was not due wholly to popular disapproval of the new tariff and of those who have recently controlled the Republican majority in Congress. Still, it seems to us that he would probably have been elected by a small plurality even if his opponent had been acceptable to the Republican party, as a whole, in the district, provided that such an opponent had made his fight as a defender of the new tariff.

For it must be admitted that the new tariff law is unsatisfactory to a great many loyal Republicans. Owing mainly to the prominence in Congress of tariff insurgents from the Middle West, some think the most formidable disapproval of the new law is shown there. But the Chicago *Tribune* recently asked for the opinions of the Republican editors in the East, and ascertained that in New England 184 oppose the law, while 39 support it. For the Atlantic States, New England excepted, the corresponding numbers were 406 and 142. Of the 17 ed-

itors answering from this Fourteenth District of Massachusetts, 16 exprest disapproval. On the day before the election of Foss, President Taft, in Providence, was warmly commending both Senator Aldrich and the tariff so closely associated with that Senator's name. Mr. Taft cannot convince a large and influential element of his party that it is a good tariff and that the party's promise, as it was generally understood, and as it had been defined by himself, was faithfully kept by those who controlled the revision. By commending the law without qualification and by frequent praise of a legislative leader who does not enjoy the confidence of the people, he is unjust to himself, he gains nothing and may lose much.

Crisis in Liberia

In 1867, when the American Colonization Society celebrated its fiftieth anniversary, it was looking forward to an unprecedented increase in negro emigration to Liberia. The colony had been founded for the benefit of freedmen. So when all the slaves were free it was expected that they would, many of them, want to go back to Africa. As President Warner, of the Liberian Republic, exprest it in his quaintly grandiloquent address, Lincoln had said unto Pharaoh, "Let my people go!" Pharaoh had let them go after suffering divers plagues, and now Johnson had made the order more specific by adding "Go to Liberia!" President Warner himself had no doubt but that the second injunction was as much the voice of God as the first, but evidently the negroes did not take it so, for they did not obey it. Emigration practically ceased after the war, and neither black nor white Americans took any further interest in Liberia.

In thus refusing to go back to Africa the colored people showed good judgment. They have prospered and progressed amazingly in this country since they were freed. They have as much right to American soil as the white folks; even a prior right by arrival over the Mayflower Descendants. If they had gone to Liberia then the majority of them would shortly have perished from disease. It was looked upon as natural and inevitable that all newcomers, black and white, should be taken down within a few days after landing by the "acclimating fever," due to inhaling the "miasma" from the tropical swamps. We now know that this mysterious miasma has wings and that by getting rid of the mosquito, the tsetse fly and other nefarious traffickers in parasites of the blood, the tropics can be made habitable to either race.

The tropics have not only become more habitable; they have become more valuable. London just now is crazy to invest in rubber plantations, for automobiles consume rubber as lamps consume oil. The king of one of the smallest countries in Europe becomes the richest of monarchs, because the Powers were rash enough to entrust him with the guardianship of the Kongo. Germany is spending millions for the defense of a bit of African coast line, once not thought worth hoisting a flag over. Italy, Spain and Portugal, hard up financially, are nevertheless willing to send men and money to their African colonies. The dark continent, in fact, looks now like a Western mining camp in a boom, with more or less conflicting claims staked out all over it.

So it happens that little Liberia finds her neighbors crowding her too closely. France on the one side and Great Britain on the other have been shoving their boundaries nearer together and have been very officious in the proffering of loans and administrative assistance. Liberia, well realizing the meaning of their sudden interest in her interests, has appealed for aid to the United States, her founder and protector. Our commission has visited the country and reported in favor of assisting Liberia in settling her boundary disputes and financial difficulties, of organizing a constabulary force and of establishing research and coaling stations. The recommendations of the commission have been approved by the President and transmitted to Congress. We believe it is the duty of that body to act upon it favorably and promptly, for we need Liberia as well as Liberia needs us. This is no time to sacrifice whatever claim we have on African soil. It has cost too much and it is worth too much for us to let it go.

At the end of the first half century of its labors the American Colonization Society reported that it had collected and expended over two million dollars and the State societies half a million more. Maryland, New York and Pennsylvania had made appropriations for carrying on the work, and the United States Government had officially promoted it in many ways. Yale originated the project in 1776, and Princeton educated the first negroes to be sent to the promised land. These universities might well take an interest in the country that owes its existence to their early enterprise.

Liberia is not now needed as a refuge for freedmen and as a depository for slaves captured from the traders. It is not needed as a means of wiping out slavery. But it may be useful to the colored race in other ways. It may afford an opportunity for political and industrial activity which is limited in this country. Negroes of ability and wealth may desire a free field for their enterprise. Those who feel themselves wronged by being deprived of their right to vote under one pretext or another may want to go to a country where the white man has no vote, the only part of the African continent where the native race is not under foreign rule. Those who feel humiliated at the indignities thrust upon them may be glad to know that there is one country where they are welcomed. The mere existence of a self-governing, prosperous and civilized community wherein negroes could work out their own destiny in their own way would raise the status of the race the world over. In short, a Zionist movement among the colored people might not be a bad thing. To be sure, the negroes have no such traditional and religious attachment to Africa as the Hebrews have for Palestine, but the economic and ethnological arguments which are put forward in favor of a Jewish state apply with greater force to the colored race, which is more restricted and contemned in America than the Jews are anywhere.

But the negroes must decide for themselves whether they want to do a little colonization on their own account. Philanthropic assistance is not needed now as it was formerly. All we as a nation need to do is to see to it that they do not lose the chance thru our neglect, and that the suffering and self-sacrifice of the American pioneers in Liberia has not been in vain. In 1822, when Elijah Johnson and his little band of settlers were in danger of being wiped out of existence by a rising of the natives, the commander of a British man-of-war offered to land a force of marines for their protection on condition that they would cede a few square feet of ground on which to erect a British flag. But Johnson sent back word: "We want no foreign flag put up here. It would cost more to get it down again than it will to whip the natives." So thirty-five colonists withstood the attack of 800 natives, and when they returned with double the number they were a second time repulsed. Now the British flag is again ready to be raised over Liberian territory and the same reply is in order.

The Playground Outlook

The playground movement has become a landslide; its full purport has yet to be defined. The cities are appropriating more money each year for the support of playgrounds, and the season is extended to take in a good deal of the school year as well as the vacation. The playground day is being made to cover the afternoon and evening sessions, and this has made the school a social center. The drift among the wealthy people is to establish memorial playgrounds in the smaller cities; a movement that seems to catch hold readily of the social sentiment of the town. Massachusetts has created a playground law that requires every city of ten thousand or more to vote on the question of sustaining playgrounds, the result being that out of forty-two cities forty have voted favorably. New Jersey has passed an enabling act, and the State of Ohio has followed the example. Minnesota permits cities of fifty thousand to issue bonds to the extent of one hundred thousand dollars, to acquire and improve sites for playgrounds. Half a dozen other States are now discussing legislation of a similar sort.

The general result of the agitation during the last year has been to widen out the city movement into State movements. State associations are being

formed, with the outlook toward State playground departments. The Massachusetts Civic League is serving as an association for that State. Another significant movement is the formation of playground commissions to study the subject more carefully, and lay plans for the future adapted to the needs of the cities. Minneapolis, Philadelphia and New York are leading in this direction. In no other way can a benevolent and kindly impulse become a wise social movement.

An interesting experiment is being tried in some of our cities in the way of organizing trips into the country for the playground children. Tents are taken along, on wagons, but the children are expected to tramp it. This idea has been imported from Germany and England, and our Chicago playground association has conducted such trips for the last two or three years, but for adults primarily. These tramps are intended not only to give recreation, but to teach country life, and to waken up a sentiment that will lead the young folk ultimately to seek country homes.

Another exceedingly interesting and wise phase of the movement has been the impulse given to the children to lay out their own grounds and construct their own apparatus. This correlates the work to the manual training system, and we are half way to the revolution that gives half the day to hand training and half to the culture system. Play that ends in play is no more satisfaction to the child than play that ends in accomplishment. What we want is to get rid of the idea of school tasks, and to fill the children full of happiness as well as knowledge. A costly equipment and a costly playground is not what is wanted, but the natural expression of the child with those things that he can most readily lay his hands on.

There is a growing appreciation of play as full of meaning. It is the language of children's emotion and thought. The Germans have grasped the idea still better by forming organizations for furthering folk and children's play; that is, organizations for promoting play, not mere playgrounds, but the art of playing anywhere and finding facilities. Most of us look back to early culture in district schoolhouses, and we were abundantly able to construct playgrounds along the country street sides. Our pleasantest memories are associated with very small patches of mother earth and a few trees, where we prevented the grass from growing by playing fox and geese and pullaway-fetch.

The German idea will do our people good; that is, to bring all the people together in their gaming, and to foster a love for all sorts of outdoor sports. The young and the old should go together not only in excursions and tramps, but in playing the simpler games of the field and skating in winter. Germany is promoting a curriculum of play games, and afternoons for compulsory or voluntary play are connected with the schools. Better yet is the increase of schools which are beginning to devote one or more afternoons each week to play. The number of such schools is said to have doubled within the past year in this country. The children are excused from home work the next day. This should lead on still farther to the devotion of one-half of every school day to outdoor work and play. The playground will not in any case prevent a large amount of outside play, nor ought they to prevent a large degree of spontaneity, while infusing the whole affair with purpose and foresight. That is, the adult population will control not only the school hours, but wisely the play hours. The really significant thing which the playgrounds are doing is to give the children ideals, which will be followed in their outside play, and give them worthier play interests.

Dr. Henry S. Curtis, secretary of the Playground Association of America, recommends

"that we take as our proper province the promotion of the play spirit and play opportunities, for all ages and both sexes. We believe that there are very many other play opportunities, essential to the development of child and community life besides those offered by the formal playgrounds."

He holds that the movement should take in all sorts of home play, the provision of vacant lots, the roofs of tenements, streets little traveled, and that the use of such places is no less important than the playgrounds themselves. He thinks the movement should take in play

festivals, picnics, summer camps and school journeys. Then he would go out to the factories and large business houses and teach them to modify the grinding drudgery of business life by adding recreation or play interest to work. Home life should center not in toil only, but in sport. He believes and we believe with him that what we want is more of the joy element in American life, and that the playground movement will not have accomplished its work until it gets into home life and shop life and store life with the idea of sunshine and joy.

The Farm a Laboratory

When Professor Whitman, in 1901, wrote that the Marine Biological Laboratory over which he had presided at Woods Hole, had reached the limit of efficient work, and that farm laboratories were needed from this time on, he implied that the real school is that place where the boy or the girl is doing his work, provided this work be done intelligently, with due investigation and application. Not only young people, but their parents, overlook the fact that the boy, while doing chores in the morning, is just as much at school as he is after the nine o'clock bell rings and he sits before a book or stands before a blackboard. In fact, he may be learning more at home than in the schoolhouse of that truly useful information which will make him a practical worker and useful citizen. This side of the question may be emphasized without casting the slightest imputation on school work. Mr. Benson, in one of his essays, tells us that erudition, when it is not usable, is a very worthless affair. It is like a furniture store locked up. Scholarship has had a false estimate. Professor Whitman did not mean that Woods Hole had proved a failure. Following Agassiz, he has helped create a band of teachers capable of apprehending the true meaning of education. These laboratories have pointed the way to something better. The boys who leave the farm to learn Latin must be told that they are going from a school as well as to a school. Not yet—that is, in the fullest degree—can we say of our modern farming that it is an expression of science, an application of the highest knowledge; but we are rapidly coming to a condition when we may say this very thing of the agriculture and the horticulture of America.

Not long ago two boys came to us for advice—two manly fellows, with a big hand grip and with observing eyes. They announced themselves as pupils in a certain high school. To the question, "Have you been at school elsewhere?" the reply came, "Nowhere else." "You can milk, I believe?" "Oh, yes; we each have to milk thirteen cows every morning and every night." "My dear boys, did you learn that at the high school?" "Certainly not; we learned that in the barnyard." "But you can plow a straight furrow, and grow sixty bushels of corn to the acre; you understand how to spray apple trees, so as to secure a perfect crop; you use the modern reapers and binders, I suppose?" "To be sure, sir." "Did you learn this at the high school?" "We learned that at home, sir." Can you tell the difference between the common birds, and can you tell me their habits and their values?" It was very plain that they did know a good deal of ornithology, and not a little entomology and practical botany—all of it gathered in the fields. Just a little more twisting of conditions, and these boys would have been tip-top pupils for Whitman or Bailey or Jordan. But all this they underestimated, and were ambitious for what they termed "education." It came out still further that they could already parse a Latin noun, and repeat the Rule of Three, without the most remote idea of the application of this garret-like storage. It was mostly stuff badly correlated, and untranslatable into life and love. Should they go still further away from cattle and field and birds and orchards, until they had left all application behind?

A sane letter lies on the editorial desk, after this sort:

"Dear Sir: I have chosen agriculture as my life work. I graduate at the high school next June. From there I wish to go at once to a farm, to apply what I have acquired, and to learn more. I am afraid that what I do know will not be of as much use as it ought, but at any rate I know that I have got a lot to learn. Can you advise me where to go?"

Every farm in the United States ought to recognize itself as a school, and be open to just such pupils as this boy (as for that matter, there are two of them). Here are two facts to be recognized and enforced: First, that our schoolboys, and schoolgirls also, should not float thru school without definite determination, but should choose an occupation and fit themselves for it. They or their friends should find out what they are good for, and what they want to do in the world, and they should evermore be pointed toward that. The second point is that our farms should be understood to be schools, and for the most part be open to pupils. A great apprenticeship system should grow up in the United States. This would solve the help problem as well as the educational problem. A rational social outlook would not involve a common use of property, but would share in the creation of property. The land truly belongs to all people for work and knowledge, for study and application.

That the schools are waking up to this view of study we are confident. The superintendent of public schools at Hannibal, Mo., works with samples of textile materials. These he collects from the great manufacturing concerns, and with them teaches "The relative advantage of different kinds, pattern cutting, garment making, sewing, the passion for styles, the evils of extravagance, the benefits of economy and other twentieth century problems." He proposes to take up foodstuff in the same manner, working along the line of human instincts, and not the mere mental possession of facts. He proposes to arouse constructive impulses and awaken thought. His method of teaching geography is to begin at the factory, then show its bearings upon the great cities, the route of transportation by which raw material is brought to mills, and then reaches the markets as a finished product. Higher geography involves with him the problems of transportation, freight rates and passenger rates—arousing social impulses of the right sort as well as furnishing information. He organizes a producers' club among the school children, for vacation work. He reaches out to the children's homes, where considerable schooling is going on in the way of gardening, lawn dressing and orcharding. The children are taught to have their own bank accounts, and the daily vital energy of a boy or girl is wisely directed along industrial lines.

Mr. Johnson tells us that the one thing which greatly distresses him is the non-utilitarian tendency in education. "I have seen too much time wasted on useless study and uninteresting instruction." He holds that the education of a child should be derived, as far as possible, from the actual and normal experiences of life, and that school instruction should not be entirely divorced from practical industry. He does not consider it right to call a child educated who has the habit of leaving tools about the lots, or wasting natural products of value, simply from ignorance of their worth. We come back to the position that our farms are schools, where every known science is practiced, or ought to be. What we have given from Mr. Johnson shows how this idea may be widened to take in factories as well as farms. The question crowds whether our schools have not got on the wrong track, and are sending out a lot of badly uneducated children; that is, children compelled to solve the real problems of life as best they can. Our universities have climbed to four thousand and five thousand pupils. These are not needed in the professions. Are they, the finest of our youth, to graduate into a furious struggle for wealth and rank, that will drop forever out of sight over half, and leave the other half in a blind contest? While we advocate that view of education which takes in the practical work of the farm and home, we do not mean that going back to Nature is going back to simplicity, but is going forward to a very complex life—forward to the classrooms where the seeds grow and the creation of a new world is always in progress.

Vacation Stories and Animal Photographs

In our issue of February 24 we asked our readers to send in photographs of animals to be used in our Vacation Number next June. We also asked to have vacation experiences written out and sent in for our approval. The response to this appeal has

been generous but not nearly enough have yet reached us. We will pay $2 for each photograph that we use and give two annual subscriptions for each vacation experience that we are able to print. There will also be a chance to win one $10 prize and one $5 prize that will be given for the best and second best photographs. All photographs and vacation stories must be in our hands by April 15 to give us time to look them over, make selections and award prizes. Why not enter this competition just for the fun of it?

National Honor

President Taft bids fair to surpass his predecessor as a genuine peace advocate. In his address at the dinner of the American Peace and Arbitration League last week he even went so far as to say: "I do not see any more reason why matters of national honor should not be referred to a court of arbitration than should matters of property or matters of national proprietorship." This is the first time we believe that any responsible head of a world power has taken such a progressive stand. Why should not President Taft therefore negotiate a model arbitration treaty with some friendly nation—say France or Brazil, in which *all* questions will be referred to arbitration. At present a few of the smaller nations have such treaties, but as yet none of the great ones. The treaties that Secretary Root has already negotiated with twenty-three of our sister nations are all modeled on the elusive Anglo-French treaty of a decade ago in which "honor, vital interests and the interests of third parties" are excluded from arbitration. As no nation has as yet attempted to define "honor" and "vital interests" they may be made to include everything or nothing. The United States, however, has more than once submitted questions to arbitration that have affected its honor, of which the Alabama case is the most notable. Thus President Taft's belief has already been put in practice by the United States. Let him therefore create a new kind of treaty that will as a model supersede the Anglo-French treaty. Where there's a will there's a way.

President Taft on Education

It was his experience in the Philippines, where there are 8,000,000 people, only 7 per cent. of whom talk Spanish, that taught President Taft that the aim of education must be the same for all races. At a late meeting at Washington in behalf of Wilberforce University, the one Northern negro college, President Taft said:

"Of course, the first feeling that one has, with reference to the education of the negro, is that education that it is possible to bring to all colored men and women, and, of course, the only education that you can bring to all colored men and women—as, indeed, the only education that you can bring to all white men and women—is primary education, with industrial education added. As you study the problem, and the importance of that industrial education forces itself on you, you forget, for the time, that any significance is to be given to secondary and higher, or university education; and you fall frequently, into the error of saying that money spent in university education is wasted; that the negroes who are educated at universities, who are engaged in studying Greek and Latin, and who are preparing themselves in an academic way, are making an error.

"You yield to such aphorisms as Dr. Wiley has used with respect to woman's education—that it is better for woman to learn how to cook, than to learn calculus. But there is nothing quite so misleading as an epigram."

That is sound sense. The Philippine people need primary education, but also the highest education, and so do every other people on the globe. Wilberforce University is conducted wholly by colored men, and is now raising a modest endowment, for which Mr. Carnegie has promised one-half.

The Old Soldiers

It looks as if we had turned the tide in pension appropriations. Last year the pension bill was for $160,900,000; this year it is $155,674,000, a very considerable reduction, and one that is likely to be repeated for a number of years, as the old soldiers pass out of sight, but not out of memory. In the pension bill they seem numerous, but they look few on Decoration Day. Those that are left we should make the most of. Many an old man now wishes that when he was a child he had sat and talked with a soldier of the Revolution; but his parents did not appreciate how dearly he

would remember it. We suggest this for our churches at the period of Decoration Day, that they gather the children, and the smaller children, of the Sunday school, and require the few old soldiers that linger to tell them stories of their experience in the war. They do not care to talk about it except in their own local camps, but they could be questioned or kindly persuaded to talk a little about themselves and what they did and saw, and what is the meaning of the button they wear, and how they saw Abraham Lincoln and General Grant and General Sherman. The time is short for such opportunities. Only the other day General Howard was buried. The pension list grows shorter every year, and it shortens faster and faster. Give the children something to remember.

The Price of Meat

The Department of Agriculture has put forth a report which has a decided bearing on the cost of meat. It says that since 1901 the population of the country has increased by 12,000,000, or 12 per cent., while the number of cattle has increased a little less, that is, from 62,133,000 in 1901, to 69,000,000, or 11 per cent. But the number of other food animals, sheep and swine, has actually decreased, the number of sheep from 59,750,000 to 57,250,000, and of swine from 57,000,000 to 47,750,000; making an aggregate decrease of all food animals of about 5,000,000. That is, the number of food animals for every 100 persons has decreased from 231 in 1901 to 193 in 1910, or a decrease of 16 per cent. We do not mean to imply that the decreased supply is the main cause of the rise in the price of meat, for it is not, but it is one cause. One of the consular reports shows that there is an increase in the price of food-stuffs in Great Britain and Germany quite equal to that in this country, but no attempt is made to indicate the reason. Both countries depend largely on importation for their meat supply.

The Decadence of States Rights

Ex-Governor Andrew J. Montague, of Virginia, has well said that the South's view of States rights is undergoing great modification. The duties, rather than the rights, of States now take precedence in thought and attitude. If States wish to avoid any encroachment on the rights of States they must attend themselves to the interests of the people. Some Southern States have enacted adequate child labor laws, and in so far they have removed any occasion for Federal intervention. Says ex-Governor Montague:

> "Should we fail to suppress lynching and riots, we may expect that this will sooner or later be done by the Federal Government. Likewise with sanitation and regulation of commerce, if the latter can ever be effectively regulated by the several States."

He does not believe that the South will ever again assume distinctive leadership in the school of "strict construction" of the American Constitution. He says:

> "The votes of our representatives in Congress upon such subjects as appropriations for internal improvements, exhibitions, lotteries, quarantine, trusts, safety appliances, employer's liability, railroads, beef inspection, pure food, control of corporations, and preservation of natural resources significantly suggest the negative. Indeed, the indications are that she shall more and more follow the canons of Marshall and the liberal views of some of the early publicists."

This is a very interesting and hopeful view of the situation.

Reform of the House of Lords

The British House of Lords sees the writing on the wall, and makes haste to issue a promise that it will reform itself. It has almost unanimously voted in favor of the proposition that heredity shall not give the right to be a member. What that means is, that the nobility shall, 615 in number, choose some two or three hundred of themselves, to constitute the second chamber, with whatever other *ex officio* members may be named. But that is no great reform. It simply drops out the incompetents who stay away, but leaves the ablest, the most powerful, to maintain the rights of the whole body. Why should the Lords reform themselves? Why should not the people do the reforming? Why leave it to the Lords? This proposed reform of theirs leaves the most outrageously iniquitous method of electing a legislative chamber in existence in any civilized state. Why should 615 rich men, by the mere right of birth, be allowed to choose the majority of a sec-

ond house and block any legislation desired by the people? That gives to 615 men the power to rule the country and preserve all their special privileges and immunities. What the present House of Lords does the proposed House of Lords would do with more effectiveness. What is wanted is utterly to abolish the right of the hereditary ruler. Let the House of Lords be reconstructed on such a plan as the people will choose to represent the people. Membership should be by choice of the people, like an American Senate, or for conspicuous service, or for some official position, and not be transmitted to one's son. That is what Earl Grey says, and we may be sure that the House of Commons is not interested in any reform that will reform nothing, but only intrench 615 families in their present power.

The American Girls' College in Constantinople

We wonder how many of our readers realize what fine work is being done by the many colleges in foreign lands, like Robert College at Constantinople, and Dosheisha University in Japan, which are controlled largely by American trustees. For instance, the American College for Girls, at Constantinople, thru its professor of biology, Dr. Emily Ray Gregory, is now engaged in an active campaign against tuberculosis in the city of Constantinople. In spite of the great need for it, nothing of the kind has ever been done before in the Crescent City. But with the new freedom resulting from the adoption of the Constitution, many things are possible that were hitherto undreamed of. Dr. Gregory's series of lectures at the college treat of various matters of municipal hygiene. These are being delivered by the most distinguished Turkish doctors and are largely attended. At the first lecture on tuberculosis papers were distributed to the audience, on which were printed in Turkish or Armenian or Greek simple rules for the prevention of the disease. To the lecture on the proper feeding of children came about one hundred veiled Turkish ladies, who listened most eagerly. The campaign proposes to see that articles are printed in the Turkish and Armenian papers, followed up by active work of the committees. Dr. Rifaat Bey, a prominent member of the sanitary committee of the city, and Dr. Kadri Rachid Bey, a specialist for children's diseases, have joined with cordial sympathy and help in this work. The American College for Girls, standing as it does at the gateway between the Occident and Orient, has almost limitless opportunities for service, and we are glad that it is doing all in its power for the welfare of the people who are reached by its influence.

Mr. Roosevelt has done something to solve the problem of what shall be done with our ex-Presidents; that is, let them take care of themselves—most of them have proved their capacity for doing it. Hayes raised hens and was a good farmer; so was Thomas Jefferson, and so was George Washington. Cleveland managed very well with his investments and Harrison went back to law. Only John Quincy Adams went to Congress, and Roosevelt's friends have booked for him the same retreat. Meanwhile he is following his own tastes, and, according to all reports, has made himself unusually useful to science. It was a novel idea, but possibly the Smithsonian might profitably employ a few more of our statesmen in Africa. After his year's vacation the country is getting ready to welcome him back to nearer hunting grounds.

Even the Sudras of India, the lowest servile caste, are waking up. One section of them, the Namasudras, have resolved that they will no longer endure the ostracism under which they live, and they have decided to turn Mohammedan, because in that religion there is no caste, and there they will be as good as any one else. It is for a kindred reason that Dr. Blyden, a leading negro scholar, approved the acceptance of the same religion by African negroes. The great success of Christian missions in the lowest castes in Southern India has in part the same explanation, for in Christianity there is, or ought to be, no caste, no bond or free, no Greek or barbarian.

That filibustering expeditions should be got up in this country, and in New Orleans in particular, to invade nations

to the south of us with which we are at peace, is a disgrace to the American Government. We have had them in the past, even to the invasion of Canada. It is the business of the authorities at Washington to get information as to any such attempts, and to require local officials at our seaports and consuls abroad where they are hatched, to report them that they may be frustrated and those guilty punished. It is not pleasant to learn just now that the representative of Nicaragua in Washington has gone to New Orleans to stop the sailing of a filibustering expedition against a government with which we are at peace. The parties there may fight till there is nothing left of either of them, but all meddling of our citizens should be sternly represt.

It is a matter for congratulation that the Senate has passed the postal bank bill, altho that does not put it out of danger, as it is likely to be amended in the House, and then go to conference and be returned to the two Houses for final enactment. The bill will doubtless pass in some form, but the question is whether the $700,000,000 of 2 per cent. bonds forced on the banks can be used as deposit to the relief of the banks. In this matter it would seem that the President is right. The passage of the bill, even in its present form, with limits to 2¼ per cent. bonds as security, is a victory for the President in one of his principal measures.

To find the regulars in Congress turning insurgent on expenditures for the navy is really refreshing. So faithful a supporter of the Administration as Mr. Tawney will not vote millions for two new huge vessels of war, and we heartily welcome him to the insurgent ranks. The deficit for the current fiscal year is well over $20,000,000 and it would be well to save a part of it on appropriations for the Army and Navy. There ought to be a budget proposed by the Administration every year, as in England, and as President Taft has urged.

Three times the House of Representatives has passed a bill in favor of an amendment to the Constitution providing for the popular election of Senators; and three times the Senate has let the bill die without action. Once more the bill has been favorably reported to the House, supported by both parties, and we are told that twenty-seven States have declared in favor of it. It is not decent for the Senate to fail to take action on it. Do Senators think that they can manipulate a legislature easier than they can persuade the people?

We mentioned last week the pains which the Japanese Government has taken to deliberate in the trial of the Korean murderer of Prince Ito. He was to be executed earlier, but the execution was delayed because he had exprest the desire to receive the sacrament from the Roman Catholic priest who promised to administer it, and the authorities consented to put off the execution till the priest could arrive. This is surprisingly considerate, for we suppose that some Catholic priest could have been found ready in any chief city of Korea.

It appears to us that Alaska might as well wait awhile before it seeks to be admitted as a Territory. The expense of a Territorial government is considerable, and the population is too small and too scattered. We govern the Philippines by a commission, aided by local elections. Our cities are beginning to try successfully the commission method. The politicians may not like it, but President Taft's proposal to govern Alaska by a commission has much to favor it.

The Democrats in Congress are not going to support any bill to reduce the power of the Speaker in appointing committees. They evidently hope to get the House at the next session, and they want all the power it implies. They look ahead. For the same reason they put Mr. Fitzgerald on the Committee on Rules, not that they like his course, but they feel the need of harmony in their ranks, as well as do the Republicans.

We may be thankful that there is a likelihood that the appropriation for raising the "Maine" will be secured. It has too long been an obstruction to navigation and goodfellowship.

INSURANCE

Insufficient Life Insurance

THERE is a world of difference between taking out a life insurance policy and in maturing one. In the first place the man often wonders how on earth he is going to pay the required premiums, but when the stipulated time has passed and the maturity of the policy happily arrives before death comes, the policyholder not having been obliged to die to win, he always wishes he had more insurance. Sometimes, according to Vice-President Buckner, of the New York Life Insurance Company, the policyholder "openly chides the agent for not making him take more." There is food for thought in this. The maturing of a policy is even more important when there are a widow and children concerned. The perversity of men is too often a striking exhibit in the matter of life insurance. Why is it that few take anywhere near as much insurance as they can carry?

New Application of the Insurance Principle

ONE of the most recent applications of the insurance principle is a system of baggage insurance by means of what are termed "tourists' baggage tickets." The St. Paul Fire & Marine Insurance Company, whose Eastern office is at No. 16 Liberty street, New York City, is now insuring baggage in this way for one week or a series of weeks, covering a business or pleasure trip. The scheme contemplates the possibility of purchasing such insurance at any ticket office where the insurance is obtainable in units of $150 at a cost of 25 cents per week. Tickets for such baggage insurance will be written for from one to twenty-six weeks; a limit of such insurance, obtainable by any one person, will be ten tickets, representing $1,500. The credit for the origination of this "tourist baggage ticket" scheme belongs to Victor R. Schenck, vice-president of the North-Eastern Agency Company of New York. In working out the details, Mr. Schenck had the co-operation of the executives of railroad companies as well as of the St. Paul Fire & Marine Insurance Company, which issues the "tourists' baggage ticket" insurance thru its inland marine department. The insurance is intended to cover any cases of the loss of baggage or personal effects; against fire or lightning, excepting in theaters, opera houses, residence of assured, or in storage; against all risks and perils of fire, lightning, cyclones, tornadoes, floods, navigation and transportation, while in the custody of any railroad, express, transfer, transportation company, steamship or other public carrier; against theft, while in the custody of any common carrier. The rates for "tourists' baggage tickets" are given below:

Amount insured.	Cost one week.	Each additional week costs.
$ 150	$ .25	$ .25
300	.50	.50
450	.75	.75
600	1.00	1.00
750	1.25	1.25
900	1.50	1.50
1,050	1.75	1.75
1,200	2.00	2.00
1,350	2.25	2.25
1,500	2.50	2.50

Insures holder only. Any member of a family can purchase from one to ten tickets ($150 to $1,500). Tickets made good for one to twenty-six weeks.

Packages sent by express may be insured in a similar manner.

A JURY in the United States Court in Brooklyn last week awarded a verdict of $15,000 damages for the loss of his leg to Albert Maley, in his suit against the Lehigh Valley Railroad Company.

THE hat pin hazard has recently been looming large in Paris. Dispatches from the gay capital go to show that within a month's time no less than twelve persons have been wounded there because of ladies' protruding hat pins. The most serious case was that of an unoffending and entirely peaceful man who had one of his eyes put out by a lady in great haste who ran against him near the Northern Railway Station. This lady wore one of these hat-pin daggers stuck thru her hat and hair. She was profuse in her apologies, but that failed to restore the man's eye. The man is now prosecuting the woman, but even if he wins his suit his eye is gone forever. It is indeed a sad case.

FINANCIAL

End of the Unlisted Department

In August last the authorities of the New York Stock Exchange decided to discontinue what is called the unlisted department. Final action was deferred until April 1 of this year, in order that companies whose securities were in that department might have ample time to meet the requirements of the regular list if they should care to do so. Many transfers have already been made, applications for others are pending, and it is expected that all the necessary changes will be completed on the date named. Among the stocks transferred, with the greater publicity which must accompany admission to the regular list, are those of the Sugar Trust, Amalgamated Copper Company, American Smelting and Refining Company, National Biscuit Company, and American Woolen Company. Recent reports from some of these corporations, made in obedience to the requirements of the Exchange, have given information to which the public is entitled, but which has been withheld from the public in the past.

The abolition of the unlisted department is a very desirable reform. It was suggested by the report of Governor Hughes's commission. The department had been a refuge for corporations and combinations which desired to promote trading and speculation in their stock issues without publishing such reports, as to financial condition, etc., as must be published by a company that is on the regular list. These corporations enjoyed the facilities of the Exchange and, in a certain sense, its protection, without meeting the requirements to which regularly listed companies are subjected, and which are by no means too severe. At times trading in their securities has been a very large part of the Exchange's daily business. In the published daily reports of Exchange transactions, all securities, listed or unlisted, came to be treated in the same way, and for this reason the public was misled. In the press reports, the securities of a concern that was practically a blind pool stood on an equality with those of companies that were required to make reports for the information and protection of the public. There is to be no more of this. Credit is due both to the Exchange and to the Hughes Commission for the discontinuance of a department which exposed the Exchange to severe and well deserved criticism.

Combinations' Export Prices

Daniel Guggenheim, president of the American Smelting and Refining Company, who returned last week from Europe, says he made a study of business conditions in Germany. "The business men of Germany," he remarks, "look with curiosity upon the agitation in the United States against combinations of capital. The German Government and the German merchants are doing everything in their power to encourage all forms of combinations, so that the highest prices can be obtained for German products in other countries. The great success of this policy is apparent to every observer."

To obtain the highest prices abroad? It is notorious that the German combinations have domestic prices and export prices, and that the export prices have been much lower than those exacted at home. There has been no attempt to conceal the marked difference. It has been repeatedly set forth and measured in the combinations' reports. Such a policy may be satisfactory to the German people. Our people do not like to see an American combination of protected manufacturers selling products to foreign buyers at prices much lower than those which they themselves are required to pay for the same products.

....Reports from the Census Bureau show that last year's cotton crop was 10,363,240 bales, which may be compared with 13,432,131 for 1908.

....New York City sold $50,000,000 of 4¼ per cent. bonds last week, realizing an average price of 101.28. There were 440 bids, amounting to $194,562,650, and awards were made to 261 bidders. The largest awards were to the National Bank of Commerce, the Farmers Loan and Trust Company, and Kuhn, Loeb & Co., each taking $4,000,000.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, APRIL 7, 1910 No. 3201

Survey of the World

Senator Allds Found Guilty

At the close of an investigation which had consumed seven weeks, the New York Senate, on the 29th ult., voted upon the question whether the charges of Senator Conger against Senator Jotham P. Allds had been sustained. Both of the men are Republicans, and Allds, until a few weeks ago, was president pro tem. of the Senate and leader of the Republican majority. The charge was that Allds, in Conger's presence, had received a bribe of $1,000 in 1901 for the exertion of his influence (he was then the leader of the Republican majority in the House) to kill a bill which was hostile to Conger's business interests. Some hours before the vote was taken Allds resigned, by advice of counsel. By a vote of 40 to 9 the Senate declared that he was guilty. Against him were 29 Republicans and 11 Democrats; 4 Republicans and 5 Democrats voted in his favor. By resigning he avoided expulsion. His counsel, Mr. Carr, afterward published a statement in which he characterized the decision as a mockery of justice, asserting that the result had been affected by pressure from Washington and elsewhere in the interest of political expediency. For this he may be brought before the Senate for contempt. Allds left Albany in a defiant mood, promising to sue Conger and at least one newspaper for libel. He had been in the legislature fourteen years. Conger has refused to resign. He will try to defend himself against formal charges, based upon his own testimony. It is expected that there will be a general legislative investigation concerning corruption, and some argue that severe punishment of Conger would prevent disclosures by other persons. Governor Hughes says there should be the fullest inquiry by every competent means:

"We should seek to the fullest extent possible the benefit of the purifying influence of publicity. This is not a time for concealment, for adroit finesse, for pleasant schemes to hoodwink the people. There must be straightforward dealing. Some object that it costs money to investigate. That is true, but it will cost more not to investigate. The political household needs disinfecting and we shall save money by making the process a thorough one."

Those Republicans who ask for searching investigation do not regard with satisfaction the nomination, in the Rochester Congressional District, of George W. Aldridge to succeed the late James Breck Perkins. Elijah R. Kennedy, who represented a group of fire insurance companies with respect to legislation at Albany, recently testified that he paid $1,000 to Mr. Aldridge, who exerted much influence. Aldridge admits that he received the money, but says he used it for the benefit of his party. Mr. Perkins was elected in 1908 by a majority of more than 10,000.——In Mississippi the State Senate is investigating the assertion of Senator Theodore G. Bilbo (made before a grand jury) that at the time of the recent senatorial election he accepted $645 from L. C. Dulaney for changing his vote from ex-Governor Vardaman to LeRoy Percy, who was elected to the United States Senate. He says he was acting as a spy in Vardaman's interest; that $1,000 in all was to be paid, and that he gave the $645 to a clergyman for the poor. Dulaney has been indicted. Senator Percy says Bilbo is plotting to affect the election next year for the full senatorial term. The clergyman mentioned (the Rev. Dr. Culpepper,

president of Clark Memorial College) does not confirm all of Bilbo's statements as to his knowledge of the incident.

Tariff Questions

As the time drew near for an automatic application of our maximum tariff rates to imports from any country found to be discriminating unduly against the United States in tariff legislation, there was still some doubt about a settlement with Canada. All differences were removed, however, last week. This was shown by official statements published on the 30th ult. at Washington and Ottawa. On the following day notice was given to Collectors of Customs that the maximum rates (applicable at midnight on the 31st) were not to be used against any country in the world, because the President was satisfied that no country was discriminating unduly against us. The correspondence in the case of Canada is especially interesting because it foreshadows conferences designed to promote a comprehensive agreement for tariff reciprocity. At the beginning of the negotiations our Government held that undue discrimination would be shown by withholding from us a majority of the reductions conceded in Canada's new treaty with France, reductions which (on account of British treaties) were automatically granted to a dozen other countries. At the end we accepted the concessions of that treaty with respect to thirteen of the one hundred and ten titles covered by it, or about forty staple commodities, involving an export trade of a little less than $5,000,000. The most important of these are cottonseed oil, drugs, dyes, fruits, nuts, photographs, perfumes, watch movements, window glass and table crockery. Our State Department gives all possible weight to these concessions (which Canada granted to all other countries at the same time) and explains that the other reductions withheld were of little or no importance. All we had to offer, of course, was our regular tariff. Writing on the 26th ult., Secretary Knox exprest the President's desire that Canada should take up "the consideration of a readjustment of our trade relations upon the broader and more liberal lines which should obtain between countries so closely related geographically and racially." In reply, Minister Fielding said the Canadian Government gladly accepted the invitation. It is reported that there will be a conference in May. The ratification of a treaty of tariff reciprocity would now, it is held, require the approval of Congress and would involve amendment of our present tariff law.——The President asks Congress for an appropriation of $250,000 in behalf of the Tariff Board, once more indicating his purpose to procure information as to the cost of production here and abroad. Some Senators hold that the Board is not authorized to inquire about this. The insurgents will use his request as a text for tariff speeches in which they will criticise the present law, ask for an enlargement of the Board, and suggest that its powers and duties be clearly defined.——Nominations for the new Court of Customs Appeals have been confirmed. The judges are Robert M. Montgomery, of Michigan; William H. Hunt, of Montana; James F. Smith, of California; O. M. Barber, of Vermont, and Marion De Vries, of California.

The Graft Inquiry at Pittsburg

The number of men indicted in Pittsburg upon evidence relating to corruption in the City Councils was increased last week by twenty-four, and the total number is now ninety-seven. One of those thus accused last week by the grand jury is Dr. E. R. Walters, formerly President of the Select Council and now Director of Public Health and Charities. He is the most prominent member of the Mayor's cabinet. The charge against him is that while in the Council he accepted a bribe of $1,000 for voting to make one of the banks a depository for city funds. Another is Morris Einstein, a well-known citizen. It is alleged that he solicited and accepted from the Workingman's Savings and Trust Company $20,000, to be used in bribery; that he paid $10,000 of this sum to fellow members of the Council, and that he retained $10,000 for himself. Much of the evidence upon which the recent indictments are based was obtained last week from William

Brand (already convicted) and Charles Stewart. It appears that during the years in which a majority of the offenses were committed it was the custom of about sixty venal members of the Councils to hold meetings in which plans for procuring bribes were made and prices of votes determined. These meetings were called caucuses. Brand was chairman and the secretary was Klein (recently convicted), whose confession has been very useful to the prosecutors. In response to the District Attorney's invitation, six more Councilmen came into court last week and admitted their guilt. Confession was also made by a former Councilman, George R. Bailey, now a resident of Pasadena, Cal., who wrote to the District Attorney saying he desired to admit that while in office he had taken from Klein $181.10 for votes on two questions. He added that he had no money to pay his fare from the Pacific Coast, and that his child was ill. But he would come back and take his punishment if it should be so ordered. During the week, bank officers and directors appeared before the grand jury. Their testimony was not disclosed. At the request of the District Attorney, the Court appointed Robert Wilson a county special detective for four years to carry on the investigation. Mr. Wilson is the Scranton detective under whose direction the proof of corruption was obtained. On the 1st, there was a mass meeting at which the subjects of discussion were the graft cases and the movement against vice. Julian Kennedy, leader of this movement and a noted consulting engineer, had recently asserted that $1,000,000 a year in graft was collected in the "Red Light" district of the city. To this meeting the Mayor, William A. Magee, came without special invitation, and he set out to defend himself against the severe criticism of several speakers. If half of what had been said against his administration was true, he remarked, he would resign. Whereupon he was loudly urged by the greater part of the audience to resign, and as he left the hall he was hooted and hissed. On that day Andrew Carnegie arrived in the city from the Pacific Coast. So deeply moved was he by the shameful evidence of corruption in the city where he had lived many years and accumulated his great fortune that he was in tears while talking to the reporters who called upon him. There was only one way, he said, to cleanse Pittsburg and keep it clean, and that was to "get politics away from the Mayor's chair." He dictated the following:

"Everywhere I go I am a great reader of newspapers, and in glaring letters I have to read Pittsburg's shame. 'Pittsburg's Graft' is such a delightful headline to one who loves Pittsburg and owes to her all that he has. I have been humiliated and I am this morning sore at heart, yet I am comforted by the fact that a great mass meeting is to be held tonight to show that the heart of Pittsburg, the mass of the people, stands firm against all that is wrong. The question now is whether Pittsburg will come through this trial gloriously or disgracefully, and I have indulged the hope that she will stand the test and will go through the fire unscathed, that her sons wherever they may travel will be able to hold up their heads and extol this city, to which they are indebted for the happy days of youth and the pleasures of old age. The exposure of the graft is a splendid sign, much better than if it had been concealed by Pittsburg. Let her put her foot upon graft. Let those accused pass into oblivion, and let her in the future discard politics in municipal affairs."

——Following an investigation concerning fraudulent transactions in connection with certain departments of the State Government of Ohio, Mark A. Slater, formerly Supervisor of State Printing, has been convicted of embezzlement, and the grand jury has found forty-nine indictments against five other men.

General Increase of Wages

The wages of more than 400,000 men were increased last week, in most cases by the voluntary action of employing corporations. About 325,000 men are on strike for higher pay, the prospect being that they will gain a considerable part of the addition which they demand. A general upward movement of wages is assured. It is expected that railroad companies will increase rates to compensate for their enlarged expenditures. One company, the New York, New Haven & Hartford, has already announced a slight increase of passenger rates on its branch lines, owing to an increase of wage payments which will exceed $1,000,000 a year. The Pennsylvania Railroad Company on the

29th ult. gave notice that it had decided to increase the wages of its employees by 6 per cent. There are 195,000 of these, and this action adds $10,000,000 to the company's annual expenses. A similar increase was ordered by the Reading Company for 37,000 men at a cost of $1,500,000 a year. Six per cent. appears to be the rate of increase accepted by other railroads. It has been granted by the Delaware & Hudson and offered by the Erie. The Western Maryland road, however, has given 8 per cent. to its locomotive engineers. The concessions of the New York Central were delayed, and for a time a sharp controversy seemed at hand. Current estimates of the additional cost for the Central are in the neighborhood of $7,000,000. All the demands of the employees of the New York, New Haven & Hartford Company were granted. The Pennsylvania Company's directors said investigation had shown that their action was justified by the increase in the cost of living. The Norfolk & Western's telegraph operators have decided to accept an offered increase of 5 per cent., altho they asked for more. Operators employed by the Big Four Company have won an increase by arbitration. In the coal mining industry an increase of 5 per cent. has been granted voluntarily to 4,800 non-union miners in West Virginia, Maryland and Pennsylvania, but 300,000 union miners, representing two-thirds of the country's output of bituminous coal, are on strike for an increase of 5 cents a ton. Mr. Lewis, president of the union, predicts that a settlement will soon be reached. The increased cost of living has led the Oliver Mining Company to add about 10 per cent. to the wages of its employees in the Minnesota iron mines, and this probably foreshadows a general increase in the iron ranges. It is reported that an increase for the 220,000 employees of the United States Steel Corporation is under consideration. In several cities the carpenters and painters have demanded higher pay, and two or three strikes have been ordered in their interest. The movement of freight in New York harbor is seriously affected by a strike of the tugboat masters and pilots for shorter hours and more pay. ——The strike of the street car men in Philadelphia continues, but on the 27th ult. the Central Labor Union ended the general sympathetic strike in support of the original movement, and those who were idle went back to work. The Central Labor Union urges workingmen to vote for local option, mainly for the reason that members of the brewery unions refused to take part in the sympathetic strike.

Japanese Arrested in Manila

Two Japanese, believed to be spies, were arrested in Manila on the 28th ult., as they were about to purchase from an American soldier, Joseph G. Saxe, photographs of the fortifications on Corregidor Island. Their names are Kawada and Suganami. The first was formerly an inspector of immigration at Manila, and the second is said to be the son of a colonel in the Japanese army. Saxe had been detailed from the Engineer Corps to make photographs. The two Japanese sought to make a bargain with him, and it is said that he planned with his superior officers to have them caught while paying him the money. Another report is that he intended to sell the photographs, was detected while making the pictures, and was then induced to betray the two Japanese. The Corregidor fortifications are of much importance and the extent of them has been concealed by the Government. They guard the entrance to Manila Bay. Certain lawyers in Manila, representing the men in custody, applied for a writ of habeas corpus. In court, on the 31st, the Assistant Attorney General asked for delay, saying the case was one of importance and of a very delicate character. Decision was reserved. As there is no Federal law covering the case, the military authorities were instructed by the War Department to deliver the men for trial in the local courts under the Philippine penal code, certain provisions of which were said to be available. But on the 3d inst. the men were released, the civil authorities declining to prosecute because no available law could be found.——In Porto Rico the sugar planters will establish an experimental station and support it by a

tax on output. Governor Colton advises them to employ an expert from this country. The Coffee Growers' Association has organized a bank, with a capital of $1,000,000, which will make loans to owners of small plantations.

Filibustering Party Restrained

Nicaragua's Consul General at New Orleans asked the Federal District Attorney, last week, to prevent the sailing of General Gordon's filibustering party for the re-enforcement of Estrada at Bluefields. Gordon had bought a steamship and had recruited about 200 men in Texas. The District Attorney's opinion that the movement was an unlawful one was upheld by the State Department, and the project was abandoned, altho it is expected that some of the enlisted adventurers will go to Nicaragua. It is reported that Gordon had been assisted by Manuel Bonilla, whom President Zelaya removed from the presidency of Honduras three years ago, and that the filibusters were to act first in Honduras against President Davila, in the interest of Bonilla. At the beginning of the present week, Madriz's forces had not attacked the remnant of Estrada's army in the eastern provinces of Nicaragua.——The agreement providing for the collection of the customs revenue of Santo Domingo under the supervision of officers from the United States, and for the use of a large part of it in paying the foreign debt, has been in force five years. It is shown by an official statement, published on the 31st ult., that in these five years nearly $7,000,000 has been segregated from the customs receipts and deposited in New York for paying the debt. This was less than half of the customs revenue, altho the entire sum collected in the four years immediately preceding the acceptance of the agreement was only $6,411,000.

Roosevelt at Cairo

Ex-President Roosevelt, in his speech at the University of Cairo, took occasion frankly to express his disapproval of the revolutionary aims of the Egyptian Nationalists. Addressing himself primarily to the students, he pointed out the futility of paper constitutions when not supported by a people long trained in the habit of self-government. No people, he said, has permanently amounted to anything whose only public leaders were clerks, politicians and lawyers. He urged them to cultivate the substantial qualities of citizenship—love of justice, fair play, the spirit of self-reliance and moderation—and not be impatient at the delay necessary for securing greater political rights. Then he emphatically denounced the murder of the ex-Premier in the following language:

"All good men, all men of every nation whose respect is worth having, were inexpressibly shocked by the assassination of Boutros Pasha Ghali. It was a greater calamity to Egypt than a wrong to the individual himself. The type of man that turns assassin is the type possessing all the qualities which alienate him from good citizenship; the type producing poor soldiers in time of war and worse citizens in time of peace. Such a man stands on the pinnacle of evil and infamy. Those apologizing for or condoning his act, by word or deed, directly or indirectly, encouraging such an act in advance or defending it afterward, occupy the same bad eminence.

"It is of no consequence whether the assassin is Moslem or Christian, or with no creed, or whether the crime was committed in political strife or industrial warfare. The rich man's hired act, performed by a poor man, whether committed with the pretense of preserving order or of obtaining liberty, is equally abhorrent in the eyes of all decent men, and in the long run equally damaging to every cause the assassin professes."

The radical Nationalists were indignant at his intervention in Egyptian politics on such an occasion, but there was no disorder in Cairo except some slight street demonstrations on the part of the students. The most violent of the Nationalist organs expresses its surprise that

"this advocate of autocracy ever came to be elected President by a people who shed their blood in defense of their liberty when tyrannized over and persecuted by the same Power that is now tyrannizing over and persecuting Egypt. No wonder he lost the respect and support of his countrymen, who have even refused to grant him a retiring pension."

Whether Mr. Roosevelt's remarks have made the position of the British in Egypt any more secure or have increased the bitter feeling between the parties cannot now be said.

The Pope Refuses to Receive Roosevelt

Mr. Roosevelt arrived in Naples on the morning of April 2, and was received, according to his wish, as a private citizen, altho with considerable popular enthusiasm. He arrived in Rome on April 3, and it had been expected that he would call upon the King on April 4 and upon the Pope on the following day, but it was announced that the Pope had refused to receive him except on condition that he promise not to recognize the Methodist mission at Rome. When ex-Vice-President Fairbanks visited Rome last February he agreed to give an address at the American Methodist Church, and the Pope learning of this, canceled his invitation to the Vatican and refused to grant him the honor of an audience except on condition that he would break his engagement with the Methodists. The attempt to impose such a condition upon Mr. Roosevelt was equally unsuccessful. On March 23, Ambassador Leishman cabled Mr. Roosevelt as follows:

"The rector of the American Catholic College, Mgr. Kennedy, in reply to inquiry which I caused to be made, requests that the following communication be transmitted to you: 'The Holy Father will be delighted to grant audience to Mr. Roosevelt on April 5, and hopes nothing will arise to prevent it, such as the much regretted incident which made the reception of Mr. Fairbanks impossible.'"

Mr. Leishman, in his cablegram, warned Mr. Roosevelt of the delicacy of the situation in the following language:

"I merely transmit this communication without having committed you in any way to accept the conditions imposed, as the form appears objectionable, clearly indicating that an audience would be canceled in case you should take any action while here that might be construed as countenancing the Methodist mission work here, as in the case of Mr. Fairbanks. Altho fully aware of your intentions to confine your visit to the King and Pope, the covert threat in the Vatican's communication to you is none the less objectionable, and one side or the other is sure to make capital out of the action you might take. The press is already preparing for the struggle."

Mr. Roosevelt made the following response:

"Please present the following thru Mgr. Kennedy: 'It would be a real pleasure to me to be presented to the Holy Father, for whom I entertain a high respect both personally and as the head of a great Church. I fully recognize his entire right to receive or not to receive whomsoever he chooses for any reason that seems good to him, and if he does not receive me I shall not for one moment question the propriety of his action. On the other hand, I in my turn must decline to make any stipulations, or submit to any conditions which in any way limit my freedom of conduct. I trust on April 5 he will find it convenient to receive me.'"

To this Mgr. Kennedy made the following reply:

"His Holiness will be much pleased to grant an audience to Mr. Roosevelt, for whom he entertains great esteem both personally and as President of the United States. His Holiness quite recognizes Mr. Roosevelt's entire right to freedom of conduct. On the other hand, in view of the circumstances, for which neither His Holiness nor Mr. Roosevelt is responsible, an audience could not occur except on the understanding expressed in the former message."

On receipt of this Mr. Roosevelt telegraphed from Cairo on March 29 to Ambassador Leishman: "The proposed presentation is of course now impossible." *The Outlook,* represented in Rome by Lawrence F. Abbott, states authoritatively that Mr. Roosevelt had not directly or indirectly communicated with the Methodists or any one else, and that he entered Rome with no arrangement of any kind save for the audience of the King. In a letter to *The Outlook* Mr. Roosevelt expresses the confidence that the great majority of his fellow citizens, Catholics as much as Protestants, will feel that he acted in the only way possible for an American to act, and says:

"The respect and regard of those of my fellow-Americans who are Catholics is as dear to me as the respect and regard of those who are Protestants. On my journey through Africa I visited many Catholic as well as many Protestant missions, and I look forward to telling the people at home all that has been done by Protestants and Catholics alike, as I saw it, in the field of missionary endeavor. It would cause me a real pang to have anything said or done that would hurt or give pain to my friends whatever their religious belief, but any merely personal considerations are of no consequence in this matter. The important consideration is the avoidance of harsh and bitter comment, such as may excite mistrust and anger between and among good men. The more an American sees of other countries the more profound must be his feelings of gratitude that in his own land there is not merely complete toleration, but the heartiest good will and sympathy between sincere and honest men of different faith—good will and sympathy so complete that in the inevitable daily relations of our American life Catholics and Protestants

meet together and work together without the thought of difference of creed being even present in their minds. This is a condition so vital to our national well-being that nothing should be permitted to jeopard it."

The Papal Secretary, Cardinal Merry del Val, explains the attitude of the Pope as follows:

"It is not in any sense a question of religion. Mr. Roosevelt might have gone to an Episcopalian, a Presbyterian, or any other Church except the Methodist, and delivered an address there, and he would have been received by the Pope even on the same day. But he could not be received when it was suspected that after the audience he intended to go to the Methodist Church in Rome, which is carrying on a most offensive campaign of calumny and detraction against the Pontiff."

The Attack on the House of Lords

On reassembling after the Easter recess, the House of Commons took up at once the resolutions of the Government restricting the veto power of the House of Lords and limiting the duration of each Parliament to five years. Premier Asquith stated that the Government held that it was expedient that Great Britain should have two legislative chambers. At present, he declared, it had a bi-cameral system only in name, for the House of Lords was frankly a partisan assembly, always ready to pass the bill of one party and rejecting the main bills of another party. The Government must prevent a repetition of the unconstitutional raid of last year into the domain of finance. The only way in which the Constitution provided for the will of the House of Commons being accepted by the House of Lords was the creation of new peers and that weapon was not appropriate. Royal veto, the Premier declared, was now as dead as Queen Anne and the absolute veto of the House of Lords must follow the veto of the Crown before the road could be cleared of the advent of a full grown unfettered democracy.——Ex-Premier Balfour characterized the proposal as "the most absurd experiment in constitution making upon which any government ever embarked." He could not conceive a more inauspicious moment for the suggestion that the Lords had exceeded their powers in rejecting the money bill than now, when everybody knew that if the House of Commons voted on the merits of the budget without regard to ulterior issues like home rule, the financial measure would be rejected. Mr. Balfour contended that the existence of the House of Lords was more necessary than ever now, when "modern radicalism has revolutionary ideals and aims upon which the people should be consulted before their final adoption." Mr. Balfour intimated that if this "really grotesque proposal" ever became a law, the Conservatives wou'd promptly remove it from the statute books when they returned to power.—— The Government is determined to force matters to a crisis as quickly as possible. Mr. Asquith announced that the closure would be applied so that the discussion of the veto resolution should be concluded on the night of April 14, and that immediately thereafter Mr. Lloyd-George would introduce the old budget, consideration of which will probably be limited to one week. The Opposition is furious at the determination of the Government to curtail discussion on such important measures. Mr. Winston Churchill explained the program in language which has attracted considerable comment on account of its insuring the frank references to the King.

"The time for action has arrived. Since the Lords have used their veto to affront the prerogative of the Crown and have invaded the rights of the Commons, it has become necessary that the Crown and the Commons, acting together, should restore the balance of the Constitution and restrict forever the veto power of the House of Lords."

——The success of the Government depends upon the attitude of the Nationalists under the leadership of John E. Redmond. Mr. Redmond has reiterated in his statement that the Government must secure guarantees from the King that he will support the House of Commons and the budget must not be allowed to pass beyond the control of the House of Commons until the veto question is settled. The Irish who are opposed to Mr. Redmond declare for the first time in the history of the Parliamentary struggle the Nationalist party holds a balance of power and if it fails to secure home rule the Sinn Fein, which believes in the futility of the Parliamentary action, will have a strong argument in its favor. An All-

for-Ireland League has been organized at Cork by William O'Brien and T. M. Healy, and it appears that Mr. O'Brien has himself been negotiating with Mr. Lloyd-George in order to secure concessions on the budget.

The Liberian Crisis A rising of the natives has endangered the civilized settlements and again made foreign intervention imminent. The Krus (or Carews) on the eastern border of Liberia attacked the American Episcopal Mission and killed the Rev. B. Kedako Speare, in charge of the Graway Sub-District, five miles east of Cape Palmas. On the French side of the river the Krus and Fantis have gone on the warpath together and killed thirty-four Frenchmen, of whom one was eaten. The German traders at Harper, Cape Palmas, appealed for protection and on February 24 the German gunboat "Sperber" entered the mouth of the river. The commander offered to land a detachment to disperse the natives, but General Padmore, of the Liberian Army, indignantly refused the proffered assistance and, it is said, ordered the "Sperber" to leave Liberian waters within thirty-six hours or take the consequences. A semi-official statement from the German Admiralty at Berlin denies that the commander of the gunboat was ordered to leave and states that he left of his own accord, on the following day, seeing that help was not needed and that the town was not in danger. The Liberian gunboat "Lark," in command of a German officer, was in the port, and the Liberian troops with a machine gun were carrying on a desultory fusillade with the natives across the river. The fighting was still going on at the time when Liberia was last heard from, March 9. The British cruiser "Mutine" has been dispatched from Sierra Leone to protect the British factory and residents at Cape Palmas. The American cruiser "Birmingham" sailed from St. Vincent, Cape Verde Islands, to Monrovia, the capital of Liberia, on March 31, carrying Mr. Lyon, the American Minister to Liberia, and the gunboat "Des Moines" is being put in repair at the Norfolk navy yard to be sent to Monrovia this month.

Foreign Notes Mount Etna continues active and the lava streams are still flowing toward the sea, tho more slowly than last week, about 12 feet an hour. Many vineyards and grain fields have been destroyed, and some villages are threatened. Cavaliere, a village of fifty houses, has been engulfed. The church bells are kept tolling and throngs of people remain praying day and night in front of the lava streams in spite of the rain of water and ashes. The altars, reliquaries and statues of the Virgin and the saints, which have been erected to check the flow, have to be moved backward to prevent their destruction by the molten rock. There are now thirty open craters on the mountain and the showers of small stones and cinders extend to the sea. Over 60,000 tourists have come to see the spectacle.——The agitation for a constitutional government in Monaco has been quickly successful. Prince Albert has at last relinquished his autocratic power and authorized the election of a parliament or municipal council by universal suffrage. The principality of Monaco is the smallest state in Europe, comprising only about 8 square miles and 1,200 population, but more than ten times that number of visitors. The revenues of the gambling house of Monte Carlo relieve the people from taxation and supply the Prince with abundant means for carrying on his deep-sea studies.——All hope that the Duma would protect Finland from the loss of its ancient autonomy disappeared when the question came to a test vote. The Constitutional and Social Democrats tried to get the measure incorporating Finland into the empire rejected by the Duma, but they were outvoted by the conservative parties. The patriotic Finns prefer self-government to representation in the Duma, but they will not have their choice. The president, Mr. Homiakoff, was unable to maintain order even by the frequent suspension of members of all parties, so he resigned in despair and Mr. Guchkoff has been appointed president of the Duma. In his opening address he explained that Russia was under a constitutional but not a parliamentary *régime,* and the executive was responsible to the monarch, not to a political party.

Ship Subsidy a False Theory

BY THEODORE E. BURTON

[This article and the one that follows by Senator Depew present both sides of the ship subsidy question now before Congress. Senanator Burton's article is from an interview with a representative of THE INDEPENDENT.—EDITOR.]

BETWEEN encouraging the transportation of American mails by American steamships and ship subsidy there is a wide difference which should be carefully considered in any legislation on the subject. One, under certain conditions, may be advisable. The other, under any conditions, is sinister, dangerous and obnoxious. The two have been so intimately interwoven in all the considerations of the last generation that, however innocently garbed, an effort to insinuate a mail contract bill into legislation instantly suggests the probability that it is but an entering wedge on the part of various interests which have long persisted in endeavors to commit this Government to the evil policy of ship subsidy.

It cannot and must not be tolerated. The idea of a subsidy, or any bounty or subvention for the support of private enterprise is repugnant to the great majority of our citizens. We are becoming the industrial sovereigns of the earth and this position is due to our unparalleled advantages and to the force of individual initiative and energy: not to gratuitous bounty from the Government.

On the floor of the House, in 1870, President Garfield, the great Republican leader, said:

"There is one feature of this bill, the subsidy provision, which is odious to the American people. It is a feature, I think, which no man in the House—certainly no Representative of an inland district—can support and sustain himself before his constituents."

The argument is frequently made that the measure is in line with a protective tariff. I deny it absolutely; for there is this essential distinction: while a tariff brings money into the public treasury, a subsidy pays it out. But there is a still stronger distinction in the very nature of the case. You can build a wall around a country; you can enforce any kind of domestic policy; you may levy a tariff in figures so great as to be prohibitive: but you cannot exercise any such control over the seas. There competition is unlimited and fitness and cheapness must prevail. There is no reason why one who favors a protective tariff should favor ship subsidy.

They tell us that it is needed in order to make up the difference in the cost of construction and operation of ships—which difference will obviously continue for all time. It is not a question of protecting an infant or growing industry till it shall have become established. It is not intended ultimately to reduce the cost of anything to the people. It will not make transportation any cheaper. You cannot ship a bushel of wheat or a ton of iron for any less under a subsidy. You simply make a new class of ships, manned and owned by Americans, and put them into the field of competition.

My theory of the American protective tariff is not that it causes us to enter into competition for all time where we shall always be at the same disadvantage. A nation would be greatly hampered, if not bankrupted, by such a policy. The result of our protective tariff has been to create two sources of supply where only one existed before. It has enabled us to develop the capabilities of our people and to enjoy the wealth of all our latent resources. As the result, in the majority of cases included in our tariff schedules, prices have been lowered and employment has been increased. There is no analogy between these items in the tariff and ship subsidy. I do not believe that many would be in favor of continuing a tariff for all time on articles where there was obviously to be a disadvantage forever, in competition with other countries.

We have been told that foreign shipping is built by subventions and subsidies: but that is absolutely not correct. England pays a heavy bounty for fast mail service and for a naval auxiliary, but the great body of her commerce is

carried by her tramp steamships and, in the language of one of their owners: "these steamships receive no more subsidy or help from the national treasury than the outcast human beings from whom they are named." In Germany there are two great lines—the North German Lloyd, and the Hamburg-American line. The North German Lloyd receives a subsidy. The Hamburg-American line does not; and yet it is the more prosperous and pays the larger dividends of the two. It will be found the world over that the gain in merchant marine and the ownership of ships is not due to subsidies, but to some collateral fact, such as an increase in wealth, or products for sale, or in the interest or preference of the people. Success has not been dependent on subventions.

Subsidies do not cause a healthy plant to grow. Our own experience has not been free from failure on the part of those who have taken advantage of various subsidies, or free from corruption in the relations between the Government and those who have desired to secure them. There are even some who claim that the reason we have no more vessels in the merchant marine of this country is directly due to our protective tariff—because our vessels have no return cargoes. But whatever may be the importance of this argument it amounts to little in comparison with certain other disadvantages which exist in the very nature of the case.

In the first place the products of our country are largely raw material, so that the outgoing cargoes are necessarily much heavier than the incoming. In New York, the great import harbor of America, the weight of outgoing cargoes exceeded by more than a million tons in a year, the incoming cargoes. In Galveston the weight of exports is twenty-four times greater than the imports. In Savannah the value of the exports is thirty-five times the value of the imports; and just as long as such conditions exist we shall labor under the disadvantage of inequality. The result of a ship subsidy would be that those American ships which did not receive it would labor under still greater disadvantage, while the foreign tramp steamers would turn aside from our ports. There are many other disadvantages which become apparent as one studies the subject, fully accounting for our present lack of a merchant marine. The question is complicated with many other problems—railroad rates, port dues, tariff regulations of other nations, banking facilities, the existence of agencies abroad for disposing of products, and in general terms the preferences and affiliations of the people with whom we are to deal, if we deal direct. It is not a loss which a subsidy is going to restore or a trade which a subsidy can build up. There must be intelligent and effective treatment of all of these contingent questions; then, when there is anything to carry, boats will be found to carry it. American commerce is much more handicapped today, by the patent insufficiency of our facilities for carrying freight on land, between the different portions of our own country.

But the real and vital reason for the decadence of our merchant marine lies in the fact that the tastes of our people are not in that direction. In England, in Norway, in Germany, in Japan, generation after generation has followed the sea. In this country the son of a sailor wants to study law. The sailor's life is no temptation to most of our people. They consider it an employment of danger and drudgery. Investments are not made in that direction because there is such an infinite variety of opportunities for enterprise on the land which are more attractive. The feeling of capital is the same as the feeling of the individual. We have gradually grown away from the sea. We have a great empire lying before us full of alluring temptation. When we have spread out till we have covered all the millions of acres, when every hill and valley has been exploited, American enterprise will turn again toward the sea. It will be looking in that direction long before; but just at present higher profits, more easily obtained, have turned the thoughts of our people toward what is more congenial. We have forgotten the sea and the present generation is accustomed only to the absorbing interest on land.

In the old days, when everyone lived upon the coast, the sea kings of New England sailed all over the globe. Our

shipping was upon every sea; but that was before the days of the great inland development—a development which is the marvel of the world. We are too busy with that development to give any thought to the sea. In this respect, too, the so-called "subsidy" bills are helpless to accomplish anything, even if they were enacted. In an effort to instill an appearaance of patriotism into the various measures proposed, there has been included the proviso that a certain substantial proportion of the seamen employed should be American citizens. Upon such conditions sailors could not be obtained to man our ships if our merchant marine should be very much increased from its present neglible proportions. Snppose the same obligation rested upon the steel mills of the United States, or the mines, or the manufactories—all places much more attractive to Americans than the sea. They would have to close down, every one of them. And so would our merchant marine, if we had one, with such a restriction. Only when our capitalists desire to invest in ships and our people desire to man them shall we have an American merchant marine.

If there can be legislation creating a mail service, by suitable mail contracts, which will enable American steamships to carry American mails, which is not a subsidy in disguise, or an entering wedge for subsidy, but legitimately intended for the improvement of communications incident to the mail service, which can be made reasonably effective, that is another matter. If an auxiliary fleet upon which our battleships can depend in case of need is possible of attainment thru legitimate means, it is something worthy of our most careful consideration. But to think that we can or should create a merchant marine by subversion is a grave mistake.

WASHINGTON, D. C.

A Revival of Our Merchant Marine

BY CHAUNCEY M. DEPEW

UNITED STATES SENATOR FROM NEW YORK.

BETWEEN the years of 1800 and 1900 our population increased from 5,000,000 to 77,000,000. From little in agriculture and nothing in manufacture our growing productions have enabled this enormous increase in population to live far better than our fathers lived a hundred years ago, and the surplus of our farms and factories has entered into competition with the markets of all the world. A hundred years a debtor nation, we entered the twentieth century a banker for all the governments of Europe. Our railway lines, a network of steel covering the country, in connection with the transportation facilities on the inland lakes, rivers and canals, have given us an internal commerce greater than that of all the interchanges of all the nations of the earth by rail and water. We have about one-half the mileage of the railways of the world.

Natural advantages were essential to our industrial victories, but natural advantages lie dormant unless the motive power and creative genius exist which shall utilize their opportunities. No unprejudiced observer can fail to believe that the United States, today, for what it is, owes an immense debt to the wisdom of Washington, Hamilton and Jefferson, in their initial legislation for developing American industries by the policy of protection. But our development and growth have been one sided. The farm, the factory, the mine have filled the warehouses and the docks of our Atlantic and Pacific coasts, leaving further transportation to the greed of foreign shipowners, to the protection of foreign flags, to the hazards of foreign wars. Besides the material advantage of owning and operating our own merchant marine, under our own flag, it ought to be humiliating to our pride and our self-respect that the industry, capital, labor and living of our people must,

upon the ocean, be dependent on the whims, the jealousies and the animosities of the sovereigns and cabinets of Europe.

It is an absolutely practical question, not a theoretical one. Owing to the situation in different parts of the country, since 1891 Congress has been unwilling to take any action whatever which would effectually promote a revival of our merchant marine. The antagonism of the Middle West has been sufficient to defeat every effort which has been made; but it is all thru lack of thoro understanding. In the minds of many there is a confusion of the propositions of today with the old discriminating rates and tonnage dues, repealed in 1828. They will never be revived, but the term "ship subsidy" has become a reproach and has done much to prejudice the people against all recent measures because it was the term applied to those early laws and was needlessly appropriated in recent efforts to secure legislation along entirely different lines wholly free from the old objectionable features.

We are either a protective nation or we are not. By our votes in national elections, and especially in the last national election, we have affirmed by tremendous majorities that we are a protective nation, as far as encouraging manufactures and developing our resources and care for our workmen are concerned—even the free traders became protectionists, during the passage of the Payne-Aldrich bill, on the productions of their own States—but we have taken away every atom of protection from the oceans. This was not due to ignorance. It was due to politics. In 1855, under one or another form of subsidy, we had reached a point where we were ahead of all the nations of the world in tonnage, but it was all owned in the North. The Southern statesmen were the wisest men in Congress at the time and for wise purposes they succeeded in repealing all kinds of encouragement afforded our merchant marine. It disappeared. On the other hand, in the last decade Germany has forged ahead from nothing to becoming the most dangerous rival Great Britain ever had in the carrying trade of the world. It has accomplished it by subsidies of one kind and another.

In 1891 we succeeded in passing an ocean mail subsidy bill and if the original bill had not been monkeyed with and partially destroyed we would have, today, vigorous and healthy lines of communication upon all the oceans. This bill, as originally drafted, provided $6 a mile for the outward voyage for American steamers of twenty knots and $4 a mile for 16-knot steamers, for carrying American mails. It passed the Senate, but in the House the rates were cut down to $4 and $2. The $2 rate, applicable to the long voyages thru the tropics to distant ports, has proved a lamentable failure as entirely insufficient in view of the class of opposition encountered, and the drastic laws we have made for the protection of American seamen, increasing the cost of running under the American flag far above the cost of running under any other flag that flies.

Our lack of a merchant marine of our own to call upon was painfully apparent to every one when our battleships made the great voyage around the world. We proved that we had a magnificent fleet of battleships—the third if not the second greatest navy in the world; but a battleship, in time of need, is as useless as the City Hall would be floating down the harbor of New York, if it cannot get coal; and three-quarters of the colliers accompanying our fleet—the vessels which carry the supplies on which the usefulness of the battleship depends—were under foreign flags. If war had been declared against us by Japan, while the fleet was in the East, it is a grave question whether it could have been got back, as the laws of neutrality would have necessitated the recalling of those colliers by the home governments, and we had no merchant marine of our own to depend upon. Unless we have an American merchant marine we cannot have an American navy for any purpose more important than holiday parades; and to pay one hundred and forty million dollars a year for that luxury, while shrinking and scared as we are before the three or four million required for the revival of a merchant marine, its only salvation, is one of the inexplicable inconsistencies of our legislation.

The objecting Middle West declares

that the subsidy would come out of the pockets of the farmers and go into the pockets of rich ship builders and owners. It is quite true that when the ships required cost from one to five millions to build they are not a poor man's playthings, and the concentration of capital required to produce and operate a fleet is not going to be put into it without reasonable assurance of adequate return. But who, in the last analysis, are the real beneficiaries? That is where education would come in and convert the opponents. They are really the farmer, in his better prices from larger markets, the manufacturers, who under protection are reaching a production which will overwhelm them unless their foreign markets increase instead of decreasing, the millions of men dependent upon the farms and manufactories, and the men who should take the places of the seamen on the foreign ships which today receive $200,000,000 for transporting our produce. The cost of a single battleship, which is absolutely worthless for the purposes for which it is built without a merchant marine, would insure us sufficient ships to compete upon all of the oceans of the world.

Washington, Jefferson and Hamilton devised the same system of protection for our merchant fleet as they did for the development of our land industries —in fact they passed the bill to promote commerce upon the ocean before they passed the famous tariff law of Washington's administration. Under that protection we carried, in 1828, 91 per cent. of our commerce. In 1900 we carried less than 8 per cent. of it. Our merchant marine did not die without a struggle. The Collins line, for instance, fought hard for Government aid to keep going against the subsidized lines of Great Britain. It was granted a mail contract and in competition it brought the ocean freight rates down one-third. But Congress yielded to the cry of free trade—to the literary campaign of the foreign shipowners and to the prejudice which was aroused against the direct fostering, by the Government, of any private industry. The subsidy, or mail contract, was withdrawn. The Collins line went into bankruptcy. The United States folded its flag and retired from the ocean and the English lines at once restored the freight rates which had been reduced thirty-three and a third per cent. The Government saved a few hundred thousand dollars a year which had been paid as subsidy, but the farmer, the merchant, and the manufacturer of the United States paid out millions of dollars a year in increased freight rates, because of that miserable surrender.

Fortunately for us the enemies of an American merchant marine have not been able to repeal the Government protection granted to vessels of our coasting trade. The construction of steamships for this trade has kept alive the few shipyards which we have and American energy has given us a better coastwise fleet, with better service and better rates, than is afforded by the coasting vessels of any other nation on the earth. In addition it has stimulated along the coast a commerce and trade which otherwise would have lain dormant.

The cost of construction, the cost of maintenance, the cost of operation are all much higher for steamships built in American shipyards and run under the American flag—in the aggregate at least twenty-five per cent. higher than the same charges in Great Britain and from thirty to forty per cent. higher than with the ships of other nations. The additional cost under the American flag is all due to labor and the better living for the crews. No American would be willing to reduce this cost, but there must be provided some compensation, or we shall never have a merchant marine to employ the possible labor. Of what value are these higher prices, today, to any one? We have no ships. We have totally inadequate shipyards. We have no routes of commerce. We have no natural agents in foreign countries in the interests of the carrying trade promoting the purchase and advocating the merits of American productions. If our tonnage was carried in American bottoms, with our shipyards enlarged to meet the demands of American construction, there would be direct employment given to over two hundred thousand men. The indirect employment, in steel mills, machine shops, mines, etc., would be even greater, while the farmer, by the simplest laws of trade, would profit most of all.

For a quarter of a century we have

been trying to invent schemes to avoid subsidy, till our flag has disappeared from the sea and we take out of the pockets of American workmen $200,000,000 a year in payment of freights to foreigners. The present effort to stimulate a merchant marine reduces the proposition to its simplest form, seeking only to restore the rate of $4 a mile, outward, for carrying mails, to sixteen-knot steamships, upon voyages of over four thousand miles. We have subsidized Pacific railroads to go over the mountains, connecting the oceans. We have spent hundreds of millions of dollars improving our rivers and waterways and our harbors for foreign commerce. But one would think, to hear the frantic cries of economy which greet this effort to encourage a merchant marine, that it meant depleting the Treasury by appropriations of sums of unequaled magnitude. As a matter of fact the present profit to the Government from the ocean mail service is $3,600,000 a year and the maximum cost of subsidies, establishing lines to South American ports, Australasia and the Orient, would not exceed that sum. Subsidy provisions which would place us on a competing basis with England, Germany, France, Japan, over the entire world, would not equal the cost of a single battleship.

There are just two prime objects of a fleet of battleships—the two are practically one—to protect the commerce of a nation and protect the country, in case of war. Now, we have no commerce under our own flag to protect. We have no merchant marine—no vessels which can be made auxiliary to the fleet, and the only means by which it can be made effective in time of war. Of what value is our navy? England, Germany, France, Japan, have built up a merchant marine as a vital part of their navy as well as its sacred charge. When England called upon the best ships in her merchant marine, during the Boer war, the loss of them as carriers cost this country nearly eighty millions of dollars, because we were depending entirely upon foreign transportation, wholly out from under our control; so that whether the war is our own or between other nations we are the losers without a merchant marine of our own. But while we spend more than a hundred million dollars a year on a navy, forty million dollars a year in dredging our harbors for the use of foreign ships, and two hundred million dollars a year in ocean freights which ought to remain in this country, we are driven from the ocean by the clamor that three million six hundred thousand dollars in mail subsidy would smash the Treasury.

We have the genius for invention, the architectural talent, the mechanical skill, the products, raw and manufactured, to compete successfully, everywhere, all over the world. Our necessity is the disposal of our surplus. Our opportunity is the open market. But to win we must have American ships built by American labor in American shipyards, officered and manned by Americans, under the American flag.

WASHINGTON, D. C.

A Simple Fact

BY O. W. FIRKINS

FROM the car window thru the smoky glass,
Five-forty-five, raw morning, sky of lead,
Each with his little pail, I see them pass.
If it is hard to leave the cheerful bed,
They do not say so; there is work ahead.

It seems a little thing to see or say,
But 'tis a little thing that's really done.
Not merely said, by millions in a day,
Under the sun or clouds that choke the sun;
Thousands of days, too, as the cycles run.

I do not know that there is aught to say;
I do not think I care to wail or rave;
For child's bread and for wife's bread one must pay:
But this truth keeps a truth, to blast or save,
That life asks much, and simple men are brave.

UNIVERSITY OF MINNESOTA, MINN.

The Rebirth of a Yankee Town

BY EDWARD PEARSON PRESSEY

[The reader will connect this article with one descriptive of the beginnings of the New Clairvaux settlement by the same author in our issue of March 30, 1905, and another entitled "Human Experiences in Bee and Bird Life," published on June 18, 1908. Mr. Pressey is the leader of the colony.—EDITOR.]

NEW ENGLAND is awakening. Twenty years ago it was midnight in the hill towns. "Decadence" and "degeneration" were household words bitterly quoted a decade ago.

THE VILLAGE SHOP AT MONTAGUE.

But even then began to appear signs of dawn.

"There is confidence in the economic future of New England," it was said when Morgan took his seat in one of our railroad directorates. A statistician has just figured out that while the total silver production of the treasure States is only thirty million dollars annually, the summer resorts of New England bring in double that sum of money. And, again, our markets for garden truck, fat cattle, dairy products and fruit are the most lucrative in the world. While we are awakening to these facts there is a noticeable increase of interest in social institutions, and a better care of public buildings. But more significant than all this has been the gradual improvement of the homes and the steady extension of scientific tests in the art of agriculture. In education we are in the midst of a revolution, radical and complete. The old district school system with its three R's is giving place to a better. The country towns of New England are on the map to stay, and to improve.

There are fifty towns for illustration. Doubtless there are many towns still living on the down grade, possibly a majority of the hill towns. These are specter communities. I remember with perennial amusement the upraiding I got from an old lady in a former parish because my eloquence did not succeed in drawing the people of her set to church; for, when she told me the list of her

CRAFTSMAN PRINTING.

friends, not finding them on recent church rolls, I happened to look in the graveyard on the hill and there found most of the names on the stones. The ones not found there had been many years away. Under such conditions civic life is not quick to revive. But a new generation is coming along poorer in recollections but richer in hope.

The town of Montague lies among the hills that fringe the Connecticut Valley in Central Massachusetts. It has a manufacturing end cut off from the rural body by an immense sandy plain of some fifteen square miles. Rural Montague is a good example of the awakening town.

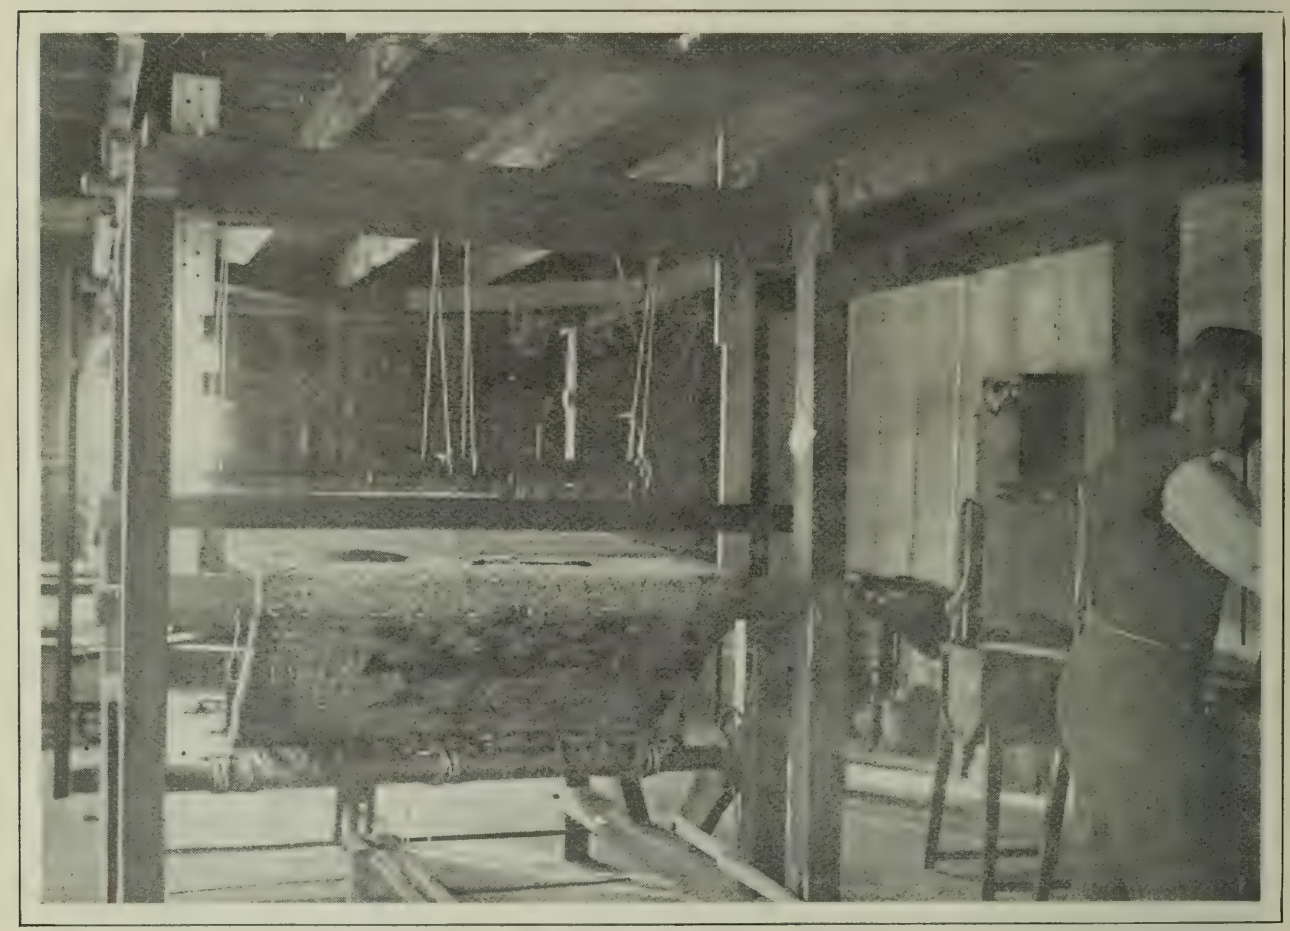
For a time the old centers remained reservoirs of latent human capacity. And then even as such they ran dry. The decay was not merely economic. Old customs broke up without any one bringing new ones in their places. For many years new enterprises were doggedly discouraged. The motto seemed to be: Do nothing you are not compelled to do. Get your sons and daughters out of it as fast as you can.

During the last ten years a decided change has taken place, which in the last five years has taken more and more definite forms. A new spirit is discernible. Some of us who were working hard ten years ago to hold the field against moral and material decay descried a possible future along lines of education and industry which in a figure we called New Clairvaux. We proceeded with an increasing group of vigorous young people to make an object lesson of the vision. We have demonstrated a few things. We showed this at least, that we had correctly forecast the future, for now all the world is coming our way.

"New Clairvaux bids fair to be standardized thruout New England and America." So remarked a neighboring Congregational minister. During the years 1902 to 1904 I made thirteen addresses on the subject of New Clairvaux before prominent organizations in Boston. Among these were the Twentieth Century Club, the New England Federation of Women's Clubs, the Lend a Hand Society and most of the leading liberal churches. During the same period I gave the same address before similar or-

ganizations in twenty-two other New England cities and a dozen times at one summer resort. In most instances there was a splendid response to the idea. There were many conferences with workers in other places. During eight years I have written nine Sunday newspaper and magazine articles on the New Clairvaux work. And there have been to my knowledge nearly twenty other "write-ups." I published, and circulated, eleven volumes of *Country Time and Tide* in every State of the Union and have more recently issued a book of 200 pages on the subject. I have answered probably four to five thousand inquiries by letter. That all this interest and inspiration has not helped mightily to change the situation would be absurd to think of. What makes this belief all the more to the point is the fact that people were ready for our idea; for they have already come our way. The very stars in their courses have fought for our New Clairvaux idea of a "more interesting and profitable country life" thru a combination of training in handicraft and modern agriculture, the combination of headwork with manual work, of art with life. The moral problems to a degree take care of themselves when the people get thoroly busy at something which carries interest and hope with it and which gets a vision before the eyes of the young. And our whole mission has been nothing else than this: The uplifting of the ideals of the youth of America, the consecration of their unspoiled convictions of duty and the worship of beauty.

The craftsman spirit particularly has permeated our little town, working as the spring steals up from the South from glen to glen, one day unnoticed and the next surprising the eye in some new hollow. A number of old houses have been refinished in excellent taste and made interesting. At least one public building, the town hall, a large brick structure built in 1858, has been reconstructed within at a cost approximately of $1,000. The designer, our fellow townsman, Mr. Austen Lawrence, with our craftsmen of the village shop, were the chief spirits in the actual work of this—all careful workmen of the new type. The hall now has a stage with fireproof wings and drop curtain. A harmonious color scheme has been carried thruout the room combined



THE CABINET MAKERS.

with a dignity of line and space of walls and comfortable furnishings without clutter. Among the simple but very effective decorative features are the arms of the family of Montague on the stage curtain, and the beautifully drafted lettering of the "exits." There is probably not a sweeter hall of its class in New England. And what gives point to our tale is that this is the work of the people and not the gift of a patron.

Much has been written about the arts and crafts of Montague, known as the New Clairvaux Arts and Crafts Society, during its first years. We started this co-operative association eight years ago as a sub-committee of a woman's auxiliary society of a church then living a very intermittent life, as a scheme to raise more money and arouse more interest. In the first year it outgrew the committee limits, "the ladies' society," and the church itself. The money income became an important aid to the members themselves in getting a living. One woman even succeeded by this new work in paying off a small mortgage on her home. Every year has seen the sales of the society increase. Some years they have doubled. They are bringing this year probably upward of a thousand dollars into the village, distributed among twenty-five to thirty families. The educational value of this work is even greater than its economic worth. We have to a degree established a new tradition among our girls and women who have larger leisure than income, a habit of doing some useful thing of good design and workmanship and finding a market for it at a fair price for their labor.

Within the past year there has been incorporated a second society of arts and crafts known as "The Dyke Mill." This is capitalized for $5,000. From a serious architectural and possibly economic point of view this promises much in the development of our rural life. It is under the management of Carl Purington Rollins, long associated with us in the village shop as craftsman printer. In the new enterprise he enters also into close touch with an important cabinet-makers' guild,

THE WEAVERY.

another outgrowth of experiments begun in the village shop several years ago, and with a weaving and dyeing industry and several smaller crafts which have grown out of the general movement here and there. This enterprise makes us think at once of the Merton Abbey works of Morris & Co., so successfully carried on in England a generation ago. And Mr. Rollins has in fact drunk deeply the inspiration of William Morris's spirit and successes in the artistic crafts and in a smaller way is like him thoroly conversant with many crafts besides being past master in the history and art of his own craft of printing.

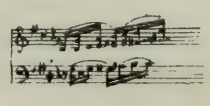
MONTAGUE VILLAGERS REDEDICATING THEIR HALL.
In old-fashioned costumes.

The methods of The Dyke Mill are businesslike, while at the same time the founder is rooted and grounded in the principles of true achievement in art. The real aim is to make work primarily its own chief and richest reward after a comfortable but frugal living has been secured. The old mill, situated between the meadows and the woods by several converging streams, is in itself a picture of a dream. The mountains stand up across the long reaches of inland marsh and wooded uplands. Its many gables are reflected mystically in the pond above and in the swirling tailrace beneath the old wooden bridge in the highway, while within, with every throb of the presses, and purring of the plane, or click of the shuttle from the loft, lives the heart of a great and urgent vision. Climbing nasturtiums and morning glories clamber over the moss-greened sheathing with the gold and purple of a new and royal life. The potato and the cucumber spread themselves along the brookside, and sweet corn patches and melons by the canal bank; the apple drops its red fruit into the water.

For today at least the vision is realized.

The revolution has struck our town school system. A good many years ago, before there was any reform, when the last industry had departed from rural Montague and the old white church was a Fourth of July target on the village

green and there were a good many unpainted houses on the village street and the old inhabitants had become reminiscent of better days, a village Solon had conceived the idea of bringing in the school children from the "districts" in long covered wagons to one central graded school. And this has been done for many years. But until recently, just as it has been everywhere else, there was no important change in the school itself. The old subjects were taught unthinkingly in the old way, the only ideal being that the children should pass 100 in answer to whatever questions their teachers might fancy to ask them in examination. But once the question was successfully raised as to whether these particular things were best worth while to know, the revolution began here and in many places. The conclusion is irresistible that education in the country districts particularly has been largely misdirected, that much of it was distinctly not worth while, that it offered no training for the high calling of the farmer and that it lent no inspiration or interest to his life.



The new school, known as the Montague Agricultural School, has its headquarters in the village school building with meadows adjoining. It has a domestic science laboratory and sewing school in the new Grange Hall, and its mechanical department in the village shop. Montague was the first town in the commonwealth to avail itself of the assistance of the State under a new law establishing a commission of industrial training and offering to appropriate State money as much as the town raises for it. Our town adopted the new plan without a dissenting voice.

We may confidently look forward to an almost immediate change of ideals of living when the first graduates of the school have once taken up their serious work on the farms and in the country homes. We may expect to see a greater activity not only in making the soil produce more and better crops to the acre with larger net returns but also in remodeling and rebuilding the farmhouse and its plant for animal industry. We may predict more sanitary and more convenient arrangements for doing the work, for storing and handling the products of the farm. We shall expect to see the house growing more beautiful, more simple from year to year.

We shall expect to see more courage, more interest, more resources, more life. We shall expect to see more co-operation, more mutual confidence, more fellowship between neighbors, a larger conception of civic life than the world has ever seen. This will mean not only the possession of modern conveniences which we now all lack, it will mean also the enjoyment of sweeter pleasures in public pageants, music, dramatics, all which require a spirit of union and intelligence, than anybody now enjoys. It will mean an application of the higher education in the great arts to the home and public life of all. It should do what education has never yet done, diffuse its liberalizing spirit thru the common arts of life and help every calling share in the ideals of poetry and architecture. The conception of the new education is truly democratic and presupposes that understanding can lift every man and woman above his or her present condition by a more intelligent and faithful use of the very things they have in hand. Our old school, we believe, inspired our boys and girls to strive to reach a hight outside the calling; to go to the city, perhaps, and speculate for wealth and strive for position or to be eloquent. The new education has a somewhat more moral ideal in that it sets the goal of ambition within each useful calling and not in some fancied higher calling; for that has proved like the pot of gold at the rainbow's end, no one has ever found it.

Oh, what is there to compare with your dream-wold of meadows and orchard and a chamber casement open to the blue mountains and plow lands fat with corn and withal the flame of the spirit of Theocritus or Wordsworth or another of the poets in your heart?

MONTAGUE, MASS.

The Cost of Living.—IX.

[This is the ninth article in our series on the increased cost of living. It is followed by a rejoinder from Professor Patten to various criticisms that were made in regard to his article in our issue of February 17. Those having already appeared are: "The Remedy for High Prices," by J. Pease Norton (February 10); "The Crisis in American Home Life," by S. N. Patten (February 17); "The Tariff and the Cost of Living," by B. W. Holt (February 24); "An Old-Fashioned Theory of Prices," by F. H. Giddings (March 3); "Prices and Incomes," by J. B. Clark (March 10); "Economy in Diet," by R. H. Chittenden (March 17); "Does Increased Gold Production Increase Prices?" by S. Brown (March 24); "High and Low Prices," by E. R. A. Seligman (March 31). Next week we shall conclude this comprehensive and illuminating series with a symposium of letters from our readers.—Editor.]

The Cost of Food Under Free Trade and Protection

BY J. D. WHELPLEY

[Mr. Whelpley is a journalist whose specialty is economic questions. He frequently makes investigations at home and abroad for the Government.—Editor.]

THERE is an impression, fostered by novels and by travelers who dwell in lodgings, that living is considerably cheaper in England than it is here. This is true in regard to certain matters which are dependent on the price of labor. Service is comparatively cheap in England and on the Continent, and dear in American cities. But as regards foodstuffs, free trade England is at this moment paying higher prices for most of its groceries than is protected America.

There are two retail prices for most things in England—the working-class price and the average family price. No such variation exists in America, except in so far as neighborhoods affect prices. The high-class grocery which has a monopoly of suburban trade is apt to sell at higher prices than the corner shop which must meet competition and cater to those who count their pennies. The prices here quoted for American foodstuffs are those of the average neighborhood, paid by the average American family.

In England the working-class price for beef is sixpence to eightpence (12 to 16 cents); the price for the average family trade, tenpence to a shilling (20 to 24 cents) per pound. The American price is 12 to 18 cents a pound for a pot roast, 12½ to 22 cents for steak. Mutton is 10 to 14 cents in England for the colonial and foreign article, and 20 to 24 cents for the British, per pound, as against 7 to 25 cents in this country. Pork, in England, costs 14 to 22 cents a pound; in this country the present price, which is considered high, is 16 to 20 cents. Bacon is 16 to 28 cents a pound in England, and 20 cents here. Ham, of which the English price is the same as bacon, is 18 cents a pound in America. Poultry in England ranges in price from three shillings (72 cents) to four shillings sixpence ($1.08), while in America it is 18 to 20 cents a pound, or 50 to 60 cents for a chicken, which can often be had somewhat cheaper. Turkey is 18 cents to 30 cents a pound in England, 30 cents here. Rabbits are from 20 to 30 cents each in England, 25 to 35 cents each in this country.

When it comes to articles on which England pays duty the difference is curious. Sugar, which pays a duty of tenpence (20 cents) to one shilling tenpence (34 cents) is sold at 4 to 5 cents a pound for lump sugar and 2 to 4 cents a pound for the granulated; while the American price is 8 cents for loaf sugar and 5 cents for granulated—nearly or quite double that of the English market. Tea, on which the English duty is 10 cents per pound, is from 24 to 34 cents a pound in England, and 50 to 75 cents a pound here. Coffee, on which the English duty is fourteen shillings per hundredweight (about 3⅓ cents a pound), costs 24 to 30 cents in England and 20 to 35 cents here. Molasses, on which England has

a duty of 10 cents to 28 cents per hundredweight, according to quality, costs 10 or 11 cents per two-pound tin in England, and 10 cents a quart here (a quart being approximately two pounds). Vinegar, which pays no duty in England, is 12 to 18 cents a quart there, and 10 cents a quart here.

Flour in England is 24 to 32 cents per stone (14 pounds), and 4 cents a pound here. The English cottage loaf, which weighs four pounds, sells for 11 or 12 cents. There is no standard weight for American bread, but the usual price is 5 cents a loaf, and the loaf usually weighs about a pound. Rolls, at 5 cents per half dozen, weigh more. The difference in price here can probably be accounted for by the higher cost of labor and also the flour used. Butter is 12 to 28 cents a pound in England, and 38 cents here for a high-grade article. Cheese is 12 to 20 cents a pound in England and 20 cents here for American cheese. Milk is 6 to 8 cents a quart in England, and 9 cents a quart here, but in the nature of things there can be no duty on that in either country. Eggs in England are 12 to 24 cents per dozen; in America, 37 to 41 cents. Lard is 8 to 14 cents a pound in England, 19 cents a pound here. Potatoes, which are 12 to 20 cents per stone (14 pounds) in England, are 15 cents a quart here, but considerably less by the bushel.

When it comes to fruits, we find apples selling for 4 cents per pound, 12 cents for 7 pounds, in England, and 15 cents a quart here. Bananas are 30 cents a dozen in England, and 20 cents here. Oranges in England are 2 cents apiece or less; here they range from 2 cents each to 3 for 10 cents, and 35 cents a dozen. Lemons are a cent and a half apiece in England and 20 cents a dozen here. Dried fruits (currants and raisins and figs) pay in England a duty of 84 cents per hundredweight, and are sold at 10 or 12 cents a pound. In America, currants are 20 cents a pound, sultana raisins 26, and figs 18 cents.

New York City.

The Theory of Price in Modern Economics

BY SIMON N. PATTEN, Ph.D., LL.D.

Professor of Political Economy in the University of Pennsylvania.

WHEN I wrote my article for The Independent (February 17) I had no expectation of exciting controversy, but it has been commented on by so many editors, notably The Independent of the same date and the New York *Evening Post* of February 19, that there seems to be more need than I thought of a discussion of price. This need is greatly increased by Professor Giddings's article on "An Old-Fashioned Theory of Prices," which assumes that Malthus, Ricardo and Mill would ignore modern data if they were called on to decide present problems. The real issue, lying deeper than any surmise as to how these men would act under new circumstances, concerns the evolution of economic thought and the stages thru which English economics went. In the first stage economics was not yet national, because England had not come into the foreground as an industrial nation. Adam Smith appealed to general principles and to international experience. He picked his illustrations with no relation to national boundaries, and his laws held as well of one age or state as of another. Ricardo took for granted that England was the great industrial nation and that its facts and ideas had the validity of general laws. English experience thus came to be regarded as the norm of the industrial world, and if other nations differed from it they were behind England and would sooner or later reach the stage England was in. This second or Ricardian stage of economic development was displaced by the rise of the

capitalist producers who dominated English public opinion after the Reform Bill of 1833. Now, the laws which the Ricardians presented as facts were used as the basis of oppression. The employer who did not want to pay fair wages cited the law of diminishing returns, the law of population, and the wage fund theory to prove that he could not pay more than a starvation wage. Class interest is now the motive for upholding Ricardian economics, not its scientific proof. It is this class interest that degraded economics from its well-earned position to that of a tool of oppression. "Old-fashioned" or class-interest economics grew out of English national economics just as Ricardian economics arose out of the cosmopolitan views of Adam Smith. It is this third stage that is so hard to displace because the people in it are attached to the marks of their class servitude. If a man is really cosmopolitan there is one way of reaching him; if he is national there is another; but the slave of class ideas is hopeless, because he wants to believe his errors. "How are you going to convince me," he proudly cries, "that the law of diminishing returns, the law of population and the quantity theory of money are not true." The only reply to be made is that it cannot be done, but that this failure is no proof of their correctness. The proof against these laws is that they were established on inadequate evidence based on the experience of one nation at a single epoch of history, and that the larger experience of the many nations during other epochs reveals opposing tendencies. The period of Ricardo was coincident with that of the French wars. As a result of this fierce conflict prices were high, industry abnormal, gold at a scarcity price, wages low and poverty general. This local temporary condition Ricardian economists mistook for a general condition of nature, and formulated laws of the niggardliness of nature that are only true of strenuous local conditions such as those thru which the nations of Europe were then passing. With new conditions Ricardian economics would have fallen into decay but for the class interests of those who wanted these doctrines as a background of their exploitation. American economics is but a return to the cosmopolitan economics of Adam Smith. It is of course true that modern economics rests largely on American evidence, but this is only so because America is the leading industrial nation, with more normal conditions and a better tabulation of its facts than those of other countries. This changed prospective, that the "old-fashioned" economist so much laments, is but a natural consequence of recent progress, and its influence will be augmented by other changes yet ahead. The loss of industrial supremacy takes from England her supremacy in economic theory, just as it takes from her the dominant place in war, trade and commerce. Struggle as class interests may for the restoration of the old *régime,* they will fail to block the saner view that puts the experience and welfare of all above that of any particular epoch, class or nation.

I hope that the contrast between the "old-fashioned" and modern economist is now clear and also the kind of proof on which each depends. But first of all, we should examine the rival explanations of recent price tendencies and see what are their premises and the facts upon which their truth depends. The most generally accepted theory is that the increased production of gold has inflated the currency of the world and thus raised the price level. The test of this is whether or no the rise in price has been general, affecting all sorts of commodities, goods and investments to about the same degree. A second explanation is that of failing resources and exploitation. The failure of resources, however, does not make general high prices, but high prices for particular commodities and low prices for others. Food would rise while wages and the products of labor fall. This is so nearly the effect of what would follow exploitation that the two stand or fall on the same data. That wages and labor-made goods have not fallen and the rise in prices is not confined to food and other necessities of laborers would seem to exclude this hypothesis. The third explanation, the one I offer, has back of it the authority of Adam Smith. The price of commodities, he tells us, is made up of three elements—the price of labor,

the rate of profit and the amount of rent. Subsequent economists, notably Ricardo, thought they had proved that rent was not an element in price, and as I do not care to discuss the point, I leave it to the reader to decide whether rent and monopoly do affect the bills he pays. The real issue is: Does the lack of capital and the resulting high profits affect prices, and if so, how? This lack of capital, if it exists, shows itself in the high price of present goods. If people love present consumption and care little for future welfare, present consumable goods will have a high price, while future or capital goods will be undervalued. The test of this view would be to show that consumable goods have a high price when compared with the investments that yield future revenue. This is what I think most people have in mind when they complain of high prices. They are thinking of food, clothing, home rent, and the cost of the various pleasures that make up their daily life. They do not mean that stocks, bonds, steel rails and building material are hard to get. If I am right in what they mean, there is a good reason to assert that the recent rise in price is not of that general nature that the oversupply of gold demands. The prices are of goods and commodities, not of stocks, bonds and material.

Having presented the possible explanations and shown where the tests lie, let us turn to the real issue. What is the cause of the high price of commodities and other present goods in which consumers are interested? I, following Adam Smith, say that "cheapness and plenty" come from hard work and much saving. The believers in the oversupply of gold assert that high prices are solely the result of the increased supply of gold. I said that the withdrawal of women from industry is a cause of high prices. This is ridiculed by the editor of the *Evening Post,* and why should it not be if prosperity depends, not on work and saving, but on the existence of gold-bearing quartz in Alaska? Adam Smith certainly would say that to increase capital and to work hard cause prices to fall, while short hours of work, idle women and but little saving would make them rise. The modern economist uses different language, but it comes to the same in the end. Work and saving increase the supply of goods and lower the margin of consumption. When our wants are well supplied the margin of consumption falls and with it the value of goods. Cheapness and plenty thus have the same connection with work and saving that Adam Smith found in earlier days. Both views make the increase of goods the test of prosperity, and not the supply of gold.

The existing confusion as to the cause of high prices is illustrated by the recent article of Mr. Byron Holt in THE INDEPENDENT. He says that the price level in America has risen 60 per cent. since 1896, while in England it has risen less than 30 per cent. On this basis he assumes that one-half of our higher prices is due to gold depreciation and the other half to price elements, such as tariff, trusts and farm values. But if 30 per cent. of our high prices are due to price elements, why is not a similar share in England due to the same causes? Ricardo's doctrine which he quotes from Mill stands in direct opposition to the price theories of Adam Smith, which Mill with equal clearness states in other places. The fact is Mill never had the courage to decide between his two masters when they differed, and as a result confusion and perplexity have been passed on for us to clear up. Ricardo says that the English tariff did not raise prices; it lowered profits. He also said that rent was not a part of price. If this is true of England, why does Mr. Holt make them into price elements in America? If our rents are a part of price, why are not the much higher agricultural rents of England an element in price? It is absurd to assume that a 100 per cent. tariff has an 11 per cent. effect on prices. It either has more effect or none at all. Mr. Holt's argument runs like this: There are plenty of causes to account for the recent rise in prices, but to give the increase of gold a prominent place, we will lop off 50 per cent. of our estimates. This may be satisfactory to Mr. Holt, but it is hardly logical.

The only workable theory of prices is that of Adam Smith. Ricardo's theory, based on the then current concept of

capital, assumed that all capital was in the form of food or of other articles used by the laborers. Each year this capital was consumed and replaced by the new work. Saving was also said to consist of setting consumable goods aside for the use of laborers. Capital was increased by the capitalist consuming less and the laborer consuming more. All income under these conditions is used to purchase consumable goods, and the more money income, the higher the prices. All this is clear, and in Adam Smith's time, when the concept of capital was formulated, it was in the main correct. But in Ricardo's time the facts about capital were beginning to change, and now our concept of it has radically altered. The use of fixt capital made necessary the contrast of present consumable goods with future goods not capable of yielding present satisfaction. Capital is now thought of, not as a fund of consumable goods, but as permanent investments, from which comes a flow of annual income. To save, according to Adam Smith, meant to turn over consumable goods to laborers; today saving means the purchasing of fixed capital, the labor of making which has already been performed. Adam Smith called the whole product of industry income, and defined saving to be the part of income turned over to laborers. Now, the earnings of industry in the shape of wages, profits and rent are thought of as divided into two parts, income used to purchase present goods, and savings to be invested in permanent forms of capital. What each one decides is how much of his earnings shall be income and how much savings. For himself he chooses between a lump sum of consumable goods and a small annual flow of income from the future produce of industry. If he buys a stock or bond he does not set labor at work, for the work that makes this investment valuable has already been performed. When he spends his earnings as income he does not take work from laborers; he competes with other consumers for the present stock of consumable goods. His savings thus add to the value of investments, while his income expenditures add to the value of consumable goods. When he and others have made their decisions as to the distribution of their earnings between income and savings, they have also decided the relative values of present and future goods. Much saving and small consumption mean a high value of securities, while small savings and large income expenditures result in a high price for consumable goods.

It will be objected that this reasoning overlooks the influence of an increase of the gold supply. Not at all; the influence of the increase of gold will be seen in another quarter. With our present banking system all money not needed for consumption is collected in banks as deposits and then if not used for local purposes is sent to the great industrial centers, notably New York. It is there used as the basis for loans which under present banking practices always means some form of securities. Each new supply of money increases the loans of banks and the use of checks, with the effect that the price of securities is correspondingly raised. The increase of money under present conditions means therefore a high price of stocks, farms and city real estate, not a high price of consumable goods. It is the permanent investments that are pushed up in price by the increase of gold and it is safe to assume that every dollar of new gold adds four or more dollars to their value.

The modern theory of prices assumes that the price of consumable goods is determined by different forces from those fixing the value of permanent investments. The relation of income to saving is the controlling factor in the price of consumable goods while the supply of gold is a leading element among the causes fixing the price of stocks, bonds and other securities. The reader should notice that the difference between this view and that of the older economist turns on the relative importance attached to fixed and circulating capital. If the older economists were right in assuming that all capital is circulating they were right in their theory of money that depends on this assumption. If they were wrong, however, in this, and if banking practices have radically changed since their time there is room for a new theory of money the failure to see which casts no reflection

on their intelligence or reasoning powers. Mr. Tooke states the main issue clearly when he asserts that during the first half of the nineteenth century every instance of variation of price may be fully accounted for by circumstances affecting the supply and demand for commodities. Similar investigations would show the same truth in respect to the last half of the century. There are specific causes that account for each change of price and the general lowering of prices is not more than the improvement in industry would call for. Believers in the quantity theory of money have not been able to account for the movement of prices without some reference to improvements in industry. Their general assumption is that these two causes should be regarded as having about the same influence, yet rules of good logic demand that when one cause accounts for all the facts and the other for only a part of them, the first cause should be accepted as the sole cause.

The relation of money to fixed capital is ignored by the adherents of the quantity theory of money because their theory was devised before the existence of fixed capital was recognized. They assume that money is used solely to buy commodities when in fact most of it is used to purchase future goods. The mass of buying is with checks and they are mainly used to transfer securities. Here the reasoning of the modern economist is clear and illuminating. The new gold has gone but little into general circulation. The public still uses silver or silver certificates in their cash payments, the quantity of which has not altered. The new gold has gone mainly into bank reserves, and increasing the use of credit has raised the price of securities. Not only does the increase of bank reserves and the use of checks show this but it is also verified by the rise in the value of securities, farms and city real estate. The increase of gold acting as an increase of capital has enabled many large enterprises to be carried through which without it could not have been undertaken or if undertaken it would have been necessary to offer a higher rate of interest. To make an investment attractive there must be either a high rate of interest or the prospect of a higher price at a later date. The increase of gold has thus delayed the rise in the rate of interest which must sooner or later come if the American pnblic do not resume their earlier habit of saving. The main effect of the abundance of gold has been to obscure the effects of rising social standards which would have been clearly manifest but for the counteracting influences of the new gold.

PHILADELPHIA, PA.

A Song for New Orleans

BY GEORGE STEELE SEYMOUR

UNDER the grand old trees in City Park we strolled—
She was a maiden bashful and I was a lover bold.
Of the flowers and fields and the bayous and many more things we spoke,
Under the streamers of Spanish moss that hang from the Dueling Oak.

There were many more days that taught us that life is not lived in vain,
Driving along the Esplanade, or over to Pontchartrain;
And then the happiest day of all, there on that shell-strewn shore,
When she promised—but, heaven! did such thing never happen before?

Lafayette has its memories, Audubon has its charm,
And the ghosts of a vanished regiment drill on the old Place d'Armes,
But as long as there is a City Park and a god of love to invoke,
Maidens and swains will wander still, under the Dueling Oak.

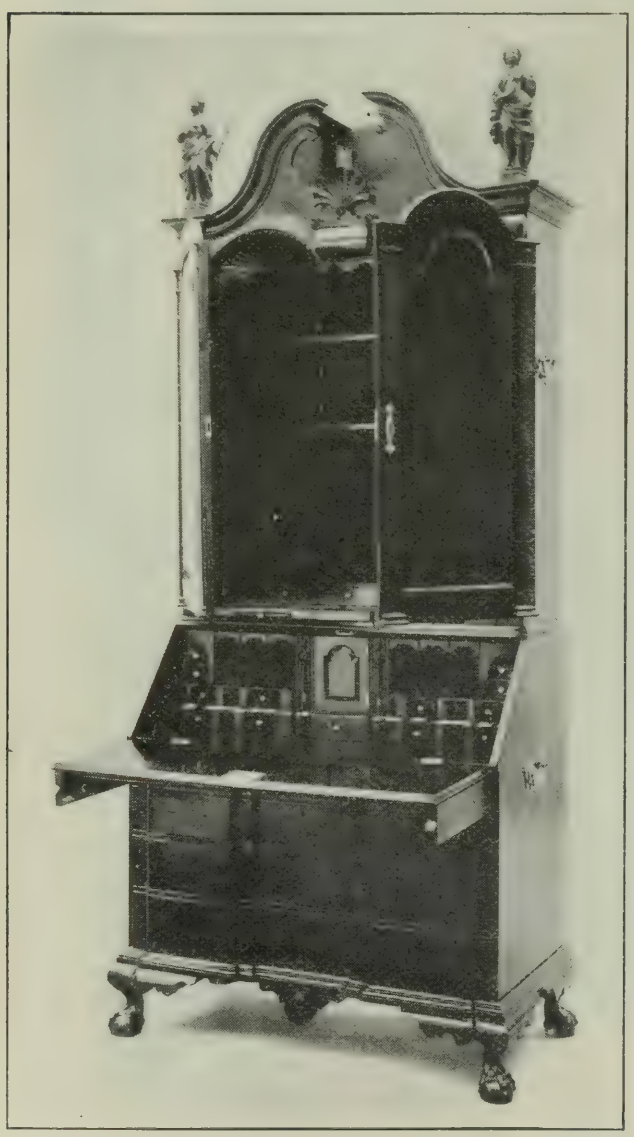
WASHINGTON, D. C.

The Bolles Collection of Colonial Furniture

BY LUKE VINCENT LOCKWOOD

Author of "Colonial Furniture in America," Etc.

THE Metropolitan Museum has recently purchased thru the generosity of Mrs. Russell Sage the Bolles collection of American furniture and household articles. This collection was made by Mr. H. E. Bolles of Boston during the last twenty-five years, with the object of obtaining specimens more particularly of the furniture used by the early settlers before the year 1700. While the widespread interest in so-called Colonial articles has led the majority of persons at least to a slight knowledge of carved mahogany, or even



PRESS CUPBOARD.
Last quarter seventeenth century. (Fig. I.)

THREE-LEAF TABLE.
First quarter eighteenth century. (Fig. II.)

ROUND-ABOUT CHAIR.
First quarter eighteenth century. (Fig. III.)

BLOCK FRONT DESK.
Third quarter eighteenth century. (Fig. VI.)

HIGHBOY.
About 1720. (Fig. IV.)

of highboys and lowboys, very few persons know anything whatever of really Colonial furniture. The standard of living of today has increased so vastly beyond that of the brave New Englanders that it is difficult to realize that three hundred years have not yet passed since Plymouth was founded.

country found in the exhibition great inspiration and information, while the effect given by the arrangement, tho more crowded than was desirable, was proof to most beholders that art is really obtained by simple means and materials.

The Bolles collection possesses fine specimens of chests, cupboards, chairs

LOWBOY.
About 1720. (Fig. V.)

The recent exhibition held at the Metropolitan Museum of New York City during the Hudson-Fulton celebration proved beyond any doubt what a widespread interest prevails among Americans in the art and artisanship of their country's early days. Teachers of arts and crafts in public and private institutions from many parts of the

and tables of the period antedating 1700, and the century following is adequately covered and represented by high and low chests of drawers, bureaus, tables of all sizes and descriptions, desks and chairs, besides mirrors in wide variety, fireirons, candlesticks, etc.

Fig. I shows a cupboard which illustrates very well the type of furniture in

use in this country in the seventeenth century. It is built of oak in a very substantial fashion and decorated with flat carving and applied ornaments of a contrasting wood and color. The upper and lower sections are cupboards fitted with shelves and the carved section separating them is a drawer. Cupboards were in every household and served many purposes. They varied in quality from the simplest undecorated cupboard of pine to the very well carved and handsome cupboards of oak. The Bolles collection possesses a number of these cupboards, which are now rare, practically never met with outside of collections.

Fig. II shows a small table with triangular base and round top, divided into a triangular piece which fits the frame, and three small, semicircular leaves. The top is so arranged that it turns on the frame holding the leaves open in place, or dropping a leaf at each side, leaving the table triangular in form. Such tables as these, of which this collection has many examples, made usually of hardwood, walnut or maple, varying in size and shape, played an important part in the housefurnishings of the late seventeenth and early eighteenth centuries.

Fig. III shows a chair known as a roundabout chair, with turned legs ending in Spanish feet, and a rush seat. These chairs were very popular in the early eighteenth century and continued in fashion thru the following periods, as late as 1770.

Figs. IV and V illustrate a very beautiful chest of drawers and dressing table, dating about 1740, decorated with "Japanned work." These highboys and lowboys were the furniture of the sleeping room during the period between 1700 and 1775. This collection has examples of all the styles in vogue during that period, as well as tables, chairs and desks, which followed the fashion of the slender cabriole leg ending in the plain Dutch foot and its variations.

The desk and bureau shown in Figs. VI and VII are characteristic of the fine furniture made in this country during the Chippendale period, when mahogany was the wood most used. The lower section of the desk is blocked and each drawer finished with a bead molding—the feet are finely carved ball and claw. The upper or bookcase section, with hooded top of the highest type of workmanship inside and out; the doors are finely paneled and decorated with fluted columns and the top is molded and the corners are surmounted with classic figures beautifully carved. The inside is divided into compartments for papers and finished at the top of each half section with carved shells.

BLOCK FRONT DRESSING TABLE.
Third quarter eighteenth century. (Fig. VII.)

The knee hole bureau, Fig. VII, belongs to the same period as the desk. It is also of mahogany cut in "blocks" from the solid wood and decorated with raised and sunken shells, also cut from the solid wood.

It would today be practically impossible under the most favorable conditions to bring together such a collection as this and each year adds to the difficulty of so

doing. The Metropolitan Museum in purchasing and exhibiting this collection is opening a practically new department, for there is no comprehensive collection of American furniture anywhere in this country. As New York is now the art center on this continent, and with wise foresight should remain so, what more fitting place could there be for such a collection?

Some years ago the Philadelphia Museum placed a man at its head who was a connoisseur in American ceramics. Today that museum possesses a collection that so far surpasses any other that the student must go to Philadelphia properly to study that subject. It is to be hoped that the Metropolitan Museum will become a like center for the study of American industrial arts. A chronological arrangement of American furniture covering the period between 1620-1820, would be of inestimable value to the student of history, and as the function of a museum is to preserve articles of artistic and historical value against the ravages of time, one may imagine how such a collection will be viewed by Americans of five hundred years hence.

One of the questions which faces those who are attempting to preserve art in any form, is the one of proper restoration. The condition in which furniture of two centuries ago is found makes it necessary, both for appearance and preservation, that restoration be restored to. If this is done faithfully and by an individual in sympathy with the result, it can in no way lessen the value of the object, artistically or practically. It is not possible for the vast majority of interested spectators to imagine the original beauty, for instance, of a carved oak cupboard if it is shown as found after many years' use in a stable, with doors hanging loose and joints at odds, while the wood has lost all of its luster by exposure to wind and weather.

The Bolles collection numbers some six hundred pieces, but there are many specimens which time can add. One of the results of a wide knowledge of this collection will be the gift from time to time of fine objects not already represented.

New York City.

Is Novel Writing Declining?

BY WILLIAM FREDERICK DIX

Author of "The Face in the Girandole," "The Lost Princess."

IT seems to be the history of fine art that each phase of it has its primitive stage; then, under some romantic incentive, its period of more or less rapid growth, its flower, and then an inevitable period of decline. Has the art of novel writing reached this period of decline?

Art is the representation of Nature; not Nature reproduced, but Nature as interpreted by the personality of the artist. The more spiritually sensitive a man is to the soul of Nature, the better is his work. The artist paints not only what he sees, but what he feels. Art is Nature made human, and the art-inspiration which Solomon, and David, and Isaiah, and Phidias, and Virgil, and Giotto, and Michael Angelo had is that divine inner voice calling us to high and esoteric companionship with what is good and beautiful and true.

Sculpture was the first of the arts to find its full flower, and music the last. Sculpture was archaic in Egypt and Babylonia, and found its perfection in classic Greece.

Picture making remained archaic till the Middle Ages, when it found its flower in Florence. The tomb frescoes of Egypt, the vase decorations of the Etruscans, all the examples of early picture making which have been preserved to us show that convention was the consort of, and Nature a stranger to, the artist till the Florentine peasant, Giotto, introduced her to the world.

The art of painting has, to my mind, never been as great as during the time of the best Florentine and Venetian

masters, whose religious and spiritual inspiration could express itself with masterly technique.

It is a very curious thing that the least intellectual and the most emotional of all the arts—music—should be the last to be developed. Did you ever realize that there was no scheme of harmony, as we know it, till about three hundred years ago, and that practically the entire development of modern music occurred within a couple of centuries?

Bach was the first musician to produce other than primitive music, and his fugues led the way to Haydn, who developed the sonata form; Handel, who developed and perfected the oratorio to an extent never since excelled, and Mozart, who first produced real opera. From these first great masters came, in superb, successive steps, the orchestral development, with many instruments playing simultaneously and in harmony, and the flower of the art of music, represented by the symphonies of Beethoven and the masterpieces of Schumann, Schubert, Brahms, and the master-musician, Wagner. Less rugged and elementally magnificent than Wagner, who is to music what Michael Angelo was to sculpture and architecture, and what Browning is to modern poetry, came Liszt with his symphonic poem. Then came the final touches of delicacy added to the art by Saint-Saëns and Tschaikowsky, and then came the inevitable point of decline. Already Richard Strauss insinuates subtle elements of degeneracy, and Debussy, forsaking harmonies, seeks sensationalism in his discords. The canker worms of self-consciousness, meretricious cleverness, over-refinement, effeminization and sensualism are gnawing at the heart of modern music!

Each phase of art is developed logically and progressively to a state of comparative perfection; then, when it is exploited so far as is humanly possible, it has an evident decline. The reason for this decline is that an element of self-consciousness comes into the work of the artist. He finds it necessary to strive for new effects; he must catch the attention of the public at any cost; he must be clever and original even if that cleverness and originality lead away from truth. And these are the canker worms of decay.

While an art is progressing to perfection, every advance stimulates the artist, every step forward is a token of strength. The artist forgets himself and lives for his art. After the art has reached its zenith, the artist is lured into subtleties and catch phrases and tricks. This is most strikingly illustrated in the history of music as I have outlined it, and I believe that we have reached the period of decline in the art of fiction. During the last dozen years I have reviewed for various magazines several million novels —at least, it seems that many as I look back upon them. Some of them I have read! As I look back over the uncounted flocks of duodecimo volumes which have flitted in and out of my study window, I realize that they have left some little residuum of general impressions, and the strongest of these impressions is that every human situation, emotion, influence, characteristic, passion and environment have been described, and that modern novel writers, despairing of finding anything new, are resorting to retellings, to tricks of technique and subtleties in order to catch the popular taste.

The classic myths of Greece and Rome, the folk-lore and peasant superstitions of Europe, the scandals and immoralities of court life, legends and fairy tales covered the gamut in allegorical form of human experience. Boccaccio, perhaps the first realistic romancer, who told tales typifying real people and social conditions, breaking away from wonderland, just as Giotto broke away from archaic convention, introduced the first modern element in the art of fiction. He dealt in realities, not in symbols; he humanized his characters instead of deifying them. He blazed the trail followed long afterward by La Fontaine, Hugo and Balzac. Defoe and Fielding led the way to George Eliot, Maria Edgeworth, Thackeray, Dickens and Scott. The art flowered under the culture of Kingsley, Charles Reade, Hawthorne and Dumas, and what have those and the "sweet host more" of other masters now dead left for the modern novelist to do?

The song of life has been sung, the

human heart has been analyzed, the passions and emotions have been portrayed; the modern writer must content himself with paraphrasing the same things, embellishing them merely with clever technique and tricking them out in new garb. Personally, I think that the technique of the novel of today is far superior to the technique of the novel of the early nineteenth century. It has a perfectly definite plan and theme, it is condensed, epigrammatic, sparkling and medallion-like in its finish, it is stripped of verbiage and circumlocutions, and technique is a very necessary part of art.

Technically, the romances of Thackeray, and Dickens, and Dumas, for instance, are not novels at all. They are glimpses of life visualized, the author rambling on in a leisurely way till he had finished his three-volume space. There were generalizations and preachments and incidental dissertations which were quite apart from the swing of the theme. Their books were faithful histories of the times, describing real scenes and characteristics, but with fictitious people who stood for types; they were marvelous panoramas of life and manners, but they were not novels as we now understand the word. "The Virginians," "The Three Musketeers," "David Copperfield," "Père Goriot," had no real endings; they simply stopped.

The novels of today are really amplified short stories, elaborating one idea or group of ideas logically to an artistic finish. They far surpass their prototypes in technique, but they have far less of the true art-impulse. The clear-cut conceptions of De Maupassant, the crisply drawn emotionalism of Poe, the imagination and virility of Bulwer, the tense realism of Kipling, all influenced the artistic methods of modern writers, but with this growth of refinement came the decrease of primal ruggedness, enthusiasm and inspiration. Kipling, with all his vigor, succinctness and picturesque force, never produced a true novel. Howells introduced what might be termed the photographic process, which *re*produces but does not *re*present, and today we have as our foremost novelists such writers as Henry James, who interminably splits hairs, who teases us with subtle shades of meaning, who quibbles over syllables. George Meredith, too refined and artificial in style to be real, and who spins gossamer threads to catch the moonlight, and Mrs. Humphry Ward, who plays the drawing-room zither, but not the sounding horn.

The novel of today suffers terribly from commercialism. The writer must keep always before him the deadly question, "Will it sell?" The publisher's criterion is not, "Is it good, will it add prestige to my house?" but, "Will it sell?" The reader asks before he buys, not "Is it good, is it art, is it literature?" but, "Is it being read and discussed? Should I buy it to be up on the subject?" This is the soil where the canker worm thrives.

What is a novel, after all? Merely a tale of human life written to divert, to please, to interest. True, but all works of art should do these things. But there are more ways than one to divert, to please and to interest. Sidney Lanier has written:

> "Let any sculptor hew us out the most ravishing combination of tender curves and spheric softness that ever stood for woman. Yet if the lips have a certain fulness that hints of the flesh, if the brow be insincere, if, in the minutest particle, the physical beauty suggests a moral ugliness—that sculptor—unless he be portraying a moral ugliness for a moral purpose—may as well give over his marble for paving stones, for Time, whose judgments are inexorably moral, will not accept his work."

The novel, like every other form of art, to be a work of art and to live, must be inexorably moral. The more recent novels from the pen of an English novelist who gave promise of being able to produce classics, Maurice Hewlett, show decided traces of moral meretriciousness too subtle to be called indecent, but which, in spite of their refinement of style, will cause them to be forgotten, I believe, when "The Scarlet Letter," with its moral treatment of an immoral theme, lives. The author of "The Stooping Lady" is beginning himself to stoop. On the other hand, certain writers who believe they are returning to the more elemental period of art mistake brutality and coarseness for honesty; they shock the senses, but do not stir the heart. Jack London, for instance, strives to

portray elemental human passions in modern but primitive conditions of life, but his books have no uplift.

One modern novelist, in my opinion, rises considerably above the plane of present-day, brilliant mediocrity. Breaking all current traditions, scorning the popular demand for condensation and rapidity of action, wandering leisurely along thru many hundred pages in each of his four books, and making many detours in the old-fashioned way of Thackeray, writing evidently for the mere pleasure of writing, yet having a distinctly strong story to tell withal, William De Morgan has, in his old age, won a permanent place for himself as a writer of good novels.

What impressions do these modern novels leave upon me? That their writers have, with much cleverness, great skill, ingenuity, versatility, boldness—and with a weather eye out for the royalties they are to reap—produced countless books—ah! a most amazing army of books!—which divert, amuse, in some cases instruct, in a few stimulate, but which seldom uplift or inspire. The novel reader of today receives a liberal education in life. With Kipling and Mrs. Fraser he learns India better than the traveler; he becomes acquainted with coolie and maharaja, with pariah and priest; he sees the palaces and bazaars, and the English garrison life, and is caught in the mystic spell of Hindoo philosophy; with Lafcadio Hearn and Pierre Loti he becomes intimate with the Japanese; with Jack London and Rex Beach he suffers the cold of the Klondike; with Merriman the heat of Africa; with Joseph Conrad and E. J. Conolly he learns the horrors of typhoon and raging seas; with Mrs. Ward and Mrs. Wharton and Robert Grant he visits the aristocratic homes of England and New England; with Mrs. Harrison, Mary Wilkins, Davis, Chambers and others he hobnobs with various grades of American society; with Winston Churchill he scans our history; with Edwin Lefevre he dabbles in high finance; with Cable and Hopkinson Smith he is entertained in Creole and Virginia society; with Myra Kelly he studies the children of the slums, and with Conan Doyle and Hornung he becomes a detective or a burglar, as his fancy pleases.

Would you hunt, fish, explore, make love, crack a safe, fight a battle, loiter at a tea, or sail the main in palatial yacht or fisherman's dory, enter the courts of royalty or eat black bread with the peasants, gentle reader? Is it your whim to explore the sweatshops or factories, delve in the mines under the earth or sail the skies in aeroplanes, plunge back into history or forward into the future? It is all here at dollar and a half per!

The modern novelist knows more of engineering than the professional engineers, more finance than the trust owners, more of Europe and Asia than the explorers, more morality and immorality than the sociologists! Truly it is a strenuous life, this novel writing of today. *It is clever, but is it art?*

Is the modern fiction writer inspired by the same frenzy that caused Shelley to write "Adonais," or Michael Angelo to carve his "Moses," or Botticelli to paint his "Spring," or Rubinstein to compose his "Melody in E," or Mendelssohn his "Spring Song," or Carpaccio to paint his Madonnas?

I cry a warning that cleverness will never take the place of inspiration, that sensationalism will tickle the public taste but transiently, and that sensualism will lead to chaos. Whether it be with his chisel, his pencil, his brush, his bow or his pen, the man must work with divine fire, regardful enough of modern needs and conditions to be sympathetic to them, regardless enough to dare to lead up and away from them, and scornful of commercial temptations, to be an artist. Books will die and bookworms will eat them, but not when they are inspired with the love of truth and beauty, not when they are written with the true art-impulse that forgets self-consciousness, that avoids the lure of money, that scorns the immoral, that cares little for the popularity of the moment, but everything for truth and sweetness and light.

Reforming the Theater

BY CHARLES M. SHELDON, D.D.

Author of "In His Steps," Etc.

THE other day a theatrical agent from New York came into my study and in a very direct business-like way said he wanted permission to put one of my books, "In His Steps," upon the stage. He represented theatrical interests in New York which he said would guarantee to put the play upon the stage in a very generous fashion, and into the hands of the very best actors and actresses. He demonstrated with somewhat enthusiastic diction, at least to his own satisfaction, that there was "big money" in it for all concerned, and pulling out a contract, seemed to take for granted that it was only a matter of coming from New York to Topeka to get what he asked for. In reply to my question whether these actors and actresses were all devout, sincere Christian men and women, he at first expressed some astonishment and then considerable feeling. He could not guarantee any such conditions and did not think it necessary. But the play, he urged, would be staged in such a way as to offend no one, and be a great purpose play to elevate the masses, and so on, closing his argument with a peroration concerning the "big money" in it for all concerned.

I may have made a mistake in refusing my consent to the dramatization of what was to me at the time a work of great thought, and intense conviction from which I have never departed, even thirteen years after the time of writing the story. I am willing to be open to the charge of extreme and of Puritanical narrowness in the demand for an idealism which can never be met, but I do not yet see that it is the Christian thing to dramatize a Christian story because there is "big money" in it, or even on the plea that it will influence possibly the lives of people if put in dramatic shape. The fact of the matter is, the particular theatrical interests which urged the dramatization are money makers, pure and simple. That is their one and only end, and it makes no difference to them whether what they put on the stage is Christian or pagan. If it has possible "big money" in it, that is all the question they ask. The uplift of humanity is a by product. The main thing is the cash. Box receipts soar mountains high above the elevation of the multitude.

There are other reasons why I hesitated to try to reform the theater with a supposably dramatic form of the purpose story. The theater as an institution is the strangest and most remarkable combination of good and bad that society knows anything about. No other institution which is supposed to be a part of our civilization dares contain such a strange medley. The Church is, for the most part, at least decently moral in its worship, its services, its entertainments, and its social life generally. It would not dare be anything else. The average school is for the most part giving to the civilized community good things in an overwhelming majority. But the theater, with an eye to box receipts mainly, gives the people a purpose play one night, and shows up the next with things so indecent that they could not be seen or spoken on the street or repeated out loud in any company of men and women, outside the theater, without a storm of protest.

I very seldom go to the theater myself, largely on this account, because I do not know what I am liable to run into, even when the actors and actresses are known as first class. But a short time ago, with the help of some newspaper reporters who are more or less frequent attendants on the theater, I summed up the character of some twenty-seven shows which came into my own town. By the consensus of opinion given by these theatergoers, five of the twenty-seven were clean and good, had some definite lesson to teach, without a syllable or scene throughout which could offend even the most fastidious Christian man or woman. Seven of the twenty-seven plays were of doubtful order, that is, they were for the most part good as to acting and such matters, but contained at least suggestive dialogue or questionable ethical teaching. The remaining fifteen plays of the twenty-seven were what could truthfully be called bad in the

sense of suggestiveness; or the theme of the play itself revolved about some phase of human frailty, the discussion of which by the theater, as experience shows, does not help to better conditions, but rather incites the passions, just as hanging used to do when it was performed in public. It is not a deterrent to evil, but rather a pandering to vulgar things, leaving in the mind a brown deposit which gradually coats the finer sensibility of virtue or takes the bloom off of the necessary innocence of youth.

At this point I find myself raising the question concerning what is supposed to be the effect of the theater as an institution on the chronic theatergoer. A great deal is said, apparently without any dissent, about the great influence of the theater in shaping conduct. I have often wondered, however, whether the influence of even the good play for righteousness on the character of one who has seen and heard it can be compared for one moment with the influence of a good book or a good speech or a good sermon. From my limited experience with the constant theatergoer, I do not find this influence very permanent in its actual doing of righteousness. On the other hand, I find a more or less blasé condition of mind. The theater seems to create an artificial atmosphere. One is not seeing real life nor meeting its real experiences. It is glamor and dream life. Young men who are caught by the fascination of the nightly attendance on the theater become dissatisfied with real life. The atmosphere of the play affects them not as an incentive toward the cleaner and more ambitious righteousness, but rather acts as a sensational tickling of certain emotional parts of the nature, and there is no question whatever concerning the rousing of certain passions in the inveterate theatergoer which, as far as my observation goes, tend towards demoralization of character.

The trouble with most theatergoers is the failure to discriminate. They go to good and bad alike. All that thousands of theatergoers ever ask about the actor or actress is whether he or she is first class or has the reputation of being such. That is enough. The play itself may be rotten to the core and the teaching objectionable in the extreme, but with these theatergoers the fine acting is the main thing; and it is only once in a very great while that even so-called Christian people will register their protest against a bad play by going out of the theater when their moral sense is offended.

A play was given once in my home town in which the principal actor was a famous man whose name attracted a crowded house. The play itself taught no good lesson, it had no purpose to elevate, it contained many passages of great vulgarity and had in it much dialog of a debasing sort. There were hundreds of Church members present in the theater that night. Some of them, commenting on the play in my hearing, condemned severely some of the things they saw and heard, but not one man or woman registered his protest by leaving the house. The only thing the manager wanted was the money of these people; the only protest he could fear was the actual and indignant withdrawal of the audience. Is it not proper to raise a question concerning this habit of theatergoers? What we call decent men and women, for fear of being thought a little odd, will let their protest fall to the ground and by their presence, at least, tacitly endorse some tremendously bad thing by looking at and hearing it.

Which leads to comment on what has always seemed to me like a very remarkable inconsistency where the theater is concerned. Our civilized cities are vulgarized by staring bill boards which depict women indecently clad, advertising theatrical presentations. Very few people seem to think anything is very wrong about this, but if the persons portrayed on the bill boards were suddenly to come to life and get down off the boards and walk along the street, the law of any town in America would instantly arrest them for indecent exposure. The same thing is true of the things that are said and done on the stage of the theater. Actors and actresses will say and do things on the stage of a theater which could not be said and done on the street or on the sidewalk of any town without subjecting them to arrest. In a recent popular play one of the characters made his "hit" by swearing profusely in every act. If the same person swore one-tenth as much on the street of any town he would be arrested by the authorities for improper language. There seems to be

one rule for the theater and one for common everyday life.

As the editor of one of our papers commenting on a play in a university town where scores of college boys and girls attended, said:

"This play is the story of the almost brutal portrayal of the utter selfishness of a man, who, to gain his own desire, would sacrifice even his own wife. The principal character is a figure that always appeals to women and yet they never find such characters in real life. The scene in —— has much that is not nice in it, there is much that is ugly, much that is revolting in the play, and it is not one for quite young girls to see attended by boys as escorts. It created a big impression in New York City and yet it is not a good play. Maybe that is why it did."

What excuse can the theater offer for giving the public a thing like this, which the papers praise in one breath and damn in another? A play not nice for boys and girls to see, and yet the play which scores of boys and girls did see, in a community far above the average, where fathers and mothers make no discrimination apparently as to the character of the shows which they allow their children to attend.

The gravest charge that can be brought against the theater today is the charge that it is run in the interest of "big money." Christian men and women who have the welfare of civilization at heart are not in control of the theater business, as a rule. It is not too sweeping an assertion to say that those who are in control of it are for the most part governed by the box receipts. If they thought the dramatization of the Bible would draw a crowd, they would be willing to put it on.

The only real things which will reform the theater either within or without will be, First, the control of the business by great Christian men and women who are not in the theater for the money to be got out of it, but for the good they can do. The Church may have a duty here which it has not been willing to assume. I can conceive quite readily of a Christian play being managed thruout by members of the Church, and performing great service, as my good friend Rev. Sylvester Horne, recently elected to Parliament in the Liberal camp, illustrated a short time ago in his own church in Tottenham Court Road, George Whitefield's old tabernacle. He gave the presentation of a temperance play, dramatized by a London playwright and staged and carried out by his own church people. I think George Whitefield, the great evangelist, would have been overwhelmed with the thought of the time coming, when on the ground where he once preached his theological evangelism a real theater would be set up, at least so far as this play was concerned. But as it is now, in the theater as actually organized and carried on, much is given that is doing vastly more harm than good. I am one of the kind called narrow and sometimes Puritanical in the matter of theatrical representations, but when I find that the results of constant theater going are not helpful, but generally harmful to spiritual exaltation, and harmful to concrete righteousness, rubbing the bloom off of youth and filling the mind with artificial dreams of life, I think my quarrel with the institution is well taken.

There are some helpful and noble plays on the stage in America today, but the number is exceedingly small compared with those plays which debase and demoralize even when they add nothing to the sum total of human beauty and usefulness, and I am fully inclined to believe that the effect of even a good play on the theatergoer has been tremendously exaggerated. There is too much that is artificial about the stage as an institution from which the listener cannot escape. There is too much of dream life about the whole thing to start impulses which will actually be exprest in daily life. It would be interesting to know how many people who shed tears in the theater over the misfortune of some character have actually relieved that kind of distress. I get the impression from what I see of the constant theatergoer that his emotions vanish just about as he leaves the house, and are forgotten when he wakes up the next morning. The real reform of the theater must come from the *management* of it; in a change of purpose on the part of those who carry it on as a business. When the theater is in real Christian hands, it will begin to do its real Christian work and be an adjunct to help the Church and the home in the real influence on character in the shaping of righteousness.

Literature

Trans-Himalaya*

Of those who have received high orographic honors of late, none have achieved renown so well earned as is that attained by the energetic Swedish mountain climber, Sven Hedin, of Stockholm, who, more than twenty years ago, took for his special ambition the development of geographical certainty as to the nature of the roof of the world in the Himalayas. There, up in the neighborhood of the four mile limit, four great rivers take their rise, having a vast mountain catchment, but a very limited range, for their highest beginnings. The area in which their chief springs lie is hardly greater than the area of the State of Connecticut, and an old-fashioned stage coach traveling fifty miles a day could water its horses successively in the Ganges, the Bramahputra, and the Indus, with its chief affluent, the Sutlej. The Ganges starts early for the race south. The other three rivers linger about the foot of glaciers at the three mile level above the sea, mingling their waters, either boldly by overflow or by seepage, in two considerable lakes, at an elevation of about 16,000 feet, or in an atmosphere where the breath comes hard. These sources of the great rivers had never been explored with anything like accuracy. Neither had it been accurately determined what was the true nature of a vast, irregular grouping of mountains that lay behind the Himalayas. Their two extremes, east and west, had been traversed in passes, but all between the two ends lay immense, tangled, and unexplored. Were they a continuous chain, or aggregation of chains? They had been heard of, guessed at, but lay in the geographies a vast, white, blank, the source of rivers and the character of the mountain chain.

These two problems attracted Sven Hedin, and against all obstacles, local, national, international, he determined to get out the observation ladders, and see for himself, and incidentally for the rest of the world, what their nature was and what was going on there. Between 1905 and 1907 he zigzagged six or seven times across that interior mountain system, examined the passes, left the skeletons of many horses, mules and native yaks under the driving snows, and added a new, definite and descriptive name to the geographies. He had been thru "Trans-Himalaya." That was to be the new mountain system in the background, behind the old and well known Himalayas. He had fairly earned the honors showered on him in various centers, and has deservedly placed the true name on a new mountain system. "It was reserved for him," as Lord Curzon sums it all up, "to trace it on the spot, and to place it on the map in its long, unbroken, and massive significance." He had, moreover, made the circuit and the criss-cross of the two great lakes, sent the lead down some scores of times and plotted the bottom of the larger lake; measured in transverse sections the higher competitive affluents of the three mighty streams, and ascertained the amount of water each could deliver in cubic feet—in other words, he had found out which was the true main source of each river. He had made good his claim that he was "the first white man that had penetrated to the sources of the Indus and Brahmaputra." He had added some definite knowledge to the small amount of vague surmise already possessed by the lower world in regard to those two "historical rivers, which, like the claws of a crab, grip the highest mountain systems of the world." Incidentally, also, he had broken through the soil-crust honeycombed by millions of field mice, and that other crust peculiar to Tibet, where the Lamaist worshiper still turns his prayer mill, unobserved by the world below the Himalayas. Behind the scenes he was able to make a fair study of Lamaism, and the mill he can describe. It "contains miles of thin paper strips

*Trans-Himalaya. Discoveries and Adventures in Tibet. *By Sven Hedin.* With 388 Illustrations from Photographs, Water-color Sketches, and Drawings by the Author, and 10 Maps. Two Vols. New York: The Macmillan Company. $7.50 net.

with prayers printed on them and wound round and round the axis of a cylinder. There is a handle attached by which the axle can be turned. A single revolution and millions of prayers ascend together to the ears of the gods."

The observation of the Swedish traveler is varied, minute, incessant, rich in small details, somewhat too promiscuously poured in from the hasty notebooks, because the eight hundred and odd pages had to be done in 107 days; the details cover the character of the soil of a vast country, the vegetable and animal life,

A STREET IN TASHI-LUNPO.
From Hedin's "Trans-Himalaya." (Macmillan.)

and the habits of the grimy Tibetans, whose personal thatch of unwashed area has to be left undisturbed during the months of a long and stormy winter.

Anatole France

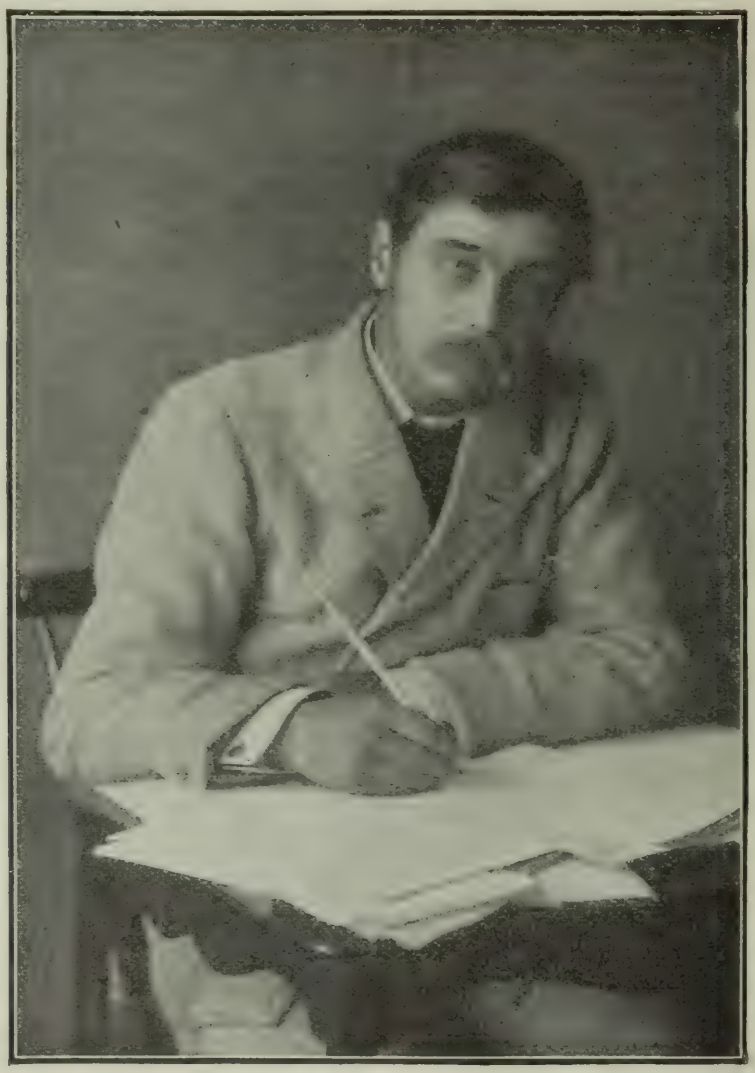
EACH volume of the English translation of the works of Anatole France that comes from the John Lane Company brings more English-speaking readers under a charm that already holds readers of French. For in these translations so much of the charm survives; not only the grace of thought, but so much of the fragrance of phrase comes over without suffering the sea-change that French fiction often undergoes in crossing the Atlantic. And the translation of *Penguin Island** is the more welcome because only an enterprise aiming at completeness would be likely to give us this book, altho it is at once the most brilliant, the most searching and possibly the most amusing of all France's productions.

For with all this, *Penguin Island* stands little chance of being popular. Certainly not with Frenchmen, who have none of the Russian fondness for seeing their weak points held up to the world. But it is bound to get out of favor with a much wider audience. Since he laughs at everything, every one is sure sooner or later to find himself laughed at, or, what is harder yet, his faith, his dream, his ideal, his illusion, his morality. If he does not hit every head he sees, at least he pats it; a mocking pat bestowed upon the most exalted personages of medieval heaven and modern earth. Americans chuckling over French discomfiture stop when he crosses the Atlantic and turns upon Chicago, New York, the American nation itself, his bitter, lambent humor. The rising tide of irony submerges all the firm ground of past and present, and he who takes refuge upon the last little island of the future finds that the swift final chapters cover even that.

The book purports to be a chronicle of an island peopled by those penguins that, after they had been inadvertently baptized by St. Maël, were, after much celestial argument, transformed into men, "not to disturb the economy of mysteries," altho, as St. Cornelius feelingly observes, "the Christian state is not without serious inconveniences for a penguin." The adjustment of these inconveniences provides the basis of a demurely serious review of primitive times and of the Middle Ages. With modern times the pace quickens, the allegory becomes thinner, the Boulanger affair, the Dreyfus case, the separation of Church and State, and many more phases of the life of his country, flash past under the most transparent disguises.

Penguin Island is in effect a history of the intelligence of France, and from her position in the world of ideas it becomes to some degree a history of the intelligence of the world. Besides this, it is the quintessence of Anatole France; in this one book appear all the traits that distinguish his work, but sharpened, intensified. His curious understanding of the medieval viewpoint—an understanding that rarely betrays sympathy—produced in "Thaïs" the celebrated statement of the dilemma of the Supreme Being at the creation of the world; here it ascends to the company of the saints and takes a perverse joy in turning theology against itself in the discussion that takes place in the best society of Heaven, a discussion that would be irreverent should he for one moment intimate that he believed there were any such persons. Here, too, is his erudition, running, as usual, on such light wheels that its bulk goes unnoticed; his famous irony that has played over all the other books concentrates here like a searchlight, and like it, sweeps the firmament and gets into all the dark corners; here the smile that shone in "The Crime of Sylvestre Bonnard" and has ever since brightened France's philosophy, shows in its last form—and what a meaning has been lying all these years back of this smile!

For it now expresses a depth of pessimism far beneath that of the German prophets of disenchantment; these have lost all illusions, but they can still weep for them, or at least can still rail and cry out. France smiles, even a peaceful smile—what does all that matter? Amid



*PENGUIN ISLAND. Complete Limited Edition of the Works of Anatole France. New York: John Lane Company. 24 volumes. $2 each.

the crash of worlds he is not even unmoved—he is moved to genuine amusement.

It would seem that not the snarl of Swift, nor Nietzsche's set teeth, nor even the sullen silences of the Russian realists, are so terrible as the sarcastic smile of Anatole France.

The History of Mr. Polly. By H. G. Wells. New York: Duffield & Co. $1.50.

Mr. Polly was a peg that didn't fit the "beastly, silly wheeze of a hole" in which he found himself. And Mr. H. G. Wells is a master of the psychology of the unfit. Again, we have the hero who hates his job; hates with an impotent fury his town, his home, his shop and himself. We do not know why Mr. Polly cherishes such bitterness, which Mr. Wells shares, toward the useful and innocent business of an outfitter; nor why a man should so loathe his "relations," including that relation-in-law, his wife. To be sure, Mr. Polly's family, as herein set forth, are not attractive; but, as everybody except Mr. Wells knows, any family in the world is sure to have some Jonathan to atone for its Saul. It is a relief to have the dismal history of this most discontented man lighted up by the glare of a fire, altho set by himself. There is an altogether delightful old lady who is rescued from the fire, altho she persistently refuses to jump; an artistic and original window-dresser, and a crowd of other characters, lifelike and distinctive, but as seen thru Mr. Polly's jaundiced eyes, utterly unlovely. We cannot help contrasting Mr. Wells's art with that of Mr. Jacobs, whose absurd old sea captains and their attendant satellites are exasperating at times, but always human and humorous, always

H. G. WELLS,
Author of "The History of Mr. Polly." (Duffield.)

likable, and often lovable. But the heart of Mr. Polly, the idealist disgusted with routine, is alive and beating; a piece of raw life snatched quivering and bloody from his frame and held up for our inspection. And there is a cruel suggestion in this clinic of: "Here are *you*—in spite of the grace of God!" If Mr. Wells would go far enough to see clearly that each of the other characters in Mr. Polly's little drab world has his own inner tragedy, his own moments of delight, his own idealism, and always an equal egoistic prepossession of his own immense importance to himself, he would be able to attain the exquisite art of Mr. Arnold Bennett's apotheosis of the common lot in his "The Old Wives' Tale." As it is, Mr. Wells has but the partial vision, and we receive a distorted image, twisted perversely from its true proportion.

Copyright, 1910, The Century Co.
SELLERS OF ORANGES AND BREAD ON STANDARD OIL CANS IN JERUSALEM.
From "A Vagabond Journey Around the World."

A Vagabond Journey Around the World. By Harry A Franck. New York: The Century Co. $3.

Amid the host of conventional travel books constantly being published, it is refreshing to pick up one that is different. This is not an "Around the World in the Yacht 'Sunbeam'"; not a personally conducted tour of Europe for $483, with Ober Ammergau thrown in and no extras except laundry. It is the plain but well-told narrative of how a University of Michigan boy worked his way around the world, a record of resourcefulness, energy and independence which proves that these American qualities are not extinct in the younger generation. Mr. Franck's itinerary, more or less involuntary, covers England, France, Italy, Egypt, Ceylon, India, China and Japan, but he has the knack of skipping the commonplace and devoting his lively descriptions to the more unfamiliar localities, and of these pages his experience as a circus clown in Ceylon and his tramp thru the jungles of Siam are the most interesting. Thru it all he stuck to his kodak, and the reader is very glad of it.

The Voice in the Rice. By Gouverneur Morris. New York: Dodd, Mead & Co. $1.25.

A volume for the hammock, light, narrow, adorned with green leaves and tinted pictures. A medieval romance in a modern American setting, proving that

an ingenious novelist has no need to go to Europe for his Zendas. A real hero, a real heroine, a real villain, a real plot, and we feared that they were extinct. And snakes, more snakes than we ever met before in a book or out. What the hammocked young person will dream of after the book is read we do not dare imagine.

The Philosophy of Change. By D. P. Rhodes. New York: The Macmillan Co. Pp. xxvii, 389. $2.

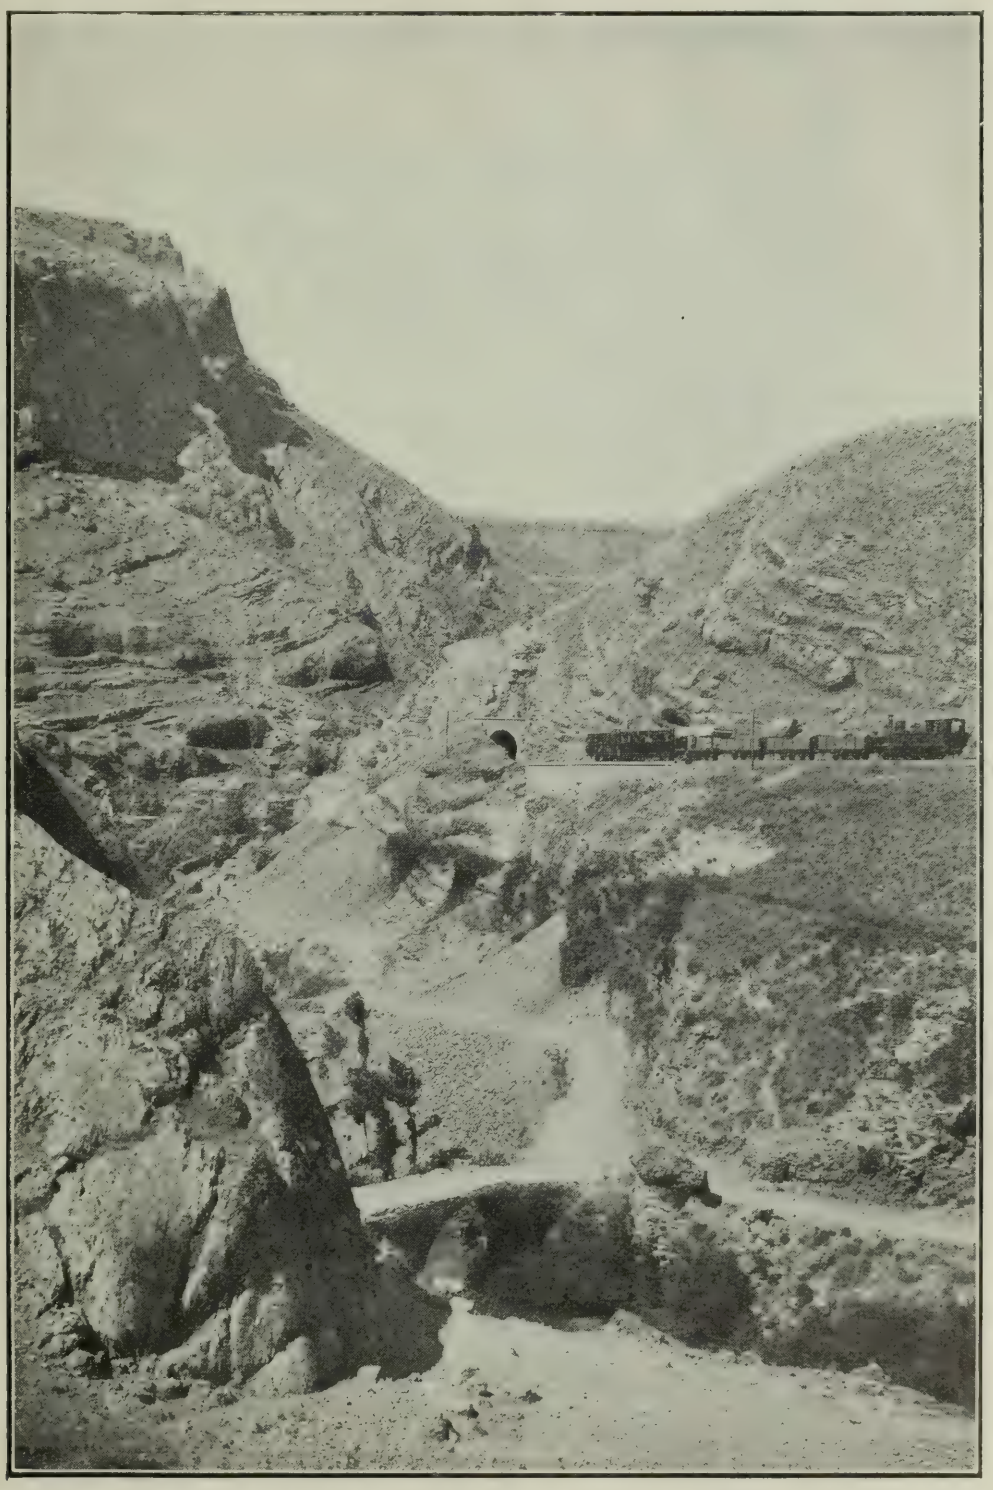
Mr. Rhodes describes for us frankly the method he employed in evolving his new philosophical theory — which, in fact, so far as it is true, is as old as Herakleitos of Ephesus:

"At the outset of the investigations here to be recorded, I had no opinions worth mentioning either as to the meanings of actual life or as to the nature of truth itself. I destroyed all the notes in which I had recorded my arguments for or against the theories of some of my notable predecessors; banished all books from my study; and with no implements further than pencil and spotless paper, a few brass pins and a tennis ball, I set about enquiring seriously into the destiny of man."

One must admire Mr. Rhodes's diligence and courage—the courage that could present the results of his cogitations to the world as a new philosophy. But one may be pardoned for doubting, after carefully traveling thru his chapters, whether the final result is worth much more than the materials with which he started. Here and there in his audacious and somewhat random assertions Mr. Rhodes strikes out a thought worth attention. To some readers the unconventional, unordered and unsystematic form of his book, with its breezy, colloquial sentences, may serve to shake up old, unconsidered prejudices and ideas, and to bring some glimpse of new truth.

History of the State of Washington. By Edmond S. Meany. New York: The Macmillan Co. $2.25 net.

Professor Meany is probably the best-informed student of Western American history residing on the Pacific Coast. His recent volume on the *History of the State of Washington* thus comes to us from a mature and well-stocked mind, and thru a facile pen. It is such a history as we ought to have for every State in the Union—interesting, accurate, well illustrated, and as well proportioned as could be expected of any local historian. Of course, if we had written the book we should have given it a slightly different balance, with less space devoted to early matters and more to the history of the State since 1883. Professor Meany gives only a quarter of his pages to the years since Villard drove thru his Northern Pacific, and we learn little of agriculture, and irrigation, and the recent growth of the State under the new transportation and scientific farming. But probably the public will like this book as well as it would like ours, and as part of the public we are properly grateful for what we have.



Philo-Judæs of Alexandria. By Norman Bentwich, 12mo, pp. 273. Philadelphia: The Jewish Publication Society.

The author is a scholar of Trinity, Cambridge University, and has carefully studied the writings of Philo, as well as his commentators, such as Drummond, Schürer, Siegfried and Montefiore. This volume is no translation, but is a careful elucidation of Philo's philosophy and theology. The study of Philo is of prime importance to the history of Christian doctrine, altho not sufficiently studied. Early Christianity, as seen particularly in John's Gospel and the Book of Hebrews, drew much from the current Philonian doctrine, even as Philo himself depended on Plato's doctrine of ideas, and the Timæus, and on the figurative language of the Psalms and Proverbs in what they say of the word *logos,* and wisdom personified. We remember that the Book of Acts tells us how much early Christianity owed to the Alexandrian learning of Priscilla and Aquila. As the author of this volume is a Jew, as might be expected he declares that the apostolic and patristic writers erred in taking Philo's allegorizing too literally, and out of his figure of the *logos* developing an objective Trinity and a hostile temper toward the Mosaic Torah.

Fifty-three Years in Syria. By Henry Harris Jessup, D. D. New York; Fleming H. Revell Co. 2 vols. $5.

This book appears at the right time, at the moment when the whole world has become aware of the regenerating

movement which has been so persistently and quietly carried on in the Turkish empire. Dr. Jessup is able to close his record of more than a half century's labors with the announcement of the opening of a new era, when freedom of thought and equality of religions is promised by the constitution and guaranteed by the rise into power of Young Turks and Syrians of liberal views, many of them trained in such schools as the Syrian Protestant College of Beirut. It is a record of faith triumphing over intolerance and hatred; a history of Syria as well as a diary of personal events and opinions, very heterogeneous and of unequal interest. It throws light upon a great variety of topics. To refer to only one example, Dr. Jessup has watched the rise of Babism and has been in con-

GORGE OF NAHR BARADA (THE ABANA) AND THE DAMASCUS RAILWAY.
From Jessup's "Fifty-three Years in Syria." (Revell.)

tact with its leaders and followers, so it is interesting to compare his unfavorable view of the new religion with the statements made by its missionaries now working in this country.

The Christian Pastor in the New Age, Comrade—Sponsor—Social Mediator, Lectures for 1909 on the George Shepard Foundation, Bangor Theological Seminary. By Albert Josiah Lyman. New York: T. Y. Crowell & Co. $1 net.

These five lectures by the cultured pastor of the South Congregational Church of Brooklyn reveal those fine qualities of mind and heart and the high ideals of service which have made Dr. Lyman the beloved leader and counselor in things spiritual that he has become. His emphasis on comradeship as the broad human basis of all effectiveness and power in the minister's life is beautifully enforced by his own method of preparation for this lectureship. His rich experiences as a city pastor for thirty-six years and his careful reading and studies on the topic in the great Oxford Library were all pushed into the background to give first place to the knowledge of the students' difficulties and aspirations acquired in a week's residence with them a short time prior to the writing of the lectures. And the mediatorship, which he regards as the highest function of the pastor, is realized unobtrusively but fully in his glowing interpretation of their half-formed longings and ideals in terms of his own large attainments and lofty vision. Thruout the book he discusses the mode of developing this comradeship, this "fraternal sentiment," and the exercise of the resulting power of mediatorship in the varied activities of the minister's life.

Cyrus Hall McCormick, His Life and Work. By Herbert N. Casson. Chicago: A. C. McClurg and Co. $1.50.

There is considerable gush and much praise of the Scotch-Irish in Mr. Casson's sketch of Cyrus Hall McCormick, but they do not destroy the underlying truth that the material expansion of the United States in the last century was the work of those intense lives that in other days were wont to go to war or sit in cabinets. There is no parallel in history for the vast migrations made possible by the revolution in transportation and tempted by the endless grain lands that offered to all independence and wealth. The inadequacy of labor in face of the work awaiting hands was equally without a parallel. And the rewards of the nineteenth century went to those men who stretched the capacity of labor until it could encompass the task before it. McCormick was one of these; a fighting farmer who lived with his reaper, waited nine years for his first customer, but never lost his faith in his own power or the future. He was Chicago. He picked it out before the railroads found it, and helped to rebuild after the fire had devastated it. All of these things Mr. Casson sings in his eulogistic life, and most of them are deserved. "The reaper is to the North," said Stanton, "what slavery is to the South. . . . Without McCormick's invention I fear the North could not win, and the Union would be dismembered." These were enthusiastic words. Yet it was the spirit of McCormick that made the industrial North.

Crete the Forerunner of Greece. By C. H. and H. Hawes. With a Map and Plan. 16mo, pp. xiv-158. New York: Harper & Brothers. 75 cents.

Mr. Hawes has worked much in the ethnology of Crete, while Mrs. Hawes is Harriet Boyd, who before her marriage had made the remarkable discoveries at Gournia. Both writers are thus thoroly familiar with their subject, and in this volume of the "Library of Living Thought" they give an account and an evaluation of the excavations in Crete carried on by Dr. Evans, Mr. Hogarth and other British, German, Greek and American excavators. Their results are as revolutionary as those of Dr. Schliemann at Troy and Mycenæ, and show how Greece got its civilization and what was the successive development of art from the stone to the iron age. Much was due to Egypt, and commercial intercourse goes back to the earlier dynasties, before 2000 B. C. We wish the volume could have given illustrations as well as plans of palaces and a map, but that would have required a larger book. This is very instructive, up to date, cheap,

while for fuller treatment one should refer to Mr. Ronald Burrows's "The Recent Discoveries in Crete."

Those Brewster Children. By Florence Morse Kingsley. New York: Dodd, Mead & Co. $1.

Like "Helen's Babies" and "The Heavenly Twins," the Brewster children assist in bringing a romance to a successful conclusion. The children are very human; so are their parents, and consequently their actions and reactions do not always accord with modern theories of juvenile training. The author evidently understands children better than some of our distinguished pediologists.

THE PSYCHOLOGIST AT THE BREAKFAST TABLE.
From Kingsley's "Those Brewster Children" (Dodd, Mead).

The Fourth Dimension Simply Explained. A collection of Popular Essays with Introduction and Notes by Henry P. Manning, Ph. D., of Brown University. New York: Munn & Co. $1.50 net.

No one who is anxious enough to learn about the fourth dimension to be willing to spend a dollar and a half need remain any longer in ignorance. For here is a collection of the twenty-two best popular explanations of the subject, from two hundred and forty-five submitted in a competition started by the *Scientific American*. The essays are all independent of each other, so there is a good deal of repetition. If we cannot construct a fourth dimensional figure even in our mind, we can at least assume it in mathematical work, and by analogy

find out many of its properties. Thus, while there are no diagrams of hypercubes, there is a projection of one, constructed just as one may project a cube upon a plane surface. All of these writers agree that while hyperspace is quite conceivable as a physical fact, there is no evidence of its existence and no reason to think there ever will be any, but such speculations have their uses in widening our views and clarifying our ideas.

The Song of Songs. By Herman Sudermann. Translated by Thomas Seltzer. New York: B. W. Huebsch. $1.40.

It would strike the unperverted student of present-day literature, art and music in Germany that all the medieval devils, driven out from other countries, had taken refuge for a second time in another herd of swine. Art has become a Walpurgis nacht's nightmare of contortion; music a hideous din and squeal; and literature a Gadarene obsession. Wedekind, Schnitzler, Hugo von Hofmannsthal, Blei, Sternheim, Mayrshofer and Strauss, among the Germans, seem possessed by obscene demons. And even Hermann Sudermann, whom we remember best as the author of that somber but noble novel, "Dame Care," with its dauntless hero, and lifting clouds, and gleam of pale sunshine at the end; even he has fallen below his level, in an evil age, and has written *The Song of Songs* —the story of a weak and wicked woman. Her weakness is intended to arouse pity, but to a healthy mind it only adds to the poisonous perfection of her serpent type. We see Lilly, perversely named, slip deeper and deeper into the slimy ooze of the underworld; everybody is ready to push her down into it, it is true, but she, as always, drags the innocent with her. Such women are, have been and always will be poisonous to all about them. The facts of her gradual decaying; that she was orphaned by her father's desertion and her mother's madness; ill-used, starved and beaten; sought by evil men and debauched by luxury because of her innocent beauty— "Lilly with the eyes," she was called by her schoolmates; clinging to the score of her father's opera, "The Song of Songs," which is made the symbol of an ideal she never quite loses; after many gross alliances finding a purer love which she is too base to keep unsoiled; too weak to live; too cowardly to die; none of these things which are insinuated as semi-excuses for her depraved life, move us to anything except disgust that an artist so rare as Sudermann at his best should have fallen in this latest novel, heralded as "the ripest fruit of his genius," which can be so only as it is fruit rotten at the core, to such a wallow as that of his swinish contemporaries! We would rejoice to have the extremity of madness seize the whole herd and dash them violently down a steep place into oblivion.

Social Reform and the Reformation. By Jacob Salwyn Schapiro. New York: Columbia University (Longmans, Green & Co.) $1.25.

Dr. Schapiro has rendered a valuable service by publishing the result of his researches into the economic conditions of South Germany in Luther's time. The great Protestant Reformation is seen to have had, like every other important episode in history, a social cause. The change from agriculture to commerce, the growth of great monopolies, the attempt of the nobles to keep pace with the wealthy merchants by laying increasing burdens upon the peasants, furnished the economic groundwork for the Reformation. A series of peasants' revolts, beginning about 1491 and culminating in 1525, produced an upheaval which, in spite of Luther's apprehensions, really served the cause of the revolt against Rome. Luther, it is shown, was no friend of democracy or equality. His philippic against the rebels is hardly matched for brutal invective by anything we know. Dr. Schapiro finds little anticipation of modern social ideals in the peasants' demands. In a sense they were revolutionary; they were extreme, and their propagation was attended with violence and bloodshed. Yet they were, on the whole, reactionary demands, tho those formulated by Geismayr for the Tyrolese were in some instances, such as that for public ownership of mines, progressive. The volume is a careful and commonsense treatment of a most interesting epoch.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Pope and Mr. Roosevelt

It is proper that ex-President Roosevelt should give the facts concerning the refusal of the Pope to give him an audience, to our excellent contemporary, *The Outlook*, of which he is the contributing editor. The whole story is there told, as also Mr. Roosevelt's plea that the incident be regarded as purely personal, and one that should give no occasion for sectarian bitterness. Mr. Roosevelt's course has been admirably courteous and considerate, while Pius X acted quite within the rights of his position. Nothing is to be gained by severe criticism, and much hurt might be done.

Mr. Roosevelt's course differs from that of Mr. Fairbanks in that the latter had made an engagement to speak at the Methodist Mission, he being himself a Methodist; while Mr. Roosevelt had positively declined to make any engagements in advance, beyond an audience with the King of Italy and the Pope. The Vatican knew that Mr. Fairbanks had promised to visit the mission, and it equally knew that Mr. Roosevelt had made no engagement. What the Vatican now wished to do was to lay down, in the case of Mr. Roosevelt, a new rule, that no audience should be given by the Pope to any one who would not previously agree that he would not visit the Methodist Mission. The Pope has the full right to impose what conditions he pleases, and no one has a right to complain, for it is simply a matter of courtesy which goes by favor and not by right. We may say that it is unwise, that it is not politic, that it advertises the Methodist Mission in a way that must please the Board of Missions and which sets millions to talking of it who had never heard of it before; but it is within the rights of the Pope to do as he pleases, to judge for himself what is right or prudent, and we cannot complain, and Mr. Roosevelt does not complain. He does all he can to prevent its being made the occasion of hurtful controversy.

Allowing, then, that the Pope was within his rights in this case, as he has been in other cases when he has refused to receive European rulers whose course offends him, and as he consistently refuses to see any King who goes direct to the Vatican from a visit to the Quirinal without first returning to his own Embassy, regarded as not Italian territory, it must yet be equally allowed that Mr. Roosevelt could do nothing other than he did. Conditions upon his liberty in this way he could not accept. He was right in understanding Cardinal Merry del Val's communication as final, and he is not the man to attempt any evasion by construction. The Pope required of him a promise not to visit the Methodists, who are American citizens, and that promise he considered a reflection on his good sense and on his liberty. He did quite right.

We confess that we do not believe that the Methodist Mission is, as Cardinal Merry del Val says, "carrying on a most offensive campaign of calumny and detraction against the Pontiff." It is not plausible, because it would be most unwise. Doubtless some bitter things may have been said there; but bitter things have also been said at the Vatican. It is impossible that the effort of the mission is to seduce faithful members of the Catholic Church. It is rather directed to those multitudes who have left it, the great bulk of the people, those who will have nothing to do with it, rightly or

wrongly. Everybody knows that in Italy as in France the people are divorced from the Church, and it is a free field for any one who wishes to bring back the people to the Christian faith, whether Catholic or Protestant.

One cannot help raising the question what the effect of this act of Mr. Roosevelt's will be on his political prospects, should he ever in the future seek high office. Like the shrewd, yet courageous, politician he is, he has always been very considerate to the Catholic Church. He put Catholics in his Cabinet. He appointed a Catholic as Governor of the Philippines. He has been a warm friend of our highest Catholic ecclesiastics, and has consulted them freely; and of his own initiative he sent Mr. Taft to Rome to confer with the Pope as to the Friar difficulty in the Philippines. Extreme Protestants have charged him with trying to cater to Catholic interests for Catholic votes; we have never done so. We have believed that he meant to be fully fair to Catholics, and that he had the sense to see that they appreciated his effort. In his last Presidential election multitudes of Catholic Democrats voted for him, because they believed he would not discriminate against them. But now he has shown his courage in another way. He has refused to accept an interview with the Pope because he did not like the conditions imposed. No one can believe that he has done this to please Protestants, and we do not think that Catholics will believe he meant the least discourtesy to the Pontiff. We trust they will see the real fact that he could not with self-respect allow any such conditions to his freedom of action. We do not expect such a storm of condemnation as they poured on Mr. Fairbanks, for he has given no occasion for it.

We thank the Lord that this is a free country, where his religion, whatever it is, is no bar to a man. Ours is perfect separation of Church and State, with no slightest persecution of the Church by the State, such as, measurably, appears in France. We would that Italy might establish a free Church in a free State, with all the kindliness to the Church, and to all Churches, that exists here. Here it is no credit to a man or statesman that he is an enemy to the Church. Even Freemasonry respects the Church. Mr. Roosevelt was a member of the Reformed Church, and Mr. Fairbanks of the Methodist Church, and Mr. Taft belongs to the Unitarian Church, and no one of them is less honored therefor. There can be no peace in European politics till religion ceases to be a political bone of discord.

No Controversy with Canada

In the recent tariff negotiations with Canada, the duty of our Government was to ascertain whether our neighbor on the north was discriminating "unduly" against us in rates on imports. It was not a movement for reciprocity. We had nothing to offer except our regular tariff, no part of which could be reduced in return for concessions on the other side. But proof that Canada was unduly discriminating against us would require the imposition of our maximum rates. Fortunately this, with all the bitterness and commercial warfare which would have followed, has been avoided, and the settlement is creditable to both parties.

Canada yielded very little, but there was force in the argument that neither the existing conditions nor the provisions of our new tariff law required her to yield anything. There was nothing but her new treaty with France that could give any support to a charge of discrimination. In the past we have negotiated similar treaties, granting reduction of duties to certain nations, and no serious complaint of discrimination has been made by other countries. Canada was willing, however, to give us a part of the reductions procured by France; our Government was glad to accept this concession as a warrant for withholding the club of maximum rates, and both sides regard the settlement with satisfaction. The fact that Canada's concessions are quite small, when measured by percentages; that they affect only one-thirty-fifth of her imports from the United States, and that her people are benefited by them, should not be overlooked; but they were sufficient to insure commercial peace. Moreover, the cordial friendliness of the conferences and correspondence, together with

the satisfactory result, has distinctly improved the relations of the two countries.

It is now proposed that there shall be an earnest attempt to make a comprehensive treaty of tariff reciprocity. Undoubtedly Mr. Taft desires such a readjustment of commercial relations. The editor of a prominent Canadian paper has printed the following report of remarks recently addressed to himself by the President:

"I want Sir Wilfrid Laurier and the people of Canada to believe that I have no sympathy with that old-time attitude. The relations between these two countries have been all wrong. Instead of indifference or suspicion or unfriendliness there should be as much freedom of trade between our two peoples as is consistent with the fiscal policies of the two countries. I do not ask now who was in the wrong in the past, but for myself and my administration I can say that we have nothing but respect and admiration for the way Canadians are taking hold of their problems and developing their status in the Empire. I want you to tell Sir Wilfrid that if this tariff difficulty is bridged I shall be prepared to take the responsibility for reopening negotiations for reciprocal trade which he opened years ago. I want to undo what was done in the past; I'll not stand on ceremony. If he'll meet me I'll go more than half way to find a better basis for trade."

There is no provision in our new tariff law for treaties of commercial reciprocity. Indeed, that law repealed such treaties that were in existence. Ratification of such an agreement as the President has in mind would probably involve amendment of the Payne-Aldrich act, and the House would insist upon being a party to the ratification. The prospect does not seem highly favorable, but we hope the President will take up the work. A fair and reasonable treaty of tariff reciprocity with Canada would be acceptable to a large majority of the people of the United States.

The Next Step in the Peace Movement

In no other nation in the world is the peace movement so active and advanced as in the United States It has always been so. In all history no men have done more to spread the gospel of peace than the two Pennsylvanians, Willian Penn and Benjamin Franklin. David Low Dodge, of New York, in 1815 founded the first Peace Society of the World. Two generations ago Elihu Burritt—they will celebrate his centenary at New Britain, Conn., next month—and a dozen others in Massachusetts and New York went up and down this country and even over to Europe urging and prophesying the formation of an international court which Burritt declared when it came into existence "would constitute the highest Court of Appeals this side the bar of Eternal justice." Coming down to more recent times it is probably a fact that the late Frederick W. Holls, of New York, had more to do with the establishment of the Hague Court than anybody else, while Richard Bartholdt, M. C., by his famous "Resolution of St. Louis" at the meeting of the Interparliamentary Union in 1904, suggested to President Roosevelt the calling of the Second Hague Conference and the turning of it into a real international legislature. Mr. Carnegie has given this Hague Court a palace in which it shall hereafter sit. The United States took the first case to the Hague Court that ever came before it, and the American Minister at Venezuela sent the second case there which brought all the great Powers before its bar and established it in the estimation of civilization. Elihu Root planned the scheme of having the Second Hague Conference create a world court modeled on the Supreme Court of the United States, and Secretary Knox is now engaged in carrying out the final detail of that idea.

Since the First Hague Conference peace societies have been springing up like mushrooms. The country is now pretty well dotted with them. The American Peace Society, with its headquarters in Boston, is the oldest and best known of all in the country. It is now actively engaged in organizing branches and auxiliaries, and at the present moment these include the Peace Society of Southern California, the Peace Society of Northern California, the Utah Peace Society, the Texas State Peace Society, the Peace Makers of Washington, the Maryland Peace Society, the Kansas State Peace Society, the Connecticut Peace Society, the New York Italian Peace Society, the New York German-American Peace Society, the Cleveland

Peace Society, the Buffalo Peace Society, the Chicago Peace Society, the Arbitration and Peace League of Cincinnati, the Intercollegiate Peace Association, and the Association of Cosmopolitan Clubs.

Another peace society of long and honorable service is the Universal Peace Union, of Philadelphia, which was founded in 1866 and whose president is Alfred H. Love. Its auxiliaries include the Pennsylvania Peace Society, the Connecticut Christian Peace Society, the Delaware Peace Society, the Rhode Island Radical Peace Society and the Wilmington Peace Society.

In addition to these two old and honored societies there are several independent societies working along similar lines. The flourishing New York Peace Society, whose president is Mr. Andrew Carnegie, is the best known and most active of these. Others include the Pennsylvania Arbitration and Peace Society, founded at the Pennsylvania Arbitration and Peace Conference held in Philadelphia, May, 1908, and the North Carolina Peace Society.

Perhaps no organization, however, has done more to crystallize the peace sentiment of the country than the annual Mohonk Conferences on International Arbitration. For the past fifteen years Mr. Albert K. Smiley has been accustomed to assemble as his personal guests some 300 distinguished leaders of American thought and action on his beautiful mountain top, and during a three days' intimacy as close and secluded as on ship board a peace sentiment has been engendered whose influence has radiated to all parts of the country.

Almost all that is best in the peace thought of the past decade has started at Mohonk, and if the conferences had done no more than to inspire the founding of the New York Peace Society, the Intercollegiate Peace Society and the American Society of International Law with its scholarly and comprehensive quarterly, *The American Journal of International Law,* it would have more than justified its existence.

For work among the legislators at Washington we have the American group of the Interparliamentary Union, whose president is Mr. Richard Bartholdt, and for work among the educational institutions we have two strong organizations, the International School of Peace, endowed last year with $1,000,000 by Mr. Edwin Ginn, the eminent Boston publisher, and the American School Peace League, founded by Mrs. Fannie Fern Andrews for peace propaganda among the secondary schools of the country.

Perhaps no organization is doing more among the leaders of American public opinion than the American branch of the Society of International Conciliation of which President Nicholas Murray Butler, of Columbia, is the head. The international society was founded a few years ago by Baron L'Estournelles de Constant, who shared this year the Nobel Peace Prize with M. Beernaert, of Belgium. The American branch is printing an invaluable peace bibliography every month as well as issuing every little while important pamphlets on the subject of international conciliation.

In addition to these organizations we must not forget the Arbitration and Peace League, of which ex-Senator McCreary is president, and at whose great banquet the other night in this city President Taft took the unprecedented ground for a National Executive that even questions involving "national honor" could and should be submitted to arbitration. As the Peace and Arbitration League, however, seems to agree with its vice-president, Congressman Hobson, that a great navy is as important a means to employ in preserving peace as arbitration, many good people think the League has no right to call itself a "peace" society.

The World Federation League is the last organization to be mentioned. It was organized in this city a few weeks ago with the avowed purpose of bringing about the condition named in its title.

This list, we believe, includes about all the active organizations in this country now engaged in specific peace propaganda, tho, of course, the religious bodies, especially the Society of Friends, the Chambers of Commerce, the socialistic and labor organizations and the universities have done and are doing a great work in the cause.

Now, tho most of these societies are doing a commendable work, they are overlapping each other to some extent and all are working in a more or less desultory and independent way. Moreover, they all appeal to pretty much the same people for financial support and to the same few peace leaders for inspiration and advice. Like all other movements the peace movement is led and financed by a comparatively few individuals.

The American people as a whole, consolidated, however, are ready to follow when the peace sentiment leads. The Government at Washington, both Executive and Legislative, has demonstrated again and again its readiness to push forward when backed by public sentiment. Public sentiment, however, has already passed the stages of conciliation and even arbitration. It is now actually ready for world federation. Is it not time, therefore, that all these various peace organizations were coordinated under one strong and powerful foundation, a foundation that will do for the peace movement what the General Education Board and the Carnegie Foundation have done for American higher education?

By a resolution at the last Lake Mohonk Conference, the chairman appointed a "Committee of Ten," consisting of Nicholas Murray Butler, Andrew Carnegie, Elihu Root, A. K. Smiley, B. F. Trueblood, E. D. Warfield, Lyman Abbott, E. D. Mead, George W. Kirchwey and James Brown Scott to consider this question of reorganizing and co-ordinating the peace movement in the United States. We understand the committee will hold its first meeting shortly. It has an unparalleled opportunity to amalgamate the American peace organizations into one great Foundation, to the end that the United States shall stand as a unit in the sisterhood of nations, for world federation and universal peace.

The Death of Justice Brewer

Justice Brewer died as he wished to die—suddenly, in the full possession of all his mental powers. Some of his ancestors had faded away thru such disintegration of the brain as is occasional in old age, and he dreaded similar decay, but he died in the harness, active, vigorous, accomplishing to the full the duties of his most important office, an office that requires the best of mental equipment and quickness. He was not one of those who pray to be delivered from "sudden death."

He was born on foreign soil. His father was one of the early missionaries to the Turkish Empire, and he was born in Smyrna. He was always proud of that descent, as he had good occasion to be. That empire now feels the influence of the fresh life and the new education which those pioneers carried into that land. Nor did Justice Brewer ever turn recreant to the warm Christian faith which he had learnt from his parents. We may put it in the foreground of anything to be said of him that he was always faithful to his religious principles. Nowhere in Washington will he be more missed than in the First Congregational Church, of which he was not only a prominent member, but where for many years he was a teacher in its Sunday school. He was often called on for public addresses at missionary and other religious meetings, and was vice-president of the American Missionary Association, and president of the Associated Charities of Washington. While chiefly a lawyer, and then rising thru rank after rank to the highest position in the judicial service of the nation, he was yet a man of very wide interests, but particularly devoted to such interests as concern the public welfare and public virtue. For such ends he put the Christian Church first.

Justice Brewer was better known to the public at large than any other one of the members of the Supreme Court of the United States. He was often summoned to the platform, and he had a graceful and yet forcible utterance, somewhat after an older and more polished and balanced style, which was very effective, and he always had something wise and impressive to say. No one has more emphatically denounced the intricacies of legal practice, or called clearer attention to the public danger of the defeat of justice by the delays which courts and laws allow. The numerous appeals which courts permit on technicalities

that do not affect the justice of the verdict he condemned severely, as also the trickeries of lawyers who gain an unjust verdict. Nor did he believe that courts are so sacred that when a case is concluded the courts must not be criticised.

Politically, Justice Brewer was a strict constructionist of the Constitution, so far as it affected the reserved rights of the States. He feared the increased centralization of power in the hands of the President and Congress. Possibly he was too much concerned with this danger, for we must trust the people, whether we will or not, and it is notable that the Southern States have lost much of the Jeffersonian type of Democracy, and are clamoring as much as others for Federal control.

Attention should be called to what seems to have been a wise distinction which Justice Brewer made in a separate but not dissenting opinion of his in the Northern Securities case. The opinion of the Court had ruled that the strict letter of the law forbidding all combination in restraint of trade must be obeyed, no matter whether the restraint be reasonable or not. While agreeing with the majority as to the case in hand, Justice Brewer would not allow that it was the purpose of the law to forbid such reasonable and minor restraints of trade as law and custom had uniformly upheld. That strict construction has been unfortunate for business, and President Taft has urged Congress to amend the law so as to distinguish more clearly what are the restraints that are against public policy and therefore should be forbidden, while others are for the benefit of the public. Justice Brewer was no friend of monopolies, but he saw no reason for restraining all combinations, as that would unsettle business enterprises, and stifle business and invite mischievous litigation. It is this evil which bills now before Congress are intended to remedy.

Justice Brewer was a rare man, an honor to the court of which he was a distinguished member, a patriot, a philanthropist and a Christian gentleman. There are few citizens who can claim more usefulness, and we have none of higher character.

Compensation for Workmen's Injuries

WHAT promises to be the first really decisive step toward compensation for American workingmen injured in industrial accidents has been taken by members of the Wisconsin Legislature. A joint committee of the Senate and Assembly appointed last June has just issued copies of tentative bills providing a system of workingmen's compensation. In order that the employer and employee may have full opportunity for hearing before the committee takes any final action, the committee has sent out, with copies of the bills, an announcement of a hearing in Milwaukee, April 12. At that time, it is expected, a historic conference of the powers—capital, labor and the insurance companies—will take place.

After a thoro study of the European systems of compensation for industrial accidents, the Wisconsin committee chose the German scale of compensation. This gives to the man who loses time thru injury received while at work 65 per cent. of his wages. This compensation is not to be paid, however, except in cases where the victim is disabled for more than two weeks. In this way it is hoped that the simulation or "soldiering" now so prevalent in Germany will be eliminated. Medical attendance is provided under the proposed Wisconsin system. In fatal cases, where the victim leaves persons wholly dependent upon his earnings, the survivors are to receive an amount equal to three years' wages of the dead man. The committee overcomes another objection to certain foreign laws in this respect. Instead of providing that the money shall be paid in a lump sum (often demoralizing to working people), the bill provides that the money shall be paid in weekly instalments over a period of five years. A county judge may, however, order the money paid in a lump sum where he deems it advisable.

The proposed Wisconsin bill requires employers who elect to come under the system (the compensation bill is optional) to cover the risk by insuring either in an insurance corporation or in

a mutual company. Existing Wisconsin laws permit the organization of mutual companies, and it is expected that employers in different classes will prefer to protect themselves thru mutual insurance.

Court suits instituted by disabled workmen are expected to drop to a minimum if the Wisconsin plan is adopted. In concerns where the compensation plan is adopted the employer is relieved of all liability other than the fixed compensation covered by insurance except in cases of gross negligence. The employees in concerns that have adopted the compensation plan shall be deemed to have accepted the compensation scale and to have waived their common law rights to bring suit. All disputes, under the proposed scheme, are to be referred to a board of arbitration of three, of which the Commissioner of Labor and Industrial Statistics is to be a member *ex officio*.

Supplementary to the compensation bill drafted by the Wisconsin committee is another tentative measure making marked changes in the defenses now put up under common law by employers who are made defendants in personal injury suits. The fellow servant rule, which, when proved as a defense, relieves an employer from liability, is abrogated. The same process is proposed for the assumption of risk defense which has come down thru scores of years, and which was created thru court rulings handed down before speedy and hazardous machinery ever was put into motion. In this proposed measure the following language is used in dealing with the common law defense of contributory negligence:

"It shall not be competent for the employer to plead or prove as a defense that the employee was guilty of contributory negligence, unless his want of ordinary care proximately contributed to the injury in degree equal to or greater than the want of ordinary care of the employer, or of such officer, agent, or servant of the employer, proximately contributed to the injury, in which event alone contributory negligence shall constitute a defense."

Under this same bill the famous railway employers' liability act of 1907 is put down for repeal.

A great mass of data not yet tabulated is in the possession of the Wisconsin committee. One of the pertinent facts brought out by these data is that a given number of concerns which carry employers' liability insurance actually pay more in dealing with accidents than they would have to pay if they paid at first hand the compensation set forth in the tentative measure. It is a matter of interest that the investigation in New York has disclosed this same truth. The Wisconsin committee also has made the first authoritative collection of statistics from circuit courts regarding personal injury cases. These data when compiled will show that the cost of personal injury suits to the public which maintains the courts is astoundingly large.

We hope the Wisconsin bill will pass. It is an advantage of our form of government that an enterprising State can test a law before the whole country is committed to it.

Our African Protégés

LAST week we appealed to Congress to adopt the recommendations of the commission on the condition of Liberia and hasten to relieve the negro republic from its critical situation. We did not, however, fully realize how much need there was for prompt assistance. The news received from the Ivory Coast this week informs us that the extreme eastern outpost of Liberia has been for a month withstanding an attack of the savages who have killed an Episcopal clergyman of the Harper mission and thirty-four of the French colonists. It seems from the report of their treatment of one of their victims that it is not for nothing that the Krumen are accustomed to file their teeth to a point. The Krus and the Fantis, now on the warpath, are the boldest canoemen of the African coast, and long contact with the whites has had little effect on their natural savagery.

But the Liberians, tho outnumbered a hundred to one, would probably be able to protect themselves against the native tribesmen. It is their officious neighbors who threaten the existence of the republic. Last week we told how, in their direst extremity eighty-eight years ago, they rejected the assistance of a British gunboat. This week we tell in the "Sur-

vey of the World" that a similar offer from a German gunboat was more or less emphatically declined. The greater part of the trade of Liberia is in German hands, and the German Kaiser would like nothing better than to serve as the protector of this little country invitingly situated between the colonies of the two Powers who recently checkmated his African aspirations at Algeciras. It is rumored that the rising was instigated by the English traders, who felt that this was the last chance to secure British intervention before the American Congress should take action. At any rate, a British cruiser has been despatched from Sierra Leone to the Liberian coast. So also has one of our cruisers, and it is apparent that our executive department is fully awake to the necessity of prompt measures.

It appears that the outbreak originated on the Cavalla River, and if the reader will refer to the article by Professor W. F. Walker, of the College of West Africa, Monrovia, "Why Liberia Wants America's Help," published in our issue of July 8, 1909, and to the map published in connection with the editorial on "Liberia's Crisis and Appeal," July 29, he will see that the disturbed region is that which France had seized on the pretext that the Liberian Government was not able to maintain order among the natives. That is, Liberia has lost a third of her territory, or will lose it if the pending agreement is signed, because the French believed that their control was necessary to protect the colonists of the coast, yet now the Liberians have to defend themselves against an attack from the French side of the river.

Secretary of State Root said:

> "Notwithstanding the very kindly disposition on the part of Great Britain and the similar disposition on the part of France, there is imminent danger that the Republic, unless it receives outside assistance, will not be able to maintain itself very long."

This is the language of diplomacy. If Mr. Root had been able to use the franker speech of the private citizen, he would have put "On account of" in place of "Notwithstanding." It is true, however, that Liberia owes much gratitude to Great Britain and France. They stood by her during the long period of our neglect, assisted her in establishing a military and naval force, and recognized her as an independent republic before the United States did. But we hope that the United States is now about to take an interest in its foundling. Some say that the fact that the Liberian republic has not become a strong and prosperous colony proves that the negro race is not capable of self-government. This argument would be worthy of consideration if there could be pointed out a colony of white men in the tropics which, without support from the mother country and cut off from the trade routes, had been able to maintain a higher degree of civilization. That 12,000 ex-slaves in a population of 1,500,000 savages should have been able more than to hold their own is doing well.

Borden P. Bowne

Professor Bowne's death brings particular grief to THE INDEPENDENT, for he was for several years one of that succession of able and distinguished men who have served in its editorial office. He came to us almost unknown, one who, having known the sea, had secured education and culture, and who brought to us unusual alertness of mind and the gift of epigrammatic expression of wise and balanced truth. His special interest was in religious and philosophical questions, and it was to the chair of philosophy that he was called to the Boston University. Whether he was a good Methodist or a bad Methodist we do not care to say, for Methodists differ; indeed, he was charged with heresy in his conference, but was not brought to trial. If those are the best Methodists who are the least sectarian then he was one of the very best. And if religion depends less on dogma than on justice and mercy and walking humbly with God, then his religion was quite sound. We do not say that he walked always humbly with men, for he had a very positive way of expressing himself about ignorant intolerance that was calculated to give offense. He was the author of a whole series of very valuable works on philosophy and morals which have had wide circulation and have done not a little to settle public opinion.

A Real Philanthropist Charles Sprague Smith, whose untimely and sudden death occurred last week in New York, was a philanthropist in the real sense of the word—a lover of his fellow men. Many philanthropists whom the world honors are content to give their money, their advice or their names to public enterprises. Mr. Sprague Smith gave himself. Trained for a career of scholarly ease, he had planned to spend his entire life in the pursuit of culture. But culture, as Professor Ross has well said, is only the "capacity to enjoy." As a life ideal it can never compare with efficiency, which is the "power to do." At forty years of age, Mr. Sprague Smith deliberately renounced his chosen career as a teacher of university students, and, at a considerable financial sacrifice, turned to the broader sphere of educating the masses of his fellow men. The People's Institute of this city was the result, and how many living New Yorkers can hope to leave at their death such another monument? In the current *Century*, Mr. Jacob A. Riis explains the meaning and work of the People's Institute, with all its manifold and subsidiary activities, such as the people's clubs, Dramatic Department, Social-Ethical League, etc. We refer the reader to it who would more fully learn of Mr. Sprague Smith's life work. Suffice it to say that if ever a man bridged the chasm between the classes and the masses it was Charles Sprague Smith. If ever there was a movement on foot in this country that gave promise of bettering the city or its citizens, whether in politics, ethics or social reform, he was at the forefront of it And, most important of all, who knows how many poor young men and women got their first inspiration from him to serve their fellow men? His was the highest type of the American citizen.

A Move Upward The inaugural exercises of President Gates at Fisk University last week were not only notable but significant. The Mayor of Nashville and the president of the Board of Trade, appreciating the significance of the occasion, accepted places among the invited speakers, and their utterances were all that could be desired. Twenty-six different institutions, including our leading universities like Yale, were represented, and Chancellor Kirkland, of Vanderbilt, gave one of the noblest utterances of the day, emphasizing the need of the work of Fisk, by insisting that ignorance is a cure for nothing. Tho Fisk stands for the higher education of the negro, we are glad to note that no voices were heard in praise of Fisk above those of Principal Frissell, of Hampton, and Principal Washington, of Tuskegee. May this be the beginning of the end of strife between those who stand for the industrial training of the negro and those who believe in his more liberal culture. A race in the condition of the colored race needs all kinds of education from the kindergarten clear up thru the highest university in the land, and any rivalry between this faction and that were puerile. But the most significant thing of the day was the announcement of the gift by a Southern white man of $1,000 for Fisk. We believe this is the greatest single gift of any Southern white man for the higher education of the colored race, and it marks the beginning of the shifting of the base of support for schools like Fisk. There was also noted a fine response from the alumni for a "living endowment" for Fisk, showing that there is a real disposition on the part of the negro to help himself. President Gates's address made a fine impression even on the Southern press, and it looks like a new era in the South for the education of the negro. If now the American Board of Boston could be induced to withdraw its color line and send educated negroes to Africa as missionaries, Fisk could easily take its place as a unique world power in education; for the heart of the uplifted black man is bound to yearn for his brethren who sit in the shadow across the sea.

That Deluge Tablet At the meeting of the American Oriental Society in Baltimore last week, the Babylonian fragment of the Deluge story lately discovered by Professor Hilprecht came up for some dis-

cussion, in his absence; but the reports of the discussion published in some journals were far from accurate. The paper on the subject was by Professor Barton, of Bryn Mawr, and it was discussed by Professor Haupt and Professor Clay. On the scientific side the conclusions did not much differ from those given in THE INDEPENDENT two weeks ago. Unfortunately the reporters had not enough technical knowledge to avoid misunderstanding, and they fell into some error. There was no intimation by any speaker that the tablet was not genuine or that there was anything fraudulent about it. Nor was there a word about the discovery having been first made known to a club of the "fast set" of Philadelphia society. Such statements would have been untrue and indecent, and they were not made. It is true that criticism was made of the way the lacunæ were filled out, and particularly of the extravagant importance given to it not so much by Professor Hilprecht in his book on the subject as by those who had publicly exploited it. It was made clear that it is not unique as to its age, nor of any fresh importance as a confirmation of the Genesis story of the Flood. So far as the scientific and critical side of the discussion went there was nothing to complain of, but there was added to it in the paper, and by one of the speakers, a severe personal attack on Professor Hilprecht which had no place in such a scientific meeting, but which should, if called for, have been reserved for other occasions. We speak with some assurance, as the editor of THE INDEPENDENT was in the chair and then exprest his disapproval of the personal attack indulged in. What provoked this attack was chiefly the claims made for the epochal importance of the discovery, as bearing on biblical teaching, by those who first exploited it in the press, and particularly, by Dr. Radau in *Old Penn*, a students' journal of the university. Even the *Sunday School Times*, which very properly published Dr. Hilprecht's account of the tablet from his book, introduced it, following Dr. Radau, as "a new epoch," when, in fact, it adds nothing to what we had before, whether in its contents or its age. It is simply another old fragment, and a very small one, of the ancient Flood story, of the time probably between Abraham and Moses, interesting and valuable but not important, and it has no new bearing on any biblical question.

Old Orchards

The Ohio State Agricultural College has discovered a new way of meeting the present demands for increased productivity of our acres. Its officials secured the privilege of treating a discarded orchard, which was about to be cut down by the owner, with the understanding that if the returns were not satisfactory at the end of the year they would withdraw. They gave a single acre of this orchard thoroly scientific treatment, that is, in the way of pruning, feeding and spraying. The result was a net return of $475 above all expenses. Here is a practical hint for thousands of farmers, who expect their apple orchards to net them good returns, or be cut down. We understand that Michigan orchards are in this way being rapidly decreased instead of increased. Their owners are unwilling to apply scientific methods in their culture. What is true in Michigan is relatively true all over the United States—with the possible exception of the Ozark region, Colorado and the State of Washington. There probably is no tree that needs as much care as the apple tree in order to secure first class returns, but there probably is no tree that rewards intelligent care with larger profits. The demand for apples has enormously increased, and average family consumption is also increasing. Prices are a good deal more than double what they were ten years ago. We suggest that our other agricultural colleges adopt orchards here and there, and make the test so plain that their owners will not prefer potato culture, or other crops that never net what a first-class orchard can return. The failure to increase the product of our farms into a ratio with our increase of population hangs entirely upon the failure of the average agriculturist to treat his orchards according to up-to-date knowledge.

INSURANCE

The Insurance Investigation

The Superintendent of Insurance of this State is now engaged in an investigation of certain expenditures on the part of fire insurance companies by means of which legislation was influenced. If the investigation shall be the means of making the crooked paths straight it will be a good thing, even should some reputations be lost in the process. Many of the daily papers have printed considerable portions of the testimony with scare headlines, but those competent to speak with authority on political-insurance topics do not always agree in their final conclusions with the newspaper accounts and with the value of their conclusions. A New York legislature absolutely free from grafters is almost unthinkable, but if the dishonest or corrupt members are discoverable The Independent earnestly desires their discovery and punishment. The insurance company which will lend itself to bribery also deserves even more punishment. Just because a man goes to the president of a giant insurance company and offers to buy for him six Senatorial votes at $500 each, it by no means follows that there were six corrupt Senators who had entered into an agreement with him to deliver their votes as goods upon the payment of the stipulated $500. Shrewd forecasts of probabilities have in the past sometimes been made and by taking advantage of opportunities based upon such forecasts fortunes have been built up without the need of corrupting votes. There may be such a thing as too much investigation. Nevertheless it is not for the insurance companies or the legislators to make any objection to proposed investigations. If there is a probability that any corruption can be uncovered through the agency of the legislative investigation now authorized, they should be the first to favor it. Opposition creates a bad impression.

Darwin P. Kingsley's Address at Springfield

In the course of a notable address on "Life Insurance and Our Dual Citizenship" before the Western Massachusetts Life Underwriters' Association and the Springfield Board of Trade, on March 29, in Springfield, Mass., President Darwin P. Kingsley, of the New York Life Insurance Company, again favored Federal control of life insurance companies. He called the cries for Federal control the growing pains of a great people. He also said that the protest of insurance against the excesses of forty-six varieties of legislation, forty-six varieties of regulation, forty-six varieties of taxation, represents an acute form of a general protest.

In the late insurance investigation nothing was more clearly shown than that many State legislatures had been systematically blackmailing the companies. Curiously enough, at the time the newspapers dwelt more on the misdeeds of the companies that had been blackmailed than they did on the doings of the blackmailers. But the people learned a lesson. Small wonder, therefore, that the people now support any honest executive, State or national, who shoulders a legislature to one side and goes direct to the mark. But if the people in single States find this action necessary, what is the condition of a business that must deal with all the legislatures in the Union? Do not the evident tendencies of government itself recite our difficulties and justify our protest?

The Supreme Court of Louisiana has recently held that the "padding" of an inventory in the adjustment of a fire loss nullifies the policy. This decision was reached in the case of the Alfred Hiller Company, Limited, of New Orleans, vs. the Insurance Company of North America. The plaintiff claimed a loss of $30,696.19 because of fire. The evidence showed that the concern carried $37,250 insurance and that the inventory and proofs of loss had been "padded." The court held that such "padding" of an inventory of merchandise by means of false entries of stock not actually on hand as claimed will work a forfeiture of the fire insurance policy in force at the time of fire loss, when such entries cannot be explained on any reasonable theory of honest mistake, and a decision was accordingly so rendered.

Financial

Savings Bank Deposits

An interesting statement concerning our savings banks has been prepared by William Hanhart, secretary of the Savings Bank Section of the American Bankers' Association. His figures are taken from the reports of the Comptroller of the Currency and the Monetary Commission. The savings bank deposits of the world amount to $15,389,672,014, of which more than one-third, or $5,678,735,379, is credited to Americans. The statistical summary is as follows:

	Number of Depositors.	Deposits.
Europe, Asia, Africa, Oceania, Canada, etc.—		
Postal savings banks	40,320,303	$1,989,299,815
Private savings banks	55,204,028	7,721,636,820
Total	95,524,331	$9,710,936,635
United States—		
Private savings banks	14,894,696	5,678,735,379
Total in the world	110,419,027	$15,389,672,014

One American of every six has money in a savings bank, and the average deposit here is $381.28. The average for the world outside of this country is $101.66, $49.33 being the average for postal savings banks, and $140 the average for private savings banks. With the establishment of postal banks here the number of American depositors will be increased.

More Stock Exchange Reforms

By resolutions adopted last week, the Governing Committee of the New York Stock Exchange has enforced reforms of no little importance. The first of the changes is designed to prevent manipulation or to make it extremely difficult. Hereafter it will be impossible for speculators to move prices up and down by matched orders for large blocks of shares without consideration for small lots pending. Members making large bids or offers must satisfy demands relating to small lots of 100 shares or more. To permit Exchange traders to ignore small lots, said the Hughes commission, is to assist manipulation. On many occasions there has been no market for lots of 100 shares while manipulators, dealing in orders ranging from 1,000 to 10,000 shares (matched orders, as a rule) have moved prices to suit their purposes. Such large orders must now be regarded as including the offerings of small lots in evidence at the time. "All bids and offers on larger lots must be considered," says the new rule, "to be for any part thereof in lots of 100 shares or of multiples thereof."

Another rule adopted forbids a member to carry a speculative account, or make a speculative transaction, in which a clerk of a member, a bank, trust company, banker or insurance company is directly or indirectly interested, without obtaining the written consent of the clerk's employer. The history of recent defalcations in out-of-town moneyed institutions, due to speculation by employees, shows that such restriction is needed. The Exchange also now limits the operations of specialists, forbidding them to trade on their own account in securities as to which they have orders from others. It is alleged that specialists have sometimes by such trading gained large profits at the expense of customers. To prevent such abuses, those who offend are now menaced with the penalty of expulsion. While the Exchange authorities deserve credit for these substantial reforms, it should be pointed out that all the changes here noted were recommended by Governor Hughes's commission.

....Interest and dividend disbursements for April, according to statements compiled by the *Journal of Commerce,* amount to $138,502,189, against $123,919,874 for April of last year. About 80 per cent. of the increase is due to enlarged dividends.

....The payment of $2,135,486 to the Government on account of customs frauds, and of $2,000,000 in settlement of the suit of the Pennsylvania Sugar Refining Company, so decreased the net profits of the American Sugar Refining Company (Sugar Trust) in 1909 that there was a deficit of $1,395,850 after the payment of dividends. But the company still has a surplus of $21,300,000.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, APRIL 14, 1910 No. 3202

Survey of the World

Indiana's Republican Convention

It was well known before the Indiana Republican convention assembled, on the 5th, that it would heartily support Senator Beveridge, who is a candidate for re-election next year, and that it would be in agreement with him concerning the new tariff, against which he voted in the Senate. The action taken in Indiana, it was thought, would foreshadow the action of conventions in Iowa and Minnesota. Senator Beveridge was temporary chairman, and he made a vigorous address. At the beginning he said:

"The Republicans of Indiana are for a protective tariff which covers the difference in the cost of production here and abroad. Less than that is unjust to American laborers; more than that is unjust to American consumers. Injustice is the only foe that protection needs to fear. It was to reduce the Dingley tariff to meet changed conditions and to secure justice that we undertook its revision. Every economic policy, every political system, almost every government, has been destroyed because of excesses and injustice which crept into it. The way to keep secure a policy, a system or a government that in itself is good is to administer it with justice and wisdom. The only way to keep a party solid and growing is to keep it right and progressive."

"Like President Taft," he continued, "I wanted free iron ore and free lumber." He could not stand for the duties on these products, but a majority of the Democratic Senators had stood for the duty on ore, and Democratic Senators supported the duty on lumber. Like the President, he wanted the woolen duties reduced, duties which favored the Woolen Trust, opprest the wool grower, raised the price and reduced the weight of the people's clothing. He could not stand for the increase of duties on cotton cloth. He mentioned other increases which he opposed. He could not support "the obsolete and infamous sugar schedule." Commenting upon the argument of the defenders of the new tariff that reductions were made on articles entering into consumption to the value of $5,000,000,000, he said that a majority of those articles were "things of which we are the greatest exporters in the world." He could not stand for the conference committee's slaughter of the moderate beginning of a tariff commission. Compromise with sheer injustice was always wrong:

"Assuming that honest differences of opinion exist—and they do; giving to those upright men who voted for the law as a whole credit for all the sincerity that I claim for myself; what is the way out of the difficulty? Surely not to turn the Government over to that grotesque band of politicians in public life, or who want to get into public life, misnamed the Democratic party. The people know what such men did in the tariff contest in Cleveland's day, for which Cleveland rebuked them; what they did in the last tariff contest, for which Bryan rebuked them. What honest Democrat—what honest citizen—approves or trusts them?"

The plain remedy, in his opinion, was a permanent tariff commission. Mr. Cunningham, the permanent chairman, said all were in favor of the Senator's re-election. This had become the overshadowing issue, on account of the principles for which he stood in the Senate. The Republicans of Indiana, he added, had equal faith in the rugged honesty and great capacity of President Taft, whose unanimous renomination he clearly foresaw. And in that second campaign the President would have "no more loyal supporters, no more aggressive fighters, than Albert J. Beveridge and Theodore Roosevelt." The platform adopted speaks of the tariff as follows:

"We believe in a protective tariff, measured

by the difference between the cost of production here and abroad. Less than this is unjust to American laborers; more is unjust to American consumers. That difference should be ascertained with the utmost speed, and the present law modified accordingly. We demand the immediate creation of a genuine, permanent, non-partisan tariff commission, with ample powers and definite duties fixed in the law itself. We believe with President McKinley that 'the period of exclusiveness is past,' and we heartily favor the Republican policy of reciprocity first announced by Blaine, and later advocated by McKinley."

The platform also asks that the coal deposits of Alaska be kept as the property of the nation, to be developed under lease on a royalty basis. It favors an income tax amendment; national legislation to end child slavery in factories, mines and sweatshops; publicity for campaign funds; and the direct election of Senators. In a long paragraph it highly commends the President and pledges him support "in any efforts to secure the enactment of genuine progressive legislation." It also promises the re-election of Senator Beveridge.——On the following day it was announced that the President would not make his expected visit to Indianapolis on May 5. He had accepted an invitation and plans for his reception had been made. It was said that he could not speak freely in Indianapolis without seeming to oppose a Republican Senator whose re-election he desired. Some supporters of the new tariff sharply criticised the Senator. Representative Dalzell said, according to press reports, that he hoped the Democrats would carry the State and send to the Senate a real Democrat in place of a halfway one. Representative Payne also exprest his disapproval of Mr. Beveridge's attitude. The incident has been the subject of much discussion.

The Insurgent Problem

Speaking at the dinner of the National League of Republican Clubs in Washington, on the 9th, President Taft urged all Republicans to be loyal to the party. This was the time, he said, for doing things, for passing the measures which represent the party's policies:

"Tonight we are reading nobody out of the party. We want all in the ranks, and all have the opportunity to establish their claims to Republicanism by what they do in Congress. When the evidence is shown that a member of the party does not desire the success of the party and is unwilling to redeem the party's pledges, the label he bears is not that of Republicanism. I hope that there is but a month or two of the session left, but in that time much is to be done and much to be shown as to the character and identity of those who belong to the Republican party. No man has a right to read another out of the party. He reads himself out if he is disloyal and if he cannot by his own works show his colors. I want the help of all Republicans, even if some have slipped away a little."

Another speaker was Representative Longworth, Mr. Roosevelt's son-in-law, who said it was no time to try to laugh away the seriousness of the situation. The coming campaign might involve not only the success or failure of the President's Administration but also the integrity of the party. He continued:

"I am a Taft man, not on the surface, but thru and thru. I am not willing to use his name as a cloak for my support of other men and other interests. I am not willing to praise him in public and work against him in private. I am with him not a part of the way, but the whole way."

He was not content to apologize for the new tariff, but was glad to boast of it. ——Before the Hamilton Club in Chicago, on the 9th, Attorney-General Wickersham made a long and elaborate review of the first year of the Taft Administration. His references to the insurgents have been the subject of comment. He believed the Administration's bills would be passed, "despite the efforts of individuals to magnify their own particular importance at the expense of party loyalty and party honor":

"Is it not time that all those who call themselves Republicans should stop coquetting with the Democratic party, should sink their individual preferences about details of legislation, and join with Republican workers in carrying to fruition under our great, patient, candid, wise Republican President the work of clinching the reforms of the last eight years upon the lines so carefully and wisely laid down in the platform of 1908? I speak to an assembly of loyal Republicans. I am sure I voice your thought when I say the time of running with the hare and hunting with the hounds is over, and every one must choose whether he is for the President and the party. He that 'hath no stomach to the fight,' let him depart. Treason has ever consisted in giving aid and comfort to the enemy. If any one wishes to join the Democratic party, let him do so. But let him not claim to be a Republican and in and out of season work to defeat Republican measures and to subvert the influence of the Republican President."

The Graft Inquiry in Pittsburg

There were more indictments and confessions at Pittsburg last week. On the 6th the grand jury indicted Frank N. Hoffstot, president of the Pressed Steel Car Company (at whose works a memorable strike took place last August), president of the German National Bank of Allegheny, and a director of several large corporations. It is charged that he gave, or caused to be given, in New York to Councilman Charles Stewart $52,500 to be used in bribes for an ordinance making three banks (his own, the Farmers' Deposit National and the Second National) depositories of city funds. This was in the spring of 1908. It is also alleged that Hoffstot and the late James W. Friend, banker, asked William A. Blakely, then a practising lawyer but now the district attorney who is conducting the investigation and prosecution, to hold the money until after the passage of the desired ordinance; that he refused to do so and warned them of the criminality of the project. The grand jury also says that Hoffstot solicited and obtained a contribution of $21,000 from Cashier Young, of the Second National Bank, as a part of the bribery fund. Hoffstot is a resident of New York City. The ordinance for the three banks was passed on July 9, 1908, over the Mayor's veto. Before the indictment of Hoffstot, the court had heard the confession of Charles W. Friend, the wealthy president of the Clinton Iron and Steel Company, a director of Hoffstot's company and of the Workingman's Savings and Trust Company, who admitted that he had paid bribe money to Stewart. Emil Winter, president of the Workingman's Savings and Trust Company, also came into court and confest that he had paid to Morris Einstein $20,000 to be used for an ordinance in favor of that trust company. Judge Frazer, who had been a friend of Winter since boyhood, asked that his confession should be addressed to another judge, and it was received in another court. Councilman P. B. Kearns confest that he had taken and distributed bribe money, adding that he had held back for himself more than was assigned to him. Max G. Leslie, county tax collector and a prominent Republican politician, was indicted again. He was recently tried for perjury and acquitted. The grand jury reported that C. W. Heppenstall and Samuel Heppenstall had paid $11,500 in bribe money to have a street vacated, but that indictments would be ineffective because the men were protected by the statute of limitations. The Pittsburg *Leader* asserted that a man more prominent than Hoffstot was involved and called upon the district attorney to make public the man's guilt. Whereupon the editor of the *Leader* was urged by the district attorney to go before the grand jury and disclose his evidence. He accepted the invitation, but his testimony has not yet been published. The grand jury recommends that steps be taken by the district attorney to collect from the six banks interest at 6 per cent. instead of the 2 per cent. they have been paying on the city's money. Counsel for several of the indicted men alleges that the foreman of the grand jury (Harrison Nesbit, a bank president and formerly a bank examiner) is not qualified for jury service, asserting that he has not become a legal resident of the county. The court is considering this charge, which, if well founded, will invalidate all the jury's work.—A committee of the Chamber of Commerce, after studying the situation for a year and inquiring about results in Des Moines and other cities, will report in favor of adopting the commission plan of government. The bill to be introduced in the legislature will provide for a mayor and eight commissioners, each to receive $8,000 a year, and it is asserted that with such a government the annual saving would be $2,000,000.

A Socialist Mayor of Milwaukee

Emil Seidel, a Socialist, was elected Mayor of Milwaukee on the 5th, by a plurality of a little more than 7,000. The figures were as follows: Seidel, 27,622; V. J. Schoenecker, Jr., Democrat, 20,513; Dr. John M. Beffel, Republican, 11,262. With this victory the Socialists also have large majorities in the Council and the Board of Supervisors. In the new Council there are 21 Socialists, or Social Democrats, 10 Democrats and 4 Republicans. In the Board 11 Social Democrats will sit with 2 Democrats and 3 Republicans. The suc-

cessful party will control the municipal government for two years. Seidel's campaign was managed by Victor L. Berger (an Alderman), who is one of the most prominent Socialists in the country. All parties called for the initiative and referendum. The Socialist program includes municipal ownership of ice and lighting plants, three cent fares on railways, cheaper bread, the eight hour day, and work for the unemployed at union wages. Railway fares, however, will be regulated by the State Commission. The new Mayor says there will be nothing revolutionary, "no utopia, no millennium"; that he and his associates will seek to give the city the best administration it has ever had, to improve the lot of the workingman and to make corporations pay their share of taxes. At the election, the Republicans lost 7,000 and the Democrats 3,000, while the Socialists gained 6,000. It is explained that both the old parties were rent by factional differences; that the Republicans were affected by the La Follette-Spooner division, and that the Socialists gained much support from Republicans and Democrats who objected to the rulers of their own party organizations. Mr. Seidel, who has been an Alderman, is forty-five years old and a native of Pennsylvania. He has been working at his trade, which is that of a pattern maker. —— In Chicago, the Democrats now have a majority of the Council, for the first time in several years. Hartford elected a Democratic Mayor, the first in eight years. In Illinois, there were gains for local option, Springfield, Decatur and Rockford being three of the cities which reversed their decision of two years ago on this question. There were gains for prohibition in Michigan.

Various Notes

The military court of inquiry which was directed to make a thoro investigation concerning the shooting affray at Brownsville in August, 1906, has made a report sustaining the charge that the shooting was done by the negro soldiers of the Twenty-fifth Infantry. Fourteen of the dismissed soldiers are found eligible for re-enlistment. This report finally disposes of the matter. ——In the course of his recent speech at Chicago, Attorney-General Wickersham said that the Government was about to bring suit against an alleged combination of railroads controlling the trade in bituminous coal.——In Pittsburg, on the 7th, a Federal grand jury indicted the Imperial Glass Company for violation of the Anti-Trust law. This is a corporation controlling the sale of the products of sixty-six companies engaged in the manufacture of hand-blown window glass. —— At Albany, Senator Conger, whose charges against Senator Allds were sustained, has resigned. Owing to the disclosures made during Superintendent Hotchkiss's inquiry concerning the expenditures of certain fire insurance companies in connection with legislation, an investigation of all such companies has been ordered in the House by a vote of 126 to 4.—— The first month's trial of three-cent fares in Cleveland shows that the receipts considerably exceed the expenses which must be paid. There was a surplus of $14,000 over cost of operation and 6 per cent. dividends.——Owing to the recent death of Justice Brewer, the Supreme Court has decided to hear again the arguments in the Standard Oil and Tobacco Trust cases.

Countries South of Us

A mob attacked the Peruvian Legation in Guayaquil on the 4th, dragging the Peruvian flag in the dust. Peruvians in other parts of the city were assaulted and much of their property was destroyed. This excited great indignation in Lima, and Peru began to prepare for war against Ecuador. The immediate cause of Ecuador's hostility appears to have been a rumor that the Spanish King's decision as arbitrator in the boundary dispute would be in favor of Peru. On the 6th, the Spanish Cabinet sent messages to the cabinets of Peru and Ecuador, urging them to take a conciliatory course. Ecuador's President received from General Bustamente, of Colombia, an offer of 5,000 soldiers from Colombia's army. In Peru there is a popular demand for war, and 15,000 men in Lima have volunteered for service. Impartial observers say that Peru would be defeated, as she would probably be opposed by Colombia and Chile, as well as by Ecuador. President Alfaro, of Ecuador, said on the 8th that

negotiations were in progress for a settlement of the dispute thru the mediation of our Government at Washington, where the two countries would be represented by commissioners, but at last accounts Peru was not willing to accept this method. —— At the most orderly election ever known in Costa Rica, Ricardo Jimenez has been chosen President to succeed President Viquez. The election last year, when he was successful, was annulled by the courts on the ground that President Zelaya, of Nicaragua, had sent many Nicaraguans into the country to vote for him.

Roosevelt's Tour

European and American newspapers have devoted much space to the discussion of the refusal of the Pope to see Mr. Roosevelt except on condition that he would have nothing to do with the Methodist Mission in Rome. Whatever the Methodists may have gained in public favor thru Mr. Roosevelt's action they lost thru the action of Rev. B. M. Tipple in making public a bitter attack upon the Papacy, part of which we quote in our editorial columns. Mr. Roosevelt was so incensed at the disregard of his request that the incident should not be used for polemical purposes that he canceled the reception to the general public which was to be given at the American embassy. The associates of Mr. Tipple in the Methodist Mission disclaim responsibility for his utterances. But, altho Mr. Roosevelt did not visit the Methodists, he has accepted the hospitality of others of whom the Pope would not approve. At Porto Maurizio he lunched with Signor Fogazzaro, the author of "The Saint" and other novels of a Modernist tendency, which have been placed upon the Index Expurgatorius, and at Rome he was given a dinner by Mayor Nathan, who by race, Masonic affiliations, socialistic ideas and anti-Clerical proclivities, is especially obnoxious to the Vatican. Mayor Nathan's address of welcome at the municipal dinner was particularly interesting because he ingeniously introduced one of the ruling ideas of his administration, namely, that Rome is not to be regarded as a museum of archeology maintained for the benefit of foreign tourists. He began by asking himself why he should talk on this memorable occasion when so many illustrious personalities of international celebrity were present, such as Signor Luzzatti, who was not only Premier, but was illustrious in philosophy and social and political economy; Ferrari, who represented art; Ferrero, who represented history, and Boni, who represented archeology. His answer to his question was:

"Because at this moment I have the honor to represent more than science. I represent the life which pulses in our veins. It is the Rome of today, the capital of Italy, that bids me welcome our eminent guests on behalf of the citizens of all classes and parties, who tell Mr. Roosevelt: 'Owing to your character, your work and its influence on civil and human progress we feel proud and happy to receive you in our capital.'

"There are ties and relations between Rome and America. Here American blood revives our old families. There Italian blood fertilizes the land with industries, sciences and arts. Methinks the personality of our guest recalls through centuries of struggles the Roman personality familiar to you all, now dominating the capital; that of the great man endowed with the courage, firm will and reflection necessary to lead his armies to victory and his fellowmen to virtue, who returned to his tent to meditate, read and teach his pupils purity, goodness and duty, the philosopher and warrior, Marcus Aurelius."

The desire exprest by Mr. Roosevelt that he should be allowed to escape public attention and travel with Mrs. Roosevelt like a private citizen over the same route along the Italian Riviera which they followed in their honeymoon twenty-four years ago was not complied with. On the contrary, his daily doings have been given to the world very fully, and he was received by enthusiastic crowds wherever he went. The municipal council of the little town of Porto Maurizio conferred upon him the privileges of citizenship and named a new street "Viale Theodore Roosevelt," cabling at the same time a message of congratulation to President Taft.

The Attack on the Lords

The debate on the veto resolutions in the House of Commons has been prosecuted with vigor, but is of little interest, since both sides realize that nothing they say can have any effect upon the outcome. The Government has announced its determination to push the resolutions thru by the use of

the closure (the equivalent of our "previous question") and has demonstrated that it has the power to carry out this policy. The first test vote was on the amendment offered by Sir Robert Finlay to the effect that the House of Commons was willing to consider proposals for the reform of the present second chamber, but declined to proceed with proposals that would destroy the usefulness of any second chamber. This amendment was defeated by a vote of 357 to 251. The House of Commons authorized Premier Asquith to employ the closure by a majority of 84, and, after the period he had allotted for the discussion had expired, the first of the three resolutions limiting the power of the House of Lords was passed by a vote of 339 to 237. On a resolution in favor of a tariff, the Irish members declined to vote, and the Government's majority sank to 33. It is supposed that the Irish delegation, or at least the Redmond party, has come to an understanding with the Government by which the features of the budget bill most oppressive to Irish industries, such as the whisky tax, will be alleviated. But whether the Irish vote can be secured for the budget unless the Premier accedes to Mr. Redmond's demand that he ask the King for guarantees, is yet uncertain. During the week, the public has been reminded of the days when hatred and distrust of the Irish leaders, were most extreme by the publication in *Blackwood's Magazine* of an article by Sir Robert Anderson, in which he admits being the author of the series of articles in the *Times* in 1887 entitled "Parnellism and Crime." This led to the appointment of the commission which vindicated Parnell and proved that the letters involving him with agrarian disorders were forgeries by Pigott. When Pigott confest and committed suicide the *Times* acknowledged that it had been deceived, but refused to name the author of the articles. The outcome of the affair was a serious blow to the *Times,* which never since recovered its former prestige.

The French Campaign

The campaign for the new Chamber of Deputies, which is to meet on June 1, has now begun. The opening gun was fired by Premier Briand at Saint Chamond, on April 10. He explained how much had been accomplished by the Government in the way of social reform and outlined its policy for the future. The electoral system should be revised in order to introduce proportional representation, and the evils of the present dominance of local interests should be prevented by enlarging the election districts. Internal peace, M. Briand declared, is as important as external peace, consequently the Government would endeavor to establish a system of arbitration between workmen and employers, and would determine the rights of state employees in order that such occurrences as postal strikes should be avoided. Premier Briand's moderate and opportunist attitude has offended his former associates of the Socialist party, and his opening address was disturbed by attacks of a noisy mob of radicals. Stones were thrown thru the windows, revolvers shot off, and when M. Briand passed to the railroad station accompanied by his friends, they were assailed by a shower of stones and a general street fight ensued. The Government, on the whole, is in a position to make a good appeal to the people. It has passed thru some difficult crises with fair success and maintained order without undue use of force. The Duez scandal did not prove so disastrous as was supposed. The ministers succeeded in satisfying the Chamber that they were not personally concerned in the extensive defalcations of the Church property, and that they had no intention of shielding those who were guilty. The most important measure of the Government program, that providing old age pensions for workingmen, was finally passed, as amended in the Senate, by the Chamber of Deputies, by a vote of 560 to 4. One of the opponents was M. Jules Guesde, the most stalwart of Socialists. His objection to the law was that it increased the already intolerable burden of the working class by requiring them to contribute a portion of their wages to the pension fund. The whole should, in his opinion, be paid by the Government with money raised by the taxation of the propertied classes.

Suffrage Demonstrations in Berlin

The Prussian Government has made a decided change in its policy, and instead of endeavoring to repress open-air meetings, they will be freely permitted on condition that they are orderly and peaceable. The police authorities have been severely criticised by men of various parties for their arbitrary and forcible interference with public meetings while the election law was pending in the Prussian Diet. Now that the law has been passed perhaps it is felt there is less danger of riotous demonstration. The first permission to hold an open-air meeting was granted by Police Commissioner von Jagow for Sunday, April 10. Over 100,000 persons assembled in Treptow Park in order to protest against the injustice of the system which allows the vote of a member of the official, capitalist and educated classes to outweigh those of hundreds of workingmen. The meeting was organized and controlled by the Socialists and Radicals, the police and military being kept off the streets, tho ready for action in case there should be disorder. The speakers on sixteen platforms began and closed their appeals simultaneously at the sound of a bugle. Then the resolution demanding electoral reform was passed by acclamation, after which the immense crowd dispersed in good order under their own marshals. ——Germany is threatened by a lockout in the building trades, beginning April 15. The number of men directly affected will be about 400,000, but 1,000,000 more in affiliated and dependent trades are likely to be thrown out of employment. The cause of the action was the refusal of the men to agree with the wage schedules drawn up by the Master Builders' Union. Both parties are thoroly organized and have been preparing for many months for this contest, which seems likely to be serious.

Abyssinia and Somaliland

In accordance with an edict of the late King Menelik, issued in June, 1908, his grandson, Lij Eyassu, has succeeded to the throne of Abyssinia. The new King or Negus is the son of Menelik's daughter, and as he is only twenty years old Ras Tassama will act as regent. Queen Taïtou, widow of Menelik, who tried on his death to seize the sovereignty, has been imprisoned, together with the chiefs who supported her. A civil war over the succession is likely to throw the country again into anarchy. King Menelik was one of the most picturesque characters of our time. Claiming the throne by right of descent from King Solomon but deprived of it and imprisoned for ten years by Theodore who succeeded his father as Negus, he organized a revolution and came into power in 1889. He inflicted a disastrous defeat upon the Italians and maintained the independence of Abyssinia by skilfully playing off against each other the capitalists and diplomatists of the various European Powers. At the same time he endeavored to secure for his people some of the advantages of civilization. He was seventy-six years old at the time of his death.——The British Government has announced its intention of evacuating from the interior of Somaliland. Even the garrisons at Zeila and Bulbar will ultimately be withdrawn and only the post of Berbera held. This leaves the country at the mercy of the Mad Mullah, against whom the British have been engaged in a desultory and futile warfare for the last ten years. Expeditions sent against him have never succeeded in catching him or in obtaining a decisive victory over his forces, and they were lucky if they escaped massacre from ambush or were not cut off from the coast by the destruction of their supply trains. The career of Haji Mohammed Abdullah, or the Mad Mullah, as he is called by the English, is much like that of the Mahdi of Sudan. He is able at will to rouse the natives of the interior to fanatical emnity of the Christians and to unite them for a holy war. Some of the tribesmen have, at the instigation of the English and relying on their protection, held out against him, but these, it appears, are to be abandoned and he has already taken advantage of the withdrawal of the English to raid their territory, destroying their property and killing 800 of them. Unless the new King of Abyssinia should have the energy and military genius of Menelik the power of the Mad Mullah of Somaliland is likely to extend into his territories.

"What Next?" in Westminster

BY JUSTIN McCARTHY

"WHAT next?" is the question which all who are engaged or interested in political affairs thruout these British islands are asking themselves just at present. We have had our dissolution of Parliament, our General Election, our restoration of the Liberal Ministry by a substantial majority, and yet nobody supposes that anything even professing to be a chapter of accomplished history, has been realized for England, Ireland, Scotland and Wales. Every one in both Houses of Parliament, and outside these two conflicting assemblies, feels perfectly certain that we are only as yet in the opening chapter of the great political struggle, and what we want to know is when it will really begin and how it is destined to end.

The Prime Minister, Mr. Asquith, has already distinctly announced that under certain conditions which are by no means unlikely to come up his Ministry would feel compelled to resign office, and he has more than once accepted the idea that it is hardly possible to contemplate a restoration of any prolonged interval of steady and satisfactory legislation without another appeal to the decision of the country at a new General Election. Mr. Asquith's is one of the very rare instances in which a Prime Minister who had been in office for a considerable time and had to appeal to the decision of the constituencies at a General Election was returned with a triumphant majority, and almost immediately after taking his reconquered place on the Treasury bench had to make the announcement that he might have once again to invite the same ordeal before considering himself and his colleagues secure enough in office to attempt carrying out the policy which they were pledged to undertake.

Now Mr. Asquith is unquestionably a man of rare practical ability, as he has proved already in more than one great field where such capacity can be triumphantly made manifest. He now sees that he is surrounded by most serious difficulties, and I feel much inclined to assume that he only regards even a General Election, a second General Election, as a still indispensable condition in order to give him even a fair chance of getting safely thru all the troubles that surround him, and not by any means as a final victory which leaves him free to carry on in security and with success the legislative work which waits for his administration. We know already how much his chances of success depend upon the possibility of his securing the support of the Irish Nationalist members and the English Labor members, and so far as the former are concerned the whole public of these countries sees very clearly that he cannot secure that support without pledging himself in the most definite terms to the principle of Home Rule for Ireland.

One of the most remarkable events of this whole political crisis has been the rise of my dear friend, Mr. John Redmond, to his present position of influence, I might almost say of command, over the great opposing parties in the House of Commons. Of course every one who takes any close interest in parliamentary life and movements has recognized for many years past the remarkable qualities for political leadership possessed by John Redmond; his brilliant eloquence, his persuasive well-arrayed and often quite convincing argument, and his careful avoidance of anything like exaggeration in his setting forth of any political case which he happened to have in hand. John Redmond is now recognized by Liberals and Conservatives alike as one of the leading figures in the House of Commons, and no movement can now be made by either of the great opposing parties without taking some account of the influence which he and his devoted band of Irish Nationalists might determine to assume during the course of the contemplated struggle. I have seen with sincere regret, but without very much alarm, the course which my old friend, Mr. William O'Brien, has taken with regard to the policy, the consistent policy, and unchanging attitude of John Redmond. William O'Brien was a dear

personal friend of mine during many years and is a dear personal friend still, but he was also a close political comrade of mine during many of the years I spent in parliamentary warfare, and I knew him then to be a man ever influenced by the most unselfish and the purest motives, and I am all the more distrest to find that he is now endeavoring to create a dissentient movement in the Irish National party. I feel well assured that his effort will come to nothing and it is sincerely on his own account and for the sake of his noble past career that I feel distrest by his present action.

John Redmond's brother William, or, as he is more generally described by his friends and acquaintances in and out of the House of Commons, "Willie," is becoming more and more a favorite on both sides of the House because of his readiness at quick and humorous and brilliant repartee, with which he enlightens many a dull debate and causes a general burst of laughter to enliven some pompous passage of a wearisome oration.

H. M. STANLEY.

Another Irish member who has won recently a most marked success in the House of Commons, to which he has been only a comparatively recent addition, is Mr. T. M. Kettle, member for East Tyrone. Mr. Kettle has delivered speeches in the House before and since the creation of the new Parliament which won for him the most cordial praises from journals representing all parties and even from writers in magazines which do not habitually concern themselves much with the praising or the dispraising of parliamentary eloquence. My countrymen in the United States may feel thoroly confident that the Irish National party, under the lead of John Redmond in the House of Commons, will never allow the cause of Home Rule to yield to the threats or be won over by vague promises of a British Ministry.

Several of the leading English journals announce the fact, and I presume on something like authority, that Herbert Gladstone, before entering on the government of United South Africa, is to be raised to the peerage under the title of Viscount Gladstone of Hawarden. A place in the peerage, we may feel well assured, was not given in answer to any request or suggestion on the part of Herbert Gladstone himself. The arrangement was made, it may be taken for granted, by the Sovereign himself in order to show a due respect for the population of United South Africa, whose destinies Herbert Gladstone is to guide, the first director of this newly-founded great English colony. All his friends and admirers must certainly rejoice in the fact that since he is to be henceforward a member of the peerage he is to carry as his title the illustrious name of Gladstone. Perhaps, indeed, one cannot help feeling a certain pang of regret in the thought that that name is henceforward to be brought into such intimate association with a legislative assembly founded and constructed and conducted under the conditions and having the history of the hereditary chamber. But then we know in the meantime that the now existing conditions and performances of the House of Lords are destined to be the subject of much parliamentary and other public consideration, discussion, and resolute and statesmanlike plans and projects for thoro reorganization during this year and its successors. We may

hope, therefore, that whenever the Governor-General of United South Africa returns to his own country he may find the new second chamber at Westminster a place more worthy of his own name and that of his father than it shows itself at present to our judgment and our feelings. I think we have all good reason to hope that the name of Herbert Gladstone is destined to become as thoroly associated with the success, the prosperity, the good order and the peace of the new Commonwealth as that of Lord Durham is with the prosperity of Canada.

It has just come to my knowledge that my dear old friend of many years, Mr. John Henniker Heaton, had made up his mind and, indeed, announced his intention, of resigning his seat in the House of Commons. It is apparently his design if the expected, and we may presume inevitable, forthcoming General Election comes on, not to seek again for a place in the representative chamber. I must say that I heard of this determination on his part with surprise and with sincere regret. I may add that that regret is felt not merely, altho to a very great degree, because of the loss which the whole country and many other countries also will suffer because of the withdrawal from active public service of a man who has rendered such inestimable benefits to all communities thruout the world who take any interest in the international postal service. It is to Henniker Heaton that we owe the recent creation of the penny postage system between Great Britain and the United States, and I hardly think that civilization has received during our recent days a more beneficent advancement than that which has been conferred by this most enlightened and most philanthropic stroke of legislation. It seems to me all the more regretful for his own sake and for that of the world in general that Hr. Henniker Heaton should make up his mind to withdraw from his active public life at so comparatively early a period of his career. He was born in 1848 and is therefore only some sixty-two years of age, and our public men in these countries have long since got out of the way of considering themselves too old for further public service when they have got to the no longer by any means patriarchal age of two and sixty. I am quite sure that to whatever length of years my dear old friend may be allowed to live on this earth he will always employ his years and days in the rendering of service to humanity, and I do not see any position in which he could render service so effective and so direct as within the walls of that House of Commons which has enabled him during so long a time to make himself a benefactor to mankind. I spent many years with him in the House of Commons, and altho we belonged to opposite political camps yet I am glad to say we were voters in the same lobby where philanthropic progress and social reform were concerned in the division.

The official announcement has just been made that the noble public services of the late Sir Henry Campbell-Bannerman, who closed his career as England's Prime Minister, are to be duly honored by a public monument in Westminster Abbey. I may perhaps say that the announcement is made known in terms which might not convey to the mind of the ordinary listener, even altho a resident of England, a full idea of the honor thus paid and most deservedly paid to the really great statesman and most enlightened patriot and philanthropist who passed out of life at the period of his most valuable public work and at the zenith of his fame. The official statement is that £2,100 is to be set apart out of the Civil Service Estimates for this monument in the Collegiate Church of St. Peter, Westminster, whereas many born Englishmen and having lived all their lives in England do not know at the present moment that the Collegiate Church of St. Peter, Westminster, is what we all know and what all the world knows as Westminster Abbey. There will, however, be no question raised, even by the most disputant and caviling mind, as to the genuine claim which the life and the spirit and the noble gifts of the late Prime Minister established to the honor of a monument in that mausoleum of England's genius and true nobleness, Westminster Abbey. The last time I ever met Sir Henry Campbell-Bannerman in social life was at a small dinner party given by the late Sir John Robinson, then and for many years before manager of the *Daily News,* who is him-

self now also dead like his guest, and the then famous Stanley the explorer, the recoverer of Livingstone, who was at the time I speak of, like Livingstone, one of the most talked of men of his generation. These two have since passed away, and altho it is not a very long time, counting mere years, since this interesting dinner party was given by my dear old friend, Sir John Robinson, it seems now something like a banquet of the dead just recalled to memory. I am glad to see that a new novel by Mrs. C. L. Antrobus, "The Stone Easel," has just been published by Messrs. Chatto & Windus. Mrs. Antrobus is an extremely clever writer with a charm which is quite individual. She has published far too few books and I am rejoiced to welcome a new one, and I hope to write more about it in my next article.

LONDON, ENGLAND.

A Literary Producer Soliloquizes

BY WILLIAM C. WILKINSON, LL. D.

PROFESSOR OF POETRY AND CRITICISM IN THE UNIVERSITY OF CHICAGO.

1. I must consider that clear thought is necessary in order to clear expression.

2. I must admit to myself that no thought is clear that is not capable of being clearly exprest.

3. I must hold it probable, respecting any given thought, that it is not quite clear in my own mind, if I cannot express it in more than one way.

4. In a doubtful case, it will be well for me to exercise myself to find several alternative expressions of my thought.

5. Whether or not it be possible to have a thought not put into words, I had better deem it certainly impossible to have, without words for it, a *perfectly clear* thought.

6. It will be wise for me to remember that at any rate no expression of thought is sufficiently clear which can fail to be understood right by those for whom it is intended.

7. Indeed let me consider that in general no expression of thought is clear enough which admits of being made a degree clearer.

8. In order to establish a habit of clearness in thought, it will be well for me to exercise myself much in fitting a given thought with its exactly, its exquisitely, adequate expression.

9. For example, it is a good practice to try matching a given current phase of the weather, a given present aspect of the sky, a landscape under observation, a new face I may happen to see, a sensation experienced, a mood of my own mind, with the adjective, or the adjectives, most accurately adapted to give the characteristic quality of the particular object in question.

10. The same art is to be practised in providing nouns, and verbs, to designate, in the most vivid manner possible, things and actions either observed or imagined.

11. I will go beyond the limits of such descriptive mere words, and frame phrases, perhaps even sentences, to express, as ideally well as possible, an observation, a thought, a fancy, of which I may happen to be, or to have been, the subject.

12. In reading or in hearing discourse, of whatever sort, I will habituate myself to notice not only what is said, but in what way it is said, and, as far as is at once proper and practicable, mentally criticise the expression, alike for its merits and for its defects, seeking at the same time to improve it, if I can.

13. I will put myself under constant regimen of conscience and of will, to express myself exactly according to my real meaning, even in the ordinary conversational exchanges of everyday life.

14. I need to consider whether a given word be capable of bearing equally well, or nearly so, a sense different from that in which I am proposing to use it.

15. In such a case of possible ambiguity, I must be at the necessary pains to find a word not susceptible of being misunderstood, or else I must accompany the ambiguous word with some form of

expression that will fix unmistakably the sense in which I employ it.

16. I must ask myself what place for a given word in relation to other words in the context will best make it serve the exact purpose in view.

17. I must often thoughtfully consider whether transposition, such or such, of a word, a phrase, a clause, a sentence, a paragraph even, might not bring out my meaning more distinctly.

18. I must exercise unceasing vigilance to have all representative words and expressions (personal pronouns, etc.) in such relation of place and syntax to the word or expressions for which they stand as not to leave reader or hearer in any doubt of their reference and their meaning.

19. With a view to this, I will freely repeat, where necessary, the original substantive words or expressions.

20. I must constantly bear in mind that, without clearness present in it as a condition, no expression of thought can be *forcible.*

21. Yes, and I need to consider that, without clearness present in it as a condition, no expression of thought can be truly elegant.

22. I must consider that, in the quest of brevity and terseness, I may err by using too few words to express adequately my sense.

23. On the other hand, I must consider that I am more in danger of using too many words, for the highest clearness even, much more for the greatest force, of expression.

24. I must consider that whatever words used by me do not contribute to clearness of expression, tend, contrariwise, to obscurity.

25. In revision of my work, let me look narrowly to see whether, at any point, I have, by the omission of a word, a phrase, a clause, or a sentence, left my expression of thought *incomplete.*

26. I must have watchful, considerate regard to the natural logical, or imaginative, order of thought, and arrange the parts of my expression accordingly.

27. I must repeatedly revise my work, coming to it in various successive moods of mind, to see whether I have observed the immediately foregoing rules.

28. And I must exercise the same care of revision as to all the other points of which I have here reminded myself, devoting, when practicable, a separate review to each separate point.

29. I must make opportunities for submitting my work, not only when finished, but at frequent intervals of its progress, to the criticism of others.

30. Let me keep myself alert to notice how the very act of so submitting it will often, without a word spoken from the listener, at once reveal some defect of expression not previously thought of as existing in it.

31. If a listener asks to hear a given sentence a second time I will consider whether that be not perhaps a sign of imperfect clearness in my expression.

32. I must not assume that, because listeners point out no lack of clearness in my expression, therefore no lack of clearness therein exists.

33. In point of vocabulary or diction, I must remember that, in general, the genius of the English language, or, perhaps, rather the genius of the peoples using that language as their vernacular, makes more conducive to clearness choice of words Anglo-Saxon in origin than choice of words otherwise derived.

34. I must keep it in mind that, in general, short words produce their effect more certainly, and more promptly, and more powerfully, than long ones.

35. I must not forget that, on the other hand, certain kinds of effect desired are better secured by long words than by short ones.

36. I must pay proper regard to the principle of onomatopœia, or resemblance of sound to sense, in my choice of words.

37. In this view, it will be useful to remember that, as a law of language tending to be constant, ideas of slowness, physical or mental, ideas of weight and of mass, whether literal or metaphorical, ideas of magnitude in whatever species, ideas of pomp, of richness, of stateliness, of grandeur, ideas of moral elevation and nobleness conceived on a scale of heroic dimensions, ideas of the suprahuman imagination, are most suitably exprest by words long, either by number of syllables, or by quantity of sound resulting from the nature and the number of letters that must be pronounced in uttering them; while, on the other hand, ideas

of quickness, of lightness, of littleness, of frugality, of simplicity, of the morally base, of the infrahuman imagination, are most suitably exprest by words productive of slight sound in being pronounced, that is, either short, or having their syllables such that they may be rapidly uttered.

38. Let me never repeat the conjunction "that," after a clause or a member of a sentence has intervened (following its first employment to introduce a dependent construction), *unless* clearness requires the repetition; and then I must see to it that the principal construction, that upon which the subordinate depends, is also itself in some form repeated.

39. Let me study books on the art of expression with this thought clearly in mind, that to me as literary producer the chief practical value of any rhetorical treatise is fairly tested by the number (with the importance) of the discriminated rules or maxims for literary production that, on careful analysis, it is found to yield.

40. It will be wise for me to remember that the most useful rhetorical rules are likely to be those which are in themselves their own vindication and explanation, needing neither extraneous reason to recommend them, nor extraneous elucidation to make them clear.

41. On the negative side, I must remind myself again and again of the truth of the paradox that no rhetorical rules, however excellent may be each one by itself, and however completely exhaustive of the subject may be all of them taken together, can ever, tho studied by me until perfectly understood, nay, until securely, in their true force and meaning, lodged in my memory, avail to make me, or even tend toward making me, now the possessor of them, a good writer.

42. On the positive side, let me remember that, so far as rhetorical rules are concerned in the business, then only am I in the way of becoming, thru them, a good writer, when I am consciously conforming my practice to their inculcation.

43. I need to prepare myself to learn from experience that the effect of consciously conforming my literary production to the prescribed laws of such production, will inevitably for a time tend in some degree to check my facility in producing.

44. I must fortify myself to persevere in conscious effort to conform my practice in production to the best principles of literary art, by remembering that the result will also inevitably be eventual release, experienced in ever-advancing degrees, from the necessity of such conscious effort.

45. In short, I must consider that conscious obedience to rhetorical rules becomes then only in the highest degree useful, when it has passed into *unconscious* habit.

46. I may put the truth of the matter paradoxically to myself in this form of statement: My true object in learning rhetorical rules is that, in the end, I may soundly forget them.

47. I may conclude that thus rhetorical rules are capable of serving most those writers who have come at last to need them least.

48. Always, but especially until I shall have reached the stage of experience at which conscious obedience to rhetorical rules has been transformed into unconscious habit, let me trust for my improvement in rhetorical art, not so much to frequent arrests of progress in the actual work of composition, as to critical returns upon the result of such work after it has been provisionally achieved.

49. I must seek so to state my meaning that no illustration shall be needed to make it clear.

50. I may well, however, ask myself whether, my meaning having thus been made clear by statement, it may not, in the current case, conduce to my purpose to render my meaning vivid, as well as clear, by the use of illustration.

51. I shall do wisely to consider even that exceptional cases may occur in which several successive illustrations, rising upon one another in power, to the end, might advantageously be accumulated on a single point for the sake of a desirable degree of vividness.

52. Let me not fail to admit to myself that sometimes illustrations not required either for clearness or for vividness, may be advantageous for the purpose of

mere gratification to the reader, or of enlivenment to his attention.

53. I must beware of using illustration too much.

54. I must beware of bringing illustration from too far.

55. Finally, and above all, in the course of composition, I must box my ears and ask myself incessantly:

(a) Exactly what is my thought?

(b) Does this exactly express my thought?

(c) Does this best serve my purpose placed here?

CHICAGO, ILL.

The Cost of Living.—X.

[With this symposium of letters from our readers we conclude our series of articles on the increased cost of living. We are sorry that we can only print here a very few of the large number of letters received and that even most of these have had to be cut down ruthlessly. Those letters that were predominantly controversial and theoretical and not based on the personal experiences of the writers have been generally omitted. The articles already having appeared are: "The Remedy for High Prices," by J. Pease Norton (February 10); "The Crisis in American Home Life," by S. N. Patten (February 17); "The Tariff and the Cost of Living," by B. W. Holt (February 24); "An Old-Fashioned Theory of Prices," by F. H. Giddings (March 3); "Prices and Incomes," by J. B. Clark (March 10); "Economy in Diet," by R. H. Chittenden (March 17); "Does Increased Gold Production Increase Prices?" by S. Brown (March 24); "High and Low Prices," by E. R. A. Seligman (March 31); "The Cost of Food," by J. D. Whelpley, and "The Theory of Price," by S. N. Patten (April 7).—Editor.]

The "Dill."

In your issue of February tenth Professor Norton suggests a method of passing over to the use of the multiple standard with almost a minimum of friction. It has occurred to me that the transition could be accomplished still more easily by the interchange of the words "dill" and "dollar" in Professor Norton's scheme. Let a dollar be defined by law as he has defined the term "dill." Let 23.22 grains of gold be called a "dill." Then instead of doing business in terms of "dills and cents" as Professor Norton suggests, we should continue to carry it on in terms of dollars and cents. But the "dollar" would be an invariable dollar, and without any change whatever in the terminology of contracts, changes in the general price level would be at an end.

Professor Norton realizes the necessity of making the change to the new standard by a simple and easy process. It would vastly simplify matters if we might continue to express all transactions in the familiar terms of dollars and cents.

(Preceptor in Economics.)

PRINCETON, N. J.

The Contented Farmer.

I am a farmer, and hire help by the day. My man says he'd rather pay me $1.25 a bushel for wheat than 75 cents. He means that with the former price he may expect good wages and steady work. I think both the Dingley and Payne tariffs well calculated to do these very same things for the workingman, and help give prosperity to us all, without material increase in prices.

The farmers in my section—western New York—are doing well. They pay for their farms right along. They hire more help than hitherto, make improvements, and in buying freely, encourage all other kinds of business.

PALMYRA, N. Y.

Wine and Woman.

Last year about two billion gallons of liquor—beer, whisky, wines, etc.—were consumed in the United States. This is sheer waste, and has no food value. If the grain used for making this liquor had been fed to hogs, cattle and other live stock the price of these animals, on account of the increased number, would certainly have been lower. The amount of land used in raising the grain, fruit, etc., used in making this enormous quantity of liquor must be a large proportion of the whole amount of cultivated land in this country.

Another item is the price paid for "style" in women's garments. It is a well known fact in the retail trade that women's garments, and more especially millinery, "left over" at the end of the season is practically worthless, and that enormous profits must be obtained to compensate for the loss on "out-of-style"

goods. Women have a natural right to dress attractively, but if women's clothes were made in a few sensible styles, with only slight changes from year to year, as is the case with men's clothing, enormous profits could not be obtained on them. It is probably useless to hope for reform in this direction, but it will do no harm to call attention to its desirability.

(Haythorn & Thomas Dry Goods Co.)
WICHITA, KAN.

But Fletcher is Now Turning Somersaults for the Biograph.

Let me say not as a panacea, but for the good of all, that so far as the cost of living means food, every one may "steal a march" on monopolists by consuming one-half the quantity.

The business man and professor would be decidedly the better for it. The laboring man can do more work on half as much, and the athlete must cut down his food or lose the prize.

For further particulars the reader is respectfully referred to Horace Fletcher.

In Adam's Fall We Sinned All.

Why is living so costly? Primarily, because we plead "Am I my brother's keeper": Jethro Tull marked what toil mankind have needlessly entailed on themselves by making the annual cereal their chief source of subsistence, instead of improving the yield of mast and nuts: "Thou shalt eat the herb of the field; In the sweat of thy face shalt thou eat bread." The cereal satisfies present needs, but provides nothing for posterity.

The Church at Ephesus had been founded by Apollos, "knowing only the baptism of John": Its angel was reproved for having left "thy first love"; and was warned to *turn again* and "do the first works."

What were those? *Dressing* and *keeping* the (trees of the) garden.

Abel could scorch and kill the thorny trunks, but needed the sheep to crop off the new shoots, ever springing up to choke the young tree that was "good for food."

Cain could supply his own wants by planting wild rice or millet along the watercourses: Heedless of posterity's needs, to him, as to the Chinese, sheep were "eaters of men."

Cain "builded a city": The dry, hard grains needed bruising and moistening for the young child's use—the mother must grind and cook: Seizing the opportunity afforded by the infant's needs, his compact with his son perpetuated the self-indulgence, the supremacy and solidarity of the male sex.

The feminine nature notes the child's idiosyncrasies: Masculine vision views objects collectively—to be subdued into harmony with its desires: The mother's care would rather develop to perfection a limited number of loved ones than control wide fields teeming with myriads.

How may we escape the burden accumulated by each adding to another's task in order to evade his own?

Help the young to co-operate, and to acquire homes by life-insurance: To "restore all things," especially the mother's normal function, "Make his paths straight."

Let the fathers' hearts turn to the children —"the disobedient to the wisdom of the just," and "all flesh shall see the salvation of God (The-For-Others)—the salvation of *service.*"

A Contrast.

In Nebraska forty years ago we would see on Saturday nights men leaving the railroad camps carrying on their backs a sack of flour, a pound of coffee, and perhaps a pound or two of sugar, headed for their sod houses on the homestead where their families lived; a distance varying from five to twenty-five miles, where they had a garden spot, a few chickens, a pig, and a cow, from which the woman got the milk, butter, eggs, meat and vegetables for the family. She sewed the clothes for herself and children, and even the overalls for the husband. Now we see on each of the same homesteads buildings and fixtures to the value of from five to twenty-five thousand dollars, the back yards covered with empty tin cans, glass jars and paper boxes which have been brought there by delivery wagons filled with fruits, vegetables, breakfast foods, and no one knows what all. The families are now traveling in twenty-five hundred dollar automobiles. The productive capacity of the old men or their successors has been enlarged as compared with forty years ago; but not equal to energy wasted in present standard of living. The difference must be charged up to some one else. C. J. CARLSON.
WAHOO, NEB.

The Unearned Increment and Alimony.

The unearned increment in land stock and bonds with its increasing tribute in rents and interest. The large application of the increment and its tribute to joy rides, champagne suppers and alimony. W. C. DOUGHERTY.
STAGG, CAL.

Take Your Medicine.

The Tariff and its heirs and dependents—the Trusts and Combines—are efficient aids in raising prices If not our protective tariff is a misnomer. You protectionists have always preached just that. Now that it is on to its job and executing its work take your medicine like little men.

To procure the consent to relieve the sufferers will be difficult. The majority are benefited by high prices. The production of gold will undoubtedly increase instead of decrease. The only remedy in sight is the withdrawal of artificial aids. The first should be the removal of the excessive tax on oleo.

I doubt if they will permit that little act of justice to the consumers. A. S. SUTTON.
ARCHER, IDAHO.

Dumping the Surplus Into the Bay.

I am neither a professor nor an authority, but will give a few facts that can be verified by housekeepers and grocerymen of San Francisco and Oakland, Cal. In summer cartloads of vegetables and fruits are dumped in the bay to keep up prices. Some producers have wished to donate their surplus to charitable institutions, but dealers would not allow that. Price of fish is now enormously high, yet the trust sends loads of fresh fish to the glue factory. Last Thanksgiving week turkey was 35 cents a pound and thousands of pounds were kept in cold storage till condemned and burned by the board of health. This last winter coal from $12 to $13.50 local dealers could not get it from wholesale yards because "prices must be kept up." An intelligent grocer told me he was obliged to sell goods at the prices set by wholesalers or he could not get them, etc., all along the line. SUBSCRIBER.
OAKLAND, CAL.

Picture Postal Cards and Other Luxuries.

A fifteen-year-old girl, whose father supports a fair-sized family by his daily labor, has received 900 picture postal cards which with return cards, postage, etc., represents a total outlay around $75. A number of families within our acquaintance, whose support depends on the husband's daily labor, have from 400 to 600 phonograph records and monthly orders for new issues at 35 cents each, not considering original cost of machine. Baker's bread and cakes to our knowledge are shipped 20 to 40 miles by rail and then staged 10 to 15 miles to families with steel ranges in their kitchens and living at the edge of a forest reserve. The electric light bill of some ordinary families to our knowledge runs to $25 per month.

M. J. SCANLAN.
HERMOSA, S. DAK.

Saving as the Remedy.

The American people have almost forgotten the teaching of Leroy-Beaulieu that "the man who saves, in case he invests his savings, directly or indirectly, spends as much and makes as much work as the prodigal, or the man who spends his whole income." The former prefers future to present goods; he aids production rather than destroys utilities. Professor Patten has given us one very important item—saving in average families is becoming a lost art. Insurance with this class is the surety of the future, with the lower classes, charity and old-age pensions. The inevitable result is to live up the incomes, justifying our policy with that old fallacy that vast expenditure is pardonable because it makes work.

The result is seen in that prices have advanced beyond a reasonable margin. New desires have arisen as rapidly as old ones were satisfied. The effort to measure up to an unnatural standard, by means foul or fair, is largely responsible for present private and public dishonesty. Besides, society is teeming with parasites, who destroy the products of the industrious without contributing anything to the total capital. One Ohio official has recently declared that 15 per cent. of the salaries in his district were given to charity. The American people must come back to the teaching of the French economist. The masses must give saving its rightful place in our economic system. In the public schools—our hope of the future—let us teach saving, not only as a surety for old age, but as a positive benefit and duty of the individual to society.

R. H. ERNINE.
(Member of the Ohio House of Representatives.)
SPRINGFIELD, OHIO.

Shorter Labor Hours.

I am superintendent in a manufacturing plant operating twenty-four hours daily, in which wages have been advanced within ten years from thirty to fifty per cent. Furthermore, instead of two sets of men working twelve hours we now have three sets working eight hours, nearly doubling the hourly wage without increased production, resulting in a higher labor cost, and it must be remembered that the cost of manufactured articles is mainly labor.

Similar conditions prevail in other manufacturing establishments and the skilled trades, causing higher cost for their products, and also drawing labor from the farms, this partly accounting for the high price of agricultural commodities. Is it not time for the public to carefully consider whether it is even for the permanent interests of the laboring man himself to give encouragement to the further extension of the short-day movement, which ultimately hurts not the employer but the consumer? W. V. W.
BOSTON, MASS.

Providence and Carnegie.

We live in a somewhat expensive college town, in a nine-room corner house rated at $45 a month. In the family there are four adults (one maid) and three children aged seven, four and two. During 1909 our expenses (exclusive of taxes and insurance) were $2,285.72. As our income is less than $2,500, this leaves a dangerously small margin of saving for a family with growing children. Yet when we try to cut down, there seems no way of escape. This house just suits us and we shrink from the fatigue and expense of a move; there must be plenty of fuel to keep grandma and baby warm; and although $342 a year for "service" seems high, the housemother already works thirteen hours a day, doing all the cooking herself. The homemade clothing for the three tots came to but $43, and we grown folk wear our ready-made suits two seasons. Motoring, clubs, bridge, and tobacco we cannot give up, as we have never had them. The appalling item of $533.14 for "food" becomes in the last

analysis a modest monthly average of $8.40 for each adult.

Luckily through the economy of our ancestors we are to have a small estate that will keep us from starving in our old age and may even enable us to get the boys through college if they forswear fraternities and appendicitis. But what of our companions in this university circle—people of refined and expensive tastes with families as large as ours and often smaller incomes? The younger men are plainly given to understand that no matter how efficient and beloved they may be as teachers, they must write, research or resign. So they are all feverishly saving for the approaching year when they shall have time to find out something new about the crayfish or to edit the thousand and first textbook on their particular specialities. How they can save anything at all beyond this I cannot see, and what they will do in their final unproductive years, only Providence and Carnegie can tell. C. H.

CALIFORNIA.

A Shoe Dealer's Views.

My business experience in the past decade has taught me that the average person does not use the same economy in buying footwear that he—and especially she—did in the past, and that less and less attention is being paid to the wearing qualities of shoes and more to elegance of fit and the appearance of the article itself.

JAMES C. MOFFET.

LOUISVILLE, KY.

From a Retail Grocer.

I have been in the retail grocery business for forty-three years. My profits after paying expenses did not amount to 10 per cent. on amount of sales for 1909. The profits of the business are certainly not any larger than they were thirteen years ago.

The people who had articles of food in cold storage have been abused and blamed probably more than any others during the last six months. Those who stored eggs have been particularly held up for derision. It has seemed as if many intelligent people believe that eggs should be stored only from philanthropic motives. A year ago eggs were higher than is usual at that season of the year. It was risky business putting them in storage at a first cost of twenty cents per dozen. But a great quantity were put in. Then to this had to be added the cost of crating, storage, interest, insurance and handling over when brought out and transportation to places to reach consumers. It is claimed now by the dealers and it is reasonable that hundreds of thousands of dollars were lost.

From November 1 to about March 1, storage eggs were about the only kind that could be obtained. Thousands of dozens were sold in this city and very few fresh could be bought at any price. The price of storage eggs at retail here averaged about thirty cents. They were satisfactory and at that price more reasonable than meat. Now, if dealers are prohibited from storing eggs or are limited as to the time they can store them—that is, limited to a few weeks or months—or on account of the price, which is higher now than a year ago, do not store them because of the still greater risk, what will naturally be the result? The probabilities are that they would be somewhat lower now for a while and then next fall and winter would be much higher than they have been during last fall and winter. E. G. S.

ALBANY, N. Y.

Blames It on the Women.

The women are at the bottom of the whole thing. Whose fault is it that the luxuries of yesterday have become the necessities of today? Grandmother was as refined a gentlewoman as any of us, but she had no annual expenditure for cosmetics, confectionery (she made taffy sometimes), bargain (?) sales, club dues, or automobiles. Instead of buying hothouse flowers she raised spice pinks and love-in-a-mist; instead of our elaborate breakfasts she had fried mush (which is still just as good as ever and besides has "meat value," Mrs. Rorer says).

The constantly lessening efficiency of housewives, who leave cooking, measuring, even ordering supplies to servants, who, if not actually dishonest, are wasteful and careless, opens the way for wholesale graft in the matter of weights and measures. Without doubt there is great loss here in most households.

Hiring of the family sewing is also a large item. Grandmother did this herself and "cut saving."

To be frank, our family is not suffering any inconvenience from this cause, but are perfectly comfortable, well clothed, well fed and happy on less than $1,000 per year, for the family of eight with one daughter in college and another taking music. It is merely a matter of good management and independence of other people's opinion.

MRS. J. L. KILGORE.

HOPKINSVILLE, KY.

But Would Not a Central Store Extort Monopoly Prices?

As there is but one producer to every eighteen consumers and about one middleman to every twenty-five consumers and producers you will get some idea as to why the cost of living is so expensive. Our system of distribution of food products is wasteful and expensive. Take the wholesale trade first. They in competition with each other keep a host of high salaried men traveling the country to dispose of their wares. This is added to the cost of the goods the retailer buys. The retailer, to compete with his rivals, spends thousands of dollars to advertise his wares to the public. This is added to the cost of the goods, and the consumers pay it.

In our little city of 5,000 population we have six stores handling groceries exclusively and four others handling groceries and dry goods, making ten stores handling groceries. Each

store has a delivery wagon and one or two clerks, who are idle at least part of the time. One central store with four wagons could handle the business. The store being enabled to buy in larger quantities would save both in freight and cost of goods, besides discounting its bills, eliminate the cost of advertising and keep busy, save in rent, wagons and various ways which would much benefit the consumer.

N. O. CREED.

CAREY, KAS.

The Country Bank.

There is much truth in the various theories concerning "high cost of living" appearing in recent issues of your paper; but there is one cause that has not been presented. That is "increased banking facilities in the agricultural districts as compared with thirty years ago." It used to be that when the farmer's taxes were due or the interest on his farm loan, or he needed money for some purchase, the only thing for him to do was to sell hogs, cattle or grain, regardless of price. They were at the mercy of the purchaser. Today, with a bank at every railway station and even out beside the country store, every farmer has a personal acquaintance with the officers of some bank and can get all the credit to which he is entitled. So today, when taxes and interest come due or money is needed in any way, he does not sell any of his products unless prices are satisfactory, but he goes to his banker, tells his wants, explains his circumstances, and the banker loans him the money, believing like the farmer that by holding his product he will more than make the interest. You can take the live stock market reports and see that every decline in prices has shown immediate reduction in shipments. The small banks in the little towns of the corn belt have made the farmer independent. And so long as the farmer can make money by holding for his price, so long will the price of foodstuffs go up, and they will be higher, for it is human nature "to get all you can," and the farmer himself does not yet realize the power that's his in being the man that feeds the world.

President First National Bank.

WEATHERFORD, OKLA.

Meeting the Higher Cost of Living Half Way.

I teach thirty-two weeks yearly and receive $800. We have four children and a worthy girl lives with us and helps with the housework for her expenses. The needs of my family constantly increase and with the higher cost of necessities threaten to drive us folk who "live out of paper bags" to the wall. My wife suggested gardening during vacation, since I had no means to continue summer work at Northern institutions, but being a carnivorous animal I had little use for vegetables. Digestive troubles changed this and I learned to relish anything that grows in the garden.

Last spring I took my wife's advice. I became chummy with farmer friends, who gave me much good advice. I planted an acre to vegetables which could be readily canned: tomatoes, okra, beans and peas. The outdoor work was delightful, just what I needed. I soon had more vegetables than we could use. I paid $5 for a work on canning; it was well worth it. The children helped with the canning. My little boy, two years old, was happy to "tote cans to papa." I put up several loads of tomatoes on shares for friends. I paid seventy-five cents per bushel for peaches. Cans with solder-hemmed caps cost three cents each. Lithographed labels cost one-fifth cent each and made the finished product look fine.

I smiled inwardly last fall when my grocer said: "Peaches are 'two bits' (25c) per can, tomatoes a 'bit.'" I sold him several hundred at 16⅔c each, tomatoes at half as much, and took in exchange a barrel of flour, sack (100 lb.) rice, sack sugar, keg of salt fish and other necessities. I learned afterward that I lost money. Boarding houses would take all I could spare at the retail price, for they were hand-packed.

Going over our accounts we find that we have saved more than ever before and are healthier and happier. I plan to plant five acres the coming vacation.

J. R. REYNOLDS.

MARSHALL, TEXAS.

More Intelligence on the Farm.

I think I may truthfully say there is not a town in West Virginia that is supplied with vegetables, eggs, meats, grains or fruits by the local farmers. These conditions prevail largely thruout Ohio and Pennsylvania. In the town where I live, about 2,500 population, we import nearly everything we eat, notwithstanding we have a good surrounding farm country. Even many of the farmers buy flour, grain, fruit, potatoes and meat. They have farms underlaid with coal, oil and gas and live on their income. A local feed dealer tells me that last spring he imported over 15,000 bushels of oats. It would seem then that one remedy for high prices is more intelligence and more industry on the farm. But instead of trying to bring prices down so that the farmer will again have to mortgage the farm, why not bring the price of labor up so that the laborer can live? The real question is, how to bring the price of labor up. It can be done much easier than prices can ever be brought down.

W. C. GRIMES.

CAMERON, W. VA.

The Cost of High Living.

Mr. Hill truly hits the mark when he claims that we should call it, not the high cost of living, but the cost of high living. The increased cost is world wide, but nowhere is it so great as in our own land. The difference between increase here and abroad is just about equal to the difference between Old World and New World extravagances.

The clerk on a moderate salary who owns an automobile finds he must do something to

increase his income and has his salary raised. The man who raises it finds his expenses increasing and raises the price of his goods. The laborer who gets his wages raised finds that he also has to pay his share of the increased cost of living.

Everybody wants more money, and we are all busy "swopping" our increased incomes for increased cost of what we consume or use. To meet and successfully combat present tendency toward higher prices we must have more producers.

Then, when the "millennium" has arrived, let us hope that at least a few of our people will be willing to live upon modest incomes economically expended and really pay their debts somewhere near the time they are due.

Then—exit high cost of living.

A BANK PRESIDENT.

BROOKLYN, N. Y.

We Expected This.

"Increase in price" is an evil. All evil is caused by ignorance. If there was no ignorance there would be no "increase in prices." The main cause of ignorance is the general use of alcoholic liquors. Alcohol dulls the brain. Abolish the use of alcoholic liquors, the main cause of ignorance, and all economic hardships will disappear.

C. CUDEBAUGH.

RESIDENCE, NORTH LAT. 65°, LONGITUDE 157°.

The Cost of Advertising.

In all the discussions of the advanced cost of living I have seen no mention made of the cost of advertising. This includes the cost of the printed page, the billboard and its fancy paintings and posters, and the wages and expenses of the traveling salesman, all of which are comparatively recent and rapid developments. The cost of such advertising is immense and it is all paid by the consumer, who in addition must pay an inflated price for an article which by every conceivable and almost inconceivable psychological trick he has been made to believe to be superior to everything else of its kind. The high price asked for these advertised goods also naturally advances the price of similar goods which are not advertised.

In small towns it is almost impossible to obtain anything except these advertised, trademarked, *packaged*, high-priced brands. It is presumed that the manufacturers make it worth while for the retailers to deal exclusively in their goods. There may be little demand for other brands by those who have been deceived into believing that there is nothing equally good. How easily this deception works none knows betters than the advertiser. Just a few examples: If a villager wants a can of baked beans he must take the most extensively advertised brands at fifteen cents a small can. Elsewhere a can twice the size and equally good can be bought for ten cents. If he wants a well known breakfast food he must pay fifteen cents for a two-pound package. Elsewhere practically the same article can be bought for four cents a pound. These are only examples of goods for which the consumer is compelled to pay two or three prices for necessary articles and almost wholly because of advertising. What is true of these articles is true of almost everything else. The millers and the packers and the bakers and the soap-makers and the clothiers are among the largest advertisers. Each represents his brand as the best, though none can tell the difference between it and other brands, and the consumer pays the price of the misrepresentation, and perhaps imagines that his tastes are more delicate than those of his fellow men. What remedy has he? I question whether he wants any. It might be unwise to pass a law forbidding the exploiting of the necessities of life by advertising; but it might be wise for the Government to establish in convenient localities depots where the masses can obtain all the necessaries of life at the actual cost of production and distribution, thus eliminating the immense profits of those who have already too long robbed the people. Impossible? No! Socialism? Yes!

PETER CRISPELL.

MONTGOMERY, N. Y.

Losing the Spirit of Independence.

In Massachusetts in August last a farmer brought three fat steers to town, but not a butcher dare buy them, for if they bought them, they said, they could not buy another pound of meat from the packers, and this was not far from the place where the tea was thrown into the sea.

W. G. PUDDEFOOT.

INDIANAPOLIS, IND.

Changes at Yale.

In reading Professor Norton's paper, and another along similar lines by Professor Fisher, also of Yale, published about the same time in the *Review of Reviews*, I had to rub my eyes hard to make sure that I had not been asleep for a century or so. But it really is only 1910—scarcely more than a dozen years since a prominent man was prevented by a mob from speaking on the Yale campus, and saved from personal violence only by the intervention of the police, because it was feared he might say substantially what Professor Norton writes for THE INDEPENDENT with no appearance of trepidation at all—altho the president of Brown University was removed for expressing similar views.

Perhaps this increased use of brains in thinking may have something to do with a rise in the value of opinions.

H. H. SWAIN.

DILLON, MONT.

Protect American Gold.

I suggest that the principle of protection be extended to the mining of gold as it is to other lines of production. Instead of 25⅘ grains of gold brought here from any part or all parts of the world being a dollar permit only that mined in this country to free coinage and all imported gold be subject to a tariff of 50 per cent. There is mined in this country

in one year about one hundred millions in value of gold. There is coined and consumed in the arts about one hundred and fifty millions. About one-third of our gold is imported. This tariff on gold would raise its price as tariff raises the prices of other commodities and its purchasing power would not be affected. This would be just to the miners, who now pay high prices on their protected machinery and other supplies. It would be just to the men with fixed salaries who have trouble now to live comfortably with the decreasing purchasing power of their incomes. It would be just to the pensioner who now has his annuity lessened near one-third in the comforts it will buy. This would be just to the large company of depositors in savings banks who find that even with the accumulation of interest their deposits will not secure for them as comfortable a cottage home nor so much of the necessaries of life as when deposited.

It seems to me this would be a simpler, saner and more logical remedy than the new "Dill" of Professor Norton.

(Rev.) J. C. Elliott.

Albany, Ore.

His Account with the Standard Oil.

In ten years the Standard Oil Company has taken from me at least $50 over and above what it should have received at a fair rate of profit on its product. In arriving at this estimate, I figure on what I should have saved had I paid fifteen cents regularly for oil, instead of twenty and twenty-five. Now apply the same method of extortions in other lines and we see where the money goes.

John J. Loux.

La Jara, Colo.

Import Japanese Labor.

Cheap farm produce means cheap farm labor, and I know of no way to secure such labor as long as our Government excludes all laborers from our shore except those of one race. Give use several hundred thousand reliable laborers from Japan and we can double the products of our Minnesota farms in a very short time.

F. F. Schow.

Wells, Minn.

Back to the Farm.

Until five years ago I worked in a factory for more than twenty years. It was very much of a problem to live and save something; my salary was about $800 per year. Five years ago we bought a small farm just outside the city. I had never done any farm work, but I knew I could learn; never had even milked a cow. Last year our income was $1,200, the year before $1,000. Previous to that we kept even. Now look at the difference in our expense account. We have our butter, eggs, milk, vegetables, summer wood, small fruits, meat for winter, that we make no account of, and we live much better. We often eat a peck of strawberries a day during the season. We enjoy the life. We work hard during six months of the year, but in the winter we have plenty of time for reading and getting out among our friends. We were at least $500 better off last year than we would have been in the city, as the increased cost of living is greatest in those things we have to eat. Let more families go to raising those things. There is plenty of room. You will need a little money and plenty of energy and brains to succeed, but if you will drop your beer, entertainments and a lot of other things for a while you will soon have money enough for a start. You city workers, get out on the farms and help to raise more food and you will be better off, and those left in town as well.

Lee W. Servey.

Watertown, N. Y.

A Dose of Our Own Medicine.

When the last panic came why did the New York millionaires sail for Europe? Simply because they could live abroad more cheaply and not be classed as tight-wads by their servants and the public. The European knows the value of money—he is a money saver—not a reckless spender like the average American. With twice the population of France we do not have half as many depositors in our savings banks. It's not the necessities of life that cost—it's the luxuries. More people die of dyspepsia than starvation. Butter is not even a necessity—at least in Italy. We would be better off with less of a meat diet, both physically and financially. Plain living and not necessarily "high thinking," but a little common sense will solve this problem. In Europe the frugal American, the man who is looking for his money's worth, commands respect. At home he is despised. Thrift and economy are becoming lost virtues which sadly need restoring. It's the wheelbarrow purse and the hankering for the honk-honk machine that is spelling ruin to so many. If prices are too high they have been made so by the extravagance and demands of the people. We are getting a dose of our own medicine. It's the habits of the people that need readjusting more than wages and prices.

Don't Patronize the Local Dealer.

The vast majority of the retail distributors in our cities, villages and country, whose volume of business is so small and expenses relatively so great, manage to stay in business only by selling goods at fearful rates of profit.

My remedy is to forego, as far as possible, the services of middle men. Last October my wife and I made a list of nonperishable groceries and canned goods sufficient to last us several months. We like to patronize local business houses when we can do so at not too great self-sacrifice. So we asked for cash prices at one of the best and strongest local stores. Its prices on goods listed totaled above $80. We bought the goods in Denver for $60 and paid $1.10 freight, thus saving almost 20 per cent. of local prices. We asked our local druggist his price on Gude's Pepto Mangan. He priced

it at $1.25 per bottle. We can buy it of a Kansas City mail order house at 85c per bottle and did buy it at $10 per dozen. By ordering it along with other articles on which the rate of saving was almost if not quite as great, we saved at least 33⅓ per cent. of local prices after paying freight.

Let us stop patronizing the small retailer. The modern mail order houses and department stores give better goods and better service at far less cost. E. W. MARTIN.

BERTHOUD, COLO.

Organize the Consumers.

"Consumers' want of organization" is doubtless the real "key," but he is "sitting up taking notice" studying all these questions as they never were studied before in the history of the world; studying national extravagance, the trust question, the tariff, and will insist on reorganization of national finances and Government trust control, and where goods are unduly inflated, removal of the tariff so that he can buy abroad cheaper, but above all, he will learn to "Organize." Organized upon a sound and wide basis, he will largely offset the selling organization of the producer, wholesaler and retailer by equally powerful buying organizations.

WILLIAM P. ROSS.

NEW ORLEANS, LA.

The Rise in the Scale of Living.

I was born in a country village in New England, before the railway had taken the place of the stage coach as a means of transportation between Boston and New York, and attended a country school where the three R's were the paramount studies and the rod was not "spared to spoil the child." The schoolroom was large and square, well lighted and ventilated, with an open iron fireplace in the center, and desks fastened to the wall on two sides, one for boys, the other for girls. Oak benches with no backs for seats, low ones near the teacher's desk for the small children; a blackboard on the wall; in one corner of the room a few colored children sat, descendants of the emancipated slaves. In summer lady teachers were employed, with a salary of eight or ten dollars a month; in winter a muscular male received from twenty to twenty-five, boarding around. In summer the children went barefoot, in winter the boys wore thick, cowhide boots. Saturday was a half holiday. A weekly paper with no telegraphic news and a few books like Baxter's "Saint's Rest," "Pilgrim's Progress," "Paradise Lost" and "Robinson Crusoe" were common in the homes. Rigid economy was practiced, nothing wasted, everything utilized. The garden supplied the vegetables and the pig and poultry meat for the table. The streams, unpolluted with sewage, abounded with fish; the woods with game and nuts; in the meadows berries grew wild. A melodeon or a piano was a novelty, but the English sparrow had not driven the native songbirds away and the air was full of their melody. In the parlors rag carpets were common. The kitchen had a wide open fireplace and served for dining and sitting room. Candles and whale oil lamps were used for light. When oil was found at Pit Hole, Pa., kerosene of a yellow color, malodorous, giving a smoky light, sold for fifty cents a gallon. Visiting at the home of a family considered very rich, I was shown into a parlor with an ancient odor. A blind was opened to let in light on a high colored, large scroll pattern, English tapestry Brussels carpet. Six hair-seated chairs, a sofa and a center table, all of solid mahogany, furnished the room. The grandeur was oppressive. Some of their descendants are among the millionaires of New York City. When fourteen years of age I worked out in haying time, twelve hours a day for fifty cents and thought it high wages. At fifteen I entered a city dry goods store, to learn the business, with a salary of fifty dollars a year for the first year, sixty for the second and seventy-five for the third and board, sleeping in the store. The first year's duties were to sweep, dust, clean the show windows and build a fire every morning in an old fashioned furnace and carry bundles; working fourteen hours a day; the second year selling goods in every department except the silk, living within my income, tho I paid out ten dollars for lessons in French, studying after hours at night. Nine yards of Merrimac calico was sold for a dollar. An old-time lady said her husband endowed her with all his worldly goods, which meant one calico gown a year. At the end of the year, taking Greeley's advice, I went West to Chicago, Ill., riding three nights with no sleeper crossing the Alleghany River on an omnibus, rechecking my trunk four times.

Entering a dry goods store as a German clerk, a salary of $500 a year seemed very large to me. Chicago was then a small city of less than 100,000, the streets not much above the level of the lake. The grade was raised from six to eight feet; blocks of stores going up at the same time by jack screws, business being uninterrupted. The streets were very muddy; a young lady going to a party had to take off her shoes and stockings to cross the street. She was one of the first settlers, afterward very wealthy. The territories west of the Mississippi River were being settled by immigrants, land selling at one dollar and a quarter an acre by the Government. Interest rates were very high, 10 to 20 per cent., and what was called the St. Paul rate was 5 per cent. a month. Farm wages were low, from eight to ten dollars a month. A country minister, a graduate of Yale College, had a salary of $600 a year and use of parsonage, said his expenses for the year, for his family of eight, was $400 for everything except clothing and benevolent gifts. Prices of provisions were low. And the rise in prices corresponds very closely with the rise in farm wages.

The scale of living has been increased by leaps and bounds. Luxuries of the old time are considered necessities of the new. The rise in price of real estate has made hundreds of millionaires. The gold mined in the last ten years equals the amount of coin accumu-

lated in a thousand years in past ages; vast veins of silver, copper, iron have been developed; coal and oil supply unlimited power.

The immense forests have been ruthlessly cut down; grain fields and grazing lands exhausted and made barren. Pianos and phones are common in the homes of the laboring man. Autos make street crossing dangerous in the cities. The cost of some of the fashionable wardrobes equals the amount thought to be a fortune years ago. Trusts, corporations and labor unions take place of individual enterprise. The struggle for survival becomes more strenuous, the contrast between the sated rich and starved poor more in evidence. The cities are congested, the farms deserted, and the cost of living has increased. J. N. Olmsted.

(5323 Monta Vista St.)

Los Angeles, Cal.

Some Financial Reflections.

I have grown to a quite mature age and have used no other cure for poverty than habitual neglect of it. With several other children I was brought up wealthily on $600 a year, partly paid. The wide paternal acre where we roved furnished us fruit, nuts, potatoes, garden "sass," chicken, cats, one dog, and several birds. At spasmodic intervals there were also squirrels and rabbits. The eighty-acre farms of our neighbors could not afford more scope for infant activities. A dime's worth of candy was an occurrence—a bag of oranges, an event. "Allowances" were, of course, for children in books—for us, the infrequent nickel earned by extra labor. Therefore, the possessor of a Christmas dollar swaggered with righteous pride and curiously enough, spent his wealth lavishly on the less thrifty. We cherished our toys and picture books, not because they were few, but because they were precious, and however slim the family purse, we were never poor.

It was not a training; it was an atmosphere. We did not hear any exaltation of money—any lament at its absence. Later years taught us the value of that freedom to which we were born. I have wept for the loss of a friend, but have lost money and positions with festive gayety; and I never allow my income to assume a dictatorial tone to me. Tomorrow I shall get my three-year-old hat from the milliner's. The top has been guillotined and the trimming which stood up militantly last year will now lie down like a lamb. It will look cheaper than most Easter bonnets and will be cheaper than it looks. But I heard some singing last winter that cost more than the hat and was worth infinitely more than it cost. Also I lived on last year's shoes—but not on last year's magazines. They say a moving picture show down street "cleans up" $800 a week. It has missed seeing me, but I bought five little trees and a rosebush for the paternal acre, and they may *all* grow!

Perhaps it is good to economize, but you feel poor. I prefer to discriminate and think myself something happier than rich.

From cannibal to pirate, from pirate to "magnate" (the very word looks inflated!) we average folk have been prone to fancy that we bowed to some mighty manifestation of power, when we knelt instead before gods of our own crude making. We have helped, in our day, to misdistribute wealth by giving false honor to the holders of it. Our weak-kneed reverence is their power. Our envy is the food of their insatiable greed.

Perhaps the world will some day be too small for us. If so, some of us will get off and walk. Just now there is a shortage in pork chops and automobiles, but there is bread and work for all if the workers and the need can be brought together.

If we could but learn that we do not fear ills because they have power over us, but that they have power over us because we fear! Best to stand straight, give honest work for as fair pay as we can get, and follow cheerily small Tommy's version of "I keep my body under." Said Thomas: "I keep my soul on top." An Inexpert.

Wooster, Ohio.

A Wholesale Grocer's Views.

I am connected with a firm which has been engaged in the wholesale distribution of food products for the past thirty years.

First and most effective in relieving the consumer of his money without adequate returns is modern advertising. For ways that are dark and tricks that are vain the advertising man is peculiar. You can take Jones's toasted peanut shells—best for breakfast, watch for my signature—that would be dear at a nickel a package, advertise it, and the consumer readily lays out a dime; Smith's pickles or baked beans that can be matched by a hundred other packers at 50 per cent. less, and the public rushes to buy them at twice their real value; John Doe's syrup, which comes out of the same vat as a thousand other brands, and its value is a third more.

The remedy is to educate the consumer sufficiently that he will investigate the advertised articles, compare them with others of a similar nature and lower price and then decide whether greater value is represented by the increased price of the advertised product. In the majority of cases it will be found that the superiority claimed does not really exist, and that the higher price simply represents the cost of the advertising.

More baleful in its effect and almost equally responsible for the increased cost of merchandise is the present credit and installment system. Everything can be bought on this atrocious plan from wearing apparel to coffins and gravestones. The cost of distributing in this fashion, the expense of collecting and keeping accounts, the risk of losses, the extra time the money is invested—all these are represented by an amount added to the first cost of the articles sold.

The fashion of buying for cash is antiquated. With the day of reckoning far in the future, the purchaser does not haggle about the price. It is not the cost he thinks of, it is the accommodation in the way of time. If a rigid law were enacted making it illegal to extend

credit of any kind, I verily believe the retail value of thousands of articles of everyday use could be reduced 20 per cent.

The modern system of marketing and distributing goods also exacts heavy toll from the consumer. Observe the containers in which food products are displayed at the grocer's—expensive glass bottles, fancy decorated cans, lithographed cartons, enameled tins, set off by labels that are works of art. The consumer pays for all these either in increased price or decreased quantity. In some cases the containers actually cost more than the contents.

With the exception of a few things, such as meats, butter and eggs, the consumer can live as cheaply as ever provided he will use sense in buying. Canned vegetables are as cheap as they ever were; potatoes, beans, barley and peas are low in price; canned salmon, an excellent substitute for meat, is very reasonable; coffee and tea can be bought at the customary prices; canned milk and preserved fruits are as good and much cheaper than the fresh articles; flour is decidedly lower than it was; dried fruits are so cheap that it scarcely pays the growers to market them. Can we resist the conclusion that ignorance and folly are at the bottom of the consumer's cost of living?

J. A. H.

PITTSBURG, PA.

The 1907 Corn Crop to Blame.

As a country storekeeper for more than forty years I attribute the present very high prices of most of the foodstuffs directly to the very inferior corn crop of the year of 1907, caused by the cool and wet summer, and an early frost in the fall before the corn was matured; that fall and the following spring and summer, farmers sent all the hogs, cattle and sheep to market which they could get into marketable condition; also disposing of a good many animals which they would have kept for breeding purposes if corn had not been so scarce and high in price. In the year of 1908 the corn crop was again a partial failure on account of the very dry season, and consequently farmers did not try to stock up. The corn crop of 1909 was fairly good although drought cut it short in several localities. This shortage in corn in the years mentioned causes the present shortage in all meat products, poultry, eggs and dairy products and also higher prices of other cereals.

CHARLES SCHRADER.

BARNESVILLE, OHIO.

Three Good Remedies.

The proper remedy for high prices is to be found in a new policy, to be carried out along the following lines:

1. Demanding intelligent conservation of natural resources now owned and controlled by individuals and corporations.

2. Demanding, even at this late date, by a really simple method of taxation, a reasonable return to society for the valuable properties and privileges that it has inconsiderately parted with in the past.

3. Demanding that the natural resources still owned by society be retained by society, to be developed and enjoyed by private enterprise only upon such consideration and under such conditions as will assure their control by society, proper compensation to society and their conservation for this and future generations.

OLIVER E. SWEET.

RAPID CITY, S. DAK.

A Japanese Lullaby

BY E. F. SAXTON

SWEET is the face of the slumbering child,
Ugly the face of the child that cries;
Soft is the light in the closing eyes—
Sleep, my baby-child, sleep!

Why does the little child cry so long?
Is not the honorable milk quite good?
The honorable rice a most pleasant food?
Sleep, my little one, sleep!

"Not yet asleep?" I asked of the pillow.
The pillow spoke words: "Already asleep."
Safe from Gagama my baby I'll keep.
Sleep, sleep, little child!

When was the time that my baby was made?
See in his cheeks the cherry tree's flower.
In the third month was the honorable hour.
Sleep, my little one, sleep!

Where has the sleep-nurse hurried away?
Over the hills, till the day is come,
For a paper cat and a little drum,
Sleep, my little one, sleep!

Thy pillow shall have on it nightingales, storks,
Plum trees and pines. But never shall be
Or lotos or cherry-bloom pictured for thee.
Rest, my little child, rest!

Happily slumber until the day breaks;
Then when the morning-bird pours out his song,
Oh! be thy waking so happy and strong.
Sleep, my little child, sleep!

NEW YORK CITY.

Taking the Census

BY WILLIAM B. BAILEY

Assistant Professor of Political Economy in Yale University.

TO the average person, the activity of the Bureau of the Census is an unknown quantity. Two or three times in his life, he may meet the census enumerator, who jots down on a large schedule the answers to the questions relating to population. He almost always considers it an aggravation and sometimes an impertinence that these questions should be directed to him. He is glad when the interruption is over and thankful that the enumerator appears but once in ten years. It probably happens very frequently that a man may reach advanced years in this country without having seen or having answered the questions of the enumerator. For, in his earlier years his mother, and in his later years his wife, may have attended to this in his absence. Probably not one person in ten ever saw the outside of much less studied a census volume. If he did take the trouble to open one of them, the solid pages of figures which confronted him caused him to close it in disgust or with a feeling of amazement that there could be people who were interested in such a volume. Since, on the 15th of April, about 70,000 enumerators are to begin gathering material for the Thirteenth Decennial Census of the United States, a little information with regard to the activities of the Bureau of the Census may be timely.

With the exception of Sweden, the United States was the first country to make provision for a periodical enumeration of its inhabitants. Moreau de Jonnés, the eminent statistician, frankly exprest his admiration "of a people who instituted the statistics of their country on the very day when they founded their government and have regulated by the same instrument the census of inhabitants, their civil and political rights, and the destinies of the nation." Other writers have claimed that the decennial censuses of this country were, more or less, a happy accident, and that the original intention was simply to enumerate the population of the country for the purpose of determining the representation of the several States in the House of Representatives. Be that as it may, the result has been extremely fortunate, and no decade has passed without the enumeration of population as prescribed by the Constitution. Down to the Twelfth Census, it was the custom for the President to designate an officer to take charge of the census, and as soon as the volumes were published, the term of office of this appointee expired. The problem which confronted this officer at each census was, therefore, from a force of untrained and inexperienced clerks to attack the tremendous problem of directing the enumeration and tabulating the results of a census of several millions of people. This problem is now rendered much easier from the fact that since 1902 the Bureau of the Census has been a permanent bureau under the Department of Commerce and Labor. It is possible, therefore, to train a corps of permanent workers who shall form a nucleus to be continually employed. During the intercensal period, this force is engaged in bringing out the special reports and in the preparation of volumes which appear annually or once in five years. When the great work of taking the decennial census approaches, this permanent force, which is acquainted with the methods of the previous census, is invaluable in training the additional workers who must be employed for two or three years to complete this stupendous task.

At the head of the bureau is the Director of the Census, and in charge of the divisions of population, manufactures, agriculture, vital statistics, and revision and results is a chief statistician. When the period of enumeration approaches, the chief statistician of the division submits to the Director a schedule which he wishes to have adopted for the forthcoming census. For the Thirteenth Census the Director called to Washington a number of economists and statisticians

to assist in the preparation of the schedules. The intention of these schedules is, with the smallest possible number of questions, to obtain the maximum of valuable information. Of course, there are any number of questions which it might be desirable to ask, but the limitations of time and space demand that they shall be kept within the smallest possible compass. When the schedules have been adopted, the next problem which confronts the Director is to secure suitable persons to serve as enumerators to ask these questions and gather this information. It would be extremely difficult for the Director of the Census to appoint from Washington 70,000 men from different sections of this country who would be efficient enumerators. It has, therefore, been found advisable to divide the States into districts, appointing over each a supervisor. Some of the States like Arizona, Arkansas, Connecticut, Delaware, Idaho, Massachusetts, Nevada, New Hampshire, New Mexico, Rhode Island, Utah, Vermont, and Wyoming comprise one supervisor's district. New York is divided into twenty districts, Ohio into nineteen, Pennsylvania into twenty-three and Texas into sixteen. There are altogether 330 of these districts. In most cases the boundary of each supervisor's district has been made to conform to a congressional district, altho, as has been stated, there are some cases in which the entire State is given to one supervisor. In some cases, as for instance in New York, Chicago and Philadelphia, the supervisor has charge of one city. The supervisors are appointed by the President, by and with the advice of the Senate. Altho the Congressmen are consulted with regard to these appointments, the President has made it clear that the position of supervisor is not a political one and these appointees are obliged to refrain from all political activity during their period of office.

The supervisors are appointed about six months before the date of enumeration, which for this census is to begin on April 15. The duty of the supervisors is to assist in the division of their territory into enumeration districts. In the cities these districts contain about 2,000 population, while in the rural districts the population is generally considerably smaller. In some cases, the territory assigned to an enumerator may not contain more than 400 or 500 people. It is the duty of the supervisor, also, to receive the applications of all persons who desire to be employed as enumerators. Persons of either sex between the ages of 18 and 70 years, who are citizens of the United States, are eligible for appointment. Since one of the questions upon the farm schedule relates to the valuation of property, it is desirable that no one who serves as assessor for any district should, at the same time, serve as enumerator. In order that all incompetent persons might be eliminated an examination was held on the 5th of February for all the candidates. These examinations were in charge of the local civil service boards, where such were in existence, and, in addition, postmasters were empowered to hold tests. In order to make these convenient for the candidates, they were so distributed over the country that no applicant was obliged to travel more than fifteen miles to reach the examination point. The test papers were then sent to the supervisors for correction. By the 22d of February they were supposed to have been corrected, and it then became the duty of the supervisor to designate for appointment those persons who passed the best test. Some discretion was allowed the supervisor in the matter of appointment and it was desired that either he or his agent should meet every person designated for appointment. Altho the law permits the employment of interpreters, it is specifically stated in the Census Act that, "No authorization shall be given for such employment in any districts until due and proper effort has been made to secure an enumerator who can speak the language or languages for which the services of an interpreter would otherwise be required." The names of those designated for appointment are sent to the director together with their examination papers and formal applications. At the same time, the papers of all the other candidates who took the test are sent to the bureau. If the director disapproves of any of those designated for appointment, the names of others must be suggested by the supervisor. By the 15th of March

the successful candidates are informed of their appointments, and, after they have taken the oath of office, the portfolios containing their schedules and other necessary blanks are forwarded to them. Upon the 15th of April the actual enumeration begins. According to the Census Act, the enumeration in cities of over 5,000 must be completed by May 1, whereas in the rural districts the enumerators are allowed until the 15th of May. If an enumerator can secure the information concerning two hundred persons in eight hours he has done a good day's work, for there are twenty-eight questions to be asked in every case. According to the Census Act by which provision was made for this census, "The schedules relative to population shall include for each inhabitant the name, relationship to the head of the family, color, sex, age, conjugal condition, place of birth, place of birth of parents, number of years in the United States, citizenship, occupation, whether or not employer or employee, and, if employee, whether or not employed at the date of enumeration and the number of months unemployed during the preceding calendar year, whether or not engaged in agriculture, school attendance, literacy and tenure of home and whether or not a survivor of the Union or Confederate army or navy; and the name and address of each blind or deaf and dumb person."

This seems a somewhat surprising number of questions, but, upon consideration, none are included to which any person could reasonably object to return a truthful answer. In order to assure correct returns, the act stipulates that any person over twenty-one years of age, who:

> "Shall refuse or wilfully neglect to answer any of these questions, or shall wilfully give answers that are false, shall be guilty of a misdemeanor and upon conviction thereof shall be fined not exceeding one hundred dollars."

A person may feel reasonably safe that any information given to an enumerator will not be divulged by him, since the penalty for this offense is a fine not to exceed one thousand dollars, or imprisonment not to exceed two years, or both fine and imprisonment. Upon the completion of the enumeration, the schedules are returned to the supervisor, who in turn forwards them to the director in Washington. The enumerators on the average make between three and four dollars a day for their work. The rate of pay varies considerably. In the cities, it is generally two cents for each name. In most of the rural districts it is two and a half or three cents for each name, altho the rate may be as high as four cents in certain cases. Under peculiar conditions, the enumerator may be paid a daily wage of not less than three nor more than six dollars per day, or he may receive not more than two dollars per day plus an allowance of not less than one nor more than three cents for each inhabitant enumerated. For enumerating a farm, the minimum is twenty cents and may run as high as thirty cents, and for each barn not on a farm or range in which live stock is kept, ten cents is allowed. It is, of course, difficult to obtain competent men to do the work for this remuneration because the men who would be best fitted for it are generally regularly employed and find it difficult to devote two weeks to work of this nature.

When the schedules are returned to Washington and, upon examination, are found to be properly filled in, the work of the enumerator and of the supervisor ceases. Then begins the period of greatest activity for the force in Washington. If all of these questions had to be tabulated by hand, it would require several years before any detailed information regarding the population would appear. In order to facilitate this work, the information with regard to each person is punched upon a card. These cards are then run thru the tabulating machines in which it is possible automatically to count various combinations at the same time. Toward the close of the twelfth census, one operator was able to tabulate between 80,000 and 90,000 cards in a working day of seven hours. During the work of tabulation for the twelfth census, cards were passed thru the tabulating machines 619,574,014 times. Notwithstanding the magnitude of this task the volume on population was published one year and seven months from the

census date. It has been estimated that without these devices, it would have required to make the three tabulations of sex, age, nativity and occupation the time of a hundred clerks for seven years, eleven months and five days. The first volumes to be published are those on population, and it is probable that within a few months after the enumeration is completed, the numbers of the population in the large cities can be announced. The volumes upon manufacture, agriculture and mines and quarries will follow with a rapidity which is really startling when the amount of the work is considered.

The least which any person can do is cheerfully, and to the best of his ability to answer the questions which are put to him, that the information upon which the publications of the thirteenth census must rest, may be complete and accurate. In this way every individual may have a share in whatever credit comes to this country from the successful accomplishment of a gigantic task.

New Haven, Conn.

The Beginnings of Art in Italy and America

BY JOHN COTTON DANA

Librarian of the Free Public Library of Newark, N. J.

NOW that I have visited Italy I am more than ever convinced that Whistler was right when he said that there is not and never has been an artistic people. The story of an art epoch in the life history of a people seems to resolve itself into something like this: Character and circumstances lead the people into conquest. It may sound better tho it means the same to say that character and circumstance bring out a few men of genius who lead and rule the people and take them on to conquest. The conquest means wealth, and this is true whether the conquest be of other peoples by leadership and force of arms, or of land's natural resources and of methods of producing and using power. Always a few gain most of the wealth and hold most of the accompanying power. The conquest being somewhat well-assured, these few have leisure. They search for occupation and things and indulgences which may give them pleasure. Whatever else these occupations, objects and indulgences may be, they must be such as the common people can not have; for the rich and ruling class must always keep itself distinct from the lower classes in its pleasures and pastimes, just as it always did in its leadership in war and government. These distinctive recreations and diversions and admired objects of the powerful and rich have always been of about the same character. War is first choice; if not war of the higher kind in which is involved the existence of the tribe, family, city, dukedom, principality, kingdom or nation over which the rich and powerful in question rule, then a war of petty conquest, mean in itself, but permitting some braggadocio, keeping up the clan spirit and exalting the ruling class in the opinion of the unthinking. There have been some wars of this kind in quite recent years. Lacking a vigorous and dangerous war on battlefields, to engage all their activities the rulers have often turned to hunting; to hunting in a form which nature or special laws or the rules of the game make somewhat dangerous; for if it does not at least seem dangerous those who engage in it will not appear brave to the lower classes. The form of hunting chosen is usually one which is quite inaccessible to the poor and weak. Big game near home, and better still at a good distance; falconry, the right to use falcons being easily restricted to the few; fox hunting on horseback; dangerous athletic sports; and latterly automobiling, ballooning and flying—these have all had or still have their vogue.

Another obvious method of distin-

guishing their life from that of the common people has been the possession of distinctive residences, beyond all need in size, number, cost and adornment. It is thru these residences that the rich and powerful have chiefly been led to become patrons of the arts. The wish to make full use of the religious habits of the ruled has, also, often led the rich to build and adorn churches; and always, of course, the need of expensive and peculiar dress has been an occasion for calling in the aid of artisans of certain kinds. Also the study of literature, language, history and the fine arts has often been a recreation of the rich; but usually these studies have been pursued by proxy. As unusual native ability has almost always been one of the essentials to success in acquiring wealth and power, it is not strange that an occasional member of the class of the ruling rich has shown marked ability in letters and the arts, or at least in appreciation of them. But pursuit of art and letters has usually ended with little more than such a patronage of them as would bring in return ample adulation, a reputation for learning and glorification in history.

Comparative security, then, after a series of profitable wars, finds the rich and powerful compelled to engage in expensive sports, to build large and expensive residences and to decorate them and to adorn elaborately their own persons that there may be no lack of distinctions between themselves and the common people. The demand for architects, painters, sculptors, gold and silver smiths, ironworkers and artisans of all kinds thus at once arises; and a demand also for teachers, poets, orators and historians to make a show of learning.

In passing it is worth noting that in former days these workers always produced without the intervention of machinery; that the rich have usually been ready to adopt the older methods in art productions if for any reason they were inaccessible to the poor, and that today admiration for the hand-made is largely born of a desire to have something which, being unique in its kind, will impart a little of the old leisure-class aroma to its owner.

The patronage of the arts, with the consequent development thereof, has varied in extent in the rise to wealth and leisure of the leaders among different peoples, as circumstances dictated; but its origin seems always to have been about the same. Whenever this patronage has appeared; whenever, that is, the demand for objects of art has arisen, the supply has been forthcoming. Fashion among the rich has sometimes prevented the results of this patronage of art from showing themselves very plainly in the country of the rich. In our day, for example, the fashion is to import from abroad and to say that good art work cannot be produced at home; so we have a Barbizon painting factory in Paris, makers of antiques in Italy, and a digging up of gone-by utensils and furniture in all European and Asiatic countries. These old things cost more in the first place, the tariff makes them more expensive still and their ownership gives considerable of the ruling-class distinction. Were it to become the fashion to patronize American designers and craftsmen in all lines and to give artists and architects a free hand, instead of insisting on conformity to the ancient ways as interpreted by the ignorant rich, we would have a larger art demand in America; the supply of artists and artisans would soon be forthcoming; competition would raise prices and wages; art study would be encouraged; more men of genius, skill and training would come here from abroad; and we would begin our own renaissance.

This nation of ours is ready to be as "artistic" as any nation ever was—and no nation ever was distinctively artistic.

I saw little enough of Italy; but the little I saw seemed to confirm me strongly in all this opinion, as I have said. Everywhere, in churches, palaces, public buildings and monuments was abundant evidence of the ignorance, the want of discretion, the lack of originality, the adherence to fashion, the desire to outvie one's rival, the wish ostentatiously to display one's wealth which have been shown by the rich and powerful of all peoples at all times.

Those who know Mr. Veblen's delightful book on "The Theory of the Leisure Class" will see that I have borrowed from him in my statement about

the character of the diversions and the conspicuous waste of the rich and powerful. The conclusion, that the development of art in Italy was largely due to the desire of the rich to make a display, and was not a spontaneous outburst of art-passion or love of learning on the part of the people at large, is my own, tho I do not venture to think it new.

Perhaps I should not have carried to Italy the impression, which my reading seemed to have given me, that the renaissance was a thing apart; that in its day it found the powerful delighting to honor the artist, simply because the artist was a creator of the beautiful, and all men working, in the fields in which birth and circumstance had placed them, with zest and with earnest desire to make beautiful, if only by perfection of workmanship, even the more modest products of their hands. Certainly, if I went with that impression I have it no longer. The rich and powerful of Italy of the middle ages must have been much like those of today and other days. Here and there was one, as here and there we find one among our own men of large success in finance, who really cared for the things the artist produces, who found pleasure in the products of genius, skill and patience, even when those products were not such as would, did he possess them, add any luster to his renown or make him more an object of envy than he was. But on the whole that band of successful adventurers who, to take a specific example, found Venice to their hands, adopted it as their stronghold, ruled and plundered from it the Eastern world, brought home the spoils of cities and vied with one another in dress, pageant, palace, artists, artisans and scholars, did not differ from the men of affairs of our day and country, who also, from the vantage ground of a new and opulent continent, first by craft of trade and politics became the rulers of America and now hold the rest of the world in fee.

On the whole I prefer the American Renaissance of 1908 to any other. Mr. Morgan puts a few millions into art, some of it for his immediate personal delight; but most of it into a form or a setting in which it becomes accessible to all his fellows for all time; Mr. Rockefeller, Mr. Carnegie and others have done much for the education of the people at large and for the promotion of research among those devoted to study—and the list could be continued. I must question if the rich and powerful of Italy did as much, relatively, to their own power and wealth. The truth is, we find it difficult to set rightly before ourselves the conduct of our own ruling class. We feel, even if we do not reason the subject clearly out, that they have gained their control of things and their resulting riches, in part at least, by methods which the spirit of the times and the business morale of the day publicly condemn. We think their conduct, no matter how splendid may be the immediate results in trade and manufacture and in the cheapening of comforts and luxuries, is in a measure anti-social; that is, it is not the kind of conduct that could be indulged in by all to the profit of all. For this and many other less important but more often-cited reasons, we condemn the rich as a whole. We note the failure of most of them to contribute directly of their power and wealth to the common welfare, and forget the few who do thus contribute, or we jibe at them. We note the ugly selfishness of the man with an automobile who thinks the countryside is made for him to despoil, and we forget the unostentatious man of business, who, thru opportunity, talent, industry and a quiet disregard of the morality that is preached, has gained wealth and, departing from the money-making routine, gives time and thought to the proper distribution of his spoil. There are a good many of this kind. If their number increases, if the sense of the obligation of mercantile genius becomes widespread; or, as, I much prefer to put it, if those who have the wealth-gaining talent acquire some of the same delight in producing beauty and pleasure with it that has always been shown by many of those who have the art-making talent, our country will go on very comfortably for some time. But the feeling of the obligation of wealth, or of delight in its joyous use, has never become sufficiently widespread among the rulers to save them in the long run from general damnation. Sometimes the end has been a few executions, sometimes a gen-

eral decay in which all classes share. I am not concerned here, however, with the question of how our social failures will be mended. I am simply drawing the parallel which a view of a few of the Renaissance art treasures of Italy brought to my mind.

I am not finding fault with the beautiful things in Italy. Even with my limited experience in art affairs, many of Italy's treasures gave me much pleasure. I am finding fault with the opinion I myself held, gathered from very general reading, that the Renaissance in Italy was something different from the development of art and letters now going on in Omaha, Chicago and Hoboken. Also I am finding fault with much that many have said about the spirit and the products of the Renaissance; for I find, as I have said, that even on a hasty view these products tell us of autocracy; of selfish rule by the clever and strong; of the subjection of the common people and of their full share of spoil; of ostentation, rivalry and display, and disregard of the rules of simplicity and restraint; of the domination of artists and artisans by the rich; and of imitation and lack of originality on the part of the artists and artisans.

In a word, I conclude that th churches, palaces, paintings, sculptures, carvings and a thousand other things produced in Italy during the Renaissance are to be enjoyed and not worshiped. They should stimulate our imagination and not stupefy our judgment. They are very human, and so are the products of our fellows in America today, the architects, painters, sculptors and artisans of a hundred kinds. I cannot endure, and I never could endure, even the insinuation that in another country and at another time these children of joy, these art fellows, these men condemned from birth to devote themselves to the task of creating beautiful things, were more devoted, and more sincere, and more joyful in their toil than they are today.

In Italy 500 years ago they worked because they liked it, and in large part also because they were well paid. They do the same today. And it is no shame to say that if more and better work were asked for from them, with greater rewards of cash, opportunity and esteem, more good artists would be forthcoming and an American Renaissance would begin. In fact, it has already begun; for a prosperous people has always its own art Renaissance.

NEWARK, N. J.

In a Prussian School

BY JAMES A. CAMPBELL

[The following article is a summary of the writer's experiences as an exchange teacher from America in a Prussian Oberrealschule. He is a professor in the University of Kansas. —EDITOR.]

THE position of an exchange teacher in the Prussian schools offers a rare opportunity of becoming acquainted with the life of the German people and of getting the German point of view. The traveler, or the visitor who stays for a longer time, remains more or less of an outsider, but the exchange teacher has a fixt position in the scheme of things and becomes a real working part of the organization, and receives the fullest comradeship of teachers and pupils. When I studied pedagogy I was taught to look upon Germany as the pedagogical paradise, where the ultimate perfection had been reached. Practical experience in a German school has shown me that it is not a paradise, but an institution which stands on a much surer foundation of common sense and practicability than the school of the pedagogy class.

The German schools have reached a high degree of efficiency, but not self-complacency. There is everywhere evident a desire for change; efforts to adapt the school more closely to the needs of present conditions; endeavors to broaden the curriculum and make it more flexible; a constant striving to make the

school work more alive and worth while to the boys.

The Sachsenhäuser Oberrealschule of Frankfurt-a/M., to which the writer was assigned, is one of the newer schools of the city. It is attended by 513 boys, ranging from ten and a half years of age in the Sexta or lowest class to nineteen and a half in the Oberprima. There is also in the same building a Vorschule or preparatory department, with a three-year course for boys from six years up till they are ready for the higher school. In an Oberrealschule the modern languages are given precedence over the ancient, and science has a very prominent place in the curriculum. This is in contrast to the Gymnasium, which is the stronghold of the ancient languages.

This particular school has a faculty of twenty men, and in addition there are special teachers for singing, drawing, religion and gymnastics. The professional qualifications of the faculty are very high. Fourteen of the twenty have their doctor's degree. The others have spent at least three to four years each in the universities. All of them, whether doctors or not, had to pass a state examination in the subjects, usually three in number, which they expected to teach, and they are limited by law to the teaching of these subjects in which they have been especially prepared and examined. After the state examination there followed a year in a pedagogical seminary, then another year as Probecandidat, or practice-teacher, with little or no pay. When the trial year had been successfully passed these men became eligible for appointment to regular positions in the Prussian higher schools. One man waited six, another seven years before securing a regular full-time appointment.

Over here teaching is never, as it so often is with us, an intermediate stage, more or less pleasant socially, between college and matrimony, or between college and a law or medical course, or the writing of life insurance. The energy, time and money of these men have been devoted to the sole end of becoming teachers. Teaching is their chosen life-work, and so highly specialized is the preparation for all professions that a choice must be made early in life, and he who starts on the road to teaching finds it all but impossible to change to another profession. In return for the long preparation, rigorous training, and the waiting for positions, those who survive the weeding out process are picked men, and they get positions that are absolutely secure against the attacks of school boards, principals or parents.

The relations between teachers and pupils are very pleasant. On one side there is sympathetic understanding and friendly guidance. On the part of the pupils there is the fullest confidence in their teachers and cheerful acquiescence to their wishes. I have observed in all classes, from the highest to the lowest, evidence of genuine comradeship in both work and play, the man and boy friendship which takes a stronger grip on the boy and gives him more real inspiration toward higher things than any amount of teaching or preaching.

I have found the German schoolboys in every way agreeable and pleasant to work with. They are a bright, healthy lot of fellows, whose five to eight lessons a day in school and two hours of study at home do not seem to have stunted their growth or their capacity for having a good time. There are five classes in the forenoon and four intermissions of ten to fifteen minutes each, which the boys are required to spend out on the playground. Wednesday and Saturday afternoons are free. On the other afternoons school begins at three o'clock and lasts till half-past five. Not all the boys are in school during the entire afternoon session. The two hours of home study are devoted chiefly to French, English, mathematics, history, physics and chemistry.

There are no fraternities, no parties, no class politics, and very little of competitive athletics to distract attention from school work. Regular hours and close attention to business accomplish much, and at the end of twelve years of school life the German boys are about two years farther ahead in their studies than American pupils of the same age. It should be said, however, that outside of the school social and economic pressure is brought to bear on the pupils to an extent seldom seen in the United States. A boy's whole career depends

entirely on the result of his school work, and he is never allowed for a moment to forget the fact. Failure means that all the learned professions are closed to him, for no short cuts are possible in this land of precision and system. Success is a big step onward and saves a year besides; for whoever finishes two-thirds of the school course need serve but one year in the army instead of two. Many boys drop out of school when they have gone just far enough to meet this condition.

There is one curious result of the early and regular hours which the boys keep. During the long summer days from June to September the morning session begins at seven o'clock. I questioned the teachers about the custom, and they told me that some years ago there was an attempt made to keep the opening hour at eight o'clock for both summer and winter, but the boys themselves objected to the proposed change. When I asked the boys about it they explained that it was no trouble for them to come at seven in the summer time, and by so doing they gained an extra hour of leisure between the morning and afternoon sessions.

As a representative of American schools I received the heartiest welcome from teachers and pupils. Both in the school and out a cordial and friendly feeling for America is found among all classes. The boys were eager to learn about America and its ways. After we had become somewhat acquainted I had them write out several questions each concerning things they wished to know about our country. The results were extremely interesting. Questions of a geographical nature were most numerous. A map of the United States plotted from the suggestions furnished by these questions would afford a good chance to see ourselves as others see us.

The size of the country would be rather indefinite, but not necessarily immense. In the eastern part, at the mouth of the Hudson, lies New York, very large and filled with skyscrapers so high that they may some day seriously interfere with the air ships. Outlines of the Alleghanies and the Rockies appear in their proper places. Pike's Peak and Yellowstone Park are in evidence, too. The whole country is well supplied with rivers correctly named and properly located. Philadelphia, Washington, Chicago and St. Louis are to be seen, but only as small dots compared with New York's skyscrapers and Brooklyn Bridge. By virtue of its earthquake and fire San Francisco may also have a dot. There are forests and plains inhabited by cowboys and red savages carrying scalping-knives. Among them all Buffalo Bill goes fearlessly. On the seacoast are several harbors, and away to the south there may one day be a Panama Canal.

I made it a part of my work to give the map a definite size, to fix some of the places that showed a tendency to wander, to fill in the blank spaces, to supply a proper population, and last, not least tho, as a loyal Middle Westerner, to reduce the size of New York.

The questions revealed a keen interest in American government and politics. The wisdom of Solomon could not have answered all of them. "What will Mr. Taft do as President? What will become of Mr. Roosevelt? The President of the United States, is he responsible for all his actions? Will the United States continue to be friendly to Germany?" etc., etc. I did the best I could to explain the main facts of our history and our system of government. My time was limited, and the boys' understanding of English was by no means perfect, but the effort was well worth the while.

The American army was the objective point of more questions than any other one thing. This was not because the Germans are interested in war, for they are not. At any rate, war is very seldom the topic of conversation or song. We Americans unconsciously associate Germany and "Die Wacht am Rhein," but the only time I've heard even the music of that fine old war song over here was when it was sung by an American, and sadly out of tune at that. By force of circumstances, however, the German schoolboy is mightily interested in the subject of armies. If he successfully completes two-thirds of the course offered by a Gymnasium or Oberrealschule he cuts in half his period of required military service, and thereby attains a certain social distinction which the boy

who is too poor or too stupid to complete the necessary school work cannot attain.

When I talked about the size of our country I was frequently met with looks of astonishment and incredulity. Five days from New York to San Francisco by an express train seemed impossible to them. The country could not be so large. The lengths of the Mississippi and Missouri rivers in English miles were surely due in part to the American love of exaggeration and big numbers. One boy, the wit of his class, told me he thought that we Americans preferred the Fahrenheit thermometer because it has higher numbers than the other scales. But when the American army came up for discussion the pendulum swung over to the other side. Sixty or seventy thousand soldiers for so large a country was an absurdity. The statement was greeted with a roar of good-natured laughter. Even more incredible did it seem that I had seen United States regulars only two or three times in my life. Here one sees companies of German soldiers that many times in a day.

The American Indian and the Wild West types are widely known among the German boys thru the reading of trashy stories of the Nick Carter and the Jesse James sort. That I had never killed any Indians, that my head had never been in the remotest danger of the scalping knife was a sore disappointment. The prosaic reality of an Indian going to school and a cowboy to work completely upset the Wild West of the yellow novel. In this connection candor compels me to add that I met over here a cultured and charming American woman from a city which shall be nameless, and she asked in perfect good faith if we had gas, electric lights or telephones in Kansas. She seemed to doubt my veracity when I alleged that we had all three of them. It won't do to smile too broadly at the European's ideas of American conditions.

Much might be written about the pedagogical theory and practice of the Prussian schools, but one or two general classroom great demands are made on observations must suffice here. In the the pupil's attention and memory. The text-book is not so much used as it generally is with us. In history, for example, the new facts, "the advance lesson," are given orally by the teacher. The boys listen with such close attention that many of them do not find it necessary to use their text-books at all in preparing for the next recitation. They can recall from memory names, dates, places or can stand on their feet and discuss in well-framed connected sentences the topics of the lesson. This method of getting the *first contact* with the new facts from the living spoken word of the teacher, not from the study of books, is used in all subjects. It has the advantage of saving the pupil time and makes sure that he gets a correct first impression, which is not always the case when he works out things for himself. On the other hand, the teacher is thoroly trained in making an interesting presentation of the subject matter, so that almost involuntarily the boys give very close attention.

The pupils show much respect for and confidence in their teachers. This is partly due to the organization of German society and partly to tradition. The system of social ranks and classes brings with it customs of manners and etiquet, and as a matter of official right the teachers, because they are teachers, receive from the pupils certain courtesies and attentions. In this respect I was treated exactly as were the German masters. Again, the German people, as a whole, have a high regard for theoretical knowledge, book learning if you will, and so the schoolmaster has not lost ground in the public esteem as he has with us, because he is not a practical man of affairs busy making money. He holds his place as one of the leaders in the community, and in consequence of the established code of courtesies in the relations between pupil and teacher, and the latter's acknowledged leadership the friction in the school mechanism is reduced to a minimum, and in consequence of the attitude of the community toward theoretical knowledge the boy goes to school with a socially well founded predisposition in favor of whatever he may find there. In the long run these things count for much toward his progress.

Literature

French Literature

THERE be books many on French literature in our language, yet it can be said truthfully, not only that the latest addition to their numbers, Mrs. Konta's *History of French Literature,*[1] is not a superfluous work, but also that, on the contrary, it fills in many important respects a niche hitherto unoccupied, which had long awaited its coming. Thoroness is its chief merit, but by the side of that admirable, scholarly quality must be placed a delightful readableness, which quotes the quatrain that fully illustrates the polish and the sting of Voltaire's satire, epitomizes the quality of the mind and the work of Taine felicitously in his own sober praise of a Beethoven sonata, "It is as beautiful as a syllogism," and gives in Boileau's own couplet the formula of the dramatic unities:

"Qu'en un lieu, qu'en un jour, un seul fait accompli
Tienne jusqu'à la fin le théâtre rempli."

This aptness, this illuminating precision of quotation, made possible by wide and deep and well-directed study, serves admirably well the purpose of making sound information eminently interesting. It is revealingly employed in the exposition of the first emergence of the language from the *sermo plebeius* brought to Gaul by the Roman soldiers, and gives color to the chapters dealing with the *chanson de geste,* troubadours and medieval popular verse, leading to the welcome inclusion (with poetic translations from various sources) of Villon's touching prayer of his mother to the Virgin, his 'Où sont les neiges d'antan?", "Ballade des Dames du Temps Jadis" and "Ballade des Pendus," of Ronsard's Ode to Cassandra and Malherbe's Ode to Du Perrier. In this way the student is informed, also, of the origin and authorship of many proverbial expressions and "winged words," the familiar "*revenons à nos moutons,*" for instance, being credited to the medieval "Farce de Maistre Pathelin," and many a euphuistic circumlocution, still current in the language, to the "Précieuses." This employment of the quotation reaches its full hight in the chapters dealing with the Golden Age of the French poetic drama, under Louis XIV. It is also made to serve as constant illustration of the importance of the place held by satire in the history of French letters.

If she quotes with aptness and purposeful discernment, Mrs. Konta has herself a way of summing up an era, or the work of an individual writer, that invites to quotation in its turn, as where she approaches the sixteenth century with this brief, significant paragraph:

"Within ten years the three books which were "the very soul of the century" were written: the Pantagruel of Rabelais, the Christian Institution of Calvin, and the Spiritual Exercises of Loyola. Each work was symbolical of the thought underlying its great question: the Renaissance, the Reformation, and Catholicism in France."

Historically the book is well proportioned, condensation being resorted to occasionally without skimping the subject, as in the case of the chapter on the transition of philosophy from scholasticism to Descartes, and in that on Port-Royal, chiefly devoted, of course, to Pascal. The great preachers of the Grand Siècle are grouped together, and at proper intervals the historians are passed in review. The successive makers of the "instrument of precision" that the French language has become receive due recognition, nor does the author fail to take notice of the restraining influence which this very precision, this marvelous clarity, has had on the flight of French poetry. She also recognizes the limits within which a literary historian should exercise the critical function.

Her judgments are sound, and remain so when she comes to deal with recent and contemporary French letters. There may be a touch of fastidious personal dislike in her treatment of the natural

[1] THE HISTORY OF FRENCH LITERATURE FROM THE OATH OF STRASBURG TO CHANTECLER. *By Annie Lemp Konta.* 8vo. Pp. x-565. New York: D. Appleton & Co. $2.50 net.

istic school of fiction, but, once she has entered her protest, she scrupulously enters beside it the verdict of literary history, as in the case of "Madame Bovary." In present-day French poetry she gives the palm to the Provençal singers.

The chapter on the modern French drama distinguishes with great justice between the earlier Sardou, the author of "Rabagas," whom the present generation does not know, and the later manufacturer of melodramatic confections for the play of Sarah Bernhardt's talents; it contains, also, a well-balanced study of the drama of the younger Dumas, so alien to American minds and manners and morals; and it pays a well-deserved tribute to an almost forgotten playwright, Augier. It may be worth mentioning here that this chapter contains what was at the time of the appearance of the book the first published outline of Rostand's "Chantecler." A closing chapter on "The French Press" proves to be a welcome innovation in a literary history, tho it must be said that in France alone, and nowhere else, the press has been sufficiently close to letters to deserve the distinction. There is a list of the Forty Immortals as at present constituted, and a serviceable index.

Socialism, Dead and Alive

In two books—*The New Socialism*[1] and *What Is Socialism?*[2]—the difference between the character and importance of Socialist propaganda in England and the United States is plainly discernible. The English volume, written in a style of great distinction, scholarly, comprehensive, lighted with imagination, is suited to the reader of intellectual tastes who, viewing the struggles of factory and forum with some aloofness, and unfooled by empty formulas, critically discerns the tendencies of his day. "The best starting point for the study of latter-day Socialism," says the writer, "is the year 1898," and doctrines which, as Mr. Kauffman's volume indicates, still command the main devotion of American Socialists, she disposes of in a few pages as "obsolete theories."

What Is Socialism? is a textbook, and therefore, perhaps, inspiration and insight should not be sought in it; but the reiteration, in volume after volume, by Socialist writers, of the theories of the concentration of capital, of the war of the classes, and of the materialistic interpretation of history, which fill most of this work, is little creditable to American intelligence.

Problems which the American book skims over lightly as hardly worth winking at have evidently bothered the keenest Enropean "comrades" more than a little. For example, as to the compensation to the capitalists when they are expropriated, "if any discontent resulted, it would result only among the small capitalistic class," says Mr. Kauffman. So why worry? But "the tremendous difficulties in the way of even the most modest expropriation are apparent to thoughtful Socialists," the British writer finds. Some are reluctant to compensate at all, others would pay a fair price for everything taken and "raise the wind" by heavy taxation, most would limit the right of inheritance and make Death their ally in annexing the millionaire's fortune. No single one of them, however, seems to have proposed, like the bland Andrew Carnegie, that 75 to 90 per cent. of a man's accumulations shall pass to the state at his death. When one of the world's richest men makes a proposal so revolutionary, the Socialists begin to look like respectable heads of families.

In their political philosophy, however, most of the Labor members are at variance, on essential points, with the Liberals, as Mr. Winston Churchill[3] points out in those brilliant speeches wherein he gives an exposition of a more searching Radicalism than ever before held Cabinet office. "Both the idealism" of British Liberalism "and its practical responsibilities forbid it to accept the elimination of private enterprise and the assumption by the State of all the instruments of production and distribution." However, Liberals recognize that "the main aspirations of the British peo-

[1] The New Socialism. *By Jane T. Stoddart.* New York: Hodder & Stoughton. $1.85.
[2] What Is Socialism? *By R. W. Kauffman.* New York: Moffat, Yard & Co. $1.25.
[3] Liberalism and the Social Problem. *By Winston Churchill.* New York: Hodder & Stoughton. $1.50.

ple are at the present time social rather than political." Socialists, both baptised and anonymous, have succeeded in making the condition-of-the-people question paramount in Parliament. Radicals now talk as only avowed Socialists talked twenty years ago. Listen to this Cabinet Minister:

"Here are the enemies of Britain, the unnatural gap between rich and poor, the divorce of the people from the land, the exploitation of boy labor, the physical degeneration which seems to follow so swiftly on civilized poverty, the constant insecurity in the means of subsistence and employment which breaks the heart of many a sober, hard-working man, the absence of any established minimum standard of life and comfort among the workers, and, at the other end, the swift increase of vulgar, joyless luxury."

All the achievements of a ministry which was informed by that fine spirit—old age pensions, a minimum wage in sweated industries, improved methods of settling labor disputes, a national system of labor exchanges as a first step in solving the riddle of unemployment, and, best of all, a budget which incorporated the taxation of unearned land values and additional liquor and income taxes—all are claimed by English Socialists as their children. The American expositor shows no such shrewdness and catholicity. Conservation of natural resources is a Socialist youngster, washed and combed and adopted into a respectable family. President Roosevelt and Forester Pinchot have condemned monopoly and pleaded for the heritage of the common people in accents which European Socialists would recognize; but their American colleagues, as Mr. Kauffman's dumbness illustrates, demand birth certificates and proofs of Marxian descent before receiving any children into their household. They stand idly and blindly by while the nation is already winning the blessings of national ownership of forests, coal and oil which they promise to give when they come into power.

Passers By. By Anthony Partridge. Boston: Little, Brown & Co. $1.50.

Passers By is an unusually clever and interesting mystery story, moving between Paris and London, and keeping the reader's speculations well in suspense to the very end. There is even a touch of respectable psychology in the exposition of motives and actions of the various characters, not often to be found in detective stories. The heroine is not the customary blonde angel whom it is everybody else's business to get into trouble and out of it with much difficulty and excitement of extrication; she is a dark, somewhat sullen girl, singing in the streets, accompanied by a hunchback, a small piano and a monkey. The singular and sinister trio mean a strange retribution, lying in wait for the Marquis of Ellingham, who had belonged, in his youth, to a gang of criminals in Paris. His secret is known to only four or five people in the world; he is rich, respected, happily married, a Member of Parliament, reformed, eager to forget his past life. There are many chances against him, and the usual implacable, imperturbable, unpurchasable French detective is on his track, guided by his kindness to the girl, Christine. There are plot, movement and passion in the tale, and skill in its telling.

The Last Days of Papal Rome, 1850-1870. By R. de Cesare. Abridged with the Assistance of the Author, and Translated by Helen Zimmern. With an Introductory Chapter by G. M. Trevelyan. Illustrated. Boston: Houghton, Mifflin Co. $3.50 net.

Following up his successful work, "The End of a Kingdom," in which he had seen Ferdinand II driven from Naples by Garibaldi and his red shirts, Signor de Cesare takes up the Papal States in 1850, when they stretched from sea to sea between the foothills of the Apennines in the valley of the Po and the borders of the Neapolitan kingdom. The genial, inquisitive, obstinate old Pope Pio Nono smiled, made his little jokes, and ruled State and Church in all that rich and historic domain. Twenty years later he ascended the steps of the Scala Santa for the last time, on his knees, and thereafter took his little temporal kingdom with him to that famous hill where Nero once had his summer gardens. These had been twenty years of trouble to the Holy Father and to his lessening realm. The story of them is told by Signor de

Cesare with the advantages acquired by the author in a life of intimate relationship with the actors in the drama and with their immediate successors. The chipped stones in the walls of the famous city, showing where the cannon of a patriot army pounded at the northern gates of the town which once had been the capital of the known world, date back, as to the chippings, less than forty years. The people were knocking at their own doors. With them the author sympathizes. He has his kindness for the old order of the nobles and a certain desire to reverence the head of the Roman Church, but for him apparently it is a good thing that the temporal power of the Pope is gone. The nobility of Rome had become impoverished, the clericals recreant to their trust, the Pope a trifler, the common people restless to a degree, and two great European cabinets at least were playing fast and loose with the different states of Italy. To tell of the decay of old families, the weaknesses of petty statesmen, the pleasant sins and easy-going virtues of the ruling classes, both lay and cleric, in Rome itself, is to tell the story of the fall, and the author shows himself to have been near the center of that hollow mockery of a highly trained upper class

Trees and Shrubs of the British Isles. Native and acclimatized. By C. S. Cooper, F. R. H. S., and W. Percival Westell, F. L. S. Sixteen full-page colored plates and seventy full-page black and white plates drawn direct from nature by C. F. Newell. Medium quarto. 2 vols. Vol. I, pp. xxxii, lxxiv, 108; Vol. II, pp. 261. New York: E. P. Dutton & Co. $7.

It does not need the broad text, the wide margins, the thick paper and the uncut edges and the gilt top to justify calling these two magnificent quarto volumes, for both the text and the illustrations are worthy of the setting, altho these are no manuals for field use, and they require a spacious table for reference to them. The American lover of trees and shrubs will be pleased to find so large a number familiar to him to be included among the nearly one thousand shrubs and trees carefully described so that an intelligent reader can identify them without a plate. The plates give help for about seventy of the species, and one only wishes for the small inserted figures of the remaining species, such as we see in Britton and Brown's larger flora of this country. The present volumes will appeal to those who have estates, to gardeners, field naturalists, botanists and foresters. The introduction covers most that one needs to know generally about arboriculture, the characteristics of trees, their leaves, fruit, bark, buds, diseases, enemies and methods of cultivation and protection. Then follows the description of the species themselves, given in an exact yet not too technical language, without surplusage or poetry. In reading such a work one is imprest with the wealth of the British Isles in nature, but especially cultivated species. Of course, most of the latter are either native with us, or are also cultivated. These volumes would be a guide to any one who might wish to devote a generous stretch of land to a sort of arboretum, for his own pleasure or for instruction. Every respectable city now has its park, many of them covering hundreds of acres, or even a number of square miles of forest, hill and stream. They offer a splendid opportunity for something more than mere patches of florists' shrubbery, banks of rhododendron and beds of *Rosa rugosa* or Japanese barberry, fine as these are. There ought to be in every such park a portion distinctively educational, in which species are arranged by orders, each plainly named; and in a smaller way this would afford infinite delight to many who take pleasure in their one or two hundred acres, and have a taste for nature. To such we commend this work. One must not expect every American tree and shrub to be mentioned; a dozen oaks from all the world are all that are cultivated in Great Britain, but about half of them are American. Everything fine and conspicuous is included. The only criticism we have to make is on the colored plates, in which the colors of the flowers lack definite strength. The clear yellow of the barberry and the purple of the lilac are not well rendered. We may mention a small error, the statement that *Fremontia* is named after Colonel "Freemont."

Literary Notes

....The March number of the *American Physical Educational Review* (Springfield, Mass.) is especially valuable on account of the very complete bibliography it contains of recent books and magazine articles on physical training, hygiene and athletics.

....Daniel Bussien Shumway, in his translation of *The Nibelungenlied* (Houghton, Mifflin Co., $2), has endeavored to give an accurate and literal translation in prose of the famous epic; and in his charming simplicity of style and his selection of Saxon words and expressions he has preserved for the reader the atmosphere of the age of pageantry and chivalry.

....An admirable exposition and criticism of the philosophy of Nietzsche by Johannes Broene is contained in the March number of the *American Journal of Religious Psychology and Education* (Worcester, Mass.: Clark University Press). Its most novel feature is the section showing the extent of Nietzsche's influence on the art, music, drama, literature and social ideals of modern Europe. There is an extensive bibliography from which, however, we miss Mencken, the best of American works on the subject

....New York, rich in history, has suffered so many changes that historical landmarks are fast disappearing. The City History Club of New York has published from time to time excursion leaflets, which have proved very valuable to tourists and students of local history. These have been collected in the present volume, which, with some additional matter, including 70 maps and diagrams and 46 illustrations, forms a helpful guide. The directions are minute and the historical information accurate. Many of the excursions have been arranged for school children, and ought to illustrate their lessons in history and localize their geography. (*Historical Guide to the City of New York.* Compiled by Frank Bergen Kelly. New York: Frederick A. Stokes Co. $1.50.)

....A miscellaneous collection of quotations is too personal an affair to impose upon the public, and assembling them in groups for daily reading under an attempt at classification does not add to their desirableness. There are, however, some people who like to read other's scrap books, who want their collections made for them, or who find these books of quotations convenient gifts for Christmas, birthdays, etc. And in the interest of these the compilers ought to make some attempt at originality; they, at least, could lead the reader into the byways and unbroken paths of literature instead of using the well-known classics or commonplace platitudes. And if they are intended for personal gifts they should be gotten up artistically. Of the three we have before us, *Life and the Great Forever,* collected by E. Chesney (Lane Co., $1.50), notwithstanding its title comes a little nearer to being interesting, original and attractive than the other two. *A Year of Ideals for Every-Day Living,* compiled by Delia Lyman Porter (Boston: Pilgrim's Press, 75 cents), with its abundance of Scriptural quotations, and *Looking Upward Day by Day,* selected by Emily V. Hammond (Dutton & Co., $1.25), in spite of its suggestion of Christian Science teachings, are both very much like the thousands of others of their kind with which book stores abound.

Pebbles

"It would please me mightily, Miss Stout," said Mr. Mugley, "to have you go to the theater with me this evening."

"Have you secured the seats?" asked Miss Vera Stout.

"Oh, come, now," he protested, "you're not so heavy as all that."—*The Catholic Standard and Times.*

A PROMINENT Western attorney tells of a boy who once applied at his office for work.

"This boy was bright looking and I rather took to him.

"'Now, my son,' I said, 'if you come to work for me you will occasionally have to write telegrams and take down telephone messages. Hence a pretty high degree of schooling is essential. Are you fairly well educated?'

"The boy smiled confidently.

"'I be,' he said."

STANDING 'neath the vine covered arbor, at the southern end of the garden, about page 357, the man and the woman gazed earnestly in each other's eyes.

"My own," murmured the man, "my very own—may I call you so? Thanks. Then, will you, sweet one, be my wife?"

"Ah," she said, her frame convulsed with sobs, "would that you had not spoken Aubrey, for I can never be your wife."

"You never can?" ejaculated the disconcerted lover, starting back in amazement.

"No, no," she said, with a choking sob.

"But you love me?" he queried anxiously.

"Yes, yes," she replied, convulsively.

"And you will always remain single if you don't marry me?"

"Yes, yes."

"There's never been any scandal about you, has there?"

"Sir!"

"No, of course not," he hastened to mutter. "Pardon me; 'twas an unworthy thought. But as far as I can make out, there seems to be no bar whatsoever to our union."

"No"—the light of love irradiated her classic features—"there is nothing to prevent our being married."

"Then why—why"—the man's voice vibrated with passion—"why can you not marry me, if there is no earthly reason to prevent it?"

"Because," she answered, in a tone of helpless despair, "I am the heroine in a woman's novel."

As he recognized the insuperability of the obstacle before them, he quailed, and then, with deep drawn sighs, he glided into the Forty-eighth Chapter.—*Puck.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Milwaukee

MILWAUKEE, WIS., has a population of 327,873. It is one of the great American cities, ranking twelfth in size. Last week it held an election and turned down both old parties, electing instead the entire Socialist ticket. It is the first time in the history of the United States that a large city has gone Socialistic. Haverhill and Brockton, Mass., a decade ago, elected Socialistic Mayors and a partial ticket, but this is the first time that a whole city administration has been turned over to the Socialist party.

For the next two years the city and county will be in the hands of Socialists. Not only is the Mayor a Socialist, but the new Council has 21 Socialists, 10 Democrats and 4 Republicans, and the new Board of Supervisors 11 Socialists, 3 Republicans and 2 Democrats. The Socialists also elected two out of seven of the Civil Judges.

Now what does this mean? It means in the first place that the unceasing propaganda of the Socialists has been at last effective. The steady growth of the Socialist vote for Mayor of Milwaukee in the last twelve years is as follows:

1898	2,414
1900	2,473
1902	8,435
1904	15,056
1906	16,837
1908	20,887
1910	27,622

It means also in the second place that for the first time in an American municipal election the disgusted Republicans did not go over to the Democratic party or the disgusted Democrats to the Republican party. Between the devil and the deep sea they flew off to Socialism.

From all the information at our disposal we believe that the citizens of Milwaukee, without respect to party, are, on the whole, glad of the result. They have watched the careers of the Socialists already in the State Legislature at Madison and in the City Council at Milwaukee, and they have seen them compelled to do what any other men have to do when given responsibility—that is to come down to earth and work along the lines of least resistance, compromising here and patching there. A Socialist in office is about like other men. If he does not entirely lose his horns and forked tail, he at least does not utterly destroy life, liberty and the pursuit of graft.

Now that the Socialists are to have their innings what do they propose to do? According to their own statements they actually hope to inaugurate these dangerous and revolutionary reforms:

Home rule for the city.

Municipal ownership, including gas, electric lighting and ice plants and the improvement of service from the same as well as the cheapening of rates.

The sprinkling of streets by street railway companies.

A seat for ever passenger in the street cars.

Three-cent car fare.

Cheaper bread by standardizing the size of the loaf.

Work for the employed at union wages and union hours.

An eight-hour workday.

Compel corporations to pay their full share of taxes.

If this is all that the Socialists hope to do it would seem that any progressive and honest Republican or Democrat might approve of the program.

THE INDEPENDENT has for the past decade taken an active interest in Socialism. We have printed probably more articles on both sides of the question than

any other magazine. It is hardly necessary to say that we do not accept Socialism at its friends' estimation, nor at its enemies'. Socialism has many phases. It is a political party, an economic creed, a religion and a stage of history. It is world wide, vigorous and growing. No man can tell what its future will be. Its philosophy is being studied by the greatest minds of the world and it deserves study because it promises a better, a safer and fairer life to the masses. But as yet it is only a theory, a hypothesis. It has never been tried *in toto*, and those who have attempted to live it in small groups and communities have signally failed. It has succeeded only where it has allied itself with liberal and opportunist rather than radical policies.

Socialism, therefore, is still an experiment. As such it should be viewed by all men with an open mind. We wish well to those who believe in it and especially to those who have the courage to practise their belief. They will be the first to abandon the cause if it won't work. Had Upton Sinclair been prevented from founding Helicon Hall how many "Jungles" and "Journals of Arthur Sterling," would he have written to prove the tyranny and bigotry of his fellow men and the paradaisical joys of a co-operative household? But one year of Helicon Hall was enough to teach him and his devoted band of enthusiastics that one family to a home is about the correct ratio.

So we do not regret that one great American city has gone Socialistic. If it succeeds other cities can reap the benefits accrued. If it fails others can take warning.

Tippletude

Since Dr. Burchard added a new word to politics we have hardly had a more notable case of inept and suicidal blundering than that which will for a long while give distinction to the name of the Rev. B. M. Tipple, D. D., pastor of the Methodist American Church at Rome. It was just before the Presidential election of 1884 that Mr. Blaine, the Republican candidate, met a number of clergymen in this city and heard their addresses of adhesion to his cause and replied to them. One of the speakers was Dr. Burchard, who referred to the Democracy as "the party of Rum, Romanism and Rebellion.' Mr. Blaine was too much engaged in thinking what he should say to notice the alliteration, and so he did not refer to the slur on the Catholic Church. But it was published, and it angered Catholics and probably lost Mr. Blaine the State of New York and so the election.

Somewhat similar to the original Burchardism is Mr. Tipple's senseless outbreak, altho it has lighter consequences. So far as the public could know the Methodist Mission in Rome had had a fine advertisement; and the veto put on Mr. Roosevelt by the Vatican had aroused criticism of the Pope rather than of the Methodist Mission, which could have nothing to complain of. It might presumably be all that was good, doing an excellent work, arousing animosity only because of its success. But just then burst in the voice of Tipple, and such a voice! A favorite Turkish story is of the man who was asked to lend his donkey, but who replied that while he would be glad to do so he could not as it was in a neighboring village. Just then, from the other side of the partition, came the bray of the ass, and the neighbor said: "Why, there is the donkey in the stable." "You infidel," replied the owner, "to take the word of an ass against that of a follower of the Prophet!" No less untimely and disconcerting, following Mr. Roosevelt's warning against religious bitterness, was the intrusive raucity that instantly destroyed the satisfaction with which the friends of the mission were considering the situation.

The Pope had put a new condition on Mr. Roosevelt which he could not accept. He had no intention of visiting the Methodist Mission, but he would not be told that he must not. The ex-President then carefully and properly told his American public that this action was quite within the Pope's rights, and that it would be very wrong to make this an occasion for religious contention or bitterness. So every one accepted it. We all hoped, or believed, that the Methodist Mission in Rome was misunderstood, and that it was engaged in legitimate mission

work for the unchurched multitudes of Italy. Then this Dr. Tipple, a member of the Methodist Mission, who had been there but a very few months, who was without experience and not in charge, who had no true sense of the situation, and who, therefore, ought to have had sense enough to hold his tongue, burst out with this insult to the Catholic Church at its center, this insult to Mr. Roosevelt, this staggering blow to the mission which employed him.

This is the sort of response made by Dr. Tipple to Mr. Roosevelt's plea for peace and good will:

"Mr. Roosevelt has struck a blow for twentieth-century Christianity. The representatives of two great republics have been the ones to put the Vatican where it belongs. President Loubet refused to accede to Vatican conditions, and now Mr. Fairbanks and Mr. Roosevelt come to maintain the dignity of American manhood in the face of Vatican tyranny. The Vatican is incompatible with republican principles. This is a bitter dose for patriotic Catholics in America to swallow. I wonder how many doses of this sort they will take before they revolt. Is Catholicism in America to be American or Romish? If Romish, then every patriotic American should rise to crush it, for Roman Catholicism is the uncompromising foe of freedom. . . . The world advances, but the Vatican never."

The language was most ill-timed, insulting and provocative. "Romish," indeed. The very word is an impertinent insult. If Dr. Tipple believed what he said—and we suppose he did—he ought to have had the decency and the prudence to keep still. Mr. Roosevelt had made an appointment to receive Americans in Rome, including the members of the Methodist Mission; but when this manifesto appeared American Catholics declared that they would not go to meet the Methodists, and very properly Mr. Roosevelt canceled the engagement. Dr. Tipple had seemed to justify the charges which the Vatican had made against the Methodist Mission, and by his gloating over the Papal action and his denunciation he had done a grievous injury to his own cause.

As far as they could the older and more responsible members of the mission tried to repair the injury done by their associate. They declared that they were not responsible for his language, did not know he intended to publish it, and would have prevented it if they could. It was the personal act of a man too eager to be heard. His usefulness in Rome is certainly at an end, and it might be well if he were to be more or less gracefully withdrawn at an early date. No good he might do there in the future could repair the damage he has done by rushing in where wise men dare not tread.

The Benefits of Cold Storage

POPULAR resentment of the increased cost of living has given rise to a determination to find something or preferably some person that can be blamed for it. The excessive production of gold, alleged by economists as the fundamental cause of high prices, is not regarded by the masses as a satisfactory explanation because William H. Seward and Cecil Rhodes are both dead and cannot be punished for their part in opening up the gold fields of Alaska and the Transvaal. Consequently the people direct their indignation against those who seem most responsible, particularly against those concerned in the preparation and preservation of food on a large scale. It is not denied that the packers and commission merchants and cold storage men have in many instances taken advantage of the occasion to get more than their fair share of the advance in prices, but there is danger lest the popular resentment against them shall cause the passage of laws hampering some of the most useful of modern industries.

For example, cold storage was not devised by the capitalist under the inspiration of the devil for the purpose of simultaneously starving, cheating and poisoning the poor, as some recent writers would have us believe. On the contrary, the inventor of the refrigerating machine is worthy to rank with that prehistoric benefactor of mankind who first introduced fire into his habitation. The command of heat was the first step in human civilization; we have tardily supplemented it in our generation by its antipode, the command of cold. As the first extended the habitat of civilized man into the northern zones so the latter will extend it into the tropics. It tends to make all seasons as well as all climates the same.

The natural effect of cold storage is to equalize prices by enabling perishable foods to be transported anywhere and kept indefinitely. How long food can be kept in this way without spoiling is not known and probably we can never find out. The longest on record is some mammoth meat which was packed away in Siberian ice about the time when the human race began to stand up and lose its hairy hide. This was before there was any law requiring meat in cold storage to be tagged with its date so we have no means of telling how long ago it was, but if we say 100,000 years no one can successfully contradict us. At any rate, when the mammoth thawed out it was sufficiently well preserved to be eaten by dogs and Yakuts. Doubtless our palate would have been more critical than theirs but since mankind has long forgotten the taste of mammoth meat no one could say that its flavor had been impaired.

In short it is not to be disputed that cold is almost a perfect preservative. Seeds and microbes have been chilled to the temperature of liquid air without even destroying their vitality, so there is no reason to think that a more moderate degree of cold, however long continued, would make flesh or vegetable inedible. We do not have to speculate about it. The experiment has been tried here in New York of serving at a banquet food that had been for many years in cold storage, together with fresh, and the guests could not tell the difference. The reason why there is this agitation for legislation is not because meat and eggs are perceptibly injured by cold storage but the contrary. The reason why jewellers cannot tell the difference between rubies that are natural and those that have been melted in the chemist's crucible is because there is no difference. The reason why the art world is agitated over the question whether Professor Bode, of Berlin, was cheated in paying $30,000 for a wax bust is because nobody can tell the difference between the work of Leonardo da Vinci and Mr. Lucas. If food did deteriorate in flavor in cold storage there would be no need of labelling it. The tongue would be a better measure of that than the calendar.

We now know that food decays only thru the action of minute animals and plants which eat it up and convert it into forms that are repulsive to us and sometimes extremely poisonous. There are four ways known of checking the action of these micro-organisms. One is to dry the food, but this seriously impairs its flavor and quality. The second is to add a chemical preservative, a mineral salt such as sodium chloride, potassium nitrate or sodium borate, or an organic compound, such as benzine derivatives in a crude state in the form of smoke or in a refined state as benzoates and salicylates. But any of these preservatives if used in excess are injurious. The third method of preservation is sterilizing by heat and canning, but this is expensive, applicable only to packages of a pound weight, and does not leave the food in its natural state. The fourth and last process, cold storage, is the best for it has none of the disadvantages of the other three.

Cold storage on the whole makes our food cheaper because it prevents the enormous waste due to overproduction at certain seasons of the year. It gives our markets and menus a greater variety so that one may get what he wants when he wants it. There is no reason why lamb and green peas should go together or roast duck and apple sauce, except that they happen to come together in the spring of fall of the year.

The cold storage system, like the produce exchange, exists for the purpose of steadying and equalizing prices by reducing local and temporal variations, in short, to prevent the exactions of monopoly. Doubtless that is still in the long run their effect. But, unfortuantely, both institutions have often been perverted to the opposite and by facilitating monopoly have exaggerated the fluctuations of prices. It is not difficult, however, to break down the monopolistic feature of the cold storage system. The plant is not very expensive. Rooms may be rented by private parties and co-operative plants erected, perhaps even public refrigerating establishments run at cost. Like all places where the food of the people is prepared or preserved in large quantities they should be under the inspectation of officials to see that sanitary conditions are maintained. But in ex-

tending public control over this important factor of our modern life we should see that we avoid our common American fault of imposing vexatious restrictions and even impossible requirements.

Mr. Taft and the Insurgents

Public addresses were made last Saturday night by the President and Attorney-General Wickersham. Both of them had the insurgents in mind. Mr. Taft did not denounce them. He urged them to assist in procuring the enactment of the pending bills which provide for reforms to which the party is pledged by its platform. But he also gave his definition of disloyalty, saying in substance that any one who called himself a Republican and was unwilling to redeem the party's pledges, and did not desire Republican success, was not a Republican. Undoubtedly Mr. Taft is annoyed by the failure of a Republican Congress to make reasonable progress in the treatment of party measures. There has been remarkable delay. In that field of legislation almost nothing has been done. But we cannot see that the insurgents should be held exclusively responsible for this. They have criticised the pending bills, proposing various amendments, but their criticism has not been destructive. We suspect that the delay has been due in part to the attitude of influential regular Republicans who are not at heart in sympathy with the proposed legislation, altho they do not openly oppose what, as they well know, the people desire. It is quite possible that a President who has been led to admire and warmly to commend Mr. Aldrich has judged the insurgents with too much severity.

Mr. Wickersham, who has come to be regarded as a very prominent and influential member of the Cabinet, spiced his review of the President's first year with remarks which will not help to reconcile the insurgents and the regulars. It seems to us that the situation calls for conciliatory overtures, and not for words, in an official address, that irritate and wound. Said the Attorney-General:

> "I am firmly persuaded that, despite the efforts of individuals to magnify their own particular importance at the expense of party loyalty and party honor, the Republican majority in Congress will make good the party pledges."

Mr. Wickersham was speaking as the representative of the President. Such words as these do not tend to endear the Administration to Senators Beveridge, Dolliver and Cummins. Nor was it eminently tactful and politic for the Attorney General to speak of "treason" and to hold open the doors of the Democratic party for any one "claiming to be a Republican" who wished to join that organization.

The insurgent movement is one that calls for careful and diplomatic treatment on the part of those who control the Republican majority. As a rule, the insurgents represent a progressive, enlightened and valuable element in the party. Their protest, so far as it relates to the new tariff and to certain conditions in Congress which promoted the enactment of that tariff, has sufficient warrant. The political importance of it is shown by much evidence of popular approval, and notably by last week's convention of the Indiana Republicans. Senator Beveridge retains the support of his party there without modifying in the least his opposition to the new tariff. The convention was clearly in agreement with him. Its platform with respect to the tariff stands for protection, as measured by the difference in costs of production, but it virtually says that this difference was not known when the tariff was revised. It should now "be ascertained with the utmost speed. and the present law modified accordingly." This is a demand for another revision, to be made upon the basis of reports submitted by a competent commission. The demand for such reciprocity as was advocated by Blaine and McKinley is also at variance with the present tariff law, which canceled existing treaties of reciprocity and makes no provision for such agreements.

It is not to be expected that the platforms of Republicans in Iowa and Minnesota will show less disapproval of the new law. The situation is one that should suggest friendly conferences and earnest attempts to reach an agreement as to differences which are full of danger to the party. When Congressman Dalzell says he hopes the Democrats will carry Indi-

ana and put a Democrat in Mr. Beveridge's place, he simply widens the breach. There is need of conciliation, and qualifications for conciliatory work are not possessed by such men as Mr. Aldrich, Mr. Cannon, Mr. Dalzell, Mr. Payne or Mr. Wickersham.

No one is so well fitted for it as the President himself. Before his election he had settled several controversies of a threatening character, displaying great skill and tact. He enjoys the confidence of the people, who hold him in affectionate regard. Altho he has recently commended the new tariff as a whole, his critical attitude while Congress was making the revision has not been forgotten. The demand for a commission might serve to promote an agreement. Mr. Taft has, in the Tariff Board, a kind of commission, and he has insisted that it should make such an inquiry as the Indiana Republicans and many others believe to be required. But his exprest opinion has been that the fruits of such an investigation cannot be available for some years to come.

The inquiry should be made, and the work can be completed in less than two years. A measure of protection has been set up by the party. If the new duties are not in accord with the accepted rule, no Republican is disloyal who asks that they be brought into conformity with it. It is possible that by wise treatment of this question of a commission and of the difference in costs of production the President may conciliate the insurgents, or a majority of them, and appease their constituents. The insurgent movement is concerned with other matters in addition to the tariff, but its origin and the main source of its strength may be found in a reasonable protest against an unjust revision of the protective duties.

The People and the Prices

THE letters from readers with which this week we close the series of articles on "The Cost of Living" are good evidence that the questions under discussion are of more than academic interest. They are intensely practical, and the comments born of experience on the farm, in the grocery store or the shoe shop, in the local bank, and in the small college faculty, supplement the theoretical expositions of the professional writers on economics with touches of realism that we should have been sorry to miss. Most of the explanations offered by the theorists are repeated by one and another of the letter writers, as conclusions to which they have come thru first hand acquaintance with facts.

Looking over all the articles and the supplementary letters together, we discover a general agreement upon a few fundamental considerations, that will bear repeating.

First, prices and the cost of living are two different things. Some of the writers have discussed chiefly the cost of living and others chiefly the theory of prices. Naturally, the letter writers are better acquainted with the cost of living than with the economic theory of price.

Second, the cost of living at the present time is a phenomenon partly of market prices, partly of changing standards and habits, and partly of natural resources and methods of production. Very thoughtful and significant reflections have been made upon all three of these factors. Whether prices rise or fall, the cost of living may increase if by "living" we mean living more comfortably, more luxuriously, or more extravagantly than our fathers lived. That the American people on the whole are living extravagantly is conceded by our writers almost without exception. That we are living more comfortably is by no means certain. Perhaps all in all we are, but the expenditures for things that contribute nothing whatever to substantial well being are large enough to raise a question of the relative good sense of the present generation. Again, whether prices rise or fall, nothing can prevent an increasing cost of living if we squander our natural resources or exploit them by wasteful methods. Public attention to this matter has been aroused none too soon.

Third, it is admitted on all sides that the rise of prices is of world-wide extent, and that the cause must therefore be sought in facts of world-wide influence. This, as our readers will remember, was THE INDEPENDENT'S editorial contention before the publication of these

articles was begun. Of the world-wide causes of increasing prices the chiefly important ones, as nearly all the writers agree, are the increased production of gold and the increasing cost of production of the raw materials of nearly all the commodities exchanged for gold. The cheapening of gold cannot indefinitely continue. So far as that factor in the causation of rising prices is concerned, we may confidently expect a reaction.

Fourth, there are contributory causes of high prices in the United States which should not be overlooked. Of these the tariff, the trusts and the vagaries of railroad management are of more than trifling importance. These are matters which the people have in their own hands. It is for themselves to say whether they will continue the policies now in force, or will make changes which would result in checking the present concentration of industrial power, economic control, and profits. It is not doubted that the policies under which we live are effective to increase the wealth of some men: are they effective to increase the wealth of the people generally and to distribute it equitably?

Fifth, no way has ever been discovered to maintain prices at an unchanging level. Every general rise of prices, and every general fall as well, redistributes the wealth of the community. It makes some men richer, and other men poorer. Rising prices throw great loss and hardship upon all persons with fixt incomes, and for a long period upon the wage and salary earning classes. For salaries and wages always advance more slowly than prices, and they seldom advance sufficiently at any time to offset the full addition to the cost of commodities. Falling prices, on the other hand, increase the burden of all indebtedness, adding to the real as distinguished from the nominal amount of every mortgage, bond and note. Equity demands that these shiftings of economic burdens be prevented so far as possible. Theoretically, it is possible to prevent them almost wholly, altho fluctuations of price must continue. The tabular standard for the computation of values meets all requirements. And how simply and easily it could be used has been clearly explained by Professor Norton. The only obstacle to this immensely important improvement in our monetary scheme is the intellectual inertia of the people. When the plan is once generally understood it will probably be adopted, and the gain for justice and well being will be incalculable.

It is gratifying to discover how profoundly interested the American people are in these practical questions. It is to this interest, and to the growth of popular understanding, that we confidently look for the adoption of measures which will solve the problems of the cost of living, whatever changes may from time to time occur in the general level of prices.

The Yerkes Sale

There seems to be evidence in the big prices bid at the sale of the Yerkes paintings, rugs and tapestries in this city last week that some people have plenty of money to spend. The total sales amounted to over one and a half million dollars, a very pretty fortune in itself. Think of a portrait of a woman, by Frans Hals, bringing $137,000, and many others for $50,000 or more. And think of old and repaired rugs selling for $10,000 or $20,000. This justifies the conclusion that it pays to put one's money away for investment in first class old pictures, tapestries and furniture, as well as in diamonds. They mount up in value, or is it also, as the economists tell us, gold, as the standard of value, has greatly depreciated? Yet there is the further explanation that while the number of millionaires who can afford expensive luxuries increases, the number of objects of art, both old and choice, constantly diminishes owing to their passing by purchase, gift or bequest into the possession of public museums of art. At this rate a hundred years from now there will be no Holbeins or Raphaels in private possession, for millionaires to gloat over in private, but they will be on free view for the poorest in the land, and that will be better. Then the rivalry will be to see what collector will show the highest skill in securing the finest work of living artists; and that again will be better.

Postal Banks

We remember when Mr. Gladstone, in 1888, declared that the establishment of post office savings banks in Great Britain was "the establishment of the most important institution which had been created inside of fifty years for the welfare of the people and the State." Senator Carter, in placing his bill creating postal banks in the United States before Congress, can say very advisedly that "we are not called upon to embark in an experimental venture." The great body of the American people have been trained to the necessity of just such a proposition. In our larger cities and towns the ordinary savings bank is an educative institution. It tends to citizenship of the safest sort; what we want now is to give the country at large, and especially all remote districts, the advantages which the towns enjoy. The end is to encourage thrift among the masses of the people, by furnishing convenient and absolutely safe depositories for those small sums which are now either wasted or hidden. The bill now before Congress allows any person over ten years of age to make a deposit. No account can be opened for less than one dollar, and no person may deposit more than one hundred dollars in a single calendar month or more than five hundred altogether. The proposition is to give a low rate of interest, with the faith and credit of the Government pledged to the repayment of principal and interest on demand. A postal savings bank system will do more than any other devised or proposed scheme to steady business prosperity and prevent fluctuations under speculative influences. Opposition to the plan is said to be almost entirely confined to New York and New England, and here it surely is restricted to a very small percentage of our people. Not one rural organization of any sort has pronounced against such banks, while the National Grange and National Farmers' Congress are equally emphatic for them.

A Disreputable Character

A man professionally designated as "Battling Nelson" was refused admission as a guest to the Bellevue-Stratford Hotel, in Philadelphia, and he brought suit for $10,000 damages to his character. But it took the jury only three minutes to decide that he had no character to be damaged. That was because he is a professional prizefighter, and has been engaged in unlawful pursuits and so is a disreputable character, such as a hotel had the right to exclude from the society of respectable people. We wonder that reputable journals report at length the doings of such men. Indeed, they are treated and fêted too often as if they were men of credit and renown instead of being infamous. Only the other day, in New Jersey, some Sunday school men got up a fight between two young men, of whom one was killed, or nearly killed, and the other fled into hiding. It was a disgrace to the church and to the town. Fortunately THE INDEPENDENT, as a weekly magazine, is not expected to publish reports of illegal and indecent exhibitions, and we wish decent dailies would exclude them. But the fighting instinct seems to demand details of the successive "rounds" before the "knock-out."

Agricultural Returns

During all this discussion of high prices we have to bear in mind that the agricultural returns for 1909 were a distinct gain over any preceding years. Secretary Wilson reports the total value of the crops to have been $8,760,000,000; a gain over the previous year of $869,000,000, the increase in the value of farm products for a single year being enough to furnish a full equipment of farm machinery for 6,000,000 farms. The total value of the crop would make half payment on the valuation of all steam railroads. Meanwhile looking a little farther back we find that the value of farm products has doubled in about ten years. What are we to make of this astonishing progress, except that our people ought to thrive, and prices ought to be reasonable? We have to look on the other side and add that high prices are the cause of the high values of these annual crops. The farmer is thriving at any rate. The real trouble comes in when we find that the larger part of the profits go to middle men. The Bureau of Animal Industry reports that the re-

tailers of meats gather in thirty-eight per cent. of profit. The average retail price in the North Atlantic States exceeded the average wholesale price by over thirty-one per cent. Dollar and a quarter wheat does not mean a dollar and a quarter to the farmer. Four dollars a bushel for apples in New York City means less than half that to the grower in the orchards of Michigan or western New York. What we need is to bring the producer and consumer just as closely and directly together as possible. Then the farmer must be trained to a study and apprehension of the market. He must learn to prefer steady gains rather than be better pleased with one or two lump returns, from one or two special crops.

The Billboard Nuisance

The Civic League of St. Louis has undertaken to solve the billboard problem, if it is solvable. A pamphlet discusses the question from these standpoints: What can be done by legislation, what by taxation, what by stirring up public opinion. It is proposed to send out very generally a full list of all those who make use of billboards, and to urge the public to ask them to refrain from such advertising. The league will then urge property owners not to rent their property for the erection of billboards, and will solicit the support of all social organizations in a general warfare; it also proposes to co-operate with the Building Commissioner in sharply suppressing those billboards that violate the city ordinances. After this it will undertake to secure the passage and enforcement of statutes taxing and regulating such boards. It appears that there are more than one and a third million square feet of billboards in the city of St. Louis, and that the income of the bill posting companies comes to very nearly half a million a year. There are three companies, and each one of them pays a ten dollar license to the city, for the privilege of reaping these enormous profits, at the expense of the comfort of the citizens and the good looks of the city. We wish the league good luck, and complete success in suppressing the nuisance.

Protection of Birds

The National Association of Audubon Societies will present to the Ornithological Congress, to be held in Berlin on May 30, a plan for uniform protection of birds thruout the world against that heartless army of poachers that supply our millinery markets. Accordingly an agreement is undertaken between the United States and Canada and Mexico, to protect the migratory birds of this continent. It seems that our robins, during their passage across Tennessee and Kentucky, are shot by the wholesale. The slaughter is so great that the birds are peddled at ten cents a dozen. It needs an alliance of the States, as well as State laws; and the international undertaking is rational. Recently ten tons of the feathers of valuable Pacific species, with the skins and wings of over two hundred and fifty thousand birds, have been recovered by one of our revenue cutters from Japanese poachers. The value of the birds destroyed can hardly be estimated in figures, altho it is calculated to be at least a million dollars. William Dutcher, president of the National Audubon Societies, reports that the bird of paradise is very close to extinction. This kind of work calls for an international co-operation, and it should be easily secured. Our migratory birds should be protected to the limit of law in their passage to and from their nesting homes. It would probably help somewhat to divert sentiment from war and war preparations if we entered more fully into industrial measures of co-operation, such as are proposed. Migratory birds of the very highest value to agriculture are being so rapidly thinned as to cause alarm to the Northern farmer. This matter does not affect our crops only, but as most of these birds do more or less scavengering, their destruction means increased disease and pestilence.

An Unusual Eulogy

We have not read for a long time a more delightful eulogy than that which *The Western Watchman,* edited by Father Phelan, bestows on "The Priest with the Hoe," a big, burly German

named Brockhagen, who was sent to a rude settlement not far from St. Louis. He was a big-handed, big-footed son of the earth, "a stranger to all sham as he was to all the amenities of life." There was no church there, so he built one himself, all with his own hands, sawed the logs, and planed the boards, and nailed the shingles. His people had no religious books and were too poor to buy; so he opened a bookbindery, bound them himself, and sold them for little more than the cost of white paper. Then he started a journal in German, and its publication was most original. He kept no books, and he left his subscribers to pay when they got ready; they received no duns. He had "a monstrous capacity for work, and equally for the language of invective." He was not a man of books, but he had words, and "they flowed from his mouth like a mountain freshet, big, rough, impetuous and stupefying," and left devastation behind them. He had a contempt for doctors, whose pretensions to cure he thought the veriest sham. He made his own study of medicine, and he practised, but took no pay for his services or his medicine. Dr. Phelan thus concludes, and it is too good to omit:

"Father Brockhagen had but two griefs during his long life; and Archbishop Kain was the cause of his woe in both cases. In one tremendous eruption of the Brockhagen volcano big, heavy, hot rocks fell out on Lindell avenue; and the startled prelate, like another Januarius, lifted his hand and stopped the hail of ruin. The *Hausfreund* had to suspend. The other occasion he suffered in a nobler cause. He had in O'Fallon parish some families of colored people in whom he took a very lively interest. He insisted that the colored children should attend the parish school with the white children. The people protested and the matter was submitted to Archbishop Kain, with the result that the colored children had to pack up their books and find another school. But this only hightened his love for them, and he was seldom seen without a colored boy at his side. Poor old 'priest with the hoe,' he had not an enemy in the world; and he remembered us among his stanchest friends. He might be gall and wormwood to others; to us he was always milk and honey. He died owing nobody a dollar, and without a dollar to his name; leaving behind him a rare example of indefatigable labor and untarnished fidelity to his sublime calling. May he find beyond the rest he never knew or permitted others to know here."

Premier Asquith's Progress

If we were to believe the cable dispatches which come to us from London and which equally go to India and Japan, Mr. Asquith's Liberal Ministry is in constant danger of disruption and defeat. But somehow the forecasts are always discredited by the event. Last week the House of Commons, by a majority of 102, adopted in committee the resolution which declares it expedient that the House of Lords be disabled by law from rejecting or amending a money bill. It appears that there has been no secession by the Irish members or by the Laborites. All moves with a steady march, as if the Cabinet knew what it is about and feared no defeat. But the House of Lords still stands in the way, and when it vetoes the will of the people as exprest by the House of Commons, the people will once more be asked to give their final decision, when the House of Lords, and the sovereign as well, will have to bow to their will.

German Parcels Post

Whether a parcels post system will carry with the present Congress or not, it is surely the demand of the American people. The German postal service is carrying packages for one-third of a cent a pound from one end of Germany to the other side of Austria-Hungary, including parcels up to one hundred pounds. The proposition is that our Government shall carry parcels at one cent a pound, and good judges believe that we should make money faster than the Germans are doing it. To handle parcels would cost no more in the large majority of our post offices, except the wagon hauls. The larger part of our offices do not have enough to do to occupy the time of a single official. There would be great economy in the wagon haulage, for every merchant or company must now employ a separate wagon, while the Government could do the work of twenty or fifty of these in a single wagon. A package costing one dollar, recently carried from Central New York to Central Florida, cost one dollar and seventy-five cents freight—more than doubling the price of the article. An-

other package, costing four dollars, and carried by express, paid four dollars and seventy-five cents charges. This sort of work is prohibitory so far as small traffic for long distances is concerned. All small packages must remain at home, unless they can secure special traffic rates, and that is just where American business is today—there is no really established code of prices. Everything is under an arbitrary system of charges.

The Japanese Scare

There is evidence that the Japanese Government is co-operating faithfully with our own in the restriction of the immigration of Japanese laborers. In the year 1908, 1,522 laborers left Japan for this country, all such as had the right to return, as they had simply gone back to Japan for a visit after residence here, or were members of the families of Japanese laborers in this country. During the same year 5,186 laborers returned to Japan from the United States, an excess of 3,664 returning to Japan. In 1909, 659 laborers left Japan to return to this country, under the same conditions, while 4,248 returned, again an excess of 3,589. If we include all Japanese, laborers and non-laborers, during the two years 4,292 more Japanese returned to Japan than came to this country. The fear of our being overrun by Japanese is absurd, not to say vicious and mischievous. Japan might not be so concessive to American prejudice in this matter if she were not so anxious to divert her superfluous population to Formosa and Korea.

The Massachusetts Legislature has passed a bill, and Governor Draper has signed it, incorporating what is called the Massachusetts College, and creating trustees for the same. The plan is to give college instruction thruout the State, using town halls for recitations and lectures. This is a practical and much extended application of what we used to call university extension. It promises relief from the extraordinary development of cost for ordinary college courses. The larger part of this expense has come out of the social side of college life, which of course is dispensed with in this new system of instruction. There is no good reason why all the value to be derived from a classical education cannot be secured at a cost not to exceed $200 direct annual outlay. Meanwhile the boys at home can use up their spare time and their surplus energy in aiding their fathers on the farm. This plan would not work as well for agricultural colleges, where study is mostly applied.

Mr. Debs, formerly Socialist candidate for President, ought to prove in a court of law statements made by him against three judges. He said that when Missouri and Kansas had passed a 2-cent-a-mile railroad law the railroads appealed against it to the judges, Pollock, Phillips and McPherson, of the Federal courts, in which "the judges are appointed by the corporations." Then the railroads, he says, got up a two weeks' fishing trip for the three judges, and stocked a private car with "all sorts of wine and good things." But "in reality it was a debauch of a most scandalous nature," in which one of them shot at another, but it was hushed up. When they returned they declared the bill unconstitutional. Such is the story he dares tell, and it is published in the papers. He should be held responsible for it or it will be believed more or less.

The most that can be said in defense of the cartoon in *L'Evangelista*, a journal issued by the Methodist Mission in Rome, which represented Christ with a scourge driving the Pope in terror from the Temple, is that it is edited by an Italian, and that the anti-clerical feeling in Italy is intense, and that Italian passion sometimes breaks all bounds of prudence or decency, bursting out without the knowledge of those at the head of the mission. But this explanation hardly explains, and this cartoon, with severe anti-Papal passages quoted, goes far to prove the justice of the charges made by the Vatican. We presume the mission board here at home will have something to say to its representatives in Italy.

We have mentioned the fact that we seem to have turned the tide in the amount paid for pensions, and that an

annual reduction may now be expected. But we are not confident that Congress may not fight against Nature. There is a bill before Congress for putting volunteer officers on the retired list, strongly supported on the ground that there are only 21,000 of them still living, and the "estimated" cost for the first year would be only $17,000,000. Then the young wives want the restrictions removed that hinder them from receiving pensions when they shall become widows. We sincerely hope that no serious effort will be made to allow pensions to deserters.

Now that it seems that the Panama Canal, only 45 miles long, is going to cost some $360,000,000, or 50 per cent. more than the original estimates, will Professor Lowell please tell us the approximate cost of the canal system of Mars. Also what is the prevailing opinion among the Martians as to the progress we are making on the Isthmus. The Flagstaff observatory has given us so much unique information about the planet that it is not improper to expect from it answers to these important questions.

The status of popular education in Russia—not including Finland—is authoritatively shown by the official year book of the Cultus Ministerium for the year 1908, just issued. In the St. Petersburg government the number who can neither read nor write is 55 per cent. of the total population; in the Kovno government, 42; in that of Moscow, 40; in that of Warsaw, 39. The lowest percentage reported of persons capable of reading and writing is 16 per cent. in no less than seven governments. It is a fearfully bad showing.

We fail to see the reason why Mr. H. A. Rucker has been removed from the office of Collector of Internal Revenue in Atlanta, a position which he has held for thirteen years, and to the complete satisfaction of the Treasury. A white man who did not apply for it has been put in his place, and now every negro who held a Presidential office in Georgia has been replaced by a white man. We seriously question the policy and its defense. There is no reason why negroes, who represent so large a portion of the population, should not be represented in office.

One of the wisest epigrams ever uttered was spoken last Thursday by Representative Ollie James, of Kentucky, before the committee investigating the Ballinger-Pinchot case. The counsel for Secretary Ballinger had made bitter complaint against Mr. Brandeis, Mr. Pinchot's lawyer, for asking for so many papers from the Department of the Interior, and declared that Mr. Brandeis was simply "fishing" for what he might find. Then broke in Ollie James: "Fishing don't hurt nothing unless you catch something."

The horrible massacre of Armenians in Western Turkey, which was the expiring gasp of Abdul Hamid, has left terrible suffering behind it; and still harvest is two months away. Mr. W. W. Peet, president of the International Relief Committee in Constantinople, telegraphs that 12,000 Armenians will be without food and in danger of starvation in the Cilician region of Adana, Aintab and Zeitûn, unless relief is sent. Brown Brothers & Co., bankers, New York, receive contributions.

The Catholic Church condemns Socialism. The strongest Catholic ward in Milwaukee is the fourteenth, where four-fifths of the voters are Polish Catholics. That ward was carried by the Socialist candidate for Mayor, altho the Democratic candidate was a Catholic. Query: Are they good Catholics? Are they Catholics at all? Are they counted as Catholics in the census which gives that Church fourteen million members?

Let it be remembered that the Department of Agriculture warns the public that so-called "bleached flour," particularly the Alsop process, bleached with nitrogen peroxide, is, in the language of the law, adulterated and cannot be sold anywhere that the United States law holds, as in the District of Columbia and the Territories, nor can it be allowed in interstate traffic.

INSURANCE

Title Insurance

THE buying of real estate is a very different undertaking from the purchase of ordinary merchandise. A man who wants a suit of clothes, a pair of shoes, a hat or some groceries or hardware walks into a store where such things are sold, buys them and pays for them in cash or has them charged to his account, and the title to his purchase passes, and that is practically all there is to the transaction. Where real estate is concerned the procedure is vastly different. Any man who buys real property may be vitally imposed upon by an unscrupulous seller and the innocent buyer may easily find that he has bought and paid for something he did not get and cannot get. The title is clouded and defective, and the mere fact of payment, in the eyes of the law, counts for nothing in so far as vesting title goes. One example of this sort may be set forth as follows: Let us suppose that a real estate owner sells his equity in a piece of realty. claiming to be unmarried, and the property passes thru several hands before it is discovered, perhaps by mere accident, that the man had a wife, with dower rights at the time of transfer. The seller's original claim having thus been untrue, would of necessity cloud the title in so far as the interest of any subsequent holder is concerned. The ordinary search would not in all cases discover such a cloud. It is easy for any one to see in a case such as this, however, the desirability of title insurance, which would relieve the last buyer from such a defect in his title. In the case of a law suit, the burden of establishing a good title would fall upon the company issuing the title insurance. The crying need of some method of insuring titles was felt by real estate operators long before title insurance became possible. It was not until 1876 that a workable scheme of title insurance was originated in Philadelphia. Such insurance was instantly popular and since that time title companies, as they are popularly known, have been established in most of the larger and in many of the small cities thruout the United States. The business has grown tremendously and is now of constantly increasing importance to the commercial as well as the social interests of the entire country. In the beginning the title companies were confronted with immense obstacles, as a systematized transcript of all existing real estate records became an essential part of their working plant. Briefly, the idea of title insurance is first to establish in so far as it may be possible to do so the flawless character of the real estate under insurance and then to defend and protect that title under the insurance policy written upon it. The business of making searches, once the work of individual lawyers and professional searchers, has now almost entirely passed into the hands of the several title guarantee companies. Fewer and fewer searches are now made except by the title companies. Charges for the examination and insurance of real estate by the title companies are based upon the amount involved in the transaction or on the value of the property where insurance is wanted for an owner in possession. If more than one chain of title is involved, an additional fee is charged for each extra chain. Surveys and drawings, if made, as well as the fees for recording policies, are, of course, in the nature of extra charges. On a property situate in New York and valued at $100,000, the title insurance would cost $400 or thereabouts, and each additional $1,000 would add $2.50 to this amount in charges. Those who are about to purchase real estate may well consider the desirability of having the protection signified by title insurance.

MR. OTTO KELSEY, sometime Superintendent of Insurance for New York State, has entered the ranks of the underwriters and has been elected president of the Aetna Indemnity Company, succeeding Beekman Hunt, resigned. It will be remembered that Mr. Kelsey succeeded Francis Hendricks as Superintendent of Insurance and had a troubled but honorable term thru 1906-08. He was charged with incompetency by Governor Hughes, who vainly endeavored to eliminate him from the insurance department. Mr. Kelsey was supported by the New York Legislature against Governor Hughes. He resigned just before the completion of his term, taking office under Comptroller Gaus.

Financial

Bucket Shop Swindlers

THE Federal Department of Justice deserves hearty commendation for undertaking to stamp out the bucket-shop evil. It has procured the indictment of three firms which have more than 250 offices scattered thruout the country. Twenty-four persons connected with these firms are under arrest. Conviction may be followed by imprisonment for two years. The owners of bucket-shops are swindlers. Their offices, commonly bearing names of an imposing character, are places where persons of small means are led to gamble upon the fluctuating prices of stocks and grain. Many "customers" probably believe that they are really buying and selling securities; others know that neither themselves nor the proprietors of the shops do anything of the kind. In various ways the victims are defrauded, and the profits of the illegal and demoralizing "business" are large. There are millionaires among those who have been indicted. Suppression of the evil should not have been left to the Department of Justice. The work should have been done by State, county and municipal authorities. In many places these have failed to do their duty.

Union Trust Company's President

EDWIN GODFREY MERRILL has been elected president of the Union Trust Company, to fill the vacancy caused last year by the death of John W. Castles. This company, organized in 1864 and one of the largest and most successful institutions of its kind in New York, has a capital of $1,000,000, a surplus of over $8,150,000, and deposits of nearly $60,000,000, and is characterized by conservative management. The late Edward King was its president for thirty-five years. Since the beginning of last year Mr. Merrill has been first vice-president of the Central Trust Company. He is thirty-six years old, was born in Bangor, Me., and was graduated at Harvard in 1895. Six years later he was made a partner in his father's banking firm of Merrill & Co. in Bangor, and at his father's death a few months later became the head of the firm. In 1903 he organized the Merrill Trust Company, which took over the banking business of Merrill & Co. For nearly six years he was president of that company, with which was merged in 1908 the old Veazie Bank of Bangor, of which he had been president since 1905. While at the head of the Merrill Trust Company he was a director of four smaller companies in Eastern Maine. In January of last year he left Maine for New York to take the office of vice-president of the Central Trust Company. He is a member of the finance committee of the Charity Organization Society of New York and a director of several corporations, a majority of them doing business in New England. Among the trustees of the Union Trust Company are James Speyer, W. Emlen Roosevelt, Adrian Iselin, Jr., Robert W. Goelet, Amos F. Eno, V. Everit Macy and M. Orme Wilson.

....The output of pig iron in March was 2,615,261 tons. In the last six months 15,403,800 tons have been produced, and it is probable that the total for the calendar year will exceed 31,000,000.

....Fifty per cent. of the spindles in Southern cotton mills are idle. The reduction of output in New Bedford and Fall River is estimated to be about 20 per cent. This curtailment is due to the inability of merchants to obtain for finished goods prices commensurate with the sustained high price of raw cotton.

....The Controller of the Currency has approved the increase of the capital stock of the Fourth National Bank of this city, so that the bank now reports a capital of $5,000,000, a surplus of a similar amount, and net profits of $614,507, making a total working capital of $10,614,507. The deposits are now $32,669,460, and its resources are $43,905,768. The president of the Fourth National Bank is J. Edward Simmons, president of the Chamber of Commerce, the vice-president is James G. Cannon, and Charles H. Patterson is cashier.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, APRIL 21, 1910 No 3203

Survey of the World

Legislative Corruption in New York

The trial at Albany of Senator Allds upon charges made by Senator Conger is now to be followed by a thorough investigation concerning corruption in the Legislature of New York. On the 11th inst., Governor Hughes transmitted to the Legislature a preliminary report from Insurance Superintendent Hotchkiss relating to his recent inquiry about the "legislative expenditures" of the fire insurance companies. The Superintendent, Governor Hughes said in his special message, had come upon certain suggestive facts apparently lying outside his official cognizance and of a character to be dealt with adequately only by the Legislature. He continued:

"The revelations in the inquiry recently conducted by the Senate and the facts brought to light by the Superintendent of Insurance make it imperative that there should be a thoro investigation with respect to legislative processes and as to the corrupt practices which have been effectual in advancing or blocking legislation. It is not necessary for me to review these disclosures or to attempt to appraise their cumulative effect. It is sufficient to say that they have caused every honest citizen to tingle with shame and indignation and have made irresistible the demand that every proper means should be employed to purge and to purify. It is the high privilege of the Legislature, in the discharge of its obligations to itself and to the people of the State, to follow the salutary action already taken in its upper branch by appropriate steps for the exposure and destruction of combinations and conspiracies against the just use of the lawmaking power, and by providing suitable protection against the recurrence of such abuses. This is a promising opportunity to pursue the opening trails of corruption, to reveal illicit methods and agencies, to uncover the perfidious influences which have dishonored the State, and thus to aid in securing the wholesome exercise of its beneficent authority."

We had not, he added, exhausted available methods of protection against traffic in legislation and chicanery in dealing with bills. No subject deserved more thoro consideration to the end that the opportunities of those who are willing to buy legislative favor or to use representative powers for personal profit should be limited to the utmost degree:

"It may be impossible wholly to eradicate these evils, but to the extent that the nature of the illicit intercourse is understood and the methods and instrumentalities which have been successful are exposed, there may be intelligent effort at remedial action through both statutes and legislative rules. The time is ripe, in my judgment, for a full and painstaking inquiry to expose the worst of public wrongs and to prepare the way for needed improvements in our laws and legislative processes. I therefore recommend an immediate, impartial, thoro and unsparing investigation into legislative practices and procedure and into the use of corrupt or improper means for the promotion or defeat of legislation."

By unanimous vote the Senate, on the 14th, adopted a resolution providing for a comprehensive investigation by a joint committee of three Senators and five representatives. Similar action will be taken by the Assembly, or House. The committee is to report on or before March 1, 1911. Superintendent Hotchkiss's report refers to the evidence that the fire insurance companies in six years expended at least $150,000 in connection with legislation at the capital. After speaking of the main points in the testimony, he says:

"In short, while absolute proof showing the transit of money from the bank account of an insurance company into the hands or the bank account of a legislator is lacking, the record of the investigation as thus far made up warrants the statement that during the last decade, particularly in the first five years of such decade, a system of bill killing and law getting has existed which is a reproach to the people

of the State. That such system existed prior to 1900 is also apparent from the facts developed."

He refers to the books of a brokerage firm, in which were found the accounts of nine prominent legislators and four other men connected with legislative affairs. These accounts warrant a suspicion that the firm was a clearing house for financial transactions connected with legislation. The dates of alleged investments and of cash withdrawals, together with the profits obtained by sales far above market prices, suggest operations of an unusual and suspicious character. He had no power to make an exhaustive inquiry, but the records are in his possession. One witness examined by him, a lobbyist who expended the fire insurance companies' fund, has moved to Canada. ——Because $1,000 of this fund was paid to George W. Aldridge, now Republican candidate for Congress in the Rochester district, where a special election is to take place this week, the campaign in that district has attracted much attention. E. N. Foss, the Democrat recently elected in Massachusetts, has been making speeches for Havens, the Democratic opponent of Aldridge, his arguments relating almost exclusively to the tariff. Samuel Gompers, president of the Federation of Labor, has written a letter in which he urges all the union men in the district to vote for Havens.

Mr. Bryan's Jefferson Day Letter

Some days before the Jefferson Day dinner at Washington, on the 13th, a letter to be read to the assembled Democrats was received from Mr. Bryan. As it had been postmarked at Lincoln, Neb., and because parts of it were not regarded with favor by certain prominent Democrats, there was an inquiry as to its authenticity. Mr. Bryan's brother in Nebraska informed the committee that the letter had been written by William J. Bryan in Brazil, forwarded to him at Lincoln, and sent by him from that city to Washington. The following part of the letter was not approved by some Democrats :

"President Taft, in his Lincoln speech at New York, February 12th, attributes present high prices mainly to the increase in the production of gold and the consequent enlargement of the volume of money. This unexpected indorsement of our party's proposition in 1896, when we demanded more money as the only remedy for falling prices, is very gratifying. How valuable that admission would have been to us if it had been made during the campaign of that year, when the Republican leaders were denying that the volume of money had any influence on prices and asserting that it did not matter whether we had much money or little, provided it was all good! We may now consider the quantitative theory of money established beyond dispute and proceed to the consideration of other questions. But the President and his predecessor have admitted the correctness of the Democratic position on so many questions that further argument is hardly necessary on any subject; we may now take judgment against the Republican party by confession."

Mr. Bryan also wrote that it seemed likely we were to win a victory over the Meat Trust. Monopoly prices had provoked a popular protest. It was not unnatural that the people should resort to a boycott, but he was sure that in the end they would find legislation against the Trust more satisfactory than abstinence from meat. At the same dinner a speech by John Temple Graves was regarded as an offer of union from Mr. Hearst's Independence League party, altho conditions were attached. "We can see," said Mr. Graves, "an opportunity for united action. We are ready to accept a Democratic party that is not half Bryan and half Belmont—half Hearst and half Ryan."

Governor Patterson Pardons Colonel Cooper

Gov. Malcolm R. Patterson, of Tennessee, has pardoned Col. Duncan B. Cooper, who was found guilty (with his son Robin) of killing ex-United States Senator Edward W. Carmack, on November 9, 1908, in the street at Nashville. This has caused great excitement in the State. Colonel Cooper and his son were convicted a year ago and sentenced to be imprisoned twenty years. Appeal was taken. On the 13th inst., the Supreme Court of Tennessee (voting three to two) confirmed the judgment of the lower court as to the father, but ordered a new trial in the case of the son. Governor Patterson, immediately, before the reading of the opinions was concluded, pardoned

the father, writing his reasons as follows:

"Being thoroly familiar with the record, having read all the testimony and testified to certain facts within my personal knowledge, it is neither desirable nor necessary to delay action for petition to be presented, asking executive clemency. In my opinion, neither of the defendants is guilty. They have not had a fair and impartial trial, but were convicted contrary to the law and evidence. The action of the Supreme Court in vacating the judgment as to Robin Cooper leaves the sentence of final conviction as to his co-defendant. The proof showed that Robin Cooper killed the deceased, and that D. B. Cooper did not fire a shot. Without reflection upon the court, it is inconceivable to my mind and repugnant to every principle of justice that a man should be found guilty of murder who was not in a conspiracy to kill and who in fact did not kill."

G. T. Fitzhugh, of counsel for the State in the trial, characterized the Governor's action as disgraceful in its haste and shocking to all sense of decency. In a published statement he added:

"Sworn to execute the laws as construed by the highest court, the Governor, without a petition from any one, tramples the law under foot and sets aside the court's decree for a cold-blooded murderer, whose influence with the Governor is and has been far more potent than the interests and safety of the people of this great Commonwealth."

Colonel Cooper was the close personal and political friend of Governor Patterson. It is said that Patterson's victory over Carmack in the primaries for the Governorship, not long before the killing of Carmack, was due mainly to Cooper's influence. Patterson then was leader of the anti-prohibitionist forces and Carmack was at the head of the prohibitionists. Carmack, when he lost his life, was editor of the *Tennesseean,* and had published editorial articles which deeply offended Cooper. It is expected that Patterson will be a candidate at the approaching primaries for re-election in November. In three years and two months he has granted 956 pardons, and 152 of these were given to persons convicted of murder.

The Pittsburg Bribery Cases

No additional indictments were reported at Pittsburg last week, and only one confession was made in court. This was offered by C. D. Tilbury, formerly a Councilman but now a resident of St. Paul. He said he had received from Charles Stewart $200, which he regarded as a loan. It had not been repaid, and recently he had decided that it was intended to be a bribe. Frank N. Hoffstot, president of the Pressed Steel Car Company and of the German National Bank, declined to go from New York to Pittsburg (where he has been indicted), and application for his extradition was made to Governor Hughes. There was a hearing at Albany, where he appeared before the Governor with counsel, claiming that he could not rightfully be extradited. The Governor's decision was reserved. Counsel for other indicted men sought to invalidate all of the indictments by attempting to prove that Mr. Nesbit, foreman of the grand jury, was not legally qualified to act as a juror. Judge Fraser has decided in favor of Mr. Nesbit. It is said that there will be no appeal from this decision at present, but that the alleged disqualification of the foreman will be taken up when the accused men are tried, with the hope of making such a use of it that the defendants can take advantage of the statute of limitations, which will soon be at their service. It is expected that a person said to be more prominent in business than Mr. Hoffstot will be indicted for his connection with the payment of $52,500 in New York to Charles Stewart for the passage of ordinances in the interest of three banks.——Mayor Kniffen, of Wilkesbarre, Pa., in a published statement, says he is convinced that the commission form of municipal government is preferable to the ordinary form. He offers to resign if the people of the city desire to make the experiment and will obtain authority to do so.

The Islands

Agents representing the Dillinghams, of Honolulu, have bought from the Government, in the Philippines, 20,000 acres situated in Laguna Province (Luzon), and including the friars' estate known as Calamba. The land, for which about $400,000 was paid, will be used for a sugar plantation.——In the House, at Washington, on the 14th, the resolution of Representative Martin, calling upon the War Department for

information concerning the sale of 55,000 acres of the San José friars' estate to persons who, it is alleged, represent the Sugar Trust, was tabled by a vote of 144 to 121, the Committee on Insular Affairs having reported that the information had been received by its chairman. Two Republicans voted with the Democrats in the negative. The correspondence shows that inquiries as to the land were made at first by John Henry Hammond, a member of the law firm which includes the President's brother and of which Attorney-General Wickersham was formerly a member; also that, on account of these relations, the work was transferred to another firm. An opinion given by the Attorney-General permitted the sale of so large a block of land to one buyer. Mr. Martin asserts that a part of the desired information has been withheld. He gives notice of his intention to introduce another resolution. —— President Gomez has made Morua Delgado, a negro, Secretary of Agriculture and Commerce in his Cabinet. Señor Delgado was formerly President of the Senate.

Countries South of Us

A series of earthquakes, beginning on the 14th, destroyed much property in Costa Rica, especially in the cities of San José and Cartago. There were sixty-two shocks in three days. The banks were closed, business was suspended, and thousands of panic-stricken people fled to the hills.——The original plans for the Panama Canal called for the excavation of 103,795,000 cubic yards of material. This is the quantity already excavated, but 71,000,000 yards remain to be taken out, because the modified plans provided for a wider and deeper canal. More than 5,000 tourists have visited the Zone this season.——At the beginning of last week it was thought at Washington that war between Ecuador and Peru was close at hand, but at the end of it there was a prospect of a peaceful settlement of the dispute. Much depends upon the attitude of Chili. Demonstrations hostile to Peru and in favor of supporting Ecuador continue to be made at the capital of Colombia.——Ignacio Mariscal, for more than thirty years the head of Mexico's Department of Foreign Relations, and a lifelong friend and adviser of President Diaz, died on the 16th, of pneumonia. ——The American Minister in Mexico, Henry Lane Wilson, asserts that persons hostile to himself and to the interests of the United States have published misleading reports of an address which he made recently at a banquet given to him by the American colony. It was alleged that in his remarks he commended the Aztec and Toltec blood and influence and spoke in an uncomplimentary way of the Spanish element in Mexico.

Roosevelt in Europe

Gifford Pinchot, former Chief Forester of the United States Government and dismissed by President Taft for insubordination, met Mr. Roosevelt at Porto Maurizio. The two spent two days in conference, mostly while walking or driving in the vicinity of the villa of Miss Carow, where the Roosevelt family were staying. Nothing was given out as to the results of the interview except that Mr. Roosevelt had accepted an invitation to speak at the National Conservation Congress in September. He will also take part in the Frontier Day celebration at Cheyenne, Wyo., and in the dedication of the John Brown battlefield in Kansas. At Porto Maurizio Mr. Roosevelt had a talk with ex-Mayor Phelan, of San Francisco, in regard to the California situation. After a day spent at Venice, partly in the company of the Duke of the Abruzzi, well known as an Arctic explorer and mountain climber, Mr. Roosevelt went on to Vienna, where he received a royal welcome, or as near to it as Austrian etiquet permitted. The Emperor had a private conversation with him for half an hour on his first call at the Hofburg and later gave a dinner at the Schönbrunn palace, where besides Mr. Roosevelt and Kermit there were thirty-five guests, members of the Cabinet and court officials. The court carriages and automobiles were placed at his disposal for his flying visits to the riding school, the parade grounds, the tombs of the Hapsburgs and other points of interest. The Papal Nuncio at the Austrian court, Mgr. Granito di Belmonte Pignatelli, called in state at the Ameri-

can Embassy and was closeted for a short time with Mr. Roosevelt. Altho nothing is known of what was said it is assumed that the visit of the representative of the Pope indicates that the Vatican bears him no grudge for the unfortunate incident at Rome.

Veto Resolutions Passed

Premier Asquith has succeeded in getting his resolutions limiting the veto power of the Lords passed thru the House of Commons. On the night of April 14, when the crisis in the great conflict was reached, the excitement in the House of Commons reached an unparalleled pitch and the Opposition members were furious at finding themselves beaten and an undesirable issue forced upon them at an unfavorable time. At 7.30 in the evening, just before the veto was to be taken under the closure rule, Mr. Asquith announced his intention of reading a statement of the policy of the Government. Mr. Balfour, ex-Premier and leader of the Opposition, interposed with the point of order that such a statement was inadmissible since there was no opportunity to reply to it. This excited a violent outburst of indignation on the part of the Liberals, Laborites and Irish, but the chairman ruled in favor of Mr. Balfour and the Premier put back his paper into his pocket and the House of Commons proceeded to vote upon the resolutions. The first, restricting the power of the House of Lords, was carried by 351 to 246. The second resolution, limiting the duration of a Parliament to five years instead of seven, was carried by 334 to 236. Later in the evening Premier Asquith, amid shouts of applause from his supporters, made his announcement. He said that it was not usual for a government to make a statement of policy regarding contingencies that had not yet arisen, but the Government was now affronted by an exceptional, perhaps a unique, state of things. The effective existence and usefulness of the Government depended upon the

THEODORE ROOSEVELT AT PALATINE HILL.
Looking down across the Roman Forum.

statutory enactment of the resolutions which had just been passed by the House of Commons:

"If the Lords fail to accept our policy or decline to consider it when it is formally presented to them we shall immediately tender advice to the Crown as to the steps which will have to be taken if that policy is to receive statutory effect. What the precise terms of that advice will be is of course not right for me to say now, but if we do not find ourselves in a position to insure statutory effect being given to our policy we shall either resign or recommend the dissolution of Parliament.

"In no case could we recommend dissolution except under conditions securing that in the new Parliament the judgment of the people as exprest at an election will be carried into law."

This declaration of policy was received with jeers and hisses by the Unionists and Conservatives and when the Premier stated that he could not say what the Government would do in case the Lords rejected the resolutions, the Opposition shouted, "Ask Redmond!" Mr. Balfour in his reply denounced the tactics of the Government in securing the support of the Irish by a promise of home rule and in bringing the Crown into the conflict instead of protecting it. He concluded with the words:

"The Premier has bought the Irish vote for his budget and bought it successfully, but the price he has paid is the dignity of his office and of all the great traditions of which he ought to be the guardian."

The session adjourned in a tumult, the Opposition calling the Irish "traitors" and "dynamitards" and the supporters of the Government retaliating in kind. It was with difficulty that some of the members were restrained from engaging in physical conflicts. The effect of this action is to force the issue of the House of Lords into the forefront and if a dissolution occurs soon, the Opposition will have to make the defense of the House of Lords its principal plea and will not be able to bring such questions as tariff reform and national defense so effectively as in the recent elections.

French Labor and Politics

Marseilles is involved in another serious strike originating with the naval reservists, who objected to the employment of so large a proportion of foreigners on vessels bearing the French flag. They claim that the steamship companies have violated the navigation law requiring that on French vessels all the officers and at least three-quarters of the crew shall be French. The dockers and draymen joined in the strike and the bakers and other unionists stopped work in sympathy. A general strike is liable to be declared at any moment, which would tie up not only the shipping but also much of the internal commerce of France. With the aid of the bluejackets part of the vessels in the harbor of Marseilles have been able to get off, but others have not found it possible to secure adequate and competent crews, and passengers in some cases have refused to embark under these circumstances. French and German steamers are loading at Genoa instead of Marseilles. M. Chéron, Under Secretary of State, is at Marseilles trying to make peace and to insure the departure of vessels. A regiment of cuirassiers, a battalion of Alpine chasseurs, and 600 gendarmes have been sent to Marseilles to keep order.——The scavengers or *boueux* of Paris are on strike and the cans of garbage remain for days upon the streets. The amount of disease resulting from the filthiness of the city is likely to be greater than that caused by the inundation. The cart drivers are striking in sympathy, and refuse to handle the garbage. In some cases, where the cans have been collected by outside assistance, the strikers would not permit the refuse of the city to be carted away, but have overturned the carts on the boulevards, very much to the annoyance of the residents in the quarter.——The electoral campaign now going on is marked by two novel features. There is now an open and active clerical party working for representatives favorable to Catholic interests, and for the first time the suffrage movement has become apparent in France. A number of women have entered the field as candidates for members of the Chamber and a program of reforms has been adopted, including, besides the right to vote, the removal of injustices of the French law. The suffragists demand equal pay for equal work, hygienic schoolhouses and hospitals and the elimination of that provision of the civil code which requires a wife

to obey her husband. One of the candidates, Madame Durand, who is running against Georges Berry in the Ninth Arrondissement of the Seine, at one of her political meetings brought upon the platform a male idiot, whom she explained had the right to vote while she had not.

Chinese Missions Destroyed

All of the foreign missions in Chang-Sha, the capital of the Province of Hu-Nan, are reported to have been destroyed by a mob on April 14. The missionaries and their families took refuge in the Governor's yamen, which was also attacked and burned, but all the foreigners escaped in safety to Hankow. Two British gunboats from Hankow have gone up the Siang-Kiang to Chang-Sha, and American and French gunboats have also been sent into the interior, but may not be able to make their way so far up the river as the British boats. The riots originated in the scarcity of rice, which the people believed was being cornered by the Chinese officials. The Chinese soldiers were helpless to protect the city from the mob, which burned the rice stores on the principal streets and the mission buildings with them. There has been a great deal of agitation against all foreigners, as there was before the Boxer outbreak. The missions known to be destroyed are the Wesleyan China Inland Mission of five Englishmen; the Methodist China Inland Mission, headed by Dr. Frank G. Keller, Yale, '92, with several assistants; the Norwegian Mission; United Evangelical Mission, in charge of the Rev. C. Newton Dubs, of Harrisburg, Pa., whose wife was the first white woman to settle in Chang-Sha; and the Yale Mission College and its hospital, which is maintained at a cost of about $13,000 a year by Yale undergraduates and alumni. There are five persons engaged in the Yale medical and educational work. It is said that 24,000 people took part in the rioting, and that the Governor of Hu-Nan and his son were killed. The Chinese soldiers at Chang-Sha, instead of protecting the officials and foreigners, took part in the looting. The refugees lost all their personal effects.

Foreign Notes

The Turkish Government is reported to have suppressed the revolt of the Albanians and, by promising investigation and redress of their grievances, induced them to disperse to their homes. If the victory of the Government is as complete as it is said to be the new administration is to be congratulated, for the Albanians are an intractable people and have been accustomed to having their own way. Under the old régime the Sultan showed them great favor, for he recruited his bodyguard from these mountain tribes. Consequently they have not been pleased by the establishment of a constitutional government and manifested their displeasure by refusing to pay the taxes it imposed. When the Government insisted they revolted and attacked the officials, one of whom fell mortally wounded. Fourteen battalions were dispatched from Constantinople the first of the month, and several sharp engagements have been fought in the Albanian mountains.——The plan for reforms in the Kongo, prepared by the Belgian Colonial Ministry, have been approved by King Albert and will go into effect on July 1. The reforms include a reduction in the taxes, which will be collected in money and not paid by labor; the substitution of native for white officials; the restriction of obligatory labor on the part of adults to the works dedicated to the improvement of their own conditions, and the suppression of polygamy.——The new Ministry under the leadership of Signor Luzzatti will adopt a more pronounced anti-clerical policy than that of Signor Giolitti which it replaces, but it is doubtful whether it will long remain in power. The precedence of civil over religious marriage and complete secularization of the public schools are among the measures proposed.——The lockout in the building trades of Germany, involving 100,000 or 200,000 workmen began on April 15. About 10 per cent. of the employers refused to join in the lockout, but the manufacturers of building material have decided to refuse to provide them with material. The trades unions are said to have $3,750,000 in strike funds and will levy an assessment of a mark or half a mark a day on the men who continue to work.

What Is the Matter with Milwaukee?

BY VICTOR L. BERGER

[Mr. Berger is one of the ablest Socialists in the United States, and has long been the leader of the Socialist party of the Middle West. Since 1892 he has been the editor of *Vorwaerts* and the *Social Democratic Herald*, both published in Milwaukee. He was the Socialistic candidate for mayor of Milwaukee and Congress in 1904 and received five votes for United States Senator in the same year. This year he was elected alderman. For THE INDEPENDENT'S comment on the Milwaukee victory see our last week's leading editorial.—EDITOR.]

FOR the first time in the history of this country the Socialists have carried a large city. They have carried Milwaukee, a city of nearly 400,000. This was done after many years of struggling and gradual but substantial growth. For 1898 we polled only 2,414 votes; in 1900 we polled 2,473 votes; in 1902, 8,453 votes; 1904, 15,056 votes; 1906, 16,837 votes; 1908, 20,887 votes, and 1910, 27,622.

The Socialists of Milwaukee feel proud of this. And they have the more reason, when they look back upon the kind of campaign that was made against them.

The Socialist ticket was elected after a campaign of abuse and vilification such as has never been equaled in Milwaukee.

The Socialists were accused of preaching "bullets, not ballots"; accused of favoring a bloody revolution and of intending to plant the "red flag of bloodlust" upon the city hall. The voters were warned that the "many headed reptile of Socialism threatened the home, the religious beliefs of our people and their liberty before God and man."

These accusations were repeated day after day and night after night from the platform. They were printed day after day in bold, black type in advertisements in the daily papers. They were made the text of many editorials, in all kinds of periodicals.

Besides, almost the entire daily press—six English, two German and two Polish papers—seemed to agree that the election of the Socialist ticket would destroy the "credit" of the city and paralyze its further growth.

VICTOR L. BERGER.

However, we have the satisfaction that the chief shrieker, the Republican candidate, had only 11,262 votes. The Democratic nominee polled 20,513 votes. But the Socialist, Emil Seidel, received 27,622.

We also elected all the seven candidates for aldermen-at-large, and fourteen ward-aldermen out of twenty-three.

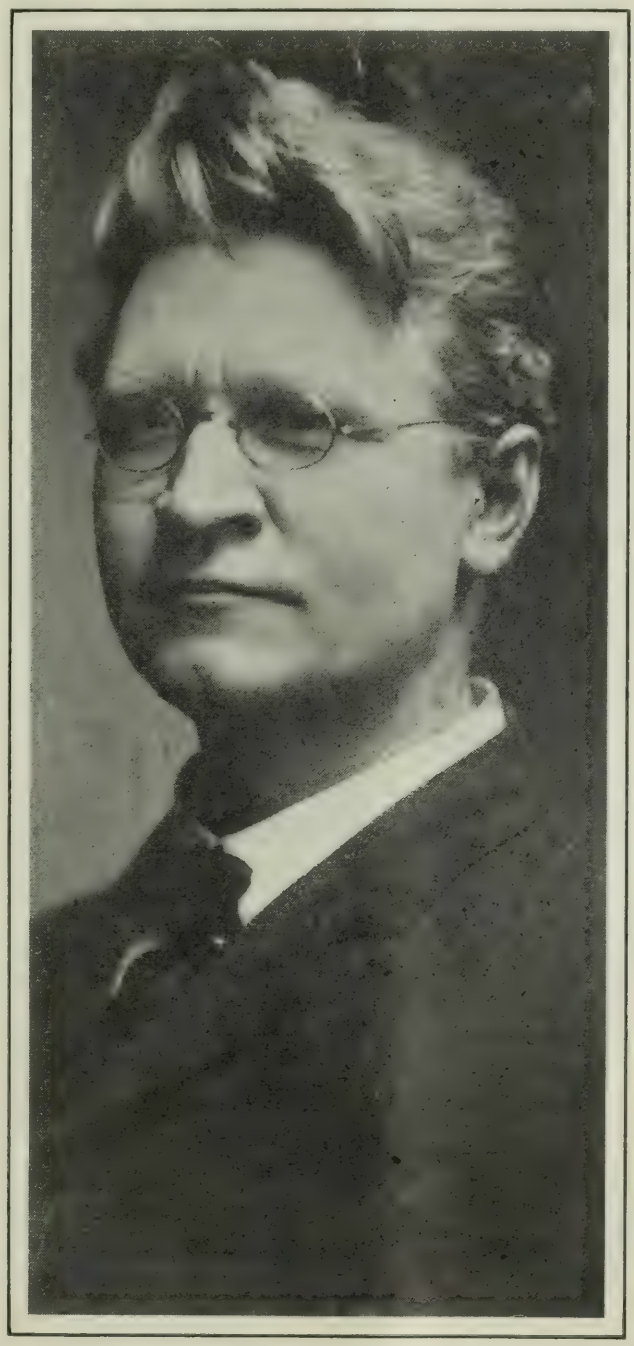
Among them was the rock-ribbed Fourteenth Ward, on which the Democratic party was supposed to have a perpetual mortgage, because the inhabitants are all Poles and Roman Catholics.

However, altho the priests had, as usual, their political say on the Sunday before the election, in some way or another a cog slipped and the majority of the ballots in the Fourteenth Ward were "red," not "black."

The Democratic forces in all probability would have been beaten quite as badly as the Republicans, if many "good"

Republicans had not voted for Mayor Rose's Crown Prince, Schoenecker, because they feared the success of the Socialists.

As for the nationality of our voters, they are overwhelmingly American. As a rule the Socialists cannot get either the German or the Pole of the first generation—to say nothing of the other immigrants. We have to wait for the second, the American born generation, educated in the public schools, or, at least, in a parochial school.



Our entire method of propoganda is and has been in the past, the use of literature. We distributed about 750,000 pieces in this campaign.

Now the very next question before us is the problem of applying the international Socialist philosophy to present conditions and to Milwaukee.

We must now show the people of Milwaukee and of the United States that the philosophy of international Socialism can be applied and will be applied to a local situation, and that it can be applied with advantage to any American city of the present day.

As to the fears about the Socialist party, they are ridiculous.

Since election day is over nobody in Milwaukee is afraid of the Socialist party.

EMIL SEIDEL,
Socialist Mayor of Milwaukee.

The workingmen surely are not afraid. In fact, workingmen, organized and unorganized, constitute the overwhelming bulk—more than 95 per cent.—of the Socialist party.

The workingmen see in Socialism their only hope and guiding star for the future. They see in Socialism their deliverance from the present system, which keeps them in ignorance, misery and degradation—and exploits them both by low wages and high prices.

The workingmen know that only as Socialism is introduced and instilled into our public life and public institutions, will trust rule, starvation and degradation vanish.

So more and more every year the workingmen from the solid phalanx of the movement. In Milwaukee they are almost a unit for the Socialist party.

So much for the workingman.

Now, are the small business men afraid? They are not.

The small business men see that they are economically doomed by the ruthless competition and the overwhelming power of the trusts.

And they know that, after all, the great mass of the working people stands nearer to them in methods of thought, mode of life, and common sufferance than the capitalists.

The small business men are sure that

their fate is tied to the fate of the proletariat. They are sure of the sympathy of the working class. And the working class to no small degree is sure of their sympathies.

Some people said, however, that in case of a Socialist victory, Socialism would be tried in Milwaukee, law and order would be abolished, and trades unionism, strikes and boycotts would run amuck.

It is true that certain of our big business men were badly frightened.

Yet it ought to be clear to every thinking man that we cannot abolish capitalism in Milwaukee alone or in Wisconsin alone.

Moreover, every thinking Socialist knows that capitalism cannot and will not be abolished in one day. We all know that it can only be abolished gradually.

We all understand that, even after its downfall, remnants of it will remain for a long time to come. Remnants of feudalism even now are still strong in England, France and Germany, altho feudalism broke down a long, long time ago. The capitalism has taken its place.

And as to law and order: While the Socialists have not made the laws and are not responsible for the present order or disorder, even our opponents must concede that we obey and carry out the laws, and make our opponents obey them as far as we can.

Socialists all over the globe have always complied with the laws of their respective countries.

At the same time, we admit that we will not give the laws that hateful and oppressive construction and interpretation toward the working class which they usually receive under capitalistic administrations.

We also declare that we will change and abolish all the oppressive laws at the first opportunity we get.

And it is, moreover, clear to every observer that the Socialist party is a great organizer. And organization always means order. Socialism in itself never creates disorder—it stands for a new order and a higher order.

Why then, should any sane man be afraid of the Socialist party?

The effect of Socialism upon the laboring class can be best studied in the trades unions of Milwaukee.

We have had hardly any strikes in Milwaukee during the last six or seven years. In fact, we had many less strikes than any other city of half its size or one-fourth its industrial importance.

The main reason for the rare occurrence of strikes in Milwaukee is very simple.

The Socialist has made the present industrial system a study.

He knows very well that the individual employer is about as much the product of the present system as the individual workingman. He knows that the capitalist is as much bound by it as the proletarian. The Socialist knows what the so-called employer can do and what he cannot do.

The Socialist knows what the wage-worker may ask and what he may not ask under the present system.

The Socialist loves his home, his wife and children. He wants to get as much as possible for them. But at the same time, knowing the capitalist system, he knows that he cannot go too far without destroying his own home.

And moreover, the Socialist has the social conscience. He looks at everything from the standpoint of the working class; from the standpoint of the community; from the standpoint of the craft to which he belongs.

I can say from actual experience that at times the Socialists of Milwaukee have opposed some strikes that have been declared in this city.

True, after a strike has once been declared by the majority, the Socialists have been the most active and ardent supporters of it and the last to give up when the strike was lost. But they rarely start a strike.

Then why should anybody be afraid of many strikes and boycotts in Milwaukee in case of a Socialist victory?

The Milwaukee trades unions have proven to be a factor for order, not for disorder.

Trades unions are absolutely necessary for the protection of the workingmen, organized and unorganized.

Even our adversaries and opponents, if they are honest, admit that the influence of the Socialists has been for good;

that it has been wholesome; that the very presence of our men has acted as a sort of public conscience, represented in the meetings of the common council and the county board.

We did not get any votes from the capitalist class as such, or from the hypocrites who decry sin in the open and practise it secretly.

We told them plainly that we scorned the votes of men who prefer hold-up men in control of the city government to honest working men.

And we want it understood that we did not ask anybody to vote for our candidates only because they are honest.

Socialists aim at higher things than simply not to steal when they are in office —and not to be bribed when a franchise is to be given out.

Honesty, that is, the capacity not to steal and not to be bribed, when there is the temptation, may be the highest ideal that any capitalist party has set up, but has not reached.

With us this kind of honesty is the first and smallest requirement.

But we want to expose the false pretense that the Socialists and trades unions will create constant disorder because of the victory of our party in Milwaukee.

We want it understood that we shall have better order in every respect under a Socialist administration than we now have in any city in the country.

The realization of our limitations in administering the affairs of Milwaukee should not, however, warrant the assumption, that the complete emancipation of labor from capitalism is any less our aim and object. Therefore this is our answer to the question:

What is the matter with Milwaukee?

The working class here is gradually awakening to the possibilities of modern achievements in production. And that their proper administration will give to all the race security, peace and the necessities and comforts of life.

MILWAUKEE, WIS.

The Present Situation in China

BY SHERIDAN PITT READ

[Mr. Read is an old contributor of THE INDEPENDENT and was formerly United States Consul at Tientsin, China. We have shown his article to Mr. Zumoto, late editor of the *Japan Times,* who replies to it in the article which follows this.—EDITOR.]

THE avowed policies of our Government with respect to China are twofold, namely, under no circumstances to seek "zones of influence" either by acquiring territorial concessions at the treaty ports (our last relinquished concession was at Tientsin*, which, on abandonment by us, was promptly snapped up by Germany), or by demanding special jurisdiction over large areas of Chinese territory. With regard to concessions at treaty ports, it should be mentioned *en passant* that the granting of such concessions has been recognized by the Chinese Government—as being essential for the safety of foreigners in their intercourse with Chinese and in accord with the principle of extra-territoriality still operative within the Celestial Empire—since the entrance into Peking in 1860 of the English and French troops.

In Shanghai the concessions which satisfy the above-mentioned exigencies are in the hands of the English and French—the English concession being by far the larger and more important. In Tientsin, England, France, Germany, Russia and Japan have concessions. Hankow is likewise provided with a number of these concessions which, grouped together, resemble the miniaturing of the great nations of the world, and the writer assures the reader that the differences—"squabbles" might be the better word to use here—continually brewing and being settled between the respective nationalities of these concessions necessitate an amazing amount of diplomatic *finesse* on the part of the consuls and their municipalities. England

*This took place in 1896, while the writer was Consul at Tientsin, and was at the instance of our Legation at Peking, Col. Denby, Minister.

never fails to have a concession at each treaty port. The other great Powers are provided with them more in accord with their commercial dealings.

As for "zones of influence"—it may be mentioned briefly that the English are entrenched at Wei-hai-wei, the Germans at Kiaochau and Tsingtau, the Japanese at Tairen (Dalny), Port Arthur and up

of operations at Harbin. Latest telegraphic dispatches, announced in the Paris edition of the New York *Herald* on the very date of this writing, state that Japan and Russia have extended their convention of 1906 so as to include specifically Manchuria (already theirs it would seem from their recent actions in opposing the building of the Kin-chow-

the railway (built by Russia) thru the Liaotung Peninsula well into the heart of Manchuria, at which point the Russians come in for their "zone," stretching northward along this unfortunate railway (which was the real cause of the recent war between Japan and Russia) as far as the Siberian frontier, with base

Aigun Railway by China, in the financing of which the United States has been particularly interested) and Mongolia. So close and intimate are the terms of this convention that it is said to be tantamount to an alliance. This latest phase, let it be said parenthetically by the writer, who has been following this North China

situation for a period of nearly a score of years, will doubtlessly result in the abandonment to Japan of all Manchurian interests, inasmuch as Russia has no possible outlet to the sea in this direction with Japan forever blocking the way. As *quid pro quo* for this obliging move by Russia in behalf of Japanese interests, Japan will accord to Russia free rein in Mongolia. With respect to this contingency, the significant fact should not be overlooked that the great Caravan Tea Route, over which for many decades Chinese tea has found its way into Russia, extends from Kalgan across the Gobi Desert in Mongolia to Urga and Kiachtka in Siberia. This tea is bought and packed at Hankow by the Russians themselves, who handle it at every point of transshipment. The Belgians, who, it is often said, have been acting thruout in behalf of Russia, have already completed the trunk line—known as the Lu-Han line—from Hankow to Lu-Kou-Chiao (6 miles from Peking). The Chinese themselves have continued it to Kalgan, a distance of 120 miles northwest of Peking. It is obvious, therefore, that if Russia can have, by the grace of Japan, free hand to lay rails over this great caravan route from their trans-Siberian line at Kiachtka via Urga to Kalgan, she will in this eventuality have, with the exception of the above mentioned 120 miles of railway owned by China between Peking and Kalgan, a thru railway system from St. Petersburg to Hankow—the Chicago of China—on the Yangtze.

Even before the building by the Russians of the trans-Manchurian Railway to Port Arthur and Dalny, Russia strove to obtain a concession from China to construct a railway from Kiachtka via Urga and Kalgan to Peking, but the insurmountable little hitch in her plan was over the section of road between Kalgan and Peking, since the great Powers thru their representatives at Peking effectively opposed letting Russia obtain railway access to the Chinese capital. This bit of railway now having been built and equipped by China herself—proving incidentally China's ability in railway construction—Russian diplomacy will find a way to lease same in good time, but in the interval she returns, so to speak, to her first love, which is to link her trans-Siberian line with the heart of China—and handle, in addition to tea over this caravan route, which is the greatest trade route in China, all other classes of merchandise, namely, sundry products and cereals going north and sheep and goat skins, wool and other raw materials going south, with which the 3,000 camels passing each way daily are heavily laden. This *dénouement* is so obvious that it is set forth here not as a prophecy but as a certainty.

Japan and Russia intend to exclude the world from North China. Their recent concerted moves, brought to light thru Secretary Knox's wise, far-sighted proposition for the neutralization of the Manchurian railways, are proofs of this sweeping assertion.

Japan, already controlling Korea, intends to dominate Manchuria and the Gulf of Pechili, and Russia, by means of the railway across the Gobi Desert, above outlined, will likewise dominate Mongolia and spread her influence all along to the very heart of China. This will also strengthen her position in the direction of Tibet.

Are the United States, England and Germany asleep and oblivious to what is transpiring, and which, if allowed to be consummated, will lead to the greatest war in history?

The United States has sedulously kept aloof from all this, but our destiny in the Far East and in all countries whose shores are laved by the Pacific is impelling us to take part in these passing events.

Our second policy in China, for the sake of the continued peace of the world, has been to maintain the "open door" thru diplomatic representations to the Powers that this is the sole means of preserving the integrity of China as a nation, and of assuring equal opportunities for trade and participation in loans to the world alike.

With our avowed intention to keep our hands off China's territory, but with our equally avowed intention to participate in international trade matters, loans, etc., affecting China, let us take a passing glance at how we stand today.

In Manchuria, Japan and Russia, because of their joint control of the rail-

way originally built by Russia from the Siberian frontier to the apex of the Liaotung Peninsula, are attempting to thwart the Chinese Government in building another road that would meet the commercial needs of Manchuria in many ways. This is the Kin-chow-Aigun Railway, above refered to, in financing which both America and Great Britain were to have participated, and with regard to which it is today stated from Peking that owing to pressure upon it, the Wai Wu Pu has abandoned negotiations. This, if true, is serious news and in a way corroborates the report of the alliance between Russia and Japan with regard to Manchuria and Mongolia to which we have already referred. Will the United States and Great Britain, in the exercise of their combined good offices, endeavor to remove this pressure from the Chinese Foreign Office in order that China may continue negotiating with regard to the building of this road as tho in no wise curtailed in the use of her sovereign rights?

In Central China, with respect to the building of the Hankow-Szechuen Railway, we have just succeeded in gaining participation in the loan by China from England, Germany and France for this purpose. But now it is given out in the press that England, France and Germany each intend to control a third part of this road. Thus we have wedged our way in as a participator in the loan, but the three great Powers above cited, it seems from this press dispatch, are to control the road when built (partly with United States money) in sections—each one-third section carrying with it special privileges belonging to a "zone of influence."

In other words we can put up our money, but can have no share in the control.

Has England inadvertently yielded to such a policy of dividing this road into "zones"? We say inadvertently because this would be at variance with her attitude, as we think we see it, toward the situation in Manchuria.

Great Britain understands as well as we do that "zones of influence," indicated by the present trend of affairs in China, would close the door.

At this juncture, therefore, the United States awaits with considerable interest the disclosure of Great Britain's attitude, and the United States furthermore trusts that Great Britain, in making up her mind as to a definite policy to be pursued with respect to this entire Chinese situation, will not lose sight of the fact that the "open door" policy is very dear to the people of our country—and that withal—"blood is thicker than water."

With England and America joined together in a policy that will uphold the integrity of China, it will be found that Germany's policy is likewise for Chinese sovereignty and the "open door."

BOULOGNE, FRANCE.

Japan in Manchuria

BY M. ZUMOTO

[Mr. Zumoto is now the Director of the Oriental Information Agency, recently opened in New York City. Before he came to this city he was the Editor of the *Japan Times*.—EDITOR.]

INFORMATION emanating from the highest quarters in Tokyo and in more than one European capital, has long since finally disposed of the rumored alliance between Japan and Russia, which seems to give Mr. Read so much trouble.

The origin of this canard appears to be the exchange of views between Tokyo and St. Petersburg in connection with the American proposals for the neutralization of the Manchurian railways at present owned and operated by Russia and Japan, and for the construction of a new line from Chinchow to Aigun, paralleling the Japanese road and bisecting the Russian road to Tsitsihar and touching the Russian border on the Amur. It would have been strange, indeed, if such an exchange of views did not take place between the two Powers so vitally af-

fected by those proposals. Nor is there any cause for surprise that these Powers should have discovered a certain community of interest in the situation created by the American proposals. This discovery naturally led to a concert of action between the governments of Japan and Russia. But, as the event has shown, that concert was severely limited and local. It was confined to the question of the neutralization of the existing railways, and the two Governments acted differently in regard to the proposed Chinchow-Aigun railway, Japan agreeing to it on condition of equal participation in financing and engineering the enterprise, while Russia absolutely opposed it on economic and strategic grounds.

How this incidental concert of action between the two Powers proves, as Mr. Read contends, that they "intend to exclude the world from North China," is more than I can comprehend. In refusing to hand over our railways in Manchuria to the control of an international syndicate nearly thirty years in advance of the stipulated date for their sale to China, Japan has simply announced her intention of conserving the advantages secured to her by treaties and other instruments which enjoy the tacit approval of all the Powers of the world.

The Japanese Government could not, indeed, have acted otherwise, without unpardonable negligence of its responsibilities. For, as Count Komura, our Minister of Foreign Affairs, recently explained in the Diet, a number of costly enterprises have been launched in Manchuria by Japanese subjects in the expectation that the existing order of things would not be disturbed before the stipulated date, namely, 1938, a period of time sufficiently long for most kinds of business undertakings.

The recognition of this fact, together with the sentimental importance which the Japanese naturally attach to the South Manchurian Railway as the only tangible result of a sanguinary struggle in which there was scarcely a family in all Japan that did not mourn for the loss of some of its members or relatives, accounts for the unanimous and unhesitating opposition which the public opinion at home presented to Secretary Knox's proposals.

The charge that Japan, acting in concert with Russia, intends to exclude the world from North China is peculiarly galling to us, because we are scrupulously adhering to the principles of the open door and equal opportunity in Manchuria and elsewhere. In spite of the chronic crusades conducted thru the press against Japan's good faith in this respect, there is not a single authenticated instance of the actual violation of the open door principle on the part of Japan.

It is still fresh in the memory of the public that the *Evening Post's* correspondent at Washington was informed at the State Department that there was not on file any protest or complaint on the matter. Too much prominence cannot be given to a timely advice, which, according to the said correspondent, "a responsibly placed person in the State Department" has offered to this effect: "Discount by 50 per cent. all alarmist reports and reserve judgment on what remains."

It may safely be claimed that, were it not for Japan's interference, the whole of Manchuria would long ere this have been absorbed into the Russian Empire. To make this clear it may be necessary to refresh the reader's memory with regard to one of the most important and interesting chapters of modern history.

It may be remembered that, taking advantage of some local disorders at the time of the Boxer trouble in 1900, Russia poured her troops into Manchuria and occupied the whole of it down to the shores of the Gulf of Pechili, treating the whole territory almost as her own province. Prior to this Russia had got the lease of Liaotung Peninsula and the right of building and operating several lines of railways in Manchuria. Attached to the railway grant were various important privileges, such as the guarding of the lines by Russian troops and the semi-independent control of affairs relating to the railway zone. Japan did not protest against either the lease of Liaotung Peninsula or to the railway grant with all its important accessory privileges, for these concessions had been obtained by legitimate agreements with China. Japan's objection was aimed at the continued military occupation of the whole of Manchuria, for which Russia

had no warrant: on the contrary she was under treaty stipulations for evacuation within certain periods of time. It was Russia's refusal to carry out these stipulations that precipitated the tension which finally ended in the disastrous war.

What has that war done for Manchuria? Japan has naturally succeeded to all the legitimate rights and privileges formerly possessed by Russia, namely, the lease of Liaotung Peninsula and the railway concession south of Changchung. Apart from that Manchuria has been completely restored to China, this being the case not only in the south but also in the north. All the troops, other than the legitimate railway guards, have been withdrawn by Japan and Russia from all parts of Manchuria, which is now policed, garrisoned and ruled by China without any interference from either of her neighbors. In other words, conditions in Manchuria have been brought down to the strictly legitimate treaty basis.

It will thus be seen that whatever autonomy China now enjoys in Manchuria—and it is complete outside the railway zone—China owes not to any exertion on her part but entirely to Japan.

Were it not for Japan, the whole of Manchuria down to the Great Wall would long since have been incorporated into the Russian Empire. Where would the open door have been then? That it is still possible to talk of the open door in Manchuria at all, is due to Japan and to Japan only. We do not want the world to feel grateful to us; all that we ask is that contemporary history be read with a reasonable degree of candor and intelligence.

Ex-Consul Read, like many another writer on the Manchurian question, seems to possess anything but a clear idea of the position Japan occupies there with reference to railway enterprises. Everybody acquainted with the recent history of the Far Eastern politics knows that Japan's position in this matter is one of special advantage fully justified by the enormous interests she has to safeguard in that part of the continent.

Japan's special position mentioned above is based on the pledge which China gave to Japan in the so-called secret protocols to the Peking Treaty of December 22, 1905. The pledge runs thus:

"The Chinese Government engage, for the purpose of protecting the interests of the South Manchurian Railway, not to construct,

LOADS OF BEAN SACKS WAITING FOR SHIPMENT AT CHANGCHUNG STATION.

CART TRAFFIC IN MANCHURIA.

prior to the recovery by them of the said railway, any main line in the neighborhood of or parallel to that railway or any branch line which might be prejudicial to the interest of the above mentioned railway."

It has been argued by not a few writers that this agreement is not binding, as it contradicts the Treaty of Portsmouth, in which both Japan and Russia agree "not to obstruct any general measures common to all countries which China may take for the development of the commerce and industry of Manchuria." If there is any contradiction between these two international instruments, the usual practice will be to read and interpret the earlier agreement in the light and under the limitations of the later one.

The limitations which Japan secured at Peking are essential for the protection of her railway rights acquired at such tremendous sacrifices in money and blood.

The objection to the Peking protocols is apparently based on the assumption that they were secretly obtained and have been studiously kept secret not only from the world at large but from the governments of the principal Powers interested. The New York *Times,* for instance, in its editorial on March 8, 1910, after referring to the Russian rejection of Secretary Knox's proposal relating to the Chin-Chow-Aigun Railway, observes: "There was some expectation that Japan might give a more favorable reply, but there crops up a secret agreement between her and China in which China agrees, etc., etc." The impression clearly intended to convey is that the Japanese Government has all these years carefully withheld from the world all knowledge of this railway agreement with China and has sprung it at the last moment upon the unsuspecting world. It may be observed in passing that in the case of the Chin-Chow-Aigun Railway Japan, as already stated, has waived her objection on condition of equal participation in the financing and management of the enterprise.

The simple truth is this. Almost immediately after the return to Tokyo of our Senior Envoy from Peking, our Government, early in 1906, took steps to communicate the text of the agreement in question to the leading interested Powers, including the United States.

Some of these Powers do not seem to have treated this communication as confidential. The text of these so-called secret protocols is, for instance, printed in Mr. T. F. Millard's much read "Amer-

ica and the Far Eastern Question" (Appendix D). Therein the author states that the document

"was communicated by the Japanese Minister for Foreign Affairs to Mr. Wilson, Charge d'Affaires of the United States at Tokyo, and by him transmitted to the Department of State under date of February 16, 1906, as a summary of certain protocols to the Peking Agreement signed by the plenipotentiaries of Japan and China."

Moreover, widespread attention was invited to this compact a few years ago in connection with a British syndicate's proposal to extend the Chinese railway to Fakumen and Tsitsihar. When the project met a determined opposition from Japan, the matter was brought up in the British Parliament, where it was officially explained from the Ministerial side that the British Government had been duly notified of the conclusion of the agreement on which Japan's opposition was based. The text of the agreement itself was then widely published in the press not only of Japan and the Far East but of the rest of the world. It is hardly necessary to add that no Power has in any way signified any objection to the agreement, which must, consequently, be regarded as tacitly approved by the Governments of the leading countries.

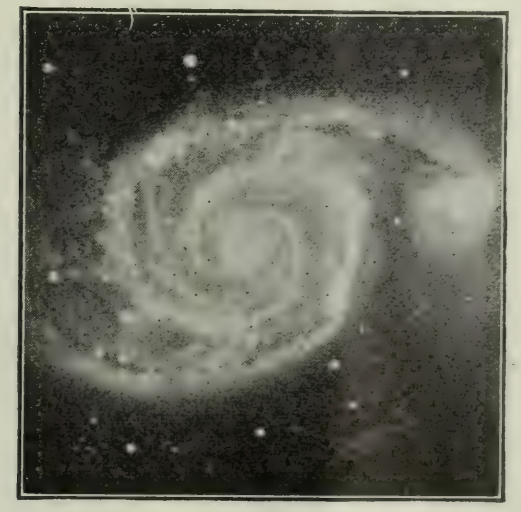
While on this topic, I may as well mention a curious contention advanced by a writer in the *Outlook* of February 12, 1910. He says: "As this secret agreement was obtained under duress . . . it cannot be regarded as binding." The portion I have omitted in the above passage as marked by dots refers to alleged contradiction between the Portsmouth Treaty and the subsequent railway agreement under consideration—a point which I have already dealt with. Now there was nothing in the conditions under which this agreement was obtained at Peking in December, 1905, that can suggest the idea of duress, unless, indeed, it be the fact that it was an agreement between a strong and a weak nation. Should this argument be accepted as sound, the result would be the invalidation of the great bulk of the existing political treaties between nations. It would certainly hold good in the case of the stipulations under which the United States holds the Philippines and dominates the West Indies.

Some of the writers who recognize the validity of the railway agreement in question refuse to admit, however, that the provisions of this agreement apply to railways like the proposed one from Chinchow to Aigun, which runs parallel to the South Manchurian line but which is separated from it by sixty or seventy miles with the river Liao between the two, and which, consequently, it is argued, will not compete with the Japanese line. Such an argument might hold good under conditions obtaining in other countries, but nobody in the least acquainted with the condition of traffic in Manchuria can fail to see that the proposed line will seriously affect the interests of the South Manchurian line not only in regard to thru traffic with Europe but still more in regard to the local business. The busiest season for the transportation of produce and merchandise in Manchuria is during the cold winter months, when, the ground and all rivers and streams being solidly frozen, the country unblessed with roads and thus unfitted for the hauling of goods in other seasons, offers unusual facilities for cart traffic. It is also the season when the farmers, who constitute 90 per cent. of the population, have plenty of time on their hands. So if you travel in Manchuria during this season, you will encounter day after day almost endless caravans of carts driven by six to eight mules and heavily laden with beans and other staple articles of produce. These carts are generally accompanied by the families of their owners, who find it almost as cheap to travel in that way as to stay at home. If you question these people where they come from you will not infrequently be surprised to discover that they hail from farms considerably more than a hundred and fifty miles inland. At Changchung, the northern terminus of the Japanese line, I was informed last spring that hundreds of thousands of tons of beans had been brought there on carts the preceding season by Chinese farmers from the vicinity of Harbin, nearly 170 miles away, because they found that mode of transportation cheaper than to send their produce by the Russian railway, which enforced prohibitive rates on the Harbin-Changchung section with the idea of attracting trade to Vladivostok.

From this it will be seen that distance is a negligible quantity in considering the

question of railway competition in Manchuria. Supposing that the Chinchow-Aigun line was built, it is quite conceivable that, if rates were sufficiently low on that line it could attract to it not only all the traffic now coming to the South Manchurian Railway from the districts lying west of it but even a portion of the traffic to a considerable distance to the east of it.

NEW YORK CITY.



Efflatus Dei

BY W. F. SPOTTSWOOD

ÆONS endless; whorl and wheel;
Whirling mist and glowing ball;
Mad, the burning planets reel;
Crashing down, the meteors fall.

Silence—there is none to hear;
Vacancy—no eye to see;
Galaxy and flashing star,
All that is, is yet to be.

Naught was here till Thought arose,
Wot and weighed this shining sand;
Till the eye, no floweret blows;
Star and sun were naught, unscanned.

Naught were matter, naught were law;
Light nor darkness, silence, sound;
Vain the mighty spiral's flaw;
Vain the circling comet's round.

Deathless matter! So the sage
Names it, in his latest lore;
Grants it neither youth nor age;
Endless dure, behind, before.

Soul of mine, till thou wert bid
All thy Maker's work to see,
Heaven and Earth in thee were hid;
God created *all* in thee.

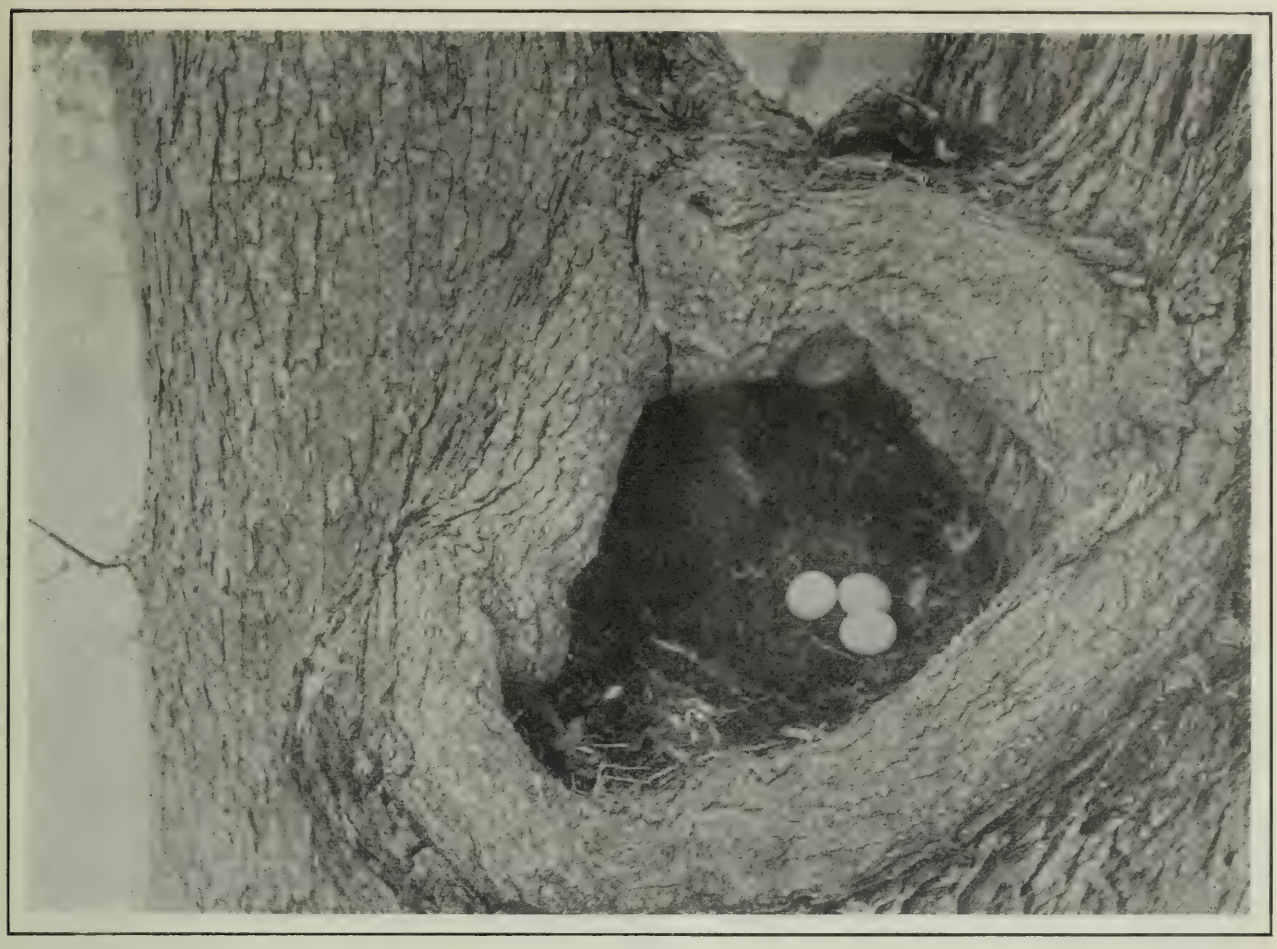
Soul of mine, shalt thou be naught,
While the endless process runs?
Thou, for whom the suns are wrought,
Star of star, and sun of suns?

KANSAS CITY.

A Family of Great Horned Owls

BY CHARLES R. KEYES

ILLUSTRATED BY THE AUTHOR AND AN ASSISTANT.



"THERE have always been big owls in that timber," said the sturdy Scot who had settled down in Sugar Grove during the fifties and had ever remained satisfied with his environment. But the changes that the half century from 1857 to 1907 had brought were great indeed. The first settlers had found miles of magnificent forest where now only detached groves of a few acres each were left, hoary remnants of a greatness forever lost; for the doom of the forest was written on the faces of the fair cultivated fields that stretched away in all directions.

This particular twenty-acre remnant, however, had retained in a remarkable degree its primitive glory. The ax had found but little occupation within its borders; the forest soil had been allowed to produce beneath the gnarled branches of the older veterans a new generation of young hard maples and black locusts, and, best of all, the great horned owls had not abandoned it.

For a number of years the question as to whether these owls had a nesting site and raised young remained unanswered. The timber tract was only a mile and a half distant from town, if one went straight across the fields, so I often walked out to see how the big birds

THE NEST CAVITY.
Seen at the foot of the elm tree in the middle of the picture.

OWL'S NEST WITH EGG CLUTCH, FEBRUARY, 1907.

fared. In Eastern Iowa the great horned owls nearly always use an open nest of sticks in which to rear their family, appropriating this from a previous year's efforts of one of the larger hawks. This particular retreat, however, contained no stick nest larger than a bluejay's, as could readily be seen during the owls' nesting time, midwinter, by a glance thru the leafless branches. But the indications, nevertheless, were good.

The voices of great horned owls, tho never really loud, have remarkable carrying power. One night in the middle of January my window was open toward the timber tract and across the mile and a half of snow-fields the cries of the big owls were borne distinctly on the moist, still air. There was the short and decisive hoo-o, hoo-hoo-hoo, hoo-hoo, hoo-o of a male great horned owl and the answering deeper-toned and slower hoo-o-o, hoo-o-o, hoo-o-o of the female. These notes were surely indicative of owl courtship. Further, one evening early in February my way led past the owls' retreat just a little after nightfall. The hooting of owls suddenly boomed out almost over my head and there, sure enough, were both birds, perched on a branch within full view of the public road. But they were unmindful of observation. With feathers ruffled and heads bobbing they were hooting out their sentiments as they side-stepped toward one another and greeted one another with the profoundest of bows. Doubtless the nest site was already selected and not far distant. But where?

On February 7 I again searched the timber tract carefully. It was of no use; there was simply no nest suitable for an owl, nor was there a tree with a hollow large enough to accommodate a bird that measures two feet in length from bill to tail. I was about to give up the search when, as a last resort, I decided to examine some old elms that grew just beyond the fence to the east in a beautiful timber pasture. None of these contained a likely looking hollow except the veteran that stood out close to the public road. Surely the owls would not choose this; but it was the last possibility, so I

threw a heavy stick up along its rough, gray sides. Immediately a pair of "horns" and two wide-open yellow eyes appeared at the doorway and, spreading her five feet of wings, the great bird flew silently away.

Up to the time of finding the owl home I had never thought of joining, even temporarily, the ranks of the bird photographers. Nevertheless, as I stood on the last round but one of a twenty-foot ladder, borrowed from the kindly Scot who lived just across the road, and gazed upon the picture that presented itself, it seemed to me that some use ought to be made of the situation. All the conditions clearly made a very focus of opportunity. In the first place the nest itself was at the very reasonable elevation of only twenty-two feet—at the very same moment a great horned owl living several miles to the north was incubating her eggs in her old hawk's nest domicile placed just ninety-two feet from the ground! Moreover, and this was still more important, the nest cavity itself was shallow and open to the light. To make the story short, I interested a friend in the project and for two months and a half we followed, pictorially and otherwise, the fortunes of those owls.

Once before the eggs hatched and at least once a week during the forty-five days that the young occupied the old home pictures were made of the nest and its surroundings. As to the winter and early spring weather encountered we merely selected, so far as possible, the best that offered. What, after all, can one expect of the weather in a northern climate in the months of February, March and April? We found that the securing of a negative depended only on light conditions and our own endurance, the temperature and the winds and the rains might offer what they would. As to the owlets they were well protected by the solid overhanging roof of their home, as well as by their own soft coats of down, and seemed to mind neither exposure nor exposures. In fact, the only really serious obstacle to our work grew out of the dispositions of the old birds themselves. But more of this as we proceed with our story.

THE OWLETS, APRIL 13, 1907.

For a full month and a day old "Bubo"

faithfully incubated the three big round eggs that lay in a slight hollow on the floor of her well-kept home. On a fortunately warm day a picture was obtained without mishap, tho our work at the nest, quite in the nature of experiment at first, kept the old bird from her eggs for quite two hours. A perfect hatch was made, nevertheless, for on March 8 the shell dropped from the first owlet and four days later from the last one. With the hatching of the first egg the ambitions of the parents to prove themselves good providers were suddenly awakened, and by Saturday, the 16th, with the young four, six and eight days old respectively, the house larder had acquired an abundance of good things. Three adult rabbits, a bob-white, and a meadow mouse, all either decapitated or neatly amputated just back of the shoulders, could be distinguished at once, and another rabbit and bob-white were tucked away under the overhanging roof to the left and do not appear in the picture. Some of the detached members can be seen at the farther end of the room. Amidst all this array the white, downy young, almost as inert as their surroundings, formed a rather inconspicuous mass. The little creatures were as blind as kittens and remained thus until the tenth day. Their steady meat diet, however, advanced them toward owlhood with amazing rapidity. At three weeks the two older ones balanced themselves well and looked out upon the world with the beginnings of intelligence. At five weeks they were nearly as large in appearance as a Plymouth Rock hen and the three pretty nearly filled their stoutly framed doorway. At the age of five and a half weeks and even at six weeks they were still at home and posed for fuller views, once at the foot of the big nest elm and once on an oak stump adjacent thereto.

MARCH 16, 1907. THE DEAD ARE MORE IN EVIDENCE THAN THE LIVING.

As hinted above, the camera failed to record the most exciting part of this owl business. On the day when the owlets averaged two weeks old I had reached the old elm a half hour in advance of my assistant and was balancing myself on top of a ladder, making some mental notes on the condition of the young and

the contents of their well-stocked lunch counter. There was no apprehension of danger, for, on all previous visits, with two of us at the nest, the old birds had confined their expressions of displeasure to the usual hooting, fluffing of feathers, snapping of mandibles, and flying back and forth. It was simply a case of failure on my part to appreciate the difference between one and two. The shock that very nearly proved the overturning of ladder, notes and all, originated somewhere in the south quarter and was so sudden and paralyzing that for a moment the reflex action of holding with grim grip to the nest rim was the only action taken. The left side of my head was stunned to insensibility, but somewhere in the other side the surmise gradually arose that I was becoming the object of a conspiracy and so a hasty retreat to firmer ground was begun. One of the old birds was sitting, or, rather, marking time uneasily, on a nearby branch and clearly ready for further trouble, so there was no encouragement to push investigations farther just at the moment. Blood was flowing from a slash which, beginning on the left cheek and running across the left ear, looked as picturesque as a German student's duelling wound.

On the whole, tho, I had got off easily. A great horned owl has eight claws, each about an inch and a quarter in length and very stout and very sharp. Only one of these had taken effect, the numbness being caused, probably, by the sweep of a rushing wing. Evidently the curvature of the great tree trunk, together with my clinging position close over the nest rim, had afforded some protection. Just what the possibilities of a plunge of all eight claws into the human countenance would be I do not know, and was reasonably careful not to find out. It was necessary, however, to make frequent trips to the owl home to complete the study of the young. One of these was perforce made alone and so some good observations on the method of adult owl warfare were again possible.

Not that I was caught off my guard this time. A second's study of the young birds was varied by three seconds' observation of the movements of their parents. In this way it became possible to define the manner of attack. The big bird first shifts nervously a few times from one foot to the other, then launches swiftly into space. Audubon speaks of the flight of the great horned owl when hunting as possessing "incomparable velocity." It certainly does seem so to the hunted. The attack is not at all that of a hawk or an eagle, stooping swiftly from above, but rather the mighty onrush of a heavy projectile with a very flat trajectory. Like a great projectile, too, the flight, tho swift, is visible and so all the more disconcerting; unlike a projectile it is as noiseless as a flying shadow. Three times in quick succession on this visit the old owl came with swift, strong sweep of wing straight at my head. A quick dodge and at the same time a vigorous swing of my cap when the great missile was within arm's length and, for the moment, the danger was averted. The owl would keep straight on her course and alight with heavy impact on a branch of a neighboring tree. But as soon as faced about back she would come again! As with Kipling's cobra in the tale of the mongoose Rikki, it was the "terrible return stroke" that was most to be feared. My ladder had a friendly supporting branch on one side only, and, moreover, there was scarcely time to readjust one's defensive attitude. After the third close call I concluded that the headless quadruped lying in the nest over behind the owlets was really, after all, just a large house rat, and so slipped down the ladder and went home.

As our acquaintance with the owls progressed our wonder at the contrast between the nature of the birds and the tameness of their surroundings grew ever greater. As above indicated a much used public highway passed close to the owls' abode, separated from the nest tree, in fact, by scarcely more than fifty yards. A quarter of a mile to the west stood a well patronized rural school. The same distance to the north and to the east stood farmhouses with their numerous outbuildings. These were the comparatively distant neighbors. Less than two hundred and fifty yards to the west a stolid English farmer had long since built his home. The house of a fourth prosperous farmer, who took much interest in the owls and often

helped us in our study of them, lay a bare two hundred yards to the east; and the above-mentioned Scot, also an interested and helpful friend, lived only seventy yards farther down the road.

And in the midst of this calm and peaceful rural region, with its five farmers and their families and its country school, a region so tamed and developed that even the second generation back could scarcely remember the deer, the wild turkey, or the buffalo, the great horned owls had managed to maintain

APRIL 22, 1907. TWO DAYS LATER ALL WERE IN THE TREE TOPS.

their existence—these the fiercest of all the American birds of prey! There can scarcely be any doubt about the fact. Our larger hawks, if their nests are disturbed, fly toward the intruder, it is true, but when still some feet from him change the tilt of their wings and shoot swiftly upward, a mere pretense of an attack. Our much-boasted eagles, including the American bird of freedom, merely fly away with indifference or cowardice, leaving eggs or eaglets to their fate. The great horned owl alone flies straight at his adversary—and strikes. Our particular birds had bad dispositions to begin with, and these constantly grew worse until, after six weeks of suspense and with the longest of our claw marks still unhealed, my assistant and I felt some sense of relief when the young owls at last took to the tree-tops. But well might we endure our wounds in patience. Like the American Indian, the great horned owl is really unable to change his untamed nature, however closely he may come in contact with people who live differently. The present scarcity of the species, except in the ever narrowing frontiers of the Western Continent, marks the largest and most savage of the world family of owls as a member of a vanishing race.

The last two attempts to secure pictures, when the young were removed from the nest, were at first exciting and finally dangerous. In spite of the constant watchfulness of an assistant, both old birds now closed in and teetered and danced and hooted on limbs within thirty feet of our heads, ever and anon brushing close past us as they took up new

positions or feinted for an opening. On the first of these occasions my assistant's full-voiced yells and well-aimed sticks proved adequate to the warding off of danger. Except for the confidence inspired by his energetic defense I am sure it would have been quite impossible to disappear under a focusing-cloth and risk the violence of the elements without.

My last visit to the owls while still occupying the old home did not pass off so smoothly. Possibly the city friend who had become interested in the proceedings and who this time was trusted as my bodyguard was less effective with voice and missiles than he should have been; possibly the owls no longer feared an ordinary demonstration. It makes little difference. Two of the youngsters were already on the old oak stump and I was up the ladder for the third one. Whether I was just reaching over the nest rim for the last snapping owlet or had just started down with him, I have never been able to remember, nor was my friend able to say. At any rate my position at the moment must have been strategically bad. The sharp warning "Look out!" gave me barely time to duck my head, when a resounding whack was administered across my shoulders. This caused no particular damage, but the return stroke would come quickly and doubtless be more accurately placed. It came and I ducked again, but not quite far enough, or possibly not at just the right instant. The shock of the collision was profound. The inventory of damages showed three scalp wounds from an inch to three inches in length, while my cap had disappeared utterly from the field of action. This was afterward located under a tree some hundred yards to the south, a punctured souvenir of our last close-contact visit to the home of the great horned owls.

After each sitting the young were replaced in the nest and two days after the stormy last one, on April 24, the house was found empty and all were in the tree-tops. One youngster was in the very top branches of the old elm of his nativity, fully fifty feet above the deserted home; another was a hundred yards away in the timber tract and well up in a linden; both were motionless and inconspicuous among the budding branches. In the time at disposal the third brother could not be found. Two days before this the owlets had shown neither inclination nor ability to fly. Surely no one of them could have mounted a vertical distance of fifty feet thru any powers of his own. Obviously the old birds are possessed here of a most interesting secret, for no one witnessed the leave-taking.

Two months passed and on a walk thru their now heavily-foliaged retreat two great heavy owls, seemingly, and doubtless actually, larger than adults, were startled from some prostrate tree trunks, from which they flew slowly into the nearby trees. Almost at the same moment a third dropped from one of the lower branches of an oak and sought a new position deeper in the shadows of the woods. So far as size was concerned the owlets had reached and even surpassed the adult owl estate, tho probably still under the tutelage and care of their elders. From now on it would be simply a question of their shrinking and hardening into the strength and agility necessary to enter the competition of owl life and maintain themselves in the general struggle for existence.

February of 1908 again found my assistant and myself rapping anxiously at the old elm of the timber pasture. We could accomplish but little more with the young owls, but during the year we had formulated a plan by which there might be one chance in ten of securing a close-range portrait of the old bird as she sat within her doorway. It was a vain hope. About the base of the big nest-tree was piled the cord-wood from a number of the neighboring young lindens at whose foot the ax had recently been laid. The owls could endure intrusion into their home life but not too great changes in their immediate environment.

A mile west of the old home is another forest fragment and in this a pair of red-tailed hawks had built their bulky aerie in a tall white ash tree, seventy-five feet from the ground. Following the custom of most of their tribe, when suitable hollow trees are no longer to be had, the big owls appropriated this new refuge and in it successfully raised their brood.

The years 1909 and 1910 add nothing new to the history of the owls except that

a January gale destroyed the nest in the ash tree and the valiant pair were forced to a new, but similar, retreat. While glad that prosperity still attends them, we regret that no longer to our own hillside homes can come the short hoo-o, hoo-hoo-hoo, hoo-hoo, hoo-o and the long hoo-o-o, hoo-o-o, hoo-o-o of great horned owls, when the night air is still and the ground is covered with the January snow.

MT. VERNON, IA.

WHERE THE OWLS NEST IN WINTER.

"Spring o' the Year!"

The Song of the Meadow-Lark

BY EMILY HUNTINGTON MILLER

No minstrel he, with notes so wild and rare
They stir the listening heart to joy profound;
His liquid song comes fluting through the air,
As if a smile should shape itself in sound.
To hail the springtime with its voice of cheer—
"Spring o' the year! Spring o' the y-e-a-r!"

On autumn morns, when all the boughs are bare,
And summer birds have left the meadows sere,
When flowers are drooping in the frosty air,
Still, thru the ripening corn, his song I hear;
A small, sweet voice, that whistles blithe and clear—
"Spring o' the year! Spring o' the y-e-a-r!"

Prophet of hope! my heart takes up your song,
Tho bare my garden where the bloom has fled,
And leaves that once made shelter wide and strong
But strew the pathway where my feet must tread.
Some fairer spring is always drawing near—
"Spring o' the year! Spring o' the y-e-a-r!"

ST. PAUL, MINN.

THE CITY COLLEGE AT NIGHT.

The Night College of the City of New York

BY STEPHEN PIERCE DUGGAN, Ph.D.

Director of the Evening Session.

ONE of the chief tributes which the Mosely Commission paid to American education was to the ease with which educational institutions conformed to the needs and interests of the community wherein they might be established. It was this desire to serve the best interests of the community that prompted some of the faculty and officials of The College of the City of New York two years since to consider the establishment of the evening session. Thru the munificence of the city, the college had been given a new site and a splendid equipment of buildings and apparatus. To some of its officials it seemed that the best return that could be made to the city was to use the plant to its greatest capacity. The properly qualified young men of the city were welcomed by day to its doors to receive gratis the best that a college can offer. Why should not the same privilege be extended at night to the properly qualified adults of the city?

The proposal, however, was coldly received by the conservatively inclined among the faculty and officials. A night

college existed nowhere in the United States and probably nowhere in the world. The one attempt at the establishment of such an institution, that of Western Reserve University, had failed. If an evening session were to be established, it ought to maintain the same high standard as the day session, and that would be impossible. The attendance would be irregular; the students, if there were any, would be tired from their day's work and unable to concentrate attention upon their lessons; they would have no time to study and prepare the necessary home work. These were but a few of the objections that were urged against undertaking the experiment.

It was with some reluctance, therefore, that the majority of the faculty and trustees voted in April, 1909, to establish the evening session, with the understanding that the work would begin in the following autumn. Their action, moreover, was conditioned upon certain prescriptions being observed. The evening session was to be a duplicate of the day session. Its administration, its requirements for admission, its curriculum, its method of teaching, its examinations, above all, its standards were to be the same as those of the day session. A director and corps of instructors drawn from the teaching body of the day session were appointed to organize the work. It was decided to offer the regular Freshman courses for applicants who had merely a high school education, and certain advanced courses for such matriculants as might have done some college work. There were twenty-four men who had at one time been students at Columbia, New York University, Hamilton, Williams, Manhattan, University of Minnesota, the day session of the City College and the Teachers' Training School. Several presented diplomas from foreign institutions. Fifteen students were admitted with conditions which were to be removed before the end of the collegiate year. It was decided to open the evening

THE CITY COLLEGE.

session every night except Sunday, from 8 to 10 p. m., with two periods of recitation of one hour each. On October 1, 1909, work commenced with a student body of two hundred and one, a Freshman class larger than that of most colleges of the State.

Of what kind of material was the student body composed? The statistics of race, religion, occupations, etc., illustrate the cosmopolitan character of our city. The average age of the students was twenty-two, the youngest being seventeen and the oldest thirty-eight. The average student at night, therefore, was beginning his college education at the age when the average student by day was ending his. Despite the fact that tho it would take at least eight years to obtain a degree by night, ninety-five students entered as candidates for a degree. In answer to the question of race the following statistics were given:

Hebrews, 76; Americans, 56; Irish, 19; Germans, 15; Italian, 5; Bohemian, 5; Scotch, 6; English, 4; Norwegian, 2; French, 3; Hungarian, 3; Swede, 3; Greek, 1; Hindu, 1; Lett, 1; Armenian, 1.

The statistics of religion given were as follows:

Jews, 76; Protestants, 61; Catholics, 42; Brahmin, 1; No religion, 9; No answer, 12.

The statistics of occupation given were as follows:

Clerks, 51; stenographers, 15; bookkeepers, 14; mechanics, 13; business, 14; salesmen, 10; lawyers, 9; teachers, 9; bank clerks, 7; newspaper men, 6; draughtsmen, 6; physicians, 5; engineers, 6; chemists, 4; correspondents, 3; surveyors, 3; accountants, 3; students, 3; real estate, 3; compositors, 2; inspectors, 2, and thirteen different occupations with one representative each.

THE STUDENT COUNCIL.

In answering the question, "What is your motive in attending the evening session?"

105 answered to obtain knowledge of culture.
25 to obtain a degree.
12 to transfer later to the day session.
8 to transfer later to another college.
16 to improve their technical skill.
9 to extend their professional knowledge.

CLASS IN PHYSICS.

7 to improve their English (foreigners).
5 to improve their knowledge of foreign languages.
3 to advance themselves commercially.
3 to form fine associations.

The spirit of the evening session cannot better be illustrated than in the language of the oldest student, who once said to me: "I have not heard a single student speak of the money value of the education he was getting here." And in reply to the question, "What benefit have you derived from the work this term?" the general feeling is best typified in the answer of one student, who wrote, "Sufficient to induce me to continue traveling from Washington Heights to Prospect Park each night, arriving home at midnight."

What was the character of the work done by the students of the evening session, and to what extent were the fears of some justified that the high standards of the day session could not be maintained? To obtain satisfactory answers to these questions the director sent a questionnaire to the fifteen instructors of the evening session. It would be most interesting to publish the statements in full of these teachers, but brevity of space will permit merely a summary. As each instructor was teaching both in the day and evening sessions, the questions took the nature of a comparison between the day and evening students. One fear was disproved at the outset. During the discussions in the faculty it had been predicted that there would be a general election on the part of the evening students of so-called "easy" subjects like history, economics, literature, etc., and a neglect of the so-called "hard" subjects. As a matter of fact, the courses most freely elected were psychology, mathematics, composition and rhetoric and comparative government, the first three of which are not usually considered easy subjects by the day students. Nor was the fear about the attendance realized to a very

considerable extent. Of the two hundred and one students who were enrolled on October 1, 1909, one hundred and sixty remained on February 1, 1910. To any one familiar with evening educational work this is a very fine showing. It is more often the experience of evening educational institutions to drop 40 per cent. of the students by the close of the first term than 20 per cent. One must expect more irregularity in attendance at night than by day and look to the greater maturity and earnestness of the evening students to make up for interruption in attendance. The following table shows the courses offered, the number that elected each course, and the number that remained in it till the end of the term:

	October 1, 1909.	February 1, 1910.
Composition and Rhetoric (two classes)	60	47
English Literature (two classes)	51	40
Advanced German	15	12
Elementary French	24	13
Advanced French	22	17
Elementary Spanish	20	12
Advanced Algebra and Trigonometry	21	18
Analytical Geometry	22	15
English History	15	10
American History	17	12
Economics	20	12
Constitutional and International Law	20	12
Comparative Government	32	25
Public Speaking	26	10
Public Debate	35	15
Logic and Psychology	31	23

In seriousness and earnestness of purpose there was a general agreement among the instructors that the students of the evening session far surpass those of the day session. Their experience in life gave them a consciousness of the need of education that could not be expected of the day students. In maturity the evening students also surpassed the day students, but in ability the instructors put both classes of students upon a level. The evening students were more determined, more thoughtful, and asked more searching questions in the classroom, but the day students came better prepared and were more familiar both with the details of the subject and with allied subjects.

Because of the lack of time for preparation at home on the part of the students in the evening session, the instructors were compelled to adopt other methods of teaching than those used in the day session, for it was necessary to cover the same ground in a subject as in the day session, to do it just as well, and to have the results tested by the same examinations. It is, indeed, a tribute to the ability and loyalty of the men teaching in the evening session that with two exceptions they were able to accomplish these results. Every instructor found the work more laborious. The explanations had to be fuller. A great deal more had to be done in the classroom. Some instructors prepared a syllabus of each hour's work which proved of great service. In some subjects, e. g., economics, government, psychology, appeals could be made to the student's general experience rather than to the information gained from text-books, as must be done to a great extent with day students. Tho every instructor found the evening work more laborious than the day work, every instructor also found it more profitable to himself in experience, because of the necessity of modifying the organization and application of his subject. All but two found their evening work more interesting and inspiring than the day work because of the greater appreciation and maturity of the students, and all but these two found the results of their evening work either as satisfactory or more satisfactory than the results of their day work.

Tho the spirit of work dominates the evening session, the students are fully aware that there is a world of emotion and volition as well as of intellect, and that learning is not the only valuable thing received in college. With the desire to develop an *esprit de corps,* to cement friendship and form happy associations, as well as to receive valuable suggestions from the students, the director formed a student council consisting of a representative from each of the twenty courses established in the evening session. The choice of men for this purpose proved most fortunate. The council is composed of a fine set of able and intelligent young men who have been of inestimable service to the director in bringing to his attention improvements that might be adopted. In developing the social side of the evening session this body has been particularly successful, trying to bring all the men together as often as possible. One room has been set aside in which the men meet socially before and after sessions. During the past five months the student council has

organized a smoker and a dance; arranged for an organ recital by the professor of music of the college, and a dinner on April 2 at which some of New York's distinguished citizens spoke. The director of the evening session certainly considers himself fortunate in some of the happy friendships he has formed in the evening session and he has reason to believe that that is equally true of the students of the evening session.

Carlyle once said that there is nothing more pathetic in the world than a human being desirous of knowledge and unable to get it. To have listened to the expressions of gratitude of so many men during the past term was to become convinced that the evening session supplied a real need in the community. To be familiar with the fine results in scholarship and discipline obtained by most of the instructors is to feel assured of the possibility of maintaining high standards. The evening session has justified its existence. The stage of experiment has passed. The students have reacquired their habit of study. The instructors have remodeled their methods of teaching to conform to the needs of the work. All concerned, but especially the director, have profited greatly by the experience of the term. The present year has decided for us the true nature of our foundation. Upon its solid basis we shall build, and we hope that for years to come the evening session will freely supply the sweetness and light and learning for which so many hunger.

NEW YORK CITY.

Halley's Comet

BY ELAINE GOODALE EASTMAN

OUT of the black, unplumbed abyss,
With torch alight and burning,
The heavenly guest pursues his quest,
On steadfast wing returning;
Cleaving the fearful gulfs profound
Without a sign, without a sound,
The centuries mark his solemn round
In tides of rhythmic yearning.

Th' appointed hour he flies to meet,
His old-age path retraces—
A path that lies thru viewless skies
And unimagined spaces;
Plunged in stark cold and endless sleep,
Beyond the stars, below the deep,
He still returns, his faith to keep—
We lift our awe-struck faces!

Even so, my Life, thou cam'st to me
From deeps no man can measure;
Dread night and chaos wait for thee—
And must I lose my treasure?
Nay, He who lit thy trembling spark
Its furthest flight must surely mark;
Fare bravely forth into the dark,
Dear Life, at His good pleasure!

AMHERST, MASS.

Literature

From Revolution to Restoration

THE Revolution, Empire and Restoration furnish a majestic sweep of events for the historical inquirer, and it is a poor searcher who cannot find something unique and interesting in them. Only a veritable scissors-and-paste-pot book about France of this age can fail to strike a responsive chord in the heart of the gentle reviewer, and not a single one of the group at present under survey is of that type. Two of them—the volumes by Hall and Gonnard—rest upon new foundations. Kropotkin's book on the *Great French Revolution*[1] is interesting on its own merits and because it is by a man who has laid us under many obligations—above all, for that remarkable book, "The Memoirs of a Revolutionist," one of the most fascinating human documents of all times. In recommending the reader to add this book to his historical library one need not accept all its communistic conclusions; but no one can rise from the volume without finding his knowledge of the French Revolution richer and deeper. That great cataclysm was not the fall of the Bastile, the flight to Varennes, the assassination of Marat, the execution of Marie Antoinette, or the 9th Thermidor; and Kropotkin knows it well. He has therefore left the picturesque and anecdotal for the dabbler in literature, and attacked the central economic problems. Of course, he had made only a general survey—the materials for deeper study are just beginning to be available—but he has given us a better account of the interests of the contending classes, the abolition of feudalism, the confiscation of Church property, the social aspirations of the fourth estate, and the various communistic enterprises than can be found anywhere in English. There are passages of rare eloquence and penetrating insight, and many of them violently disturb our old notions of the Revolution. It is dominated by the author's communistic bias, but the bias has the advantage of being obvious. Every one knows that poisonous prejudices may lurk under academic phrases and outward calm.

Tallentyre's work on *Mirabeau*[2] is a rather poor thing when compared with the scholarly researches of Fling, whose first volume appeared last year, but it is not without merits. It is founded on sources easily accessible and it reveals no new passages in the life of Mirabeau, but it is accurate enough for general purposes and it is written in a light and easy fashion which will please those who have no feeling for Lomenie or Stern or Fling, and who do not care whether Mirabeau was "the wisest statesman of France" or not. We could have managed, however, to have worried along without the book.

Major Hall's volume on the *Bourbon Restoration*[3] is a far more serious piece of work. It is indeed a decided contribution to the literature available in English. It is based on first hand sources and shows on every page a firm grip on complex situations. It is written with a swing which is refreshing to find in a heavily documented text. There are excellent appreciations of the leading actors—Louis XVIII, Charles X, Lafayette and Polignac; the fine dramatic scenes of the period are seized upon with proper literary effort, and the conclusions on most points are in harmony with recent researches in the field—as far as one can speak of conclusions regarding such controversial matters.

Gonnard's book on the last days of Napoleon[4] will no doubt have the biggest sale. It has the advantage of being on a theme whose interest never dies, and moreover it is done with a thoroness which will commend it to scholars everywhere. The various works written under Napoleon's direction at St. Helena

[1] THE GREAT FRENCH REVOLUTION. *By P. Kropotkin.* New York: G. P. Putnam's Sons. $2.25.

[2] THE LIFE OF MIRABEAU. *By S. G. Tallentyre.* New York: Moffat, Yard & Co. $3.

[3] THE BOURBON RESTORATION. *By John Hall.* Boston: Houghton, Mifflin Co. $4.

[4] THE EXILE OF ST. HELENA. *By P. Gonnard.* Philadelphia: J. B. Lippincott Co. $3.50.

are examined with care and evaluated. The views of the fallen monarch on important topics, from religion to the principles of the Revolution, are examined and set forth with abundant documentary evidence. The origin and development of the "Napoleonic legend" are made the subjects of illuminating inquiry and exposition. The style of the volume, notwithstanding its scholarly character, will commend it to the reader who only finds footnotes a nuisance.

Lady Westmorland's Correspondence*

While English historical and social literature is amazingly rich in memoirs and correspondence, there are singularly few volumes of memoirs or letters of women, notwithstanding the many women of the aristocracy who have been more or less active and prominent in the political and social world of London. To the few volumes that do exist a notable addition is made by the publication of the correspondence of Lady Westmorland* These letters have not quite the vivid interest of those written by the Princess Lieven during the years of her sojourn in London. They do not illuminate any great crisis in English politics to the same extent as Princess Lieven's "Letters of Earl Grey" help to an understanding of the crisis over the Reform Act of 1832. But none the less, both in interest and importance, they rank next to Princess Lieven's letters, and high indeed among the correspondence of nineteenth century Englishwomen.

Lady Westmorland was a niece of the Duke of Wellington, and in the intricacies of English politics between 1832 and the break-up of the Tory party over the repeal of the Corn Laws in 1846, she was nearly as well versed as the Duke himself. She was implicitly trusted in all political concerns by the Duke, and equally so by Melbourne, when he was Prime Minister, and quite frequently the Countess was the go-between for these two statesmen—the one a Tory and the other a Whig. She also occasionally acted in the same capacity for Peel, after he had broken with the Tory party in 1846, and when, with his followers, Gladstone, Graham and Sydney Herbert, he stood apart in the House of Commons from both Tories and Whigs.

It is in her letters to the Earl of Westmorland that the Countess describes the part she played in these political transactions. The letters are most informing to students of the period between the Reform Act of 1832 and the repeal of the Corn Laws in 1846—between the two great crises of the first half of the nineteenth century. They also afford fresh proof of the part that women have so long played in English politics. Lady Westmorland, it need scarcely be stated, was a Tory; and like most of the aristocratic Tories of her time, she dreaded that the glory of England would fade with the death of the Duke of Wellington. "It is frightful," she wrote in February, 1854, "to see the progress England has made in wrongdoing since the death of my uncle. He was the last rampart that remained against this torrent of Liberalism which quite disgusts me."

Students of English history who are drawn to Peel will realize from Lady Westmorland's letters, even more than from Parker's "Life of Peel," the intense dislike with which Peel was regarded by his old followers in the Tory party after he had broken with them in 1846. Gladstone's lot was not a pleasant one after the split in the Liberal party over Home Rule in 1886; but there was in 1886 little of the rancor and bitterness toward the great Liberal leader that characterized the opposition to Peel in the years between 1846 and his untimely death in 1850. The fact that he was of a manufacturing, as distinct from a landed family, was long a disadvantage to him. Even Melbourne did not scruple to intrigue against him and to embarrass him in his relations with Queen Victoria when he became Premier. But as Queen Victoria's letters now make clear, the Queen later on recognized the true inwardness of the difficulty over the Ladies of the Bedchamber in 1839. She realized that it was a Whig scheme to embarrass Peel; and these letters of Lady Westmor-

*The Correspondence of Priscilla, Countess of Westmorland. Edited by Her Daughter, Lady Rose Weigall. Pp. x-487. New York: E. P. Dutton & Co. $5.

land's, whose relations with the Queen were always intimate, show how fully Peel had secured the confidence of the Queen after he became Premier in 1841.

Lady Westmorland realized from the very beginning that the Crimean War was unnecessary and would inevitably be useless. In her opinion, as she wrote in 1854 to her intimate friend, the Comtesse Pauline Neale, it was "Unjust, useless, brought about by personal spite, weakness and blunders, and the cowardly giving in to the cries of the press." "A strong government, statesmen courageous and consistent, would have easily managed an affair which has been allowed to grow until they can no longer control it* Elsewhere she described it as "A miserable war of personal feeling and wounded vanity, brought about by blunderers on all sides—perfectly unnecessary and which by no possibility can have any result useful or honorable to England." Today, no man or party in England pretends to justify the Crimean War; but it needed insight to write as Lady Westmorland wrote in February, 1854; and it is because insight is characteristic of these letters, whether from London, Berlin or Vienna, that they must take high rank among English political memoirs.

The Awakening of Spring. By Frank Wedekind. Philadelphia: Brown Brothers. $1.25.

Wedekind has taken a tragic chapter from Stanley Hall's "Adolescence" and made a strangely moving play out of it. It is a play for parents, and by no means *virginibus puerisque*. It cannot be that German children have been allowed to attend the stage representations; yet even that, with its rude and coarse awakening, would be better than to leave young girls and boys in the utter ignorance the play describes. We feel an indignant sense that the children are not to blame; their parents evade their innocent questioning and put them off with misleading and foolish answers. There is a heartrending scene, albeit a perfectly quiet one, in which little Wendla begs her mother to tell her the truth about the secret of life and its coming. And the mother tells her—nothing! She sends her little daughter out into a world of temptation ignorant and undefended, but she does not forget to add a hand breadth of flounces to the skirt of the rapidly growing girl, and is anxious indeed over the set of her sailor blouse, the low shoes, the silk gloves, the rose in her hair! It is so tenderly natural, so terribly incredible a scene that it grips the heart of the reader, and it is painful to think how it must move the spectator. Wedekind is lacking in refinement and much of his work can only be characterized as brutal, but it may be that the parental conscience adream needs a blow from a bludgeon such as his, and the souls of lost children may look up with despairing eyes, thanking him that other children no more innocent but more fortunate may be spared their fate because of his frankness and savage courage. Yet, so indecent and repulsive a treatment might work the evil it reprobates. Some of the scenes could not be tolerated on an American stage, and it is to be hoped that some purer prophet than Frank Wedekind may arise to teach in a loftier drama the right instruction of youth. Life is clean, but Wedekind's handling of it is impure; his coarse fingers soil the theme; there is the mark of the beast on much of this frightful drama, hideous in spite of passages of lyrical beauty and pathos.

Nietzsche in Outline and Aphorism. By A. R. Orage. Chicago: A. C. McClurg & Co. 75 cents.

The Gist of Nietzsche. Arranged by Henry L. Mencken. Boston: John W. Luce & Co. 60 cents.

Nietzsche is best taken in homeopathic doses—if at all. His genius is aphoristic, and some volumes of his works consist of miscellaneous sentences and fragments of sentences quite as disconnected and even more heterogeneous than those given in these two little volumes of selections. Both are compiled by men who have published larger volumes on the same subject, Mr. Mencken being the author of "The Philosophy of Friedrich Nietzsche," and Mr. Orage of "Nietzsche, the Dionysian Spirit of the Age." Of these two compendiums, that of Mr. Mencken is rather the better. It is smaller, for one thing, and is undi-

luted, for another. Mr. Orage's introductory expositions of the different topics often fill as many pages as the selections following them, and they are dull by contrast, tho any commentator of Nietzsche would find it hard to avoid this fault. Sometimes, too, he cuts his quotation down so much as to leave it quite without point; as, for example, when he quotes merely, "Two things are wanted by the true man—danger and play." This is Nietzsche with Nietzsche left out. The scorpion sting lies in the application in the succeeding words, "*Therefore,* he seeketh woman as the most dangerous of toys."

Latter Day Problems. By J. Lawrence Laughlin, Ph. D., Professor of Political Economy in the University of Chicago. New York: Charles Scribner's Sons, Pp. viii, 301. $1.50.

The problems analyzed by Professor Laughlin embrace a variety of social and economic topics, all of which have a timely interest. In matters relating directly to finance and political economy, the author exhibits a thoro knowledge of facts and conditions, but his discussions of some of the modern sociological problems, such as trades unions, socialism and social settlements, have a pronounced academic tinge. Professor Laughlin's theory regarding the fundamental defects of trades unionism is merely a restatement of similar theories expounded by the English economists of a generation ago. His criticisms of organized labor may apply to a few of the raw and undisciplined organizations, of which the teamsters of Chicago are a type; but they certainly cannot be made to apply to the aggregate of the labor unions in this country. The essay on social settlements likewise displays a lack of intimate acquaintance with the work being done at present by these institutions. Within recent years the ideas and purposes underlying social settlements or neighborhood guilds, as they are more aptly called, have undergone radical change, resulting in an abandonment of much of the work formerly attempted by the settlement workers. Professor Laughlin's strictures against the settlements apply to the original schemes and ideas connected with these institutions and are, therefore, decidedly unfair to those existing at the present time. In the discussion of financial and monetary problems, Professor Laughlin covers familiar ground. His intimate knowledge of these subjects enables him to furnish the reader with solid facts upon which he bases his arguments.

Labor and the Railroads. By James O. Fagan. Boston: Houghton, Mifflin Co. 164 pages. $1.

In view of the efforts of the railroads during recent years to improve the efficiency of their employees, Mr. Fagan's book is of very timely interest. It will be remembered that when the author's book, entitled "The Confessions of a Railroad Signalman," appeared, quite a stir was created in railroad circles, which led several of the largest companies to investigate the workings of their signal systems. In the present work Mr. Fagan reviews the present status of railway employees, analyzing the opposing effects of unionism and the policies of railroad managers. Altho insisting that the railway employees as a class are a relatively high grade set of men, Mr. Fagan is decidedly of the opinion that the unions are a stumbling block to the efficiency as well as to the individuality of railroad employees. The rules of the organization, more than any other cause, have forced the railroads to fill the executive positions on their lines by outsiders instead of from the ranks of the employees. In spite of the strength of the railroad organizations, Mr. Fagan believes that the railway employees are underpaid, when viewed in the light of the responsibilities placed upon them. This question of wages is a weighty one with the railroads, since approximately 45 per cent. of the gross earnings of the railroads are paid out in wages. The demands for higher wages, shorter hours and provisions against superannuation on the part of the employees, and the desire for higher standards of efficiency accompanied by greater economy of railroad operation on the part of the railroads and the public, are the two principal factors of the transportation problem in the United States.

Literary Notes

....The English translation of Rostand's poetical drama "Chantecler" is to be published in *Hampton's Magazine,* June to September. We called the attention of our readers to the human interest and inner significance of this remarkable work in our issue of March 31st.

....The Yale University Press makes the important announcement that it will publish, during the autumn of this year, "The Records of the Federal Convention of 1787," under the editorship of Max Farrand, of the Department of History at Yale University. It is expected that the records will appear in three royal octavo volumes, with a special limited subscriber's edition, on English hand-made paper.

....A book that is of interest and value to both mother and daughter is *Girl and Woman,* by Caroline Wormeley Latimer (Appleton's, $2). The author has taken great pains to bring before the reader in a simple and compact form a knowledge of Nature's laws, such as is unfortunately not often imparted to the layman by the physiologist. It is easily comprehended thru the avoidance of technicalities, and all necessary details are treated fully, yet with delicacy.

....A volume of *Selected Tales of Mystery* by Edgar Allan Poe is notable for its sumptuous form. Superbly printed, bound in a cover whose fantastic design suits what it contains very well indeed, it is adorned with a series of sixteen colored illustrations by Byam Shaw, who succeeds repeatedly in visualizing the weird fancies of the author. This is an edition to appeal to the lover of Poe. (Lippincott Co., 8vo, $3.) The *Tales of Edgar Allan Poe* with Frederick Simpson Coburn's gruesome drawings have been issued in a new edition. (Putnam, 12mo, $1.50.)

....The Rev. S. Baring-Gould, who has labored in many antiquarian fields, furnishes his readers with a good deal of curious information in his work on *Family Names and Their Stories,* devoting much ingenuity and research to origins, Saxon, Danish, Norse, Norman, Flemish, German, Dutch and French, classifying patronymics as originating in castle and manor, in town and trades, in nicknames, etc., and going into the matter of prefixes and suffixes. Scottish and Irish family names have a chapter of their own, and thruout particular attention is paid to the modification of surnames in the course of time, and their often almost unrecognizable changes under the influence of a change of locality. For the benefit of pedigree searchers, there are appendices giving the Anglo-Saxon and Danish names in the Domesday Book, the Scandinavian originals of a number of English family names, surnames of the fifteenth century in the "Liber Vitæ," a list of those who came to England with William the Conqueror according to the "Roman de Rou," and the names affixed to a loyal address in 1744 by a number of Huguenot refugees. There is a good index. (Lippincott Co., 8vo, $3 net.)

Pebbles

A DISTINGUISHED consulting surgeon is noted for his absent mindedness. The other day he placed his stethoscope to a patient's chest, applied his ear to the instrument and cried: "Are you there?"

A MINISTER, having given out his "notices," was about to read his hymn, when he was reminded of one he had forgotten. Stopping, he made this announcement, apologizing for his forgetfulness. Then, much to the amusement of his audience, he began to line out the hymn as follows: "Lord, what a thoughtless wretch am I!"—*Judge.*

EXPERIENCED.

Farmer—Ever milk a cow?

Summer Boarder—No, sir, but I'd like to try.

Farmer—Think you can make 'er give down?

Summer Boarder—I guess so. I've served two years as a personal property assessor.—*Chicago Tribune.*

A JOLT IN PROTEST.

New York was in sight.

The ship was entering the harbor.

"Ah, free America!" exclaimed a foreigner on the deck. "Free America, ze land where efrybody has an equal chance!"

"Going to locate here?" inquired a friendly American.

"Ah, yes. I haf come over to engage in ze oil business."—*Washington Herald.*

THE telephone operators at fire headquarters get lots of amusing calls, but one came in the other evening that was new on the list.

The flue on a North Side home was burning out, and the women of the house were determined not to get excited about it. But they didn't want to take any chances, and it was finally decided that the fire department should, at least, be notified. So one of them went to the phone.

"Hello! Give me 504. Is this 504?"

"Yes."

"Well, the flue of our house is burning out We dont' think it is going to do any damage but thought if you were passing this way you might stop."

Then she hung up.—*Indianapolis News.*

THE COUNTRY EDITOR'S TROUBLE.

"Don't be disappointed if the paper is not better than usual or not so good this week, as the old king *Hornet* has been away most of the time, trying his hand at the Statehood business, and the younger *Hornet* has had his hands full in the mechanical department. When dad went away, he left copy enough for two issues, with instructions to cut all that was objectionable to the readers that called, and he had barely got out of town till the office was overrun with readers that wanted to see the proofs, and the slashing began. We saved a little out of the wreck and place it before you without further apology."—*Waukomis* (Okla.) *Hornet.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

An "Authorized" Statement

We refuse, or at least hesitate, to believe it—the cablegram from Rome which asserts that the Pope has "authorized" a statement rebuking the Abbot Janssens, a learned Benedictine, and Secretary of the Congregation of the Affairs of Religious Orders, for a courteous message to Colonel Roosevelt; and the statement further adds, as if directly quoted, that the Vatican "did not wish Mr. Roosevelt to bracket the Pope with other more or less royal personages he will boast of having hunted in Europe after his African hunt." We may believe that the Pope, thru his Cardinal Secretary of State Merry del Val, might express disapproval of Mgr. Janssens's courtesy, but that the Pope, or Cardinal Merry del Val, a trained diplomatist, should use such insulting language about Mr. Roosevelt, and at the same time should insult the royal personages whom he expected to visit in Europe, seems past belief.

Who are these "more or less royal personages"? They are the King of Italy, the emperors of Austria and Germany, the Queen of Holland, and the kings of Great Britain, Norway and Denmark. The President of France is no king at all, and so not in the list. Now which of these is "less royal"? Is it the King of Italy? That would be incredibly inept, not to say dangerous. Whoever it might be it is so undiplomatic and offensive that such an expression of resentment against Mr. Roosevelt seems incredible. We wait before we trust this dispatch, which we observe is dated from "Rome," and not from "the Vatican." We have previously observed untrustworthy dispatches from "Rome," just as Chinese canards come from Shanghai.

If this statement should prove really genuine—and it claims to quote the written document—then its folly and its impertinence outdoes Tipple. Merry del Val is supposed to be an accomplished diplomat, one who weighs his words. He might very possibly think that discipline required him to rebuke Mgr. Janssens, who had called on Mr. Roosevelt, and finding him absent had left an appreciative and grateful message, and this after the Pope had refused to receive the ex-President; but Merry del Val must have lost his wits—for anger is a short madness—if his passion allowed him to sneer at once at Mr. Roosevelt and at the same time at the royalties of Europe. He might be supposed too much of a cosmopolitan—this Spanish-Irish-Italian—to have yielded to any resentment over the loss of the war with Spain and the loss of the Philippines, and yet we think of it, and ask if this can explain the statement if it should prove genuine. Should this prove to be the fact, then Dr. Tipple's outbreak may almost be forgotten, for he is no diplomatist.

And if it should prove true—for we must consider the almost incredible—what would you think of it, James Gibbons, Cardinal and Archbishop of Baltimore? You, who were an intimate friend and adviser of Theodore Roosevelt, and have often consulted with him and praised him, and whose own words have always been so wise and gracious? And what would you think of it, John Ireland, Archbishop of St. Paul, you, who in your Church have, as a Republican, especially represented Catholics in his councils, and at whose advice in the

most friendly way he sent the commission to Rome to settle the difficulty with the friars? You, like the Abbot Janssens, always found President Roosevelt fairer to your Church than were the Catholics themselves in Cuba and in the Philippines; and would not this insult from the Cardinal Secretary of State—not, we trust, from the Pope—make your ears tingle? And what would you think of it, William Henry O'Connell, Archbishop of Boston, you, who were for six years in charge of the American College in Rome, and know well Merry del Val; you, who, as Papal Envoy to the Emperor of Japan, have personal knowledge of President Roosevelt's treatment of your Church in the East; you, whose policy it has been to associate with Protestants on terms of courtesy? Could you take any satisfaction in this composite snub to both the American ex-President and the crowned heads of Europe?

We hope it is all a false report, even tho it claims to be authorized. We still cannot believe it true, and so we speak with reserve. But if it should be true, then the tables are turned, and it is in order for Dr. Tipple to laugh.

Suffrage in Maryland

THE position in Maryland is this: The Democratic Legislature has passed two bills to restrict negro suffrage. One provides by amendment to the Constitution that no negro shall vote in any State or municipal election who shall not have owned $500 worth of property for at least two years before his registration. That could not be vetoed, for it goes to the people for adoption. The other would immediately limit registration and vote on this very proposed amendment to white voters, and thus exclude negroes now voters from voting on the amendment to exclude them. This Governor Crothers has vetoed, so that negroes will have a chance to vote on the proposed amendment, and it will in all probability be defeated, as was a former one having the same purpose. Of course, it would be reversed as soon as it could be brought before a Federal court, for it is plainly against the Fifteenth Amendment of the Constitution, as its proponents very well know, but they claim that the Fifteenth Amendment was not validly adopted. Southern Democrats have strongly criticised their Maryland friends as injuring the chances of the Democratic party in the next Congressional election, when they hope to gain the House of Representatives, and the best men in the State, with Cardinal Gibbons to lead them, oppose it. Here is an illustration how a Legislature may fail to represent the people. But Maryland has a good Governor.

But before the people of Maryland build a political gallows to hang the negro voter on they had better consider the gallows Georgians built. Under the political leadership of Hoke Smith some four or five years ago the white voters of Georgia amended their Constitution with the avowed intent of disfranchising the negro, altho at that time the actual vote cast by the negro was a negligible quantity. This amendment required each voter to meet either one of five conditions in order to vote: (1) He must have been a soldier in any war; (2) he must be a legal descendant of a soldier; (3) he must have good character, and understand the duties of American citizenship; (4) he must have certain educational qualifications; (5) he must own a certain amount of property. As to immediate action the registrar is made judge of all this. It was intended to cut out the colored voter.

But what has been the practical effect? According to the Atlanta *Constitution,* the "Georgia Bible" and the leading newspaper in the South, this new law will disfranchise 50,000 white voters this year. This estimate is built on returns just in from ninety-seven counties of one hundred and forty-four. The total registration in these ninety-seven counties for last year amounted to 235,350, while the registration for the same counties this year is only 205,890. This makes a falling off of about 15 per cent. At this average at least 50,000 white voters will be disfranchised in Georgia this year. Under our Constitution it is impossible for one class of voters to build a gallows for another class and not hang thereon themselves.

While the corrupt voter of no matter what race should be kept from polluting the ballot, yet it is un-American to devise any scheme that will keep honest voters from participation in the franchise. The trend of the world is toward larger liberty, and repression will fail. With a population of 2,500,000 and with less than 300,000 people doing the voting in Georgia, it will be clearly seen that democracy is having a poor show in that neck of the woods. Does Maryland wish to put herself in the Republican column by attempting to follow?

Personal Taxes

THE Yerkes art collection sold at auction in New York City for the astonishing sum of $2,034,430. For how much was the collection taxed in the personal property schedule? Exactly nothing. This is but another example of the impossibility of reaching personal estate for taxation. Mr. Yerkes during his lifetime was not technically a resident of New York and escaped taxation of the art treasures which were protected by the police and courts of that city. Two of his executors, when death revealed the magnificence of the collection, were legally exempt from paying the tax because they had technically not accepted possession of the property. The third, being a non-resident, could hold the precious objects and snap his fingers at the tax assessors, for if New York taxed a citizen of Illinois, what would become of States rights and our glorious Constitution?

The pretense of levying a tax on personal property in cities involves injustice and financial confusion and leads to much false swearing. If David had been trying to levy such a tax in Judea there is little wonder that he "said in mine haste, all men are liars." Millionaires can evade payment in New York either by putting a mortgage on their real estate equal to their threatened personalty, by taking a legal residence in some other State, or, in the last resort, by challenging the assessor to prove the existence of the securities that are hidden in safety vaults. But usually a widow and children who inherit a small estate are caught. The probating of the will reveals the property, and the tax assessor, as by law directed, swoops down like a wolf on the fold. Escape is impossible. A woman of moderate means cannot uproot herself and skip across the State lines; neither can she buy houses and lands for the express purpose of loading them with a mortgage. She is trapped, and compelled to pay about 2 per cent. annually on the capital value of her bonds and stocks. Her income from these holdings is probably about 5 per cent. Therefore the personal property tax is the same thing for her (and all who pay it in full) as an income tax of 40 per cent. What a scream of rage would resound from coast to coast if business corporations were threatened with such a confiscatory income tax!

In the period when Father Knickerbocker placidly assumed that a tax on personal estate laid according to law would be duly collected his finances inevitably got in a tangle and he now has over thirty million dollars of these back taxes on his books endorsed "uncollectible," which future taxpayers must assume. Mayor Gaynor and most authorities on taxation recommend that the farce of this impracticable tax be taken off the stage. It has run too long. Objection to this course comes from those who imagine that by some unspecified means the tax might be enforced, and from those who object to letting the rich man's bonds go free while the poor man's dwelling is taxed on every shingle. Doubtless other means of reaching the rich man's wealth should be devised. Some German cities impose a habitation tax paid by the tenant and graduated according to the rent paid. Such a tax, united with an inheritance tax stiffly graded, would reach the lordly coupon cutter. Then Mr. Andrew Carnegie need no more be subject to the jibes of superior persons in Europe, who charge him unjustly with being a tax dodger because he is assessed only for $5,000,000 on bonds known to be worth hundreds of millions, and the assessors would no more be under the necessity of estimating how much millionaires will consent to pay rather than techni-

cally leave the city. But to rely on the old-fashioned personal property tax laws is to shoot at the millionaire with a blunderbuss when a machine gun is available. Messrs. Asquith and Lloyd-George could teach us a lesson.

Platitudes

THEY say that Mr. Roosevelt is a mighty repeater of emphatic platitudes. Doubtless he is, and very sensible and useful platitudes they are. The world needs his kind of platitudes. We cannot have too many of them.

The world goes to church; and what for? To hear platitudes, platitudes it needs to hear. There cannot be too much of the repeated urgency to be good, that we ought to tell the truth, to be forgiving and patient, to be industrious, to love God and love our fellow men. We have heard them a thousand times, and we need to hear them a thousand times more. Repetition gives them force, and perhaps we may, out of mere weariness of the commonplace, obey them. That is what preaching is for, and they say that Mr. Roosevelt is all the time preaching. That means that he keeps repeating and urging what we all know to be right, or ought to know to be right; but yet, it must be said, things that we do not all do, and are to blame for not doing; and that is the reason why such platitudes need to be said over and over again.

What is more of a platitude than that murder is wrong and to be condemned? That is one of Mr. Roosevelt's platitudes. And yet is it a platitude always and everywhere? Was it a platitude in Egypt, where Mr. Roosevelt, in a speech to young Egyptians, told them that it was a wrong and a blunder to kill a man they did not like? Somehow they did not all take it as a platitude; some of them were very angry. They knew—for he applied the platitude to a late case of political murder—what was their own sympathy with that murder. Hundreds and thousands of them thought that murder right. To them condemnation of murder was not a platitude, for they approved it and lauded the murderer as a patriot. Right there, and to them, face to face, Mr. Roosevelt uttered what seems to most of us a platitude, that killing people because you don't like them is bad policy and bad morals; and they did not like it, and two hundred of them marched before his hotel shouting cries meant to show their disapproval and rejection of his platitude, and their approval of political murder. From our point of view it was a platitude; but in Egypt it was no platitude, and we judge it would not be in certain circles of Great Britain, by the way some people and journals blamed him for speaking his mind freely on the matter of murder.

And there are other countries where this is no platitude. It is not in Russia, where great parties believe in murder, and they kill as they can get a chance. Indeed, in our own country there are thousands and millions who approve of murder, and in half our States, nearly, this last year crowds of people, mobs of them, joined in committing murder, because they have not been educated up to the platitude. This plainest and most basic and primitive of all platitudes needs to be preached over and over again for the benefit of the oncoming multitude of youth and for the callous consciences of older men; for they really think it right to murder. They need to be told the contrary with emphasis. And yet when we condemn lynching we are complained of as if we were enemies of the South.

What is true of the wrong of murder applies to a multitude of other popular errors. What could be more of a platitude than that bribery and graft are wrong? And yet we hear of "honest graft." What attempts have we seen in Albany and in Pittsburg and in other cities to shield these evils? That means that those who defended the wrongs—and thousands defend them—have no sharp twinges of conscience against these evils. They will condone them, and would take or give the bribe if they had the chance. What our whole public needs is to feel the compulsive truth of such platitudes, and for this we need to hear them constantly repeated. Give us more men who will repeat more ethical platitudes, put more emphasis on them, and give us Rooseveltian applications thereof.

Recognizing the Public

In the movement which is substituting social interest and responsibility for a selfish and narrow individualism as controlling forces in economic life there is no more interesting factor than the admissions—in some instances confessions—that business men of exceptional ability and great wealth are from day to day handing out to the public. Mr. Carnegie, who has for some years been proclaiming that great fortunes are created quite as much by public co-operation and the normal evolution of society as by the genius of their owners, and who has more recently been saying that at least half of every great fortune should revert to the state thru the inheritance tax, has ceased to be a voice crying in the wilderness. We do not remember that Mr. Carnegie has declared himself in set terms on the desirability of public control of corporate activity, or upon the degree of publicity which should be prescribed for corporate affairs; but if, as he teaches, the public co-operates in creating the great fortunes, it may properly exercise control over the methods of wealth-getting no less than over the rights of property which result.

It is upon this point in particular that some of the most significant of recent utterances have been made. Not long ago President Mellen, of the New York, New Haven & Hartford Railroad Company, made a statement compact with good sense upon the relations of the state to the railroads. We should recognize, he said, that the railroad business is in its nature a monopoly, and it should frankly be so treated in law and in public policy. Parallel and competing lines are an absurd waste of capital and they have failed as a means of regulating railway rates. The public should grant monopoly powers to the railroads that it charters, and in return the railroads should, as a matter of course, accept governmental regulation and control. This is the only economical and satisfactory policy for all parties concerned.

Now comes Mr. George W. Perkins, of J. P. Morgan & Co., who accepts the principle implied in Mr. Carnegie's philosophy and in Mr. Mellen's proposition, and gives it wide extension. In an address delivered before the Graduate School of Administrative Science at Harvard University, Mr. Perkins declared unreservedly for a national control of corporations accompanied by publicity. We have not seen the full text of this address, but if the newspaper reports of it are substantially accurate, it was a clear and admirable analysis of the present industrial and political situation. The argument was substantially that of the Marxian economic philosophy, and we judge that Mr. Perkins is too well informed to be surprised when this circumstance is pointed out.

The conditions under which we now live have not been produced, as shallow thinkers imagine, by evil-minded men, altho there has been plenty of wickedness and plenty of "glaring abuses in business methods." Neither have these conditions been a product of the mere size of modern business enterprises. They are a product of great inventions that have worked a revolution in business and that have demanded great organizations to utilize them. We shall not abandon these inventions or cease to use them on the vast scale. We shall not go back to the old and small ways of doing things. But in the development of the new order of things there has been antagonism between private and public interest. "Politics has fought business and business has fought politics until both have been sorely wounded, and in the general scrimmage the public has had a pretty hard time and under the circumstances has been long suffering and patient." The remedy for this state of affairs is to see and accept the tendency of our times. "Let us realize our responsibilities and our problems will be far easier of solution. If we believe that in our republic the people's word is law, let us believe it in all things, and if the people have decided that the time has come to take a hand in how business shall be conducted, is it not plain business sense to meet the question at least half way, rather than fight it all the way?"

This surely is sound doctrine, but it might easily have been left in the realm of vast generalization. Mr. Perkins

we are glad to see, comes down to specific propositions, such as that when the shares of a business enterprise are owned by the public, its managers are substantially public servants; that the plain American citizen has a right to know from disinterested third parties what is being done by a great business enterprise in which his money is invested, or which is handling a commodity that affects his daily life; and finally that the officers of great corporations should realize that such concerns are more nearly public institutions than private property. With equal good sense Mr. Perkins insists that control must be by the National Government. "State control is impossible because steam and electricity have largely wiped out State lines in commercial undertakings."

Whatever else such deliverances as these by the greatest leaders of business enterprise may accomplish, they will have at least the happy result of making ridiculous and negligible the palaver of the little men in business who may henceforth talk about the "mischievousness" and the "dangerously socialistic tendency" of governmental control of business operations.

Mr. Bryan's Letter

It is an open secret that many hopeful Democrats who sat at the Jefferson Day dinner in Washington were in a sour frame of mind when Mr. Bryan's letter was read. He had an opportunity to commend himself to his party, and to many who are not accustomed to fight under the Democratic flag, by denouncing the recent revision of the tariff, but there was not a word about the tariff in his letter, which appears to have been written for the sole purpose of trying to prove by the utterances of President Taft that he was right in demanding free silver in 1896. Any reference to the tariff, he probably thought, would impair his argument concerning the effect of an increase of the volume of money upon prices. If he had given a little more thought to the matter, he might have realized that his argument would virtually say to the public that he favored the prevailing high prices, which are disliked by Democrats, as a rule, and by a majority of the American people. It is quite plain that the opportunity of the Democratic party has been given by popular disapproval of the increased cost of living, the insurgent revolt in the Republican party, and the movement against the Republican leaders who have been controlling legislation in Congress. The last two had their origin in the tariff revision, to which the first is related in the public mind. But the free silver obsession prevents the thrice nominated leader from seeing this. Consequently, the leading organ of the Democratic party in New York lifts up its voice mournfully as follows:

> "Somehow the party has come instinctively to hate success. It seems to believe that majorities are always wrong, and it takes elaborate precautions to remain right. No sooner does the Taft Administration begin to lose its grip on public confidence than a Democratic Legislature in Maryland undertakes to nullify the Fifteenth Amendment to the Constitution of the United States; Mr. Bryan triumphantly drags the corpse of free silver from its tomb; the Democratic Governor of Tennessee reverses the State Supreme Court, and a Democratic dinner cheers the announcement that the party of Jefferson, Jackson, Tilden and Cleveland may be permitted to affiliate with the party of William Randolph Hearst."

There was a time when Mr. Bryan did not ignore the tariff. The speech which first gave him prominence had the tariff for its subject. It was made when he was a member of the House.

A Navy for the Steel Trust

In an address the other evening before the Navy League, which claims "that international efforts toward peace have accomplished nothing as to the limitation of armaments," Secretary Meyer urged a great navy for the United States on the ground that it was the best guarantee of peace and that it gave encouragement to the steel industry and the ship building concerns. We suppose we should be thankful that nobody now advocates a navy for fighting the enemy but only for preserving the peace, tho we should like to have Secretary Meyer or the Navy League point out to us when a great navy has ever prevented war! But the justification for spending millions of dollars a year for battleships on the ground that it helps the Steel Trust and the shipyards is an argument we advise

our great navy friends not to use too extensively in the public prints and on the platform if they value the progress of their cause. These are Secretary Meyer's words:

"In 1880 before the Navy had authorized ships requiring steel of domestic manufacture, there were 140,000 wage earners in the iron and steel trades, earning $55,000,000 in wages and turning out products worth $296,500,000. . . . In 1905 there were 242,740 wage earners in the iron and steel industry earning in a year $141,439,000 and producing iron and steel worth $905,000,000. The encouragement given to this industry by the construction of the new Navy had a decided influence in bringing about these substantial results and therefor I claim that the money expended on battleships and cruisers has not been thrown away as the peace societies and some of the worthy clergy who have been opposing the increase of the Navy and the building of battleships would have you believe. . . . The great shipyards of Bath, Quincy, New York, Camden, Philadelphia, Newport News, Seattle and San Francisco owe their establishment and growth to the Government work on the Navy."

Let all our statesmen and peace advocates ponder this argument from a responsible Cabinet officer. And now another American Armada is to circle the globe for the purpose of "impressing" our sister nations and stimulating a public opinion at home favorable to the building of more and still more Dreadnoughts!

New Work for Chambers of Commerce

The Pittsburg Chamber of Commerce has recently sent out a document, showing that it has broken with tradition, and opened the work of such bodies in a way not heretofore thought of. It has in active operation committees on smoke abatement, on municipal sanitation, and on general housing conditions. It is announced to be the intention of the Chamber to make that smoky city ideal for residence. Following its new policy of co-operation with all civic improvement, it has lent its assistance to the County Medical Society to create a milk standard that should decrease infant mortality. It is proposed to take oversight of small shipments, to see that packages are carefully marked to facilitate delivery. Pittsburg is already receiving "next morning" service to a majority of the larger towns within a radius of one hundred miles. The passage of freight that took ten or twelve days has been reduced to six. In other words the Chamber of Commerce has become a medium of close communication between the people and all corporate action. Especial attention has been given to housing conditions and improved sanitation. Bad water, bad sewage, bad housing and bad air are a species of indirect taxation on business interests. Foundrymen tell how a manager was compelled, by having his windows washed, to let more light in, for the advantage of his workmen. It seems to us that what is particularly needed in our smaller cities, is a central organizing force, that shall correlate all efforts for civic betterment.

President Wilson and Princeton

President Wilson's address at a Princeton alumni dinner at Pittsburg a few days ago spoke in general terms when he meant particularly to hit the university of which he is president. What he said was not all true, but it is partly true. This language is somewhat needlessly alarming:

"If she loses her self-possession, America will stagger, like France, thru fields of blood before she again finds peace and prosperity under the leadership of men who know her needs."

In getting ready to accuse the colleges he thus assailed the churches:

"I trust I may be thought among the last to blame the churches, yet I feel it my duty to say that they, at least the Protestant churches, are serving the classes and not the masses of the people. They have more regard for pew rents than for men's souls. They are depressing the level of Christian endeavor."

This is true of certain city churches, but not of churches as a whole. Many of them have no pew rents. This charge is hardly in any degree true of the country churches, and there are few churches where the poor clerk or milliner or the mechanic is not welcomed. But it was the universities President Wilson was after:

"It is the same with universities. We look for the support of the wealthy and neglect our opportunities to serve the people. It is for this reason the State University is held in popular approval while the privately supported institution to which we belong is coming to suffer a corresponding loss of esteem."

This may be in good part true as applied to Princeton University, for it has

been very much an aristocratic institution, which President Wilson would not have it be. But there are not a few "privately supported institutions" of which this is not true, and which are as eager to serve the public as are those whose presidents have to buttonhole Governors and Senators and legislative committees at State capitols to get the money they need.

Professor Sumner

In the death of William Graham Sumner, last week, the country loses probably its ablest free trader, the science of sociology one of its keenest and soundest students, and Yale University perhaps its greatest and most distinguished professor. For thirty-five years Professor Sumner held sway in the classroom, impressing all who were privileged to hear him with his remarkable intellectual keenness, his lucidity of exposition and his uncompromising rectitude of character. Every Yale man in the academic department attended his lectures. From President Taft to last year's graduates, all will testify to his greatness as a teacher. The undergraduates called his course on "The Science of Society" "Sumnerology," and no one can tell what an influence he has exerted thruout the country as his students went out into the world and became factors in the realm of education, politics and finance. It was his single-minded devotion to truth probably more than any other characteristic that caused Professor Sumner to be so much admired and honored by students, faculty and the public. In his last years, however, there was a touch of sadness that ran thru his nature, for he believed the principles of Spencerian liberalism, which he has always championed, were losing ground, and in their place the people were following the false gods of imperialism, paternalism and socialism. Free trade he preached in the classroom and even in the halls of Congress itself. The abolition of custom houses, he held, would do more to bring about an era of peace on earth than anything else. The peace advocates would do well to look more into this neglected argument for their cause. Professor Sumner wielded a pen as keen as his tongue. His books are already among the political and sociological classics of America. Any of our readers who have not already done so will make no mistake in reading at once his little volume, "What Social Classes Owe to Each Other," and his latest and monumental work, "Folkways." Professor Sumner was a great teacher, a brave scholar and a true gentleman.

WILLIAM GRAHAM SUMNER.
From an old photograph taken in 1873.

Another Educational Defection

We are sorry to see Tufts College backslide from its just and worthy position as a co-educational institution. In a measure we condone the fault of Harvard, and Yale, and Dartmouth, and Brown, and Bowdoin, and Williams, and Amherst, for they were founded before co-education was thought of, and special schools and colleges were established to provide for young women, and three large and superior colleges for women—Smith, Wellesley and the yet older Mount Holyoke—are excellent institutions. But Tufts

represented the Universalists, and the Universalists were supposed to be progressive, if not radical; and Tufts has, in its day, seen the light and followed it, as did Wesleyan University. Then the Wesleyan boys insulted their sisters, and the trustees submitted to their rudeness and sent the girls away, and now the Universalists have followed the Methodists. Now we shall look to see if St. Lawrence University, at Canton, N. Y., another institution controlled by the Universalists, has as uncontrolled a body of students and as pliable a board of trustees. We think better of President Gunnison.

President Taft to the Suffragists

When President Taft addressed the suffragists at Washington last week, and told them that he was not so ardent in their cause as he was as a boy of sixteen, when he made it his graduating essay at the Cincinnati High School, and when he further said that now he was not ready to favor woman suffrage so long as the women do not seem ready to ask for it, some of the women present hissed. That was a decided rudeness, and was very gently and yet effectively rebuked by him:

> "Now, my dear ladies, you must show yourselves equal to self-government by exercising, in listening to opposing arguments, that degree of restraint without which successful self-government is impossible."

That was fair, and then they heard him quietly to the end. The argument is, that before any class has the suffrage it should not only be intelligent (a requirement which we question), but it should, "as a whole, care enough to look after its interests, and take part as a whole in the exercise of political power if conferred." But how shall such a class, as a whole, ever come to look after its interests, and take part in the conduct of them, so long as they are forbidden to exercise any rights therein, and are bidden to attend to other duties? It looks like telling a boy he must not go into the water till he has learned to swim. No class of men anywhere that is denied the right of suffrage takes much interest in its duties; only a few advanced ones bother with it. But when they get it they value it, and so would women, and so they do in Colorado or Finland.

A Correction

We are heartily glad to note that we were in error last week in saying that Mr. H. A. Rucker, the colored Collector of Internal Revenue in Atlanta, had been replaced by a white man. It proves to be all newspaper talk. We were correct, however, in asserting that for the nearly thirteen years of his tenure of office he has performed his duties to the complete satisfaction of the Treasury, his office being uniformly rated No. One. It may be interesting to note in this connection that the father-in-law of the late Henry W. Grady is Mr. Rucker's chief deputy, and that a large part of his official force consists of Southern whites. Be it said to their credit that they have uniformly given their superior in office perfect official courtesy, and it is needless to say that this has been cordially reciprocated. Mr. Rucker has on file over a thousand applications from Southern whites desiring places under him. It will surprise those who know of Southern conditions only thru the newspapers that Mr. Rucker's application to President McKinley for the office was endorsed not only by leading business men of Atlanta, but also by leaders of labor organizations as well. Up to this time none of these has entered any reasonable complaint against the conduct of his office, the only complaint, and that by a few interested ones, has been the Collector's complexion. He is an educated man, is rearing an intelligent family, has lived economically and is accumulating property. Measured by any right standard he is a citizen of whom any community might well feel proud. If President Taft is seeking for efficiency we fail to see the need of a change, especially since he is the only man of his race of over a million in Georgia holding a Federal office within that State, where negroes have since their freedom accumulated over $25,000,000 worth of property. As we said in our last issue, we seriously question

the policy of depriving the negro population of representation in office, and the more so when the race can offer such men as this for the public service.

An Explanation

As Prof. George A. Barton, of Bryn Mawr, thinks we did him injustice in a late editorial, we give room to his explanation and defense:

In THE INDEPENDENT of April 7th in the editorial entitled "That Deluge Tablet," after referring to a paper of mine on the subject which was read at the meeting of the Oriental Society in Baltimore, you say: "So far as the scientific and critical side of the discussion went there was nothing to complain of, but there was added to it in the paper . . . a severe personal attack on Professor Hilprecht, which had no place in such a scientific meeting."

It seems to me that in this statement you have unintentionally done me an injustice, because apparently you did not see the situation as I did, and consequently did not understand the purpose of the sentences to which you objected in my paper or the motive which lay back of them.

In publishing the little deluge tablet Professor Hilprecht had not only made claims as to its antiquity and importance which there was no evidence to justify, but had permitted, if he had not caused his discovery to be widely heralded thru the daily press as of epoch-making importance critically and religiously. Many innocent people were deceived. Moreover somewhat similar sensational methods had been used by him before. It seemed accordingly that a duty rested upon the Orientalists assembled in Baltimore, not only to disprove the extravagant claims as to the importance of the tablet, but to let the public know that scholars regard such sensational methods as unscientific and unworthy of a scholar.

It was this twofold duty that I with great reluctance undertook to perform in my paper. The few sentences which you interpreted as a personal attack were designed solely to make clear to the world that the methods were followed in this instance must be regarded as unworthy of a real scientist. It still seems to me that it was a public duty to give utterance to this thought at that time and place, and it also seems that the reception given these sentiments by the Oriental Society and by the public bear out this view. This was all I intended to do. It is difficult, I know, to separate a man from his methods, but I had no motive for attacking Professor Hilprecht personally and no desire to do so. When he published his "Old Babylonian Inscriptions" I was among his most sincere admirers. It has been one of the most painful experiences of my life that in recent years I have been compelled by a sense of public duty and by loyalty to truth openly to criticise his work and his methods. I can think of nothing now that would give me more genuine pleasure than to see him take a course that would restore my confidence in his scientific work and my admiration for it.

I heartily agree with you that personalities and invective have no place in scientific discussion. When, however, unreal results obtained by unscientific methods are proclaimed in a sensational way in the daily papers as of transcendent importance, it is clearly the duty of scholars to voice their disapproval of such ways in no uncertain tones. Perhaps some one else could have accomplished the result by means of expressions as effective as those used by me but less objectionable, but I am far too sad over the whole affair to think of making a personal attack.

If you can find a way to set me right with your large and influential circle of readers, I shall be most grateful.

A Lesson in Church Union

Here is a lesson for those who are afraid to unite two denominations for fear they will lose their property to a small remnant which refuses to join. The United Church of Scotland and the Free Church united a few years ago, but a little ragged remnant of "Wee Frees" refused to join, and, by a strange freak of overstringent law, they got a big part of the property, altho every one knew it was wrong. The loss of membership has been already far more than made up. The congregations evicted have got their new places of worship. There has been a magnificent expression of liberality, so much so that, while raising over $3,000,000 for special needs, the missionary causes have not suffered, and they have even added a surplus grant of $50 to all ministers whose stipends fall below $1,000 and a manse. This may give courage to the union cause in this country. The Cumberland Presbyterians have lost property in two States by union with the Northern Presbyterians, but they will more than make it up. Division is no part of Christianity, and no part of good finance.

Mount McKinley

Mount McKinley in Alaska has at last been scaled to its summit, over 20,000 feet above the level of the sea, the loftiest mountain in North America; and there they planted the American flag. But the interest in the achievement is not in this splendid feat,

but in the fact that they found no trace of Dr. Cook's "brass tube," which he said he left there; neither could they discover any such character of the summit or of the route to it as he described in his book. It seems to be now proved that he faked the story of his conquest of Mount McKinley, as we had generally come to believe, just as he later faked his conquest of the Pole. It was his success in his first fraud that gave him courage to attempt the second. One great lie paved the way to a yet more colossal one, by which he hoped to gain unearned fame. So near does fame lie to infamy. It is an old story, but seldom if ever have we had so stupendous an example of the *facilis descensus.* Discovered, exposed, he now is compelled to hide from the world, after enjoying only a few weeks of splendid glory, but consigned for all the rest of his life to worldwide shame, forced to conceal his identity and his vagrant residence, and to exhaust his suddenly acquired fortune in hunting his hiding places, until poverty shall bring him to distress. Such are the wages of ambitious fraud.

The African Hunt

It ought to be clear to every one now that Mr. Roosevelt's African hunt was no mere pleasurable jaunt of a strenuous man eager to kill, but was a really scientific expedition. It was a dangerous expedition, dangerous for its conflict with wild beasts—which might be attractive enough—but dangerous also for the prevalence of poisonous fevers, which is never attractive. But this was a purely scientific expedition, conducted by Mr. Roosevelt under the direction of the Smithsonian Institution, with its full complement of naturalists and assistants, and the fruits of it prove that it was well devised and accomplished. The National Museum at Washington has received a magnificent collection of specimens, which will make it, for the territory explored, the finest in the world, including over eleven thousand vertebrates, from elephants and hippopotamuses to birds, frogs and snakes, besides thousands of shells and insects. In addition to these, a second large collection was presented to a British museum in recognition of the courtesies received from English officials and the English Government. There were those who deprecated such an expedition and even severely blamed Mr. Roosevelt, as if he had been a mere bloodthirsty pot-hunter, but they were wrong. The end crowns the event. It was hardly less than a stroke of genius which led him, while hiding himself away for the first year of President Taft's administration, to make the year both useful to science and productive of physical and intellectual energy for himself, and a real advantage to his country.

A Pardoner of Murderers

Governor Patterson, of Tennessee, has, during his brief term of office, pardoned 956 prisoners, of whom 152 had been convicted of murder, the last one being a man convicted of murdering ex-Senator Carmack. We are astonished that so many murderers could have been convicted in Tennessee; but they evidently have a Governor in that State who believes that murder is a virtue. He was elected by the whisky people, and he speaks their sentiments. In the case of Colonel Cooper, who threatened to kill ex-Senator Carmack if the latter attacked him again in his paper, and who accompanied his son when the latter fired the fatal shot, Governor Patterson says he knows the jury was wrong, and that his friend Colonel Cooper was innocent, for he did not fire the shot. In Tennessee we would judge that murder is regarded as quite an innocent amusement, as it is a very common one. It must not be thought that these 152 murderers exhaust the list, for few are convicted and many are never tried. Why should the State be put to the expense? It is a small village that cannot boast of at least one murderer that walks free and carries his loaded gun in his hip pocket.

A very hopeful development of our agricultural work is the appointment by fruit growers of experts, whose business it is to supervise large sections, and establish uniform culture and care of apple orchards, and in some cases of other fruits. Such an expert has been engaged in Wayne County, of New York State, whose business it is to oversee the spraying of all the apple orchards of that section, and superin-

tend the harvesting of the crop. No one can fully appreciate this movement who has not a personal knowledge of the shiftlessness with which many apple orchards are gathered, and the wretched way in which the barrels are packed. As for spraying, it is rarely done with intelligence and accuracy, often doing more damage than benefit. The intention now is to give a local reputation for first-rate apples to those localities that employ the expert. It is a movement that will accrue with as much benefit to the purchaser as to the seller. It should spread over the whole country, and end in driving out of market all inferior grades of fruit, and probably all inferior sorts. Apple growing is at present a combination of ignorance and neglect, and the marketing is badly shadowed with dishonorable packing.

The work done by our friend, Mr. N. O. Nelson, of St. Louis, in the way of co-operation with his workmen, is catching. Andrew Carnegie now says that the one thing that would tempt him to go back into business, would be that he might be able to address his 40,000 employees, every one of them, as fellow partners, at every annual meeting. Mr. Carnegie thinks that this is the solution of the labor problem; a solution that is coming before many years. It may be Socialism, but it is free from the dangers of State socialism. We can believe that more Carnegies are coming, and more Nelsons, and that the business world will not much longer be sharply divided between money kings and muscle kings. They have come to battle, and it is impossible for this battle to end in anything but fellowship. It is the one and only way that is open to industrial peace; and it is the only road that is open whereby our social life can escape from the selfishness that is eating out the heart of our American manhood.

The Rev. Lord William Cecil, who has made careful investigations in China with a view of establishing a university there, has come to this country with a view, as reported, to obtaining American support for it. We should presume that his purpose is rather to consult with those who may have in charge the large educational scheme for China, for which two distinguished professors of the University of Chicago made a study there, with Mr. Rockefeller's support. Lord Cecil would not desire that his English plan should conflict with the American one, both countries being anxious to benefit that long slumbrous empire.

Postmaster-General Hitchcock finds that there are other ways to reduce the annual deficit in his department than by raising the postage on printed matter. Last year the deficit for six months was $10,265,000, while this year it is only $4,072,000. This comes largely by business economies, and now he proposes to put the appointment of the smaller post offices under civil service rules. That would be a splendid advance, and it comes from the man who has been regarded as the special politician of the Cabinet.

We welcome General Kitchener, the great British officer, to our country, and his anticipations of peace please us; but his ideal of peace is of interest, and is that of enlarging armaments: "My whole view of the future is one made peaceable by the force of arms." It is the old "*quietem per ense.*" There is a better.

On the upper corner of the first page of a leading New York daily: "All the News That's Fit to Print." On the middle column of the same page, in big display type: " 'John L.' to Report Fight for The ——. Sullivan Will Telegraph His Account of It from the Ringside. Will Report Training Too."

President Taft doubts whether women as a class take enough interest in public matters to care to vote, and yet in the four States of Colorado, Idaho, Utah and Wyoming about 115,000 of them voted for him as President. Did they err, or does he?

When our artists read that a group by Franz Hals has been sold for half a million and a single portrait for $137,000, it must make them wish they were dead.

Insurance

The Mutual Life Insurance Company and Superintendent Hotchkiss

An incident of the report issued by Superintendent Hotchkiss, of the State Insurance Department, this week, covering the Department's last examination of the Mutual Life Insurance Company for the years 1906-07-08, lies in the criticism of this well-known company that it contains. The examination was on the financial statement as of December 31, 1908. This examination, made under the laws recommended by the Armstrong committee, was quite exhaustive and several months' time was consumed in its preparation. All accounts of the company were checked and all assets and liabilities verified. It was shown that the company had ledger assets at the time specified, of $515,282,-177.30, and total admitted assets of $544,185,205.99. It was also shown that a reorganization of the supply department had been effected, so that a recurrence of expenditures for legislative and other improper purposes, as concealed in this department by the previous management, had been made impossible. It was shown that the Mutual had added to their surplus over $49,000,-000, of which something like $33,500,000 had gone into dividend account, and the balance, approximately $15,500,000, had been used to bring the surplus up to the limit permitted under the law and to provide for the charging off for a portion of the real estate. The dividends have been several times augmented under the new laws now obtaining. The efforts made by the company to dispose of its stocks, bonds and real estate, as required by the legislation of 1906, were also touched upon. On the whole the report is complimentary to the company, which is shown to have complied for the most part with the insurance law as amended by the Armstrong committee. The severe criticism is made, however, that the company has more or less evaded the restrictions of section 97 of the insurance law, which limits the amount a company may legally expend in securing new business. An item of $354,144.09, which the company paid during 1908 ostensibly for "supervision of old business," appears to have been made up, in part at least, of bonuses paid to those agents who were the most successful in securing new business. The fact that the company increased its advances to agents during a campaign for the election of directors under the amended laws by more than double the amount paid during any other quarter of the year was held to be a proper subject for criticism. The settlement of the McCurdy suits, even tho the settlement was made by and with the advice of Joseph H. Choate and James McKeen, is likewise scored in the report, as having been reached on statements that were at once inaccurate and misleading. Charles A. Peabody, the president of the Mutual Life Insurance Company, in a reported interview, denied much of what was set forth in the so-called Publicity Statement, saying in part as follows:

"The Publicity Statement (so called) issued by the department contains three criticisms of the company. Two of them, relating to expenditures for 'care and supervision of old business' and to agents' advances during the year 1906, are too silly to discuss, as will be apparent to any one reading the report. It is sufficient to say that in spirit they misrepresent the facts.

"The other subject in the report (that of the McCurdy Settlements) was arranged by a committee of the board of trustees.

"As to whether the seven gentlemen composing this committee acted wisely in their conclusion or, as stated in the report, did not understand the subject or 'purposely misled the board of trustees,' I leave the policyholders, to whom we are accountable, to judge. The comparing of their judgment and integrity with those of the examiner of the department, presents a question which I do not care to discuss.

"I maintain that the spirit and the letter of the Armstrong law have been observed by the Mutual Life Insurance Company and that the law has been in good faith lived up to. If it can be shown that it has not been I must take the consequences, whether I like it or not."

Financial

The Trust Cases

At the opening of the stock market on the 11th there were no signs of an upward movement. The news that a rehearing in the Standard Oil and Tobacco Trust cases had been ordered by the Supreme Court came unexpectedly at noon. At once there was a sharp advance. In following days there were fluctuations, but at the end of the week the prices of the leading active stocks (a majority of which had some direct interest in the pending question) were from 4 to 6 points higher than at the beginning. In what may be called the opinion of the Stock Exchange, therefore, a delay of from nine months to a year in the settlement of these very important cases was something greatly to be desired.

But the delay is really something to be deplored. It gives to speculators a sense of relief and freedom for a time, but it is unfortunate for the business interests of the country that a definite settlement of the highly important questions involved must be so long deferred. Moreover, the delay may have greater length than is now indicated, for two of the Justices are seventy-seven years old, and another vacancy might cause still further postponement. It was to be desired for many reasons that a comprehensive and emphatic decision as to the Anti-Trust law should be reached now by the court of last resort. Business interests ought to know now just what the law means and how it is to be applied. A prompt decision might have hastened the adoption of some modifications or amendments.

Wheat Crop Report

The first crop report of the year is not a favorable one, but there is ample time for some improvement. On April 1, the condition of winter wheat was 80.8, against 82.2 a year ago, and a ten years average of 87. This indicates, but with much uncertainty, a crop of about 435,000,000 bushels. Last year's crop was 446,366,000. There was a remarkable increase of acreage at seeding time, and the severe losses due to winter killing, mainly in Kansas, Nebraska and Missouri, have probably left 2,000,000 more acres of growing wheat than were to be seen at last year's harvest. But the condition is very low. The prevailing higher prices have caused an increase of acreage in the spring wheat States also. James J. Hill says there is an addition of 20 per cent. Spring seeding, earlier by thirty days than the average date, is now nearly finished, and a large yield is expected. While winter wheat has suffered, the condition of rye is exceptionally good, being 92.3 against 87.2 last year, and a ten years average of 89.5.

....Commodity prices are still rising. Bradstreet's index number for April 1 is 9.1924, against 9.1113 for March 1, and 9.0730 for February 1. The average for the four months of this year has been 9.1592, against a monthly average of 8.5153 for the year 1909, and 8.0094 for 1908.

....By the death of James T. Woodward, New York and the country have lost an eminent banker and a citizen whose influence was exerted for the public good. Born on a farm in Maryland, his first service after the completion of his education was in a New York importing house. In 1877 he was elected president of the Hanover National Bank, and he held this office for the remainder of his life, seeing the deposits of the institution rise from $6,000,000 to about $100,000,000. In 1898 he was made president of the Clearing House Association, and in the panic of 1907 his wise action, as chairman of the Clearing House Committee, gave him national prominence. Grover Cleveland was his intimate friend. In the Democratic party Mr. Woodward stood firmly for a sound currency. Therefore, in 1896 he cast his vote for McKinley. He contributed generously to charitable and educational institutions and was a vestryman of St. Thomas's Church.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, APRIL 28, 1910 No. 3204

Survey of the World

Senators Aldrich and Hale Will Retire

Predictions that Senator Nelson W. Aldrich, of Rhode Island, would retire from the Senate at the end of his present term, in March next, were published two or three weeks ago. It became known on the 19th inst. that he had given formal notice of his intention to retire, and also that Senator Eugene Hale, of Maine, would leave the Senate at the same time. Their terms will expire on March 4, 1911. Mr. Aldrich, now in the sixty-ninth year of his age, will then have served four years in the House and thirty years in the Senate. Mr. Hale, who is nearly seventy-four years old, was in the House ten years before he entered the Senate, twenty-nine years ago. They have been men of great influence in the upper branch of Congress. The Rhode Island Senator is chairman of the Finance Committee and of the Monetary Commission. Much of his work may be seen in the McKinley, Dingley and Payne-Aldrich tariff acts. Mr. Hale is chairman of the Committee on Appropriations, which is second only to the Finance Committee in importance and power. He is also a prominent member of the Naval Committee, of which he was formerly chairman. The two Senators hold the first two places in what is commonly called the Steering Committee, which determines the program of legislation. Mr. Aldrich will retire on account of the condition of his health. His physicians have directed him to do less work and take more outdoor exercise. Undoubtedly he has found insurgent opposition irksome and has not enjoyed the criticism to which he has been subjected outside of the Senate. He intends to remain at the head of the Monetary Commission. In his letter of the 17th to the Governor of Rhode Island he said:

"My purpose in coming to Rhode Island at this time was to apprise you and other political friends, before the commencement of the approaching campaign, of a decision, long since made, that I cannot under any circumstances be a candidate for re-election to the Senate. At the earnest solicitation of friends I have withheld this announcement, which is now enforced by personal reasons which are, for me, imperative.

"It is a source of satisfaction to me to know that my successor is sure to be a Republican, whose fidelity to the principles and governmental policies of the party cannot be questioned. I am confident that the important legislation to which the party and the Administration are pledged, with one exception, will have been enacted into laws before the close of the present session.

"I do not intend to resign my position on the National Monetary Commission, nor to relinquish my efforts to secure as soon as possible the adoption of a wise banking and monetary system by the United States. On some proper occasion I shall express to the people of Rhode Island my appreciation of the unfailing support and confidence which they have accorded to me through more than forty years of public service."

The "one exception" is currency reform legislation. Charles R. Brayton, the Republican leader in Rhode Island, says the Senator's successor "must be a man who will stand for the things Aldrich has stood for." One of those who are mentioned is Col. Samuel P. Colt, president of the United States Rubber Company. It is said that the Senator would regard with pleasure the election of Henry F. Lippitt, a wealthy owner of cotton goods mills. In his letter of the 18th to the chairman of the Maine Republican Committee, Mr. Hale said he declined "to engage in a conflict for the Senatorship." He continued:

"Longer public service is not necessary to my peace of mind, and the prospect of retirement has little in it that is disagreeable to me.

> The party has given me what no other man in Maine has ever received, five unanimous nominations for five full continuous terms in the Senate, and it seems not fitting for me to make a personal contest for the succession."

It was most important, he added, that Maine should send four Republican Representatives to the next Congress, "to avoid what may be a critical trial day for all Maine's industries and her business prosperity":

> "Should the Democrats carry the next House of Representatives, within ninety days after the opening of the next Congress a free tariff bill will be sent to the Senate, in which Maine's principal industries and interests will be marked for slaughter. Whoever recalls the situation under the Morrison bill, and later under the Gorman-Wilson bill, will fully realize this. And this disaster to Maine can only be prevented by the Republicans retaining control in the next House."

It is well known that if Mr. Hale should seek re-election he would be confronted by considerable insurgent opposition under the direction of F. A. Powers, formerly Attorney General and recently a judge of the Supreme Court. His physicians advised him not to enter a heated campaign. Ex-Governor Cobb gives notice that he is a candidate. The retirement of these two leaders of the "old guard" has caused much speculation as to its effect. Mr. Burrows, of Michigan, is second in the Finance Committee, but his re-election is not assured, and there is some talk about his retirement. It is evident that power in the Senate will be gained by the West and that the influence of the insurgents will be increased. It is understood that Mr. Depew, who has just celebrated his seventy-sixth birthday, does not intend to retire. Speaker Cannon says he expects to live twenty-five years more. At the end of the present session probably there will be an attempt to depose him. Judge Norris, of Nebraska, who recently led the insurgents in the House, says the retirement of Senators Aldrich and Hale "means a breaking up of the machine as a force in legislation, and the passing of the legislative bosses."

The Pittsburg Bribery Cases

M. L. Swift, Jr., a former member of the Pittsburg Common Council, was placed on trial last week for taking bribes, John C. Klein, who was recently convicted, testifying against him. He was found guilty, but the jury asked the court to be merciful. Sentence has not been pronounced. A. V. Simon, a Councilman, was then tried. After being out forty-six hours the jury reported a verdict of acquittal, "provided that Simon would pay all costs of the case and at once resign from the Council." Declining to accept this curious verdict, the judge discharged the jury and ordered a new trial. Among those recently indicted was Max G. Leslie, county tax collector and president of the Republican committee, who had been tried for perjury, and acquitted. Leslie is in New York, and is said to be ill. He asked for a change of venue, alleging that public prejudice would prevent a fair trial in Pittsburg and that the county authorities would pack the jury against him. There was some surprise on the 23d, when District-Attorney Blakely joined Leslie in asking for a change of venue. But his reasons were not the same as Leslie's. His remarks to the court fairly warranted an inference that he could not expect justice in a trial there of a person prominent and active in politics. A large fund had been raised, he said, and was being used against the interests of justice. The court corridors had been full of gamblers and jury-fixers; owing to the way in which jury panels were formed, they contained many persons unfit to serve. It was not safe for the State to try indicted politicians in Allegheny County. He asked the court to name some other county, but not to name it until a few days before the beginning of the trial. In the case of Frank N. Hoffstot, president of the Pressed Steel Car Company and of the German National Bank, Governor Hughes decided to honor the requisition of the Governor of Pennsylvania. It is plain, however, that Hoffstot will resist extradition in all possible legal ways. The case is still pending in habeas corpus proceedings.

Wages Increased

The general rise of wages has not been checked. An increase of 6 per cent. for the 225,000 employees of the United States Steel Corporation, announced on the 14th, will add about $9,000,000 to the annual payroll. The corporation has also discontinued Sunday work in all its mills and mines, and

on its railroads (about 2,000 miles of track) so far as possible. A plan for the relief of injured men, and of the families of men killed in the company's service, has been adopted. The sums to be paid will be larger for married men than for single men, and the additions will be in proportion to the number of children in the family. Relief payments made by subsidiary companies heretofore have exceeded $1,000,000 a year. The new plan will increase them.——The New York Central Railroad Company's men declined the offered increase of about 6 per cent. After a vote in favor of a strike had been taken, an agreement was reached. The controversy will be settled by arbitration, two of the arbitrators being E. E. Clark, of the Interstate Commerce Commission (formerly grand master of the conductors' union), and P. H. Morrissey, president of the Railway Employee Investors' Association (formerly at the head of the trainmens' union). Their names were suggested by the company. An offered increase of 6 per cent. was rejected by the Delaware & Lackawanna employees, who insisted that the forthcoming decision of the Central's arbitrators should be applied to their service. After a strike had been ordered, the company yielded. The Delaware & Hudson's men have decided to accept the terms of the Central's arbitrators. The increase granted by the Boston & Maine is about 11 per cent., and passenger rates will be made higher.——In Montreal, an unsolicited increase has been granted to 3,000 street railway men. An offered increase has been rejected, as insufficient, by the street railway employees in Hartford and Pittsburg, and the Worcester men have voted to strike for higher pay. The street railway men who were on strike in Philadelphia have accepted the terms offered by the company several weeks ago. These provide for an increase now, with gradual additions in the coming four years.——There has been more disorder at the works of the Pressed Steel Car Company, near Pittsburg. Nearly 5,000 men were on strike last week, owing to the discharge of four employees. Seven men were injured on the 20th in a battle between a mob and the police. The wounds of three (a policeman and two strikers) are mortal.

Trust Cases The Sherman Anti-Trust law has been used effectively in the prosecution of Kentucky tobacco farmers who took part in the night-rider persecutions. A Federal jury at Covington, last week, found eight residents of Grant County guilty of violating that statute. By intimidation they had compelled a farmer named Osborne to withhold from shipment a quantity of tobacco which he had agreed to sell in Cincinnati. This they had done in the interest of the combination or trust of tobacco growers. They were punished by fines ranging from $100 to $1,000. All are prominent residents of Grant County, and one, John S. Steers, is a clergyman and a member of the legislature. Three days later, a jury in the same court convicted six farmers of Pendleton County, the complainant being a farmer named Eckler. Similar fines were imposed. In another case $6,000 was awarded in damages to W. S. Henderson, a merchant who had sued twelve tobacco farmers of Bracken County. By threats they had forced him to sign agreements concerning the purchase of tobacco. They had also ruined his business and driven him from the State.——Arguments were made last week before the Governor of New Jersey on the application of Prosecutor Garven for a requisition asking for the extradition of J. Ogden Armour and other Chicago packers accused in the indictment of the Beef Trust by a grand jury of Hudson County, N. J.——During an inquiry made by the Attorney General of Missouri, last week, the secretary of the St. Louis Dressed Beef Company (which was generally believed to be an independent corporation) testified that the company was really owned by the National Packing Company, which is a holding corporation (recently indicted in Chicago) controlled by the Armour, Swift and Morris interests. The vice-president of the company admitted that in buying cattle, persons representing these interests pretended to bid against each other, in order that there might seem to be competition. The Attorney General has decided to proceed against the National Packing Company and its subsidiary corporations in an ouster suit.——Before the Supreme

Court, in Washington, last week, arguments were made in the appeal of the Standard Oil Company from the ouster decree of the Tennessee courts, which held that the company had violated the Sherman Anti-Trust law of the State. ——An investigation by a Federal grand jury shows that there have been at New Orleans no weighing frauds like those committed in New York for the benefit of the Sugar Trust. A similar inquiry is to be made at San Francisco.

Cuban Negroes Under Restraint

General Estenoz, leader of the independent negro party in Cuba, and thirty-three negroes who had been associated with him, were arrested on the 23d by order of President Gomez. The Supreme Court has appointed a judge to hear the charges against them. It is alleged by the Government that Estenoz and his companions have been holding unlawful meetings, striving to array the blacks against the whites, making seditious speeches, and in other ways promoting rebellion. Several of those in custody, it is said, are members of secret associations of negroes who have been drilling in a military way in anticipation of an uprising against the whites. Three days before the arrests, troops were sent to Santa Clara, owing to the excited condition of the negroes in that province, where Estenoz and others had been making incendiary speeches. Estenoz says he was engaged in building up a political party of negroes, that it has 93,000 organized members, and that their aim is to get their share of the offices. As the editor of the party's newspaper, Estenoz was found guilty, on February 10, of libeling President Gomez, and was sentenced to be imprisoned for six months. After he had been in jail two weeks he was set free by the provisions of an amnesty act, which the President signed. His course is not approved by Morua Delgado, the negro who was recently made a member of the Cabinet. It is said that many negroes have been discharged from the army. Upon the motion of a negro Representative, Congress has asked the President for information about this. —— Secretary Dickinson tells a Congressional committee at Washington that our Government, in answer to a request from Cuba, detailed three officers of our army to assist in training Cuba's new army, because otherwise Cuba would have procured such instructors from some European Government. Complaint was recently made in Congress because the three men were receiving $200 a month from Cuba, in addition to their army pay.——Mr. Bryan has urged a House committee at Washington to recommend the proposed appropriation of $375,000 for the eradication of the hookworm disease in Porto Rico, and for the establishment of a Porto Rican university. He reports that American rule has been very beneficial to the island. Speaking of the hookworm disease, he says that about 300,000 cases have been treated. Half of the patients have been cured. About 400,000 more cases are to be treated.

The British Parliament

Notwithstanding the bitterness of the small Irish contingent led by Mr. O'Brien, the mass of the Irish members of Parliament, led by Mr. Redmond, hold firm with Mr. Asquith, as does the Laborite party, so that the Liberal coalition has a handsome majority assured. On Monday of last week William O'Brien made a bitter attack on Mr. Lloyd-George, charging him with falsehood. In an address at Dublin he had made statements as to private confidential communications he had had with Mr. Lloyd-George which the latter had denied, and now in Parliament Mr. O'Brien repeated his statements in a very offensive way, and was publicly contradicted by Mr. Lloyd-George, who was supported by Mr. Redmond, and even Mr. Balfour said that such communications should have been held as confidential. But when Mr. Balfour said that the Ministry had made a "bargain" with the Nationalists Mr. Lloyd-George absolutely denied it; and then Mr. Healy, another of the recalcitrant Nationalists, said he believed it, for Mr. Redmond, the Irish leader, had not an ounce of political backbone. Mr. Redmond assured the Government of the hearty support of the main body of Nationalists, some seventy in number, because, said he, the finacial injustice to Ireland in the Budget was trivial in comparison with the abolition of the veto

power of the House of Lords. The Redmond Nationalists met during the day and agreed to support the Budget thru all its stages. The country will have a respite from the threatened general election for at least three months. Premier Asquith announced in the House of Commons today that the spring recess of Parliament, which will begin on April 28, would continue until May 26, after which the House of Lords reassembling would occupy the greater part of a week in the debate on Lord Rosebery's reform resolution. Accordingly, it will be impossible for the House of Commons to take up the veto resolutions until June, and the crucial period will not arrive until that month is well advanced, not before August at the earliest. The Conservative forecasts of a break-up of the Liberal majority have all proved false, and Premier Asquith's plans have all gone on successfully, notwithstanding the bitterest opposition. There have been no changes in the Budget beyond those of a verbal nature. The deficit amounts to $141,000,000, in a total expenditure of $658,000,000, but Mr. Lloyd-George, Chancellor of the Exchequer, declared that but for the action of the Lords in rejecting the Budget there would have been no deficit. Taxes can now be collected, and a large amount is expected from the death duties.——The Cunard Steamship Company paid no dividend this year, but it will build a third monster vessel for service to New York of the "Mauretania" type. The chairman of the board of directors reports that the future of the New York trade is not with vessels of the 10,000-ton type, but with those of 40,000 or 50,000 tons, being combined passenger and freight vessels.

Countries South of Us

No collision of the troops of the Government, in Nicaragua, with the remnant of the revolutionist forces has been reported, altho the Government's army is said to be not far from Bluefields. Protest was made in New Orleans, last week, against the sailing of the steamship "Venus," loaded with arms and ammunition for President Madriz. There were cannon also on board and it is said that the steamship was to be used by the Government in an attack upon the eastern ports still held by the revolutionists. Louis Kohlman, a wealthy banker of New Orleans, was arrested for violation of the neutrality laws. It is alleged that he supplied the money for the projected expedition.——There has been no settlement of Ecuador's controversy with Peru. In Ecuador, last week, the first reserves were called to service. In Guayaquil they marched in the streets, demanding war.——President Cabrera, of Guatemala, has been re-elected. The beginning of a revolution against him was reported on the 18th, but the report appears to have had no foundation in fact.

Roosevelt in Europe

The impression first created by the reported visit to Mr. Roosevelt, in Vienna, of the Papal Nuncio, Mgr. Pignatelli, that the Vatican bore no ill-will toward the American ex-President because of the unfortunate incident at Rome, was hardly correct. A statement has been issued from the Vatican that no blame is put on M. Pignatelli, inasmuch as, having called on the American Ambassador, and having happened to find Mr. Roosevelt there, he could not help meeting him. Therefore the interview has no significance. The Nuncio himself explains that being himself unable to accept Ambassador Kerens's invitation to meet Mr. Roosevelt, he called on Mr. Kerens to express regret and to express his personal esteem for the ex-President. But meanwhile Mgr. Janssens, the learned Dominican Abbot, who voluntarily called on the ex-President in Rome, and left for him, with his card, a grateful message, has been rebuked and deprived of his offices in the Papal Court, with the exception of his membership in the Biblical Commission. After his visit to Vienna Mr. Roosevelt went to Budapest, the capital of Hungary. After a luncheon at the palace with Archduke Joseph of Austria, to which a number of celebrated hunters were invited, he made a visit on Francis Kossuth, the son of the famous Hungarian patriot, who is himself the leader of the Opposition party. At the House of Parliament Mr. Roosevelt was received by the Interparliamentary Union, and responded to an address of welcome by Count Apponyi. He avoided carefully

any reference to the political differences that exist between Austria and Hungary, and confined himself to the glorious memories of the past, going back to the time when Hungary protected all Europe against the Eastern barbarians. On the morning of the 21st, at 7.30, Mr. Roosevelt reached Paris, and was met at the station by Ambassador Bacon, M. Jusserand, French Ambassador to Washington, and representative of the President of the Republic of France. He called on President Fallières and the Foreign Minister, who immediately returned the call at the Embassy. In the evening he and his party occupied the Presidential box at the Comédie Française and were most tumultuously received. During the day he denied the report cabled from Rome that he intended on his return home to drive from Rome "the Methodists who disgrace any religion." He said it was an unqualified falsehood. He had previously denied the report that when in Berlin he intended to raise with the Emperor the question of disarmament, as this is a subject that belongs to diplomatic relations. Friday was given to sight-seeing, particularly to the Mausoleum of Napoleon and the Invalides Museum and the Louvre. There was a dinner at the Palace of the Elysée, followed by a reception attended by a multitude of officers and celebrities. The newspapers of the day gave Mr. Roosevelt a most eulogistic welcome, except the *Echo de Paris,* a clerical journal, in which, under the caption "Ave Cæsar," Frederic Masson, a member of the French Academy, denounced his "violent quest of publicity," as if he were a "pupil of Barnum," and turned to prophecy:

> "One can clearly foresee already that Mr. Roosevelt, on returning to his own country, will be raised above the Constitution to a position which may still be Republican in name, but which will in fact be dictatorial and, to use the right word, imperial. Why is this? Because he is ambitious. Truly no man appears to have so great a presumption, no man so great a contempt for all the forces which unbecome him, none such incomprehension of what is in the mind of education and respect for conventions."

On Saturday Mr. Roosevelt was welcomed as a foreign Associate of the Academy of Moral and Political Sciences. It was a most simple function; he was admitted to a seat with the members, and listened to the usual proceedings and exprest his thanks in a ten minute speech. Mr. Roosevelt's lecture at the Sorbonne was attended by 3,000 hearers. His subject was, "The Duties of Citizenship," published elsewhere in this issue.

The Chinese Troubles

It was hoped that the riots in the Hu-nan province of China had been controlled, but that does not seem to be the fact. Hunan is an interior province long known to be turbulent and anti-foreign, but it has been comparatively quiet since the Boxer Rebellion and many missions have been established there. To reach the province one must sail up the Yangtse-kiang nearly a thousand miles to Yo-Chan at the mouths of the Yuan-kiang and the Siang-kiang, branches of the Yangtse-kiang. Hu-nan is a magnificent province covering the drainage system of these two tributaries and has 22,000,000 population. The capital is Chang-sha, where, as reported last week, the outbreak occurred, at first excited by the extortionate price of rice, and then easily directed against all foreigners, who were forced to flee and whose property was all destroyed. No missionaries or other foreigners are believed to have been killed, except three Catholic priests who are said to have been killed after their escape in a vessel which was run down in the night. Even the Japanese consulate was burned. Riots are reported from other towns in the province, from Ning-siang, Yi-yang and Yo-chan. The efforts of the soldiers to suppress the riots have not been very successful, and in some cases the troops have deserted and joined the rioters. A number of the villages are said to have been burnt, and the country is placarded with threats to kill all foreigners, whose coming is believed to have caused all their evils. In one case a technical school was burnt and thirty native pupils are reported to have perished in the flames. Late reports assert that the British consulate at Chang-sha was burnt because the consul secured workmen from another province to rebuild it. Several small gunboats from different fleets have gone to the protection of foreign interests, but it is slow work reaching there. It is much feared that the troubles are spreading.

Duties of the Citizen

An Address Delivered Before the French Academy April 23

BY THEODORE ROOSEVELT

[Our readers will thank us for giving ex-President Roosevelt's Sorbonne address in full. The Paris Sunday papers show that it has made an immense impression, as the utterance to France of those basic moral principles which only can save a state. The utterance of all the leading papers is condensed in one sentence from one leading journal: "No nobler lesson of civic duty ever fell from human lips."—EDITOR.]

STRANGE and impressive associations rise in the mind of a man from the New World who speaks before this august body in this ancient institution of learning. Before his eyes pass the shadows of mighty kings and warlike nobles, of great masters of law and theology; thru the shining dust of the dead centuries he sees crowded figures that tell of the power and learning and splendor of times gone by; and he sees also the innumerable host of humble students to whom clerkship meant emancipation, to whom it was wellnigh the only outlet from the dark thraldom of the Middle Ages.

This was the most famous university of medieval Europe at a time when no one dreamed that there was a new world to discover. Its services to the cause of human knowledge already stretched far back into the remote past at the time when my forefathers, three centuries ago, were among the sparse band of traders, ploughmen, woodchoppers and fisherfolk who, in hard struggle with the iron unfriendliness of the Indian haunted land, were laying the foundations of what has now become the giant Republic of the West. To conquer a continent, to tame the shaggy roughness of wild nature, means grim warfare; and the generations engaged in it cannot keep still less add to, the stores of garnered wisdom which once were theirs, and which are still in the hands of their brethren who dwell in the old land. To conquer the wilderness means to wrest victory from the same hostile forces with which mankind struggled in the immemorial infancy of our race. The primeval conditions must be met by primeval qualities which are incompatible with the retention of much that has been painfully acquired by humanity as thru the ages it has striven upward toward civilization. In conditions so primitive there can be but a primitive culture. At first only the rudest schools can be established, for no others would meet the needs of the hard-driven, sinewy folk who thrust forward the frontier in the teeth of savage man and savage nature; and many years elapse before any of these schools can develop into seats of higher learning and broader culture.

The pioneer days pass; the stump-dotted clearings expand into vast stretches of fertile farm land; the stockaded clusters of log cabins change into towns; the hunters of game, the fellers of trees, the rude frontier traders and tillers of the soil, the men who wander all their lives long thru the wilderness as the heralds and harbingers of an oncoming civilization, themselves vanish before the civilization for which they have prepared the way. The children of their successors and supplanters, and then their children and children's children, change and develop with extraordinary rapidity. The conditions accentuate vices and virtues, energy and ruthlessness, all the good qualities and all the defects of an intense individualism, self-reliant, self-centered, far more conscious of its rights than of its duties, and blind to its own shortcomings. To the hard materialism of the frontier days succeeds the hard materialism of an industrialism even more intense and absorbing than that of the older nations; altho these themselves have likewise already entered on the age of a complex and predominantly industrial civilization.

As the country grows, its people, who have won success in so many lines, turn back to try to recover the possessions of the mind and the spirit which perforce their fathers threw aside in order better to wage the first rough battles for the continent their children inherit. The leaders of thought and of action grope their way forward to a new life, realizing, sometimes dimly, sometimes clear-sightedly, that the life of material gain,

whether for a nation or an individual, is of value only as a foundation, only as there is added to it the uplift that comes from devotion to loftier ideals. The new life thus sought can in part be developed afresh from what is round about in the New World; but it can be developed in full only by freely drawing upon the treasure houses of the Old World, upon the treasures stored in the ancient abodes of wisdom and learning, such as this where I speak today. It is a mistake for any nation merely to copy another; but it is an even greater mistake, it is a proof of weakness in any nation, not to be anxious to learn from another and willing and able to adapt that learning to the new national conditions and make it fruitful and productive therein. It is for us of the New World to sit at the feet of the Gamaliel of the Old; then, if we have the right stuff in us, we can show that Paul in his turn can become a teacher as well as a scholar.

Today I shall speak to you on the subject of individual citizenship, the one subject of vital importance to you, my hearers, and to me and my countrymen, because you and we are citizens of great democratic republics. A democratic republic such as each of ours—an effort to realize in its full sense government by, of and for the people—represents the most gigantic of all possible social experiments, the one fraught with greatest possibilities alike for good and for evil. The success of republics like yours and like ours means the glory, and our failure the despair, of mankind; and for you and for us the question of the quality of the individual citizen is supreme. Under other forms of government, under the rule of one man or of a very few men, the quality of the rulers is all-important. If, under such governments, the quality of the rulers is high enough, then the nation may for generations lead a brilliant career and add substantially to the sum of world achievement, no matter how low the quality of the average citizen; because the average citizen is an almost negligible quantity in working out the final results of that type of national greatness.

But with you and with us the case is different. With you here, and with us in my own home, in the long run, success or failure will be conditioned upon the way in which the average man, the average woman, does his or her duty, first in the ordinary, every-day affairs of life, and next in those great occasional crises which call for the heroic virtues. The average citizen must be a good citizen if our republics are to succeed. The stream will not permanently rise higher than the main source; and the main source of national power and national greatness is found in the average citizenship of the nation. Therefore it behooves us to do our best to see that the standard of the average citizen is kept high; and the average cannot be kept high unless the standard of the leaders is very much higher.

It is well if a large proportion of the leaders in any republic, in any democracy, are, as a matter of course, drawn from the classes represented in this audience today; but only provided that those classes possess the gifts of sympathy with plain people and of devotion to great ideals. You and those like you have received special advantages; you have all of you had the opportunity for mental training; many of you have had leisure; most of you have had a chance for the enjoyment of life far greater than comes to the majority of your fellows. To you and your kind much has been given, and from you much should be expected. Yet there are certain failings against which it is especially incumbent that both men of trained and cultivated intellect and men of inherited wealth and position should especially guard themselves, because to these failings they are especially liable; and if yielded to their —your— chances of useful service are at an end.

Let the man of learning, the man of lettered leisure, beware of that queer and cheap temptation to pose to himself and to others as the cynic, as the man who has outgrown emotions and beliefs, the man to whom good and evil are as one. The poorest way to face life is to face it with a sneer. There are many men who feel a kind of twisted pride in cynicism; there are many who confine themselves to criticism of the way others do what they themselves dare not even attempt. There is no more unhealthy being, no man less worthy of respect, than he who either really holds, or feigns to hold, an attitude of sneering disbelief toward all that

is great and lofty, whether in achievement or in that noble effort which, even if it fail, comes second to achievement. A cynical habit of thought and speech, a readiness to criticise work which the critic himself never tries to perform, an intellectual aloofness which will not accept contact with life's realities—all these are marks, not, as the possessor would fain think, of superiority, but of weakness. They mark the men unfit to bear their part manfully in the stern strife of living, who seek, in the affectation of contempt for the achievements of others, to hide from others and from themselves their own weakness. The role is easy; there is none easier, save only the role of the man who sneers alike at both criticism and performance.

It is not the critic who counts; not the man who points out how the strong man stumbles or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena, whose face is marred by dust and sweat and blood; who strives valiantly; who errs, and comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows the great enthusiasms, the great devotions; who spends himself in a worthy cause; who at the best knows in the end the triumph of high achievement, and who at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who know neither victory nor defeat. Shame on the man of cultivated taste who permits refinement to develop into a fastidiousness that unfits him for doing the rough work of a workaday world! Among the free peoples who govern themselves there is but a small field of usefulness open for the men of cloistered life, who shrink from contact with their fellows. Still less room is there for those who deride or slight what is done by those who actually bear the brunt of the day; nor yet for those others who always profess that they would like to take action, if only the conditions of life were not what they actually are. The man who does nothing cuts the same sordid figure in the pages of history, whether he be cynic, or fop or voluptuary. There is little use for the being whose tepid soul knows nothing of the great and generous emotion, of the high pride, the stern belief, the lofty enthusiasm, of the men who quell the storm and ride the thunder. Well for these men if they succeed; well also, tho not so well, if they fail, given only that they have nobly ventured, and have put forth all their heart and strength. It is warworn Hotspur, spent with hard fighting, he of the many errors and the valiant end, over whose memory we love to linger, not over the memory of the young lord who "but for the vile guns would have been a soldier."

France has taught many lessons to other nations; surely one of the most important is the lesson her whole history teaches, that a high artistic and literary development is compatible with notable leadership in arms and statecraft. The brilliant gallantry of the French soldier has for many centuries been proverbial, and during these same centuries at every court in Europe the "freemasons of fashion" have treated the French tongue as their common speech; while every artist and man of letters, and every man of science able to appreciate that marvelous instrument of precision, French prose, has turned toward France for aid and inspiration. How long the leadership in arms and letters has lasted is curiously illustrated by the fact that the earliest masterpiece in a modern tongue is the splendid French epic which tells of Roland's doom and the vengeance of Charlemagne when the lords of the Frankish host were stricken at Roncesvalles.

Let those who have keep, let those who have not strive to attain a high standard of cultivation and scholarship. Yet let us remember that these stand second to certain other things. There is need of a sound body; and even more need of a sound mind. But above mind and above body stands character—the sum of those qualities which we mean when we speak of a man's force and courage, of his good faith and sense of honor. I believe in exercise for the body, always provided that we keep in mind that physical development is a means and not an end. I believe, of course, in giving to all the people a good education. But the education must contain much besides book learning in order to be really good. We must ever remember that no keenness and sub-

tleness of intellect, no polish, no cleverness, in any way make up for the lack of the great solid qualities. Self-restraint, self-mastery, common sense, the power of accepting individual responsibility and yet of acting in conjunction with others, courage and resolution—these are the qualities which mark a masterful people. Without them no people can control itself, or save itself from being controlled from the outside. I speak to a brilliant assemblage; I speak in a great university which represents the flower of the highest intellectual development; I pay all homage to intellect, and to elaborate and specialized training of the intellect; and yet I know I shall have the assent of all you present when I add that more important still are the commonplace, everyday qualities and virtues.

Such ordinary, everyday qualities include the will and the power to work, to fight at need and to have plenty of healthy children. The need that the average man shall work is so obvious as hardly to warrant insistence. There are a few persons in every country so born that they can lead lives of leisure. These fill a useful function if they make it evident that leisure does not mean idleness; for some of the most valuable work needed by civilization is essentially non-remunerative in its character, and of course the people who do this work should in large part be drawn from those to whom remuneration is an object of indifference. But the average man must earn his own livelihood. He should be trained to do so, and he should be trained to feel that he occupies a contemptible position if he does not do so—that he is not an object of envy if he is idle, at whichever end of the social scale he stands, but an object of contempt, an object of derision.

In the next place, the good man should be both a strong and brave man; that is, he should be able to fight, he should be able to serve his country as a soldier should the need arise. There are well meaning philosophers who declaim against the unrighteousness of war. They are right only if they lay all their emphasis upon the unrighteousness. War is a dreadful thing, and unjust war is a crime against humanity. But it is such a crime because it is unjust, not because it is war. The choice must ever be in favor of righteousness, and this whether the alternative be peace or whether the alternative be war. The question must not be merely, Is there to be peace or war? The question must be, Is the right to prevail? Are the great laws of righteousness once more to be fulfilled? And the answer from a strong and virile people must be "Yes," whatever the cost. Every honorable effort should always be made to avoid war, just as every honorable effort should always be made by the individual in private life to keep out of a brawl, to keep out of trouble; but no self-respecting individual, no self-respecting nation, can or ought to submit to wrong.

Finally, even more important than ability to work, even more important than ability to fight at need, is it to remember that the chief of blessings for any nation is that it shall leave its seed to inherit the land. It was the crown of blessings in Biblical times and it is the crown of blessings now. The greatest of all curses is the curse of sterility, and the severest of all condemnations should be that visited upon wilful sterility. The first essential in any civilization is that the man and the woman shall be father and mother of healthy children, so that the race shall increase and not decrease. If this is not so, if thru no fault of the society there is failure to increase, it is a great misfortune. If the failure is due to deliberate and wilful fault, then it is not merely a misfortune, it is one of those crimes of ease and self-indulgence, of shrinking from pain and effort and risk, which in the long run Nature punishes more heavily than any other. If we of the great republics, if we, the free people who claim to have emancipated ourselves from the thraldom of wrong and error, bring down on our heads the curse that comes upon the wilfully barren, then it will be an idle waste of breath to prattle of our achievements, to boast of all that we have done. No refinement of life, no delicacy of taste, no material progress, no sordid heaping up of riches, no sensuous development of art and literature, can in any way compensate for the loss of the great fundamental virtues, and of these great fundamental virtues the greatest is the race's power to perpetuate the race.

Character must show itself in the

man's performance both of the duty he owes himself and of the duty he owes the state. The man's foremost duty is owed to himself and his family; and he can do this duty only by earning money, by providing what is essential to material wellbeing; it is only after this has been done that he can hope to build a higher superstructure on the solid material foundation; it is only after this has been done that he can help in movements for the general wellbeing. He must pull his own weight first, and only after this can his surplus strength be of use to the general public. It is not good to excite that bitter laughter which expresses contempt, and contempt is what we feel for the being whose enthusiasm to benefit mankind is such that he is a burden to those nearest him; who wishes to do great things for humanity in the abstract, but who cannot keep his wife in comfort or educate his children.

Nevertheless, while laying all stress on this point, while not merely acknowledging but insisting upon the fact that there must be a basis of material wellbeing for the individual, as for the nation, let us with equal emphasis insist that this material wellbeing represents nothing but the foundation, and that the foundation, tho indispensable, is worthless unless upon it is raised the superstructure of a higher life.

That is why I decline to recognize the mere multi-millionaire, the man of mere wealth, as an asset of value to any country, and especially as not an asset to my own country. If he has earned or uses his wealth in a way that makes him of real benefit, of real use—and such is often the case—why, then he does become an asset of worth. But it is the way in which it has been earned or used and not the mere fact of wealth that entitles him to the credit. There is need in business, as in most other forms of human activity, of the great guiding intelligences. Their places cannot be supplied by any number of lesser intelligences. It is a good thing that they should have ample recognition, ample reward. But we must not transfer our admiration to the reward instead of to the deed rewarded; and if what should be the reward exists without the service having been rendered, then admiration will come only from those who are mean of soul. The truth is that after a certain measure of tangible material success or reward has been achieved the question of increasing it becomes of constantly less importance compared to other things that can be done in life. It is a bad thing for a nation to raise and to admire a false standard of success and there can be no falser standard than that set by the deification of material wellbeing in and for itself. The man who for any cause for which he is himself accountable has failed to support himself and those for whom he is responsible ought to feel that he has fallen lamentably short in his prime duty. But the man who, having far surpassed the limit of providing for the wants, both of body and mind, of himself and of those depending upon him, then piles up a great fortune, for the acquisition or retention of which he returns no corresponding benefit to the nation as a whole, should himself be made to feel that, so far from being a desirable he is an unworthy citizen of the community, that he is to be neither admired nor envied, that his right thinking fellow countrymen put him low in the scale of citizenship and leave him to be consoled by the admiration of those whose level of purpose is even lower than his own.

My position as regards the moneyed interests can be put in a few words. In every civilized society property rights must be carefully safeguarded. Ordinarily, and in the great majority of cases, human rights and property rights are fundamentally, and in the long run, identical; but when it clearly appears that there is a real conflict between them, human rights must have the upper hand, for property belongs to man and not man to property.

In fact, it is essential to good citizenship clearly to understand that there are certain qualities which we in a democracy are prone to admire in and of themselves, which ought by rights to be judged admirable or the reverse solely from the standpoint of the use made of them. Foremost among these I should include two very distinct gifts—the gift of money making and the gift of oratory. Money making, the money touch, I have spoken of above. It is a quality which in a moderate degree is essential. It may be useful when developed to a very great de-

gree, but only if accompanied and controlled by other qualities; and without such control the possessor tends to develop into one of the least attractive types produced by a modern industrial democracy. So it is with the orator. It is highly desirable that a leader of opinion in a democracy should be able to state his views clearly and convincingly. But all that the oratory can do of value to the community is to enable the man thus to explain himself; if it enables the orator to persuade his hearers to put false values on things it merely makes him a power for mischief. Some excellent public servants have not the gift at all, and must rely upon their deeds to speak for them; and unless the oratory does represent genuine conviction, based on good common sense and able to be translated into efficient performance, then the better the oratory the greater the damage to the public it deceives. Indeed, it is a sign of marked political weakness in any commonwealth if the people tend to be carried away by mere oratory, if they tend to value words in and for themselves, as divorced from the deeds for which they are supposed to stand. The phrase maker, the phrase monger, the ready talker, however great his power, whose speech does not make for courage, sobriety and right understanding, is simply a noxious element in the body politic, and it speaks ill for the public if he has influence over them. To admire the gift of oratory without regard to the moral quality behind the gift is to do wrong to the republic.

Of course, all that I can say of the orator applies with even greater force to the orator's latter-day and more influential brother, the journalist. The power of the journalist is great, but he is entitled neither to respect nor admiration because of that power unless it is used aright. He can do, and he often does, great good. He can do, and he often does, infinite mischief. All journalists, all writers, for the very reason that they appreciate the vast possibilities of their profession, should bear testimony against those who deeply discredit it. Offenses against taste and morals, which are bad enough in a private citizen, are infinitely worse if made into instruments for debauching the community thru a newspaper. Mendacity, slander, sensationalism, inanity, vapid triviality, all are potent factors for the debauchery of the public mind and conscience. The excuse advanced for vicious writing, that the public demands it and that the demand must be supplied, can no more be admitted than if it were advanced by the purveyors of food who sell poisonous adulterations.

In short, the good citizen in a republic must realize that he ought to possess two sets of qualities, and that neither avails without the other. He must have those qualities which make for efficiency; and he must also have those qualities which direct the efficiency into channels for the public good. He is useless if he is inefficient. There is nothing to be done with that type of citizen of whom all that can be said is that he is harmless. Virtue which is dependent upon a sluggish circulation is not impressive. There is little place in active life for the timid good man. The man who is saved by weakness from robust wickedness is likewise rendered immune from the robuster virtues. The good citizen in a republic must first of all be able to hold his own. He is no good citizen unless he has the ability which will make him work hard and which at need will make him fight hard. He is not a good citizen unless he is an efficient citizen.

But if a man's efficiency is not guided and regulated by a moral sense, then the more efficient he is the worse he is, the more dangerous to the body politic. Courage, intellect, all the masterful qualities, serve but to make a man more evil if they are used merely for that man's own advancement, with brutal indifference to the rights of others. It speaks ill for the community if the community worships these qualities and treats their possessors as heroes, regardless of whether the qualities are used rightly or wrongly. It makes no difference as to the precise way in which this sinister efficiency is shown. It makes no difference whether such a man's force and ability betray themselves in the career of money maker or politician, soldier or orator, journalist or popular leader. If the man works for evil, then the more successful he is the more he should be despised and condemned by all upright

and farseeing men. To judge a man merely by success is an abhorrent wrong; and if the people at large habitually so judge men, if they grow to condone wickedness because the wicked man triumphs, they show their inability to understand that in the last analysis free institutions rest upon the character of citizenship, and that by such admiration of evil they prove themselves unfit for liberty.

The homely virtues of the household, the ordinary workaday virtues which make the woman a good housewife and house mother, which make the man a hard worker, a good husband and father, a good soldier at need, stand at the bottom of character. But of course many others must be added thereto if a state is to be not only free, but great. Good citizenship is not good citizenship if exhibited only in the home. There remain the duties of the individual in relation to the state, and these duties are none too easy under the conditions which exist where the effort is made to carry on free government in a complex industrial civilization. Perhaps the most important thing the ordinary citizen, and, above all, the leader of ordinary citizens, has to remember in political life is that he must not be a sheer doctrinaire. The closest philosopher, the refined and cultured individual who from his library tells how men ought to be governed under ideal conditions, is of no use in actual governmental work; and the one-sided fanatic, and still more the mob leader, and the insincere man who to achieve power promises what by no possibility can be performed, are not merely useless but noxious.

The citizen must have high ideals, and yet he must be able to achieve them in practical fashion. No permanent good comes from aspirations so lofty that they have grown fantastic and have become impossible and indeed undesirable to realize. The impracticable visionary is far less often the guide and precursor than he is the embittered foe of the real reformer, of the man who, with stumblings and shortcomings, yet does in some shape, in practical fashion, give effect to the hopes and desires of those who strive for better things. Woe to the empty phrase-maker, to the empty idealist, who, instead of making ready the ground for the man of action, turns against him when he appears and hampers him as he does the work! Moreover, the preacher of ideals must remember how sorry and contemptible is the figure which he will cut, how great the damage that he will do, if he does not himself, in his own life, strive measurably to realize the ideals that he preaches for others. Let him remember also that the worth of the ideal must be largely determined by the success with which it can in practice be realized. We should abhor the so-called "practical" men whose practicality assumes the shape of that peculiar baseness which finds its expression in disbelief in morality and decency, in disregard of high standards of living and conduct. Such a creature is the worst enemy of the body politic. But only less desirable as a citizen is his nominal opponent and real ally, the man of fantastic vision who makes the impossible better forever the enemy of the possible good.

We can just as little afford to follow the doctrinaires of an extreme individualism as the doctrinaires of an extreme socialism. Individual initiative, so far from being discouraged, should be stimulated; and yet we should remember that, as society develops and grows more complex, we continually find that things which once it was desirable to leave to individual initiative can, under the changed conditions, be performed with better results by common effort. It is quite impossible, and equally undesirable, to draw in theory a hard and fast line which shall always divide the two sets of cases. This every one who is not cursed with the pride of the closet philosopher will see, if he will only take the trouble to think about some of our commonest phenomena. For instance, when people live on isolated farms or in little hamlets, each house can be left to attend to its own drainage and water supply; but the mere multiplication of families in a given area produces new problems which, because they differ in size, are found to differ not only in degree but in kind from the old; and the questions of drainage and water supply have to be considered from the common standpoint. It is not a matter for abstract dogmatizing to decide when this point is reached; it is a matter to be tested by practical experiment. Much of the discussion about

socialism and individualism is entirely pointless, because of failure to agree on terminology. It is not good to be the slave of names. I am a strong individualist by personal habit, inheritance and conviction; but it is a mere matter of common sense to recognize that the state, the community, the citizens acting together, can do a number of things better than if they were left to individual action. The individualism which finds its expression in the abuse of physical force is checked very early in the growth of civilization, and we of today should in our turn strive to shackle or destroy that individualism which triumphs by greed and cunning, which exploits the weak by craft instead of ruling them by brutality. We ought to go with any man in the effort to bring about justice and the equality of opportunity, to turn the tool user more and more into the tool owner, to shift burdens so that they can be more equitably borne. The deadening effect on any race of the adoption of a logical and extreme socialistic system could not be overstated; it would spell sheer destruction; it would produce grosser wrong and outrage, fouler immorality, than any existing system. But this does not mean that we may not with great advantage adopt certain of the principles professed by some given set of men who happen to call themselves socialists; to be afraid to do so would be to make a mark of weakness on our part.

But we should not take part in acting a lie any more than in telling a lie. We should not say that men are equal where they are not equal, nor proceed upon the assumption that there is an equality where it does not exist; but we should strive to bring about a measurable equality, at least to the extent of preventing the inequality which is due to force or fraud. Abraham Lincoln, a man of the plain people, blood of their blood and bone of their bone, who all his life toiled and wrought and suffered for them, and at the end died for them, who always strove to represent them, who would never tell an untruth to or for them, spoke of the doctrine of equality with his usual mixture of idealism and sound common sense. He said (I omit what was of merely local significance): "I think the authors of the Declaration of Independence intended to include all men, but that they did not mean to declare all men equal in all respects. They did not mean to say all men were equal in color, size, intellect, moral development or social capacity. They defined with tolerable distinctness in what they did consider all men created equal—equal in certain inalienable rights, among which are life, liberty and the pursuit of happiness. This they said, and this they meant. They did not mean to assert the obvious untruth that all were then actually enjoying that equality, or yet that they were about to confer it immediately upon them. They meant to set up a standard maxim for free society which should be familiar to all—constantly looked to, constantly labored for, and, even tho never perfectly attained, constantly approximated, and thereby constantly spreading and deepening its influence, and augmenting the happiness and value of life to all people, everywhere."

We are bound in honor to refuse to listen to those men who would make us desist from the effort to do away with the inequality which means injustice; the inequality of right, of opportunity, of privilege. We are bound in honor to strive to bring ever nearer the day when, as far as is humanly possible, we shall be able to realize the ideal that each man shall have an equal opportunity to show the stuff that is in him by the way in which he renders service. There should, so far as possible, be equality of opportunity to render service; but just so long as there is inequality of service there should and must be inequality of reward. We may be sorry for the general, the painter, the artist, the worker in any profession or of any kind, whose misfortune rather than whose fault it is that he does his work ill. But the reward must go to the man who does his work well; for any other course is to create a new kind of privilege, the privilege of folly and weakness; and special privilege is injustice, whatever form it takes.

To say that the thriftless, the lazy, the vicious, the incapable ought to have the reward given to those who are farsighted, capable and upright is to say what is not true and cannot be true. Let us try to level up, but let us beware of the evil of leveling down. If a man stumbles, it is a good thing to help him to his feet.

Every one of us needs a helping hand now and then. But if a man lies down, it is a waste of time to try to carry him; and it is a very bad thing for every one if we make men feel that the same reward will come to those who shirk their work and to those who do it.

Let us then take into account the actual facts of life, and not be misled into following any proposal for achieving the millennium, for recreating the golden age, until we have subjected it to hard headed examination. On the other hand, it is foolish to reject a proposal merely because it is advanced by visionaries. If a given scheme is proposed, look at it on its merits and in considering it disregard formulas. It does not matter in the least who proposes it or why. If it seems good, try it. If it proves good, accept it; otherwise reject it. There are plenty of men calling themselves socialists with whom up to a certain point it is quite possible to work. If the next step is one which both we and they wish to take, why of course take it, without any regard to the fact that our views as to the tenth step may differ. But, on the other hand, keep clearly in mind that, tho it has been worth while to take one step, this does not in the least mean that it may not be highly disadvantageous to take the next. It is just as foolish to refuse all progress because people demanding it desire at some points to go to absurd extremes as it would be to go to these absurd extremes simply because some of the measures advocated by the extremists were wise.

The good citizen will demand liberty for himself, and, as a matter of pride, he will see to it that others receive the liberty which he thus claims as his own. Probably the best test of true love of liberty in any country is the way in which minorities are treated in that country. Not only should there be complete liberty in matters of religion and opinion, but complete liberty for each man to lead his life as he desires, provided only that in so doing he does not wrong his neighbor. Persecution is bad because it is persecution, and without reference to which side happens at the moment to be the persecutor and which the persecuted. Class hatred is bad in just the same way, and without any regard to the individual who at a given time substitutes loyalty to a class for loyalty to the nation or substitutes hatred of men because they happen to come in a certain social category for judgment awarded them according to their conduct. Remember always that the same measure of condemnation should be extended to the arrogance which would look down upon or crush any man because he is poor and to the envy and hatred which would destroy a man because he is wealthy. The overbearing brutality of the man of wealth or power and the envious and hateful malice directed against wealth or power are really at root merely different manifestations of the same quality, merely the two sides of the same shield.

The man who, if born to wealth and power, exploits and ruins his less fortunate brethren is at heart the same as the greedy and violent demagog who excites those who have not property to plunder those who have. The gravest wrong upon his country is inflicted by that man, whatever his station, who seeks to make his countrymen divide primarily on the line that separates class from class, occupation from occupation, men of more wealth from men of less wealth, instead of remembering that the only safe standard is that which judges each man on his worth as a man, whether he be rich or poor, without regard to his profession or to his station in life. Such is the only true democratic test, the only test that can with propriety be applied in a republic. There have been many republics in the past, both in what we call antiquity and in what we call the Middle Ages. They fell, and the prime factor in their fall was the fact that the parties tended to divide along the line that separates wealth from poverty. It made no difference which side was successful, it made no difference whether the republic fell under the rule of an oligarchy or the rule of a mob. In either case, when once loyalty to a class had been substituted for loyalty to the republic the end of the republic was at hand. There is no greater need today than the need to keep ever in mind the fact that the cleavage between right and wrong, between good citizenship and bad citizenship, runs at right angles to, and not parallel with, the lines of cleavage between class and class, between occupation and occupation. Ruin looks us in

the face if we judge a man by his position instead of judging him by his conduct in that position.

In a republic to be successful we must learn to combine intensity of conviction with a broad tolerance of difference of conviction. Wide differences of opinion in matters of religious, political and social belief must exist of conscience and intellect alike are not to be stunted, if there is to be room for healthy growth. Bitter internecine hatreds, based on such differences, are signs not of earnestness of belief but of that fanaticism which, whether religious or anti-religious, democratic or anti-democratic, is itself but a manifestation of the gloomy bigotry which has been the chief factor in the downfall of so many, many nations.

Of one man in especial, beyond any one else, the citizens of a republic should beware, and that is of the man who appeals to them to support him on the ground that he is hostile to other citizens of the republic, that he will secure for those who elect him, in one shape or another, profit at the expense of other citizens of the republic. It makes no difference whether he appeals to class hatred or class interest, to religious or anti-religious prejudice. The man who makes such an appeal should always be presumed to make it for the sake of furthering his own interest. The very last thing that an intelligent and self-respecting member of a democratic community should do is to reward any public man because that public man says he will get the private citizen something to which this private citizen is not entitled, or will gratify some emotion or animosity which this private citizen ought not to possess. Let me illustrate this by one anecdote from my own experience. A number of years ago I was engaged in cattle ranching on the great plains of the western United States. There were no fences. The cattle wandered free, the ownership of each being determined by the brand; the calves were branded with the brand of the cows they followed. If on the round-up an animal was passed by, the following year it would appear as an unbranded yearling, and was then called a maverick. By the custom of the country these mavericks were branded with the brand of the man on whose range they were found. One day I was riding the range with a newly hired cowboy and we came upon a maverick. We roped and threw it, then we built a little fire, took out a cinch ring, heated it at the fire and the cowboy started to put on the brand. I said to him: "It is So-and-so's brand," naming the man on whose range we happened to be. He answered: "That's all right, boss; I know my business." In another moment I said to him: "Hold on; you are putting on my brand!" To which he answered: "That's all right; I always put on the boss's brand." I answered: "Oh, very well. Now, you go straight back to the ranch and get what is owing to you; I don't need you any longer." He jumped up and said: "Why, what's the matter? I was putting on your brand." And I answered: "Yes, my friend, and if you will steal for me you will steal from me."

Now, the same principle which applies in private life applies also in public life. If a public man tries to get your vote by saying that he will do something wrong in your interest, you can be absolutely certain that if ever it becomes worth his while he will do something wrong against your interest.

So much for the citizenship of the individual in his relations to his family, to his neighbor, to the state. There remain duties of citizenship which the state, the aggregation of all the individuals, owes in connection with other states, with other nations. Let me say at once that I am no advocate of a foolish cosmopolitanism. I believe that a man must be a good patriot before he can be, and as the only possible way of being, a good citizen of the world. Experience teaches us that the average man who protests that his international feeling swamps his national feeling, that he does not care for his country because he cares so much for mankind, in actual practice proves himself the foe of mankind; that the man who says that he does not care to be a citizen of any one country because he is a citizen of the world, is in very fact usually an exceedingly undesirable citizen of whatever corner of the world he happens at the moment to be in. In the dim future all moral needs and moral standards may change; but at present, if a man can view his own country and all other countries from the same level with tepid indifference, it is wise to distrust

him, just as it is wise to distrust the man who can take the same dispassionate view of his wife and his mother. However broad and deep a man's sympathies, however intense his activities, he need have no fear that they will be cramped by love of his native land.

Now, this does not mean in the least that a man should not wish to do good outside of his native land. On the contrary, just as I think that the man who loves his family is more apt to be a good neighbor than the man who does not, so I think that the most useful member of the family of nations is normally a strongly patriotic nation. So far from patriotism being inconsistent with a proper regard for the rights of other nations, I hold that the true patriot, who is as jealous of the national honor as a gentleman of his own honor, will be careful to see that the nation neither inflicts nor suffers wrong, just as a gentleman scorns equally to wrong others or to suffer others to wrong him. I do not for one moment admit that political morality is different from private morality, that a promise made on the stump differs from a promise made in private life. I do not for one moment admit that a man should act deceitfully as a public servant in his dealings with other nations, any more than that he should act deceitfully in his dealings as a private citizen with other private citizens. I do not for one moment admit that a nation should treat other nations in a different spirit from that in which an honorable man would treat other men.

In practically applying this principle to the two sets of cases there is, of course, a great practical difference to be taken into account. We speak of international law; but international law is something wholly different from private or municipal law, and the capital difference is that there is a sanction for the one and no sanction for the other; that there is an outside force which compels individuals to obey the one, while there is no such outside force to compel obedience as regards the other. International law will, I believe, as the generations pass, grow stronger and stronger until in some way or other there develops the power to make it respected. But as yet it is only in the first formative period. As yet, as a rule, each nation is of necessity obliged to judge for itself in matters of vital importance between it and its neighbors and actions must of necessity, where this is the case, be different from what they are where, as among private citizens, there is an outside force whose action is all-powerful and must be invoked in any crisis of importance.

It is the duty of wise statesmen, gifted with the power of looking ahead, to try to encourage and build up every movement which will substitute or tend to substitute some other agency for force in the settlement of international disputes. It is the duty of every honest statesman to try to guide the nation so that it shall not wrong any other nation. But as yet the great civilized peoples, if they are to be true to themselves and to the cause of humanity and civilization, must keep ever in mind that in the last resort they must possess both the will and the power to resent wrongdoing from others. The men who sanely believe in a lofty morality preach righteousness; but they do not preach weakness, whether among private citizens or among nations. We believe that our ideals should be high, but not so high as to make it impossible measurably to realize them. We sincerely and earnestly believe in peace; but if peace and justice conflict, we scorn the man who would not stand for justice, tho the whole world came in arms against him.

And now, my hosts, a word in parting. You and I belong to the only two republics among the great Powers of the world. The ancient friendship between France and the United States has been, on the whole, a sincere and disinterested friendship. A calamity to you would be a sorrow to us. But it would be more than that. In the seething turmoil of the history of humanity certain nations stand out as possessing a peculiar power or charm, some special gift of beauty or wisdom or strength, which puts them among the immortals, which makes them rank forever with the leaders of mankind. France is one of these nations. For her to sink would be a loss to all the world. There are certain lessons of brilliance and of generous gallantry that she can teach better than any of her sister nations. When the French peasantry sang of Malbrook, it was to tell how the soul of this warrior foe took flight upward thru the laurels he had won.

Nearly seven centuries ago Froissart, writing of a time of dire disaster, said that the realm of France was never so stricken that there were not left men who would valiantly fight for it. You have had a great past. I believe that you will have a great future. Long may you carry yourselves proudly as citizens of a nation which bears a leading part in the teaching and uplifting of mankind!

PARIS, FRANCE.

The President and the Suffragists

BY IDA HUSTED HARPER

CHAIRMAN OF THE NATIONAL WOMAN SUFFRAGE PRESS COMMITTEE.

IN Washington, on April 14, President Taft opened the baseball season and the National Woman Suffrage Convention. The papers said he made a "faultless delivery" of the ball; he was not so fortunate in the delivery of his speech. The latter occurrence, however, may now be regarded as a closed incident, and "Who hissed the President?" must take its place with those other historic conundrums, "Who killed Cock Robin?" and "Who struck Billy Patterson?" There are those that say it was a deep-laid scheme of the "antis," who, when their appeal to the President not to make this address of welcome was unsuccessful, distributed themselves among the audience and turned the suffragists' smiles of triumph into tears of mortification. Others declare that, when the President intimated that if women should get the ballot only the "undesirable classes" would use it, the delegates from the four Western States where women already have it made this slight sound as more polite than calling out a short and ugly word. Still others assert that women have submitted without bloodshed to be ranked with idiots, lunatics and felons, but when it came to being classed with Hottentots their forbearance gave way.

Whatever and whoever was the cause, the act was un-American and regrettable. Hissing by an audience in Great Britain is as common as applause, but we are noted in the United States for tolerance at public meetings. In all the long years of those working for woman suffrage, this is the first known instance of such an expression of disapproval, altho many times the provocation has been almost too much to bear in silence. The President of the United States, however, was entitled to the highest respect because of his unprecedented courtesy in welcoming the convention. This required a political courage and independence that no other President of the United States, that no member of the Cabinet, ever has possessed. The act stands out in splendid contrast to those of his predecessor regarding this question. Altho Mr. Roosevelt was on record, while a member of the Legislature and Governor of New York, as in favor of woman suffrage, he never could be persuaded to speak one word for it during the whole of his Presidency. Not even the personal appeals of Miss Anthony in the closing days of her life could obtain the slightest expression from him which would be of assistance to this struggle for political liberty, altho there was scarcely any other reform too insignificant to receive his approval.

The women of the whole country should be deeply appreciative of President Taft's action in giving the prestige of his welcome to the convention and in accepting in a friendly spirit the sincere apologies of its officers for the unexpected episode. Its most unfortunate feature he exprest in his letter: "I regret it because it may be used in an unfair way to embarrass the leaders of your movement." It will indeed give the opponents a year's ammunition and their stock was getting very low. Nothing, however, could better illustrate the progress that the suffrage movement has made than the moderate and judicial comment of the press on this incident. Not long ago it would have denounced the women in unqualified terms, but now it has carefully weighed both sides, and admitted that they at least had cause for resentment. The statements of Presi-

dent Taft which created the trouble demand a careful analysis, partly because they come from such high authority and partly because they embody the objections most commonly made to the enfranchisement of women.

Said Mr. Taft:

"Popular representative government we approve and support, because on the whole every class who are intelligent enough to know what their own interests are, are better qualified to determine how those interests shall be cared for and preserved than any other class, however altruistic. But I call your attention to two qualifications in this statement—one that the class should be intelligent enough to know their own interests. The theory that Hottentots or any uneducated or altogether unintelligent class are fitted for self-government at once, or to take part in government, is a theory I wholly dissent from—but this qualification is not applicable to the question here."

Then why talk about it in this connection? A very large body of admittedly the leading women in the United States have long asked for a voice in the Government, and the President answers that "Hottentots or any altogether unintelligent class are not fitted for self-government at once." Even at their worst what class of women in the United States correspond to Hottentots? As a matter of fact if any number of male Hottentots should decide to make this their home they could vote in a number of States within six months. A few weeks ago a large body of Indians in blankets and feathers came to Washington to implore the Government not to make voters out of them. Did the President talk to them about Hottentots? No; he urged them to go home, wash off the paint and accept the ballot as a gracious gift. When Mr. Taft was Governor of the Philippines he went before the United States Senate Commission in 1902, and after testifying to the superiority of the Filipino women over the men, said: "If you expect to confer political power on the Filipinos it ought to be given to the women." Archbishop Nozaleda, of the Philippines, testified still more strongly, saying:

"If any rights and privileges are to be granted to the natives, do not give them to the men but to the women. . . . Every law of justice demands that even in political life they should have the privilege over the men." (Senate document 190, page 109.)

Nevertheless, with the consent and assistance of Mr. Taft, and under the presidency of Mr. Roosevelt, Congress conferred the franchise on the Filipino men and made them rulers over the women. No qualifications of intelligence or fitness were imposed and their use of the ballot and their legislative sessions have been a travesty upon self-government.

Last autumn when President Taft was talking to a body of workingmen he emphasized the point that every class knew their own needs best and no class was wise enough to govern another. Not by a word did he qualify the statement to the effect that "the class must be intelligent enough to know their own interests." That kind of talk is reserved exclusively for women. Not a class of men have been enfranchised for the past seventy-five years on the ground of "intelligence and fitness for self-government." Every male immigrant who can answer the few inane questions necessary for naturalization is presented with a ballot, and so is every native-born man who can keep out of the penitentiary and the asylums for the insane and imbeciles. It is only when women ask for it that all the great and little men say as Mr. Taft did to the National Suffrage Convention:

"If I could be sure that all the intelligent women most desirable as political constituents would exercise the franchise I should be in favor of it, but at present there is considerable doubt upon this point."

By what right is a condition imposed upon women that has never been imposed upon men? And is it absolutely certain that even "the most intelligent and desirable class" of either men or women could be trusted implicitly to vote for the best interests of those not so intelligent and desirable? While Mr. Taft was on his recent Southern tour he was reported as saying that "when all women wanted the suffrage he would favor giving it to them." Now he has decided that it must be all "intelligent" women, but one stipulation is just as absurd as the other. When "all men" or "all intelligent men" unite on any one point then it will be in order to make this requirement of women. The indisputable facts ought to be sufficient that in all the history of our country the number of men who have demanded the suffrage is infinitesimal compared to the

number of women who have demanded it; that the women who have exprest themselves in favor of it outnumber those who have exprest themselves in opposition in the ratio of hundreds to one; that the advocates are in every community the representative women in its organized life—in the clubs, charities, philanthropies, civic reforms and educational work.

Thus far in the speech the members of the National Suffrage Convention exprest no outward disapproval, whatever may have been in their thoughts. The following sentence called forth the dissent:

"The danger is, if the power of the suffrage is conferred, that it may be exercised by that part of the class least desirable as political constituents and be neglected by many of those who are intelligent and patriotic and would be most desirable as members of the electorate."

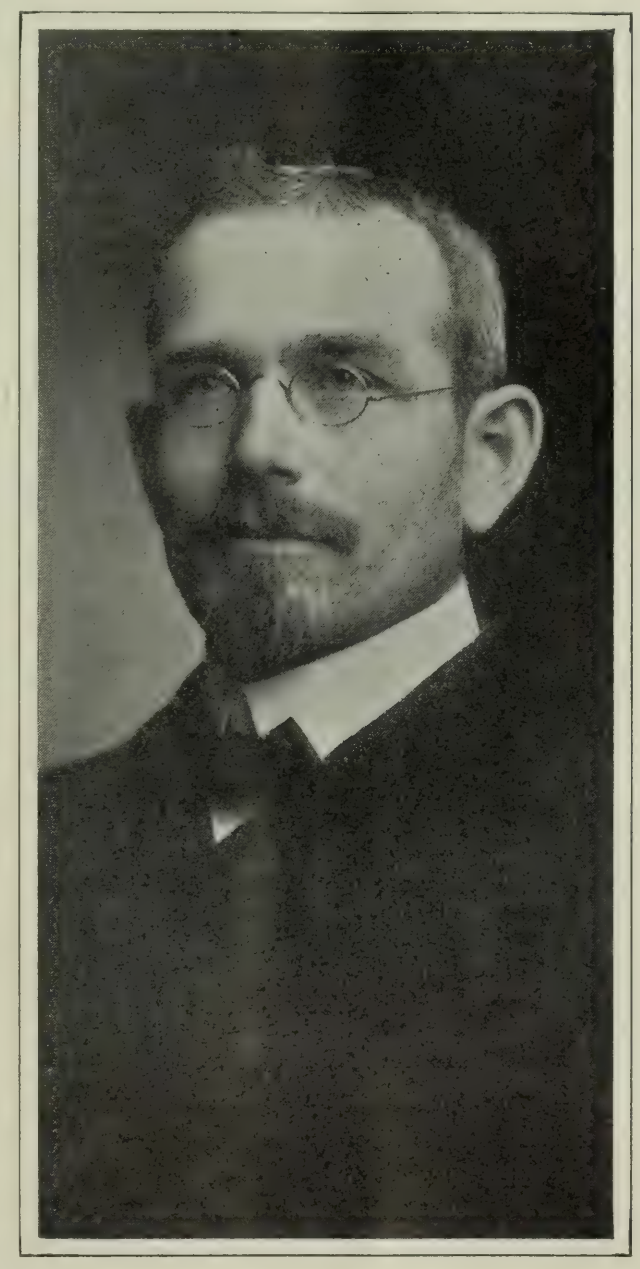
It seems reasonable that the delegates from the States where women vote would resent this imputation. It was not very tactful in the President when all of those States gave a majority for him last year. The suffragists are getting pretty tired of these charges. There is abundant evidence which would be received in any court that in all those States the proportion of the women's vote is largest in those localities where the proportion of intelligence and morality is greatest. In Colorado, for instance, Colorado Springs, "The Athens of the State," leads in the ratio of the woman vote. In Denver it is highest in the best residence districts. The other States present the same facts—they are truisms, easily ascertained by any one, and they leave no room whatever for the "considerable doubt" the President exprest. At the last election the official count of the vote of the women in the "red-light" district of Denver showed one-third of one per cent. of the total. Every particle of authentic testimony from those States where women have been voting from seventeen to forty-one years is that the so-called "best element" among women never fails to go to the polls. The official records prove that they vote in quite as large proportion as the men and sometimes in a larger proportion. All of these facts are open to everybody. There is no foundation for doubts and fears, and when one whose words carry as much weight as those of the President of the United States is to express an opinion he should first thoroly inform himself. President Taft would not give utterance to such crude and superficial sentiments on any other public question.

The women who represent the suffrage movement are well informed and they have a great deal of self-respect and independence. They have been listening to such speeches as that of Mr. Taft—and much worse—for the last quarter of a century, until their endurance is near the breaking point. They have been patronizingly lectured from platform, pulpit and press; they have been held to conditions never imposed on any other class asking for the franchise; the evidence they have offered to sustain their claims has been smothered by wilful and persistent misstatements; their dignified, orderly methods have been barren of results. The protest which dared voice itself against the utterances of a President is a symptom of the new régime impending. The movement for woman suffrage is entering the "militant" stage; its leaders realize that conservatism has had its day and failed to win, and they are willing to recognize the modern spirit. Every opposing argument has been answered and the suffrage has not been gained; therefore it is time the methods were changed. This necessity has been imposed upon women thru no wish of their own. Men have made their last stand behind a barricade inscribed, "The majority of women do not want the franchise." Very well; men have forced the issue; "the majority of women" must demonstrate that they do want it. If in order to do this an army of women must leave their homes; if thousands of girls must go directly from the colleges into this contest; if the much-needed workers in life's many activities must forsake them all and enter this great struggle for the suffrage —let it be remembered that the situation is not one of woman's choosing. How "militant" the movement may become, to what extremes it may lead, men alone must determine. Women intend to have a voice in the Government and they will do whatever is necessary to obtain it.

New York City.

Regulation That Regulates

BY FREDERICK L. HOLMES



STATE regulation of railroads in Wisconsin is effective. Judged by results it is a practical success.

Reductions in freight and passenger tariffs already ordered by the commission, altho the real work has only begun, aggregate an annual saving to the people of $1,970,000.

But the regulation of railroads in Wisconsin is not confined to correction of rates. The service is increased and improved. New trains have been ordered; schedules have been changed to meet the conveniences of the people in the territory served, and trains on different lines make close connections at junction points. Dilapidated and unsanitary stations are being supplanted by modern structures.

This is not drastic regulation. The railroads continue to extend their lines; 218 miles of road have been built since the work of regulation was begun. More than this, in the past year the gross earnings show an increase of $5,392,086. Apparently no industry has suffered as a result. The agricultural, manufacturing and commercial interests within the State are thriving.

Yet apart from the financial results, the physical comforts and conveniences, there are other important accomplishments. The railroads are out of politics. The disappearance of their vicious practices—the free pass, rebate and discrimination—has had a tendency to establish a new code of business ethics.

B. H. MEYER,
Chairman of Railroad Commission of Wisconsin.

Rate regulation permeates the very atmosphere in Wisconsin. People talk it. In two years shippers and citizens have made 1,134 complaints. Besides the consideration of these, the commission, on its own motion, has pursued general investigations, which have resulted in the reductions of rates on the shipments of many necessities of life. It now costs less to transport, for instance, grain, lumber, cheese and coal.

Effective results have been accomplished by the commission. Nearly one hundred and fifty orders have been issued, thousands of grievances have been settled, and only three appeals to the courts. The practical features of the Wisconsin commission law, requiring absolute and scientific rate making, has eliminated litigation.

Successful regulation of railroads resulted in the Legislature extending to the commission similar control over the 1,200 public utilities in the State. The granting of the power to regulate these monopolies has had a pronounced moral effect upon the service furnished in nearly every city. The quality of gas is bet-

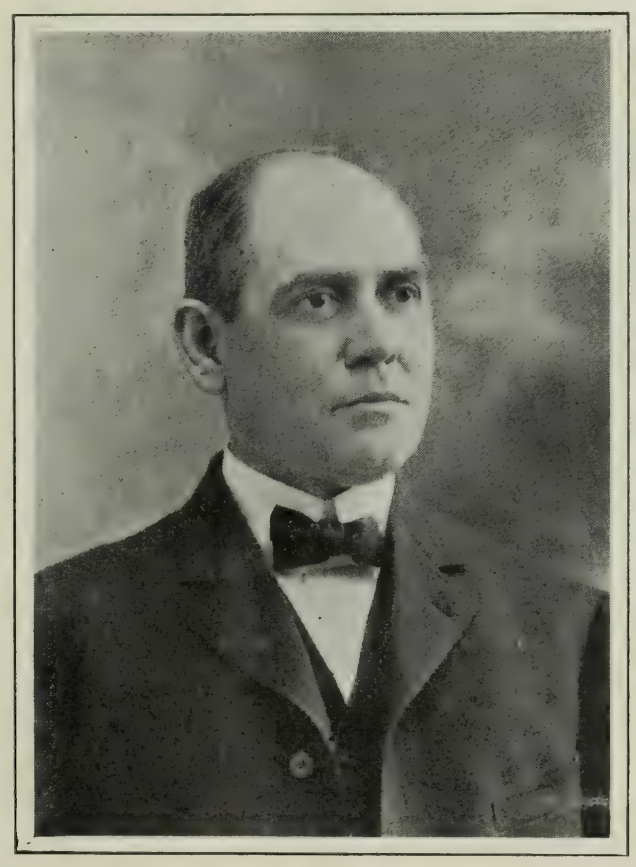
ter; the electric lights burn more brightly and the local long distance telephone service is clearer. Widespread discriminations in rates, already discovered, have been abated. Empowering the commission to grant indeterminate privileges to public utility companies on "good behavior" has largely eliminated the field of municipal graft.

By further legislative enactments the commission is given other supervisory powers. It may endorse or restrict bond issues; grant or refuse certificates of public convenience, and necessity for building new plants or extensions of railroad lines.

The foregoing is but a summary of results and existing conditions. The pioneer work of Wisconsin in railroad regulation is a story of reverses, inactivity, public resentment, defeat and victory. For over thirty years it has been an underlying issue with which every Legislature grappled. Each defeat served only to impress more and more upon the people the vital need of regulation. Finally the people assumed control; the present effective commission law is the result.

Wisconsin is one of the four "Granger" States which, early in the seventies, subjected the railroads to a drastic form of State control by prescribing a definite schedule of rates and creating a commission of three members to administer the law. This regulation, however, was premature, and after eighteen months of trial the obnoxious features of the law were repealed. The commission was supplanted by a single commissioner, whose office was an empty title and whose powers were merely advisory and of little effect. Then the railroads met with little interference. Train schedules were not on file and no decisions were on record. Gradually the office became a bureau for the gathering of valueless statistics and the performance of perfunctory duties.

These conditions existed when Robert M. La Follette was elected Governor, in 1900, on a "reform platform." Altho bills providing for the regulation of railroad rates had been introduced at nearly every session of the Legislature since 1889, the issue did not become paramount, and dangerous from the standpoint of corporate interests, until Governor La Follette secured the passage of the ad valorem and primary election measures. The railroad commission bill, introduced in 1903 and backed by La Follette, was defeated. But the Legislature passed an inconspicuous and harmless little law, without knowing its real purpose, which enabled representatives of the State to inspect railroad companies' books. Consequently La Follette turned up at the next session, armed with facts and figures procured under this law by the best accountants and experts, which confounded the opposition and spiked the guns of the railroad lobbyists. In the meantime he had gained the support of the people by touring the State in an automobile, talking railroad regulation. After five months of contest with the lobbyists the present effective law went thru the Legislature of 1905, where State Senator William H. Hatten, by painstaking efforts, brought about agreements on vital points assailed.



The results accomplished in Wisconsin, after two years of actual trial, demonstrate that State regulation is feasible, practical, comprehensive and effective. Now, besides the broad regulation—which implies everything in connection with the operation of railroads—water, heat, light, power, telegraph and telephone companies have been placed within the commission's control.

These measures were not accomplished in one session. Railroad regulation came first, and the extension of control to include all public utilities came two years later. Quite naturally, the success of railroad regulation proved the necessity of increasing the scope of such regulation. The trend of such legislation in Wisconsin is to accomplish the control of natural monopolies, however private in character, the theory being that no business affecting the popular pocketbook is above public scrutiny.

Any system of regulation, whether State or Federal, to be effective, must be prompt, accurate and just in the correction of corporation evils. This is axiomatic. The Wisconsin method, as exemplified in the results attained by a sane, conservative, but thoro commission, has fulfilled in letter and spirit this axiom and has united the support of all public interests.

The commission is composed of three unostentatious, hardworking men. They

are not captains of industry. Prof. Balthasar H. Meyer, the chairman, for six years prior to his appointment held the chair of commerce at the University of Wisconsin, lecturing primarily on railroad legislation. He has long been recognized as an expert on the questions of railroad science. Halford Erickson, the second member, received his early knowledge of railroads in the auditing department of the Chicago, St. Paul, Minneapolis & Omaha road. Later he was Labor Commissioner of Wisconsin. He is the practical statistician of the commission, the man who settles largely the question of rates. The third member, John H. Roemer, is a lawyer in more than the name implies. He has a judicial temperament. At the time of his appointment he was acting as Wisconsin counsel for several large liability companies. These are the men who have made the Railroad Commission of Wisconsin a vital force.

JOHN H. ROEMER,
Member of Railroad Commission of Wisconsin.

They are not in politics. They are appointed by the Governor, with the confirmation of the Senate, to serve six years, on a salary of $5,000 annually and expenses. The law fixes the standard of merit. "One shall have a general knowledge of railroad law; each of the others shall have general understanding of matters relating to railroad transportation." The headquarters are in the Capitol building at Madison. The office is no sinecure. It is the most powerful active body in the State today.

To aid the commission in its work the best experts and statisticians of the University of Wisconsin are at its command. Such men as Prof. W. D. Pence, head of the department of railroad engineering, and J. G. D. Mack, professor of machine design, with a staff of assistants, each skilled in some particular line of engineering, carry out the work of valuing the railroads and making examinations as to service. Efficient accountants and statisticians are continually examining the books of the railroad companies. Reports, detailed and accurate in every branch, are made to the commission, which directs the general scope of the investigations. There is no guesswork. The data are classified and the three commissioners, working harmoniously, examine the results from practical, statistical and legal viewpoints. Decisions founded upon information and judgments of this character are unquestioned. The commission's achievements are in evidence everywhere in Wisconsin.

Fixing a reasonable rate is the kernel of the railroad problem. Even the question of service centers about it, for a tariff cannot be lowered that is not based on adequate service. The order of the commission reducing the freight rates on grain, including oats, corn, barley, rye and wheat affected over six hundred rates thruout the State. The investigation proved that the tariffs for the carriage of grain in Southern and Western Wisconsin were approximately 20 per cent. higher than the charges for similar service in Illinois, and nearly 30 per cent. higher than such rates in Iowa. The commission lowered the old schedules from 20 to 25 per cent., the reductions being largest in those counties which had suffered most from discriminations by the railroad companies. After allowing for local consumption, and applying the proportion of reduction to the crop re-

ports by counties, an aggregate saving to the people of $600,000 annually was thereby effected. This saving alone is over ten times what the commission has cost the State in two years. A profitable investment, truly! But this is not all.

The percentage of reductions in live-stock rates, applied in like manner, will aggregate an approximate minimum annual saving of $150,000; lumber rates, including pine clippings and slabwood, $30,000; pulpwood rates, $160,000; coal rates, $50,000; sugar beet rates, $15,000; cheese rates in Western Wisconsin, $15,000, and other numerous reductions on shipments of local importance, $100,000. The investigation of coal rates has only begun. In the meantime the railroads increased the minimum package freight charge from 25 cents to 50 cents. The commission ordered the companies to return to the old schedule of 25 cents in use in Wisconsin for over thirty-five years, but permitted a charge in addition of 25 cents where the package must be shipped over more than one line. This percentage of reduction, applied to statistics of shipments from this source in 1906, approximates an annual saving of $50,000. The total then of the annual saving to the people from freight rate reductions alone, directly resulting from this commission's work, is $1,170,000, and the strange and interesting thing about it is that not a protest from a railroad company, nor an appeal to the courts for relief, has been made. The commission has just begun its labors.

HALFORD ERICKSON,
Member of Railroad Commission of Wisconsin.

Passenger rates have been dealt with in like manner. With one stroke, after a year of investigation, the 3 cent fare was reduced to 2½ cents on the three principal railroad lines in the State. The same railroads acquiesced in the recommendation to sell a 500 mile book for $10—in reality a 2 cent fare. This decision saves the traveling public over $800,000 a year. Subsequently the Legislature passed a 2 cent fare law, which in practice already was in operation, altho railroad statisticians estimate an additional saving of $200,000 was realized. Apart from the benefits of this legislative enactment, in two years the commission's reductions on both freight and passenger rates aggregate an annual saving of $1,970,000—70 per cent. of the total amount of taxes to be paid by the railroads in 1908. These savings apply to increased earnings for all parties and interests. If they were capitalized on the basis of a 5 per cent. interest on investment, the principal represented would be $34,400,000—an amount equal to one-seventh of the assessed value of the fifty-one railroads in Wisconsin. And yet the railroads have not suffered.

The public profits more from better train accommodations. This commission tells the railroads what trains they are to run; where they shall stop; what kind of depots they shall supply—what not? The service is improved first; lowering of rates is secondary. Milwaukee wanted a 3 cent street car fare. The commission's answer was more cars, cleaner cars and regular schedules. The strap hangers took seats. Later the commission will adjust the fare problem.

Of the 158 requests for improved service brought informally before the commission, 105, or nearly 70 per cent., re-

sulted favorably to the complainant; sixteen were dropped by the petitioner, without explanation, but probably adjusted favorably, and in thirty-seven cases the contention of the railroad was sustained.

Train schedules are being revised to meet actual conditions everywhere. Residents of Southwestern Wisconsin no longer spend two days to travel 150 miles to the metropolis of the State. More trains, including a Sunday service, were ordered. Inconveniences are disappearing; trains on different lines make close connections at junction points. At summer resorts and fishing stations, of which there are hundreds in the State, passengers no longer wait in the rain for trains, or shiver in the cold. Dilapidated and unsanitary depots are being replaced by modern buildings. The erection and improvement of thirteen stations have been ordered, and additional facilities, including side tracks, given to scores of others.

The iniquities in the railroad business have vanished. Fifteen years ago the free pass was as common a weapon for molding favorable public sentiment as the distribution of free seeds is by Congressmen today. Annual passes were given freely to legislators, with the further right to distribute similar permits to friends. These were good on any line, anywhere in Wisconsin, during the session of the Legislature. One legislator boasted that during a short session of three months he had given over 800 to his constituents, adding he would like to see the man who could keep him from reelection. More than this, some of the Congressmen carried blank pass books, signed in facsimile by the president of the road, and all that was necessary was to fill in the name, to make it equal to first class mileage. Politicians sent passes for Christmas presents. Public officials, from Governor down to ward politician, acted as distributing agents. The letter files at the executive office reveal numberless unique requests. But public sentiment revolted. The anti-pass law of 1899 was enacted; a constitutional amendment prohibiting the further distribution was adopted, but these are only shadows when compared to the provisions embodied in the commission law of 1905. Only railroad employees are so privileged and the reports of their passes, including free trip tickets, must be made annually to the commission. It is still more drastic. Not even a railroad employee can hold a political office so insignificant as that of notary public and a railroad pass at the same time. Anything that looks like a gratuity is forbidden. Transportation worth $120,000, heretofore exchanged annually for newspaper advertising and "good will," is now sold for its face value. A smaller amount is now paid—and in cash. The people, the newspapers and the railroads are more independent.

The exposure of 1903, that the railroads of Wisconsin in ten years previous had given more than four and one-half millions of dollars in rebates, can never be repeated. Rebates, discriminations and political contributions are prohibited. The stumbling block of many other commissions, the lack of accurate knowledge of all facts, is removed by this commission law. Complete power to examine the books of account, vouchers and memoranda of the company is given. Even the general system of accounting is prescribed by the commission. Experts are continually examining these reports, tabulating data and always searching for rebates. If violations were discovered prosecutions would follow against both the railroad and the favored shipper. The penalty is high, so no chances are taken. The graft has ceased.

Matters for determination come before the commission in three ways. First is the formal complaint upon which there is a hearing, as in a court of equity. The second method, and aside from the original investigations of the commission by far the most profitable and important, is the bringing of the interested parties together in an informal conference. The shipper and the railroad official rub elbows together. The third function exercised is that of intermediary. The grievance never reaches the stage of an informal conference. The complainant, the railroad and the members of the commission, thru an interchange of letters, reach a satisfactory agreement. Friction is avoided. Scores of such cases are handled in every mail. Aside from these duties there are numerous requests for interpreting the law, investigation of claims

made for overcharges, inquiries for information about rates, classifications—no end to work.

Publicity keeps the commission from falling under the control of the corporations. The hearings are open to the public; citizens have access to the commission's records and data and its decisions are printed and circulated generally. There is no hiding behind closed doors. The methods used are frank, open and businesslike.

Sixteen other States have the same power of rate making as the Wisconsin commission. They have used it sparingly because of the insecure foundation upon which many of these commissions work. In Wisconsin the commission fixes an absolute rate. The law makes it a violation to charge more or less. Discriminations and excessive charges are prevented with one order. A majority of the other States in the Union gives the power to fix a general schedule of maximum rates (for all lines); an absurdity when one considers that three men, almost unfamiliar with the business, have to complete in a few months tasks it takes railroad experts years to solve, even approximately. It results in the railroads dictating the schedules.

Herein lies the strength of the Wisconsin commission, compared to similar commissions in other States. The first step is the physical valuation of the railroads to the minutest detail. Then the actual valuation is determined, when every other possible element regarding values is taken into consideration. This is necessary that the public and the courts may know how much in addition to the physical valuation is allowed for the other elements. Carrying this theory still further, the commission examines the railroad accounts, amount spent for construction, earnings, operating expenses, and every detail of the cost of service. The investigation involves the separation of expenses and earnings on freight and passenger business. Every item of expense is examined and classified; every possible bearing—cost of production of the article shipped, distance to market, bulk and competition with other sections and localities. Then a tariff is fixt, taking all elements into consideration, which will earn the railroad company a fair profit. The application to change one rate involves a complete analysis of the entire business of the company on that branch. But such a method is invulnerable.

MADISON, WIS.

Song of Blossom Time

BY MARGUERITE OGDEN BIGELOW

WHAT is the song of the frog in the marshes?
What are the tidings the blithe robins teach?
"Let us be merry with the bloom of the cherry,
Let us be gay with the bloom of the peach!

"Let us go out where, on ripples of rapture,
All the sweet odors of earth are afloat,—
Glad in the gloaming, let us all be homing,
Back to the mate with a song in the throat!

"Back to the friends that have sued for our presence,
Back to the loves that have let us aspire,
Back to the dreaming, ay, and to the gleaming
Fair of the flashes of life's hidden fire!"

What is the gospel of Jack-in-the-pulpit?
What is the glory the orioles reach?
"Let us be merry with the bloom of the cherry,
Let us be gay with the bloom of the peach!"

BURLINGTON, IA.

Attacking the Rush-Bagot Treaty

BY HARRY E. HUNT

[Mr. Hunt is a member of the bar of Detroit who has long given attention to questions of international law and peace. Living on the shores of the Great Lakes, he has special opportunities to learn what is going on there. As the Rush-Bagot treaty is probably the most beneficent peace treaty ever entered into by two great Powers, we are very glad to call attention to a condition which we are sure the American and Canadian people do not fully realize.—EDITOR.]

WANTED: Men who will undertake to slay and skin the Rush-Bagot Treaty and tack its hide on the wall of the museum of international relics.

The source of this advertisement has not been made public, but we know that determined men are out, bent on their errand of destruction. We have long been aware of an effort to exterminate the scavengers of international affairs, but are surprised to learn that any one should turn a hand to kill our useful domestic pets.

The treaty which causes some one inconvenience was signed in 1817 by the United States and Great Britain. It placed a limit upon the number and equipment of war vessels which each nation was to maintain on the Great Lakes.

When word reached the administration at Washington, November, 1815, that the British Government had given orders for an increase of its naval force on the Lakes, Secretary of State Monroe dispatched a letter to Minister Adams at England asking that he endeavor to conclude an arrangement with the British Government looking to a limitation of armed vessels. Among other things, he wrote: "It is evident, if each party augments its force there with a view to obtain the ascendancy over the other, that vast expense will be incurred and the danger of collision augmented in like degree."

At first England refused to enter into negotiations, believing that the United States enjoyed an advantage of position.

Secretary Monroe's successor, Mr. Rush, continued to press the matter, and in 1817 the treaty, as we have it today, was signed by Mr. Bagot on behalf of the British Government. It allows each nation to maintain, in all, four vessels, armed, each, with one 18-pound cannon. The treaty was to remain in force until either contracting party served a six months' notice of its intention to terminate. It does not prevent or discourage the maintaining of cutters for revenue purposes, and the British Government has permitted the use of training ships by the State's naval militia.

Both countries have been compelled to disregard the treaty to protect themselves against threatened invasion of irresponsible bands of marauders; men who could not be held in check in any other way. We refer to the Canadian rebellion of 1838 and the work of Confederate agents along the Canadian border in 1864-5. No serious objection to an increase of war vessels was registered at such times because, under the law of national self-defense, when private parties in one state organize for the purpose of invading another and the government of the former either refuses, neglects or is unable to disband the force, the latter may take steps to defend itself, even tho it be forced to trespass the territory of the former state or contravene the terms of the treaty. When the cause of the temporary breach was removed each had willingly reduced the number of its ships to conform with the treaty.

Since 1817, the United States and Great Britain have three times arbitrated boundary disputes (1842, 1846 and 1904), and, altho feeling ran high along the border, especially during the northwest boundary dispute, the Rush-Bagot Treaty was not for a moment endangered. But now, tho we have no quarrel with our Canadian or English neighbors; tho 100,000 of America's red-blooded men emigrated to the Canadian Northwest during 1909; tho hundreds of thousands of Canadians have employment in the United States, and intermarriage and interrelations have almost obliterated the

international boundary, yet, in this age of peace, our attention is arrested by a call that the treaty be modified or abrogated.

It is not difficult to determine who are the interested parties. Lake conditions tell the whole story. The Federal Government exercised no jurisdiction over navigation on the Great Lakes until the decision of Genesee Chief vs. Fitzhugh, in 1851. Under that decision they were held to be inland seas, and, tho their waters were not affected by the tide, yet, as they were navigable and "suited to admiralty jurisdiction," they were held to be subject to the maritime jurisdiction of the United States. Until the Government undertook a system of improvements, a great fleet of small, light-draft vessels plied the lakes. Any man with a little capital and a mild ambition could build a ship and make money. The great forests produced an abundance of excellent timber, which was easily converted into boats and was very reasonable in price. Thousands of independent owners reaped the rewards of thrift from a great fleet of wooden vessels.

Why were not larger vessels constructed? Nature's avenues would not permit. Portions of the St. Clair River periodically filled with sand, and the bed of lower Detroit River was of rock formation just twelve feet below the water's surface. When the Federal Government was induced to build a ship canal at the St. Clair Flats, to take out the solid rock at the Lime Kiln Crossing, and to erect locks at the "Soo," the supremacy of nature ceased and the ascendancy of man was heralded. These improvements made possible the mammoth carriers drawing from 21 to 22 feet of water, running from Superior to Erie, and owned by the same interests that controlled the mines and mills. It was impossible for the independent owner with his small wooden ships to compete with the larger, longer, deeper freighters and the economies practised by a fleet united in ownership and purpose. Tho it took more money to construct the 600-feet steel freighters (about $275,000), the interests that had the carrying to do were also able to provide the money. The placing of the smaller vessels in a high premium class by the domestic insurance companies completed the overthrow of the independent owner which the deep waterways made possible. Unless he possessed "affiliations" his boat sulked in enforced idleness at some ruined mooring within view of its arena of past usefulness.

A trust fleet will carry coal up and ore down. The wheat, already pushing from Dakota into the Canadian Northwest, will reach the coast thru the Hudson Bay.

The Government improvements made possible both the large freighter and a community of interest. With competition defied, the number of vessels necessary to do the work of the lakes is greatly reduced.

It is deplorable, but doubtful, whether the shipbuilders will long continue to dictate the price of their output. A year of financial depression, a year of labor trouble and reduced freight rates, has already embarrassed many of the builders, and, while 47 vessels of 279,600 gross tons were constructed in 1907, 29 vessels of 130,900 tons were constructed in 1908. During 1909 the number fell to 17 bulk freighters of 157,300 tons capacity.

About 1898 the shipbuilders were confronted with similar conditions, and after three poor years an unsuccessful effort was made thru the Joint High Commission to allow war vessels of a certain type to be constructed in the lake yards and sent thru the Canadian canals to the Atlantic. The Navy Department has repeatedly refused to award contracts to the lake yards which might, by any stretch of reasoning, be held to contravene the agreement of 1817. The department even went so far as to refuse to construct a gunboat on the lakes, tho, in 1898, an appropriation of $260,000 was made by Congress for that purpose.

The problem of idle mills, or, at best, "short runs," confronts the lake shipbuilder. The evolution which dulled the adz now threatens the hammer. Many of these great industrial units, once the forum of life, made cheery with the noise of activity, must find common grave with the vessels which they built unless new fields of endeavor are open to them. In their struggle to survive, a simple treaty which has saved hundreds of millions of dollars to both countries should not be sacrificed. With the new-born desire of Canada for a navy, and the American yards eagerly waiting for orders, and tariff conditions

problematical, the abolition or modification of the treaty would throw the lakes open to a spirit entirely foreign to that which has heretofore prevailed.

The peace of the lakes is their delight. No one who has lived along their beautiful shores or spent vacation days upon their dancing waves but that has loved this peace. The treaty has operated to make shore defenses and submarine mines unnecessary. Why make this playground an arsenal? For nearly a century the lakes have been free from the friction incident to the parade of squadrons. The flags of both countries have been crossed in friendly feeling. Along no international boundary in the world has a better feeling been manifest than that which has existed along the lakes, made possible by a strict interpretation of the Treaty of 1817.

It is stated that the bids of the lake shipbuilders for war vessels are much lower than those of the builders on the Atlantic, but that they are "turned down" by the department because of the treaty. This is one of the reasons advanced for killing the treaty. The statement is superficial, because it intimates that the Government will profit by the transaction. The argument suggests that *real* competition will exist and continue to exist between two great interests engaged in the same line of work. It is also impossible to conceive that the powerful interests that have heretofore been awarded contracts would divide the business with the lake yards. Were the lake builders successful in securing contracts it would simply mean a greater navy appropriation with no gain to the Government.

Friends of the movement do not show a necessity for a navy, much less an increase. The near approach of the Powers at The Hague to the establishment and perfection of an international court of arbitral justice and the universal condemnation of war as a means of settling international disputes has caused Justice to turn her back upon armaments.

The work of the lake shipyards to get a finger in the Government pie has exposed the trick of the game, and thinking man finds that navy building is a soulless commercial enterprise, forced upon governments by gigantic combinations of capital. Some of the daily papers, also thoroly commercialized, play the game to perfection, and we are constantly told that we should dole out as much plunder to the contractors as do other countries. The action of one nation is made the excuse for appropriations in others. War scares hide the infamy of the deed.

The modification or abrogation of the treaty would result in a gain in two directions: 1. The naval militia along the lakes would be greatly increased and doubtless be treated to a more pleasant outing each year. 2. The shipbuilders would enjoy renewed prosperity, and this would have an influence upon all business in the lake region. The benefits, however, which are insured under the treaty to *all* business interests along the lakes greatly outweigh any that may be conceived as possible from its nullification.

James Monroe, by initiating the treaty, showed that he was greater than any one age. Because he was able to appreciate the effect upon the future of a decision concerning present day problems, he proved himself a statesman, broad between the eyes. He differed from the politician. The politician does not think of, work for, or dream of the future, but rests content when his constituency is satisfied for the day.

Now that politics and special interests have seized the treaty at one end and the people at the other, in a tug of war, it may not be surprising if it snap. If it does, the one treaty that has shown that nations can successfully limit armaments by agreement will have indeed been killed and skinned, and in passing thru the museum of international relics some people of the future may pause for a moment to read a brief tablet under a miniature bust of James Monroe.

DETROIT, MICH.

PANORAMA OF THE

The Anarchists at Home, Washington

BY J. W. GASKINE

[Mr. Gaskine has long been interested in experiments in social reform. From the time of the Russian Communistic Colony established in Kansas a generation ago and led by Tchaykovsky, the Russian patriot, down to the present day he has personally visited most of the colonies that have been started in this country. The following article is based on a long sojourn among the Anarchists at Home, Washington.—EDITOR.]

IT will surprise many readers to learn that there are anarchists who actually have homes, and in a Home City of their own; which rather inconsistently is incorporated, too, under the laws of the State of Washington, taking the title of the Mutual Home Association.

Where is Home? Home is on the frontage of one of the charming waterways of Puget Sound. You take a little steamer at the Commercial Dock, Tacoma. Home, in a straight line is thirteen miles west of Tacoma, but by water it is something more than twenty miles. The little steamer is pushed along by a great wheel behind and on the lower deck it is likely to be piled full of freight, baled hay, sacks of bran and meal, boxes of canned goods, furniture. The cabin is on the deck above and from there the passengers look out at the steep shore lines of the city for some five miles when Point Defiance with its high forest topped bluff is reached and the steamer sharply rounding the point shoots across to the other side, taking advantage of the swift current over there for some miles, and then turning into a strait called Hale's Passage.

Lovely views along this strait, which is little more than half a mile wide. Small farms along on either bank—homelike cottages—the hillsides, rising somewhat steeply, covered with the checkered rows of strawberries. The steamer stops along at small floats to deliver freight or mail; or it stops where there is no float and row boats come off to meet it. If the sun shines it is delightful: all is green and fresh along the shores, the fruit trees in the little orchards of plum and cherry and apples may be in bloom; and looking behind, there, far back over the land which has been left, shows Mt. Tacoma, its snow-

HOME SETTLEMENT.

covered top of a dazzling whiteness. You do not see far, for the waterway courses always between bluffs, but on top of those bluffs you see always green trees, the evergreen fir of the immense Puget Sound forest, which reaches beyond all to the ocean.

Leaving the Passage the steamer enters a broader reach of the Sound and makes its way straight across to a small bay which is indented into the land narrowly, for perhaps half a mile. This is Joe's Bay and here is the site of the Home City settlement. Really Joe's Bay is not a bay, but a hollow in the land into which the water flows at high tide, making up not very far to a head into which empties a small brook. At high tide it is very pretty, but at low tide (the tide rises and falls 16 feet), the upper part is no more than an unsightly mud flat, thru the center of which the small stream trickles its way out. However, most of the time the tide is in, and there is a good channel at all times up to the wharf of the settlement. As the steamer enters, a pretty milkmaid sort of cottage, painted white with blue trimmings, is first noticed on the right: other cottages follow, with gardens looking trim—then there is a small spot of the native forest, and then the bulk of the village built along the shore front up to the head of the bay.

The boat makes fast to a very substantial wharf which has a small warehouse on the end, and at the shore end are two white frame buildings—the two stores of the settlement. As you look at it from the deck of the steamer, the village makes a good show. It is all on the right side as you look—separate home dwellings on acre lots, and some of the dwellings comfortable looking structures.

The shore line is uneven, spots having been washed out by the waves, and the land, level only for a few feet back of the banks, rises some few hundred yards up a broken hillside, beyond which is a flat country. The first roadway is along the shore, fronting the lots which extend back, two acres deep, to a parallel road which has been chopped out along the face of the hillside. Three lines of such parallel roads reach the top and a number of houses have been built on these upper roadways and some even at the top of the hill, where there is a superb view of the bay, the sound and the mountain. Conspicuous, just back of the summit, is the schoolhouse, which is also the dance house, a two-story unpainted, rusty-looking structure with

footpaths trailing to it thru black stumps and brush, which have never been cleared away.

At present there are probably some 250 people, men, women and children in the village. It is said to have been the fastest growing settlement ever started on the Sound and to have the greatest mail delivery, all anarchists being fond of letter writing.

Twelve years ago the shores of this little waterway where a forest wilderness with the exception of one small clearing and orchard on the side opposite the present village. And it should be understood what this wilderness was. It was a dense forest of gigantic fir and cedar trees, such great trees as those whose trunks support the roof of the forestry building of the Alaska-Yukon Exposition. Anarchists have hewed down those trees, sawed them into logs, had them sawed into lumber for their dwellings, dug up the roots and planted in their stead vegetable and flower gardens.

How it all came about is naively and graphically told in a communication to the writer from one of the three men who were the founders of the settlement.

Regarding my going to Home, or how I came to go there, I will say that after several of us saw that the colony at Glennis, which was after the Bellamy plan, was a failure as regarding the establishing of individual freedom in connection with co-operation, we put our heads together to formulate some plan that would embody co-operation with the liberty of the individual to withdraw without a loss to himself, should he wish to direct his efforts in a channel he thought better. The desire of the many at Glennis to make by-laws restricting others from doing things that in reality were private matters, causing so many meetings which were noisy and bred inharmony from the diversified views of what should be done, not only made us lose interest in the meetings, but finally disgusted us at the wrangles and disputes over petty matters. So at last, when we saw that the end of the colony was near, a few of us, with our wives, held many talks at different times upon the best form in which to start a new association. Finally there were only three of us with our wives united, and we decided to find a new location. But our treasury was so low from meeting the claims of withdrawing members and we were in such a strait that we paid our only and last $20 as a first payment on twenty-four acres, which we decided to settle on, at Joe's Bay, making a contract with the owner, a banker in Tacoma, to pay $20 every sixty days until the land was paid for. Being then out of money we were compelled to ask Ed Lorenz, the captain of the steamer, to haul our goods from Tacoma and wait for his pay, which he did; and for which we afterward paid by cutting cordwood for the steamer. And by this means we also paid the greater part of our indebtedness on the land. [Probably about $10 an acre].

Before moving to the new site, however, we three, Allen, Odell and myself, had formulated the settlement agreement practically as it now stands. After many discussions upon principles, and the discarding of many of them, we agreed upon the necessity of retaining those that upheld the freedom of the individual from any or all coercive laws or methods, under conditions that made the possession of a home safe. For nearly two years we tried to find a way to avoid incorporating, as we desired to be free from all possibility of law interference. Finally, however, after consulting several of the best lawyers, and acting on their advice, we incorporated under the fraternal laws of the State of Washington.

As to its growth probably two very important factors in the evolution of the human race can be considered: First, the personal liberty to follow their own line of action, no matter how much it may differ from the custom of the past or present, without censure or ostracism from their neighbors; second, the placing of every individual on his or her own merits, thereby making them independent.

The first was accomplished by making our views quite public, thereby encouraging those imbued with our ideas to come, and, of course, discouraging those who were not liberal enough to let others alone. Fortunately, enough liberals came at first to establish the custom that each one attend strictly to their own affairs, and today that is practically the only requirement for good fellowship among the Home people.

The second feature was made easy by the absence of all laws, rules or regulations whereby either majority or minority could enforce any one against their will to aid in furthering any plan or scheme. No scheme could be sprung upon the members whereby future benefits were promised for aid in the present. Every person coming must build and maintain their own home, unless two or more mutually desired to build together, in which case perfect liberty was granted. One party writing to me asked if the association built the houses for people coming and had them ready on their arrival, and on being told in reply that we were poor and had all we could do to build our own houses and maintain them, wrote again "that lets me out." And we found after that he was an indolent fellow only anxious for others to do for him.

Thus it can be seen by the absence of all enforced rules we could soon rid ourselves of that class that have so often inflicted themselves upon socialistic colonies. As to the changes of feeling that may have developed, I do not know that they are very great. Of course with an increase of members there came a more diversified view of what would be the result of certain actions. For instance, the first coming were perhaps ideal-

istic and they thought by leaving all free to choose their one or two acre lots that future comers would do as they did, choose one acre to build on in front and the other back over the hill for a co-operative farm, thus leaving more acres along the water front, so all could live in the open. But others came who would not do this, but chose both acres in front, and two each, for their wives and children besides. This, of course, used up the front lots rapidly, and it prevented some from settling because of having to make their homes on the uncleared land behind the others. However, what effect this had on the development of Home none can tell, but it prevented a rush that might have brought minds that would have overthrown the vital principles on which Home had been founded. One interesting study is, however, exhibited in the fact that the majority of avowed free lovers and anarchists have built their houses and made their improvements upon the acres chosen by the wives and mothers, while the majority of those believing in government have built and improved on the acres of the husband. Whether this is a coincidence or the direct result of a more liberal mind and education I will leave for all to judge for themselves, expressing the personal opinion, however, that with lovers of liberty a strong sense of justice usually prevails.

THE COTTAGE OF THE PRETTY IVY.

The spirit of fairness in the foregoing (which was written some six years ago) is manifest. The writer is a Mr. Oliver B. Verity, an efficient working man and perhaps the most typical free-lover and anarchist of the settlement.

Verity and his two associates, Allen and Odell, were skilful men of the Western class, and above all lovers of liberty from the free environment of labor and change in which they had, as it were, been brought up. They were men to clear lands and build houses and make farms by their own labor, in their own way. This free exercise of their powers gave them happiness. Love, also, they felt should be free. In one of his writings, Verity puts it thus—"The love principle of our being is a natural one, and to deny it expression is to deny nature." And again—"Government is the only thing that can rob you from which there is no redress."

They hated government. Really it was a noble feeling, but misinformed as to the real character of love, which is something more than a natural feeling, being a very superior sentiment which has found its growth only in the midst of society, fostered and protected by laws. But these strong, free men, in-

capable of making this reflection, set out to make a settlement where love should have this natural expression. Leaving the Glennis Colony they built themselves

NINA, THE ASTROLOGER, IN HER GARDEN.

a small boat. Then, confident of themselves, they set out with oars and sail to find the site for a new kind of city, a city without government. In this boat they found Joe's Bay and landed on its narrow beach in the shade of the great fir trees to commence the building of Home on a land basis of 26 acres and a capital of $20.

It was an heroic effort, but they might have lived there obscurely, for some years, had they not somehow managed to print a little monthly paper which gave to anarchist and free-love seekers the news of there being a place where it would be possible to be fully free. Among the first to seek them was a farmer from Virginia, named Dadisman. Dadisman had been a thrifty man on his Southern farm and he was as skilful a man as the others and as firm a believer in freedom. Dadisman brought something more than faith, he brought money. The settlement was already incorporated. Dadisman bought some two hundred acres joining, which on the most liberal terms he added to the Home property—that is he opened settlement on it to applicants for membership on the terms of the incorporation and bound himself, when it was all taken up, to pass over the title to the association, which he did within a year or two.

Something else had also happened which had a great importance in furthering the growth of the free city. A printer, also from the South, arrived there —a fellow of equally confident belief in anarchistic society. A small, slender man, middle aged, his hair commencing to gray, looking, as some one said, like a Catholic priest of French stock from New Orleans, which, in fact, was his na-

tive city. This man who, from his own open confession, had spent most of his years in dissipation, seems curiously to have received a stimulus to a more sober life from the anarchistic philosophy, which he had adopted as a relief to the soul in its remorse, much indeed as a priest would have taken to religion. This delightful consolation he wished to convey to the world and having a practical talent he started a settlement paper which he called simply *Discontent?*

It was a great name; there are discontented ones everywhere and *Discontent* as the organ of a settlement touched them. It was true then that at last there was a place where everybody was happy because discontented with everything else in the world except right there, where every one could do as he or she pleased. *Discontent* was well edited, containing indeed many thoughtful articles; it quickly brought a support to the printer, it made a fame for Home to the whole world, it brought visitors, and the printer—Govan—must be thought of with Verity, Odell, Allen and Dadisman as one of the constructers of the city of freedom.

After the arrival of Govan and the outputting of *Discontent,* Home was really put on its feet in the way of growing. Still there were but half a dozen families. Some women arrived—rather nice women—one a widow from Minnesota, just passing middle age. Charming to see her trip about with a step like a young girl. And she had some money, too, and was besides, a good business manager. Best of all she had a good heart which was revealed in a lovely smile. She was kissed a little and flattered some—and that settled it: she decided to stop and make a home there—"to stop for keeps," as she called it. She bought a lot on which already were improvements, which she added to, and soon had a nice, comfortable looking white-painted cottage on the hillside. This was the first painted house and it gave an air of modernity to Home.

Then there was another arrival—another widow—a younger widow, from old Missouri. This woman had her charm—a tall slender creature with a face and brow exactly resembling the portraits of the actress Rachel. She too was kissed and flattered. It made her happy. She had some money, too. With her folks she camped for a summer in a shack at the head of the bay and then she bought two lots on the water front and put up a sightly house.

It must be considered on what a slender basis of cash the settlement had been started; the building of two houses by these women gave some work and probably distributed in the settlement a thousand dollars. This was an immense help. After this others arrived and before very long all the lots were taken up. None was rich, most had only the means to build simply, but the settlement had a population. And all was good feeling so far. It was the opening to the golden age of Home and I have otherwise described it in some pages under title of "Glances at Idyllic Anarchism."

Three years later. The city grows; not so very large yet, but some thirty households now, and near to a population of a hundred and fifty. The people are happy. They have labored hard these years with axe and saw and mattock, felling and sawing up the great trees and grubbing and burning the great stumps; and some nice homes have been built. The trail along the shore front has been smoothed some by the traffic and a plank sidewalk has been laid along part of it, and in places sightly picket fences protect fertile and well-kept gardens.

Of necessity some huge blackened stumps remain, having obstinately resisted the fires set about them; and in the background of the life of some of the folks must be felt at times an irksome struggle to make a living, and at the bottom of all is a conception of the world society, which is fallacious. But they love freedom above all things and they seem to have it here. Eugenia, who lately came from confinement to hours of duty as a telegrapher in a city, was surprised and delighted that here "people came and went and played or worked, just as they felt like." The New Hedonism of Grant Allen would be translated into reality by these people and you often hear from pretty lips "what is life for but enjoyment?" This

keeps the settlement idyllic. It has been called the City of the Discontents, but in reality it is the City of Happiness.

All the doors of all the houses are open and there is a very singular and pleasant air of all being of the same family, or at least such close friends that all each has in heart and house is at the using of all the others. It is store day, too; a day on which their little co-operative store is open for business some two hours of the afternoon. Along the water front you will see the men coming to trade, carrying buckets of eggs, or pushing handcarts or wheelbarrows to take back a sack of feed for the cow, or the family groceries. Others come rowing in boats, having more weighty stuff to fetch back.

I myself am in a boat and I row slowly along the shore front and then farther out and on to the outer bay where on this clear day I can so clearly see the mountain. And I feel how lovely it is—the summer weather here.

Rowing back and then walking to the shore myself I meet a group coming along friendly: the Jew—the woman Lorena and her close friend, Mattie of the House of Stillness. Mattie has fine blue eyes, a well featured thoughtful face and a mouth which shows nice teeth. This time she is becomingly dressed, which is uncommon, for usually she does not care.

By her side walked the other two in line—the Jew with slant, Mongol eyes, bareheaded as usual—barefooted as usual and wearing patched blue overalls and a coarse shirt. A burly fellow, yet being barefooted he slipped along as without effort, taking short steps while he held tightly the arm of Lorena, a nervous bronzed woman of thirty-five. Lorena's eyes are dark and deep set and her very dark, thick hair is cut short to the masculine large head. And what name shall we call her? I think Diana, for she has a free erectness in her carriage much as we think of in the fabled goddess. She leads by the hand sometimes a boy of four years, a noble, well grown boy with long curling fair hair and gray-blue eyes. And the mother who has borne this life feels still unrest. Storming in her is longing—the longing for doing—the passion sense of beauty. In an ecstasy of this feeling she writes thus:

Oh, I have not lived half enough!
Oh, I have not breathed half enough!
Oh, I have not climbed half enough!
I have not leaped and danced and strode the earth one-half enough.

And of beauty:

A tea rose drives me partly mad!
A bud three-quarters open;
With firm, voluptuous curves—
The tips of softest cream, all veined
And deepening to a tender golden bowl.
I hold it up and gaze far into it
And something rises in my head like fumes of wine;
I breathe deep breaths and do not know what I am doing.

Diana's hands are perfect: such perfect hands can have come molded only from some beauty in the soul. And she wears on one tapered finger a ring: but it is a ring for the beauty of it; it is not a ring to mark a bridal.

And why does such a woman come here to live, lodging alone with her boy in a cabin on the hillside? It is the atmosphere of freedom. She is a Seeker.

Nothing has been said so far of the labor question. How did these free people settle that and get along with their work? It will have been noticed that Home aimed to be a strictly individualistic association. But as things had to be done and these individuals had no Aladdin lamp to rub, it was necessary that they help each other. There was but the faintest disposition from the first to ordered, or to voluntary co-operation. When men helped each other clearing or building they preferred to be paid in cash for the time they spent, and it was settled that the rate should be fifteen cents an hour. Skilled and unskilled labor were paid alike at this rate, which continued the same for some years. It worked in fact very well, and this low wage perhaps, as much as the free love, helped to nourish the common happiness. It helped to preserve fraternal feeling by preserving the feeling of equality, it caused the more skilful to aid the less skilful, it kept down cost—the common life sustained itself at Home at a modicum of expense that all could accomplish. Greed, however, gradually crept in, the terrible greed of the world, the

wish to get as much as you can: then the price of labor was advanced to twenty cents an hour—again it was advanced to twenty-five cents an hour, which remains the ordinary charge today: and it costs as much to live at Home today as in any ordinary country village.

The association had troubles after the assassination of President McKinley. A hue and cry was raised against them in Tacoma and it was proposed to go out and raid the colony. Charges were trumped up against the paper *Discontent,* as printing immoral articles in favor of free love, and a United States marshal was sent out to arrest the publishers and bring them to trial before a Federal Court. The papers of Tacoma gloated over the likelihood of a terrific resistance by the anarchists. In fact they received the marshal with the greatest courtesy, gave him a good dinner, got up a dance for him at their hall and when he returned with three lamb-like prisoners he reported with effusion that he had found the slandered anarchists leading a life ideal in gentleness. The case came into court before Judge Handford, who luckily was a man of broad intelligence. He stopped the harangues of the lawyers for the defense, who had been hired at a considerable cost. He said it was not necessary to talk so much. He had looked thru the offending paper at his lunch and he took it out of his pocket and read the article to the jury. And then he requested the jury to sign a directed verdict of acquittal, which they did.

The limits of this article will not permit much more to be said of Home. Its history in its fullness would require a volume. It would call for an interpretation of the anarchistic philosophy, showing it to have its basis in illusion as to the nature of the human being and the society which he has so slowly built up in the passage of untold centuries. It cannot be denied that the people of Home greatly enjoyed themselves in the simple freedom of expression that they allowed to some noble and beautiful sentiments. They could not realize that those sentiments had been preserved from degenerating to primal brutality only by institutions protected by laws.

In the end Home itself did not prove superior to degeneration from human littleness. It is to be observed that the Act of Incorporation was singularly deficient in guarding against a monopolizing and speculation in the acre lots. The evil of this was very shortly felt. As Mr. Verity puts it the founders were idealists who were moved by a sense of justice. Others came in who were not, who were under the world conceptions of acquiring property for self and the family. They took up just as many lots as they could for their children and they did not improve these lots, they let them lie idle, waiting like any other speculator in land values, to sell out at an advance to others. And from year to year the price has grown with the growing cupidity and today at Home a hundred dollars an acre is asked for land that cost the sellers not more than two dollars and fifty cents.

Other changes have occurred. The founders were men and women of the pioneer class and with the restlessness of that class. Home attracted them because it was free; the woods were free and they would make love free, too, and be happy. Well, they worked it out; they chopped down the woods and built their homes and they enjoyed for some years their full of freedom. Then they were tired, they wanted change and they have mostly gone away. Odell has been gone for a long time: Verity, the most typical of the class, has been gone for three years. The widow who stopped "for keeps" has sold out at a good advance and will leave soon. The other widow has been gone some time.

Another class has come in—the Russian Jews. Some of these, emigrants from a tyranny, and having a socialistic streak, were attracted to Home and found that it was a good place to have homes in. At Home they could have little gardens and leave their children in fresh air while they carried on small businesses in Tacoma or Seattle. Largely the Home people pleased them because they were not Christians. The Russian Jews are buying up Home: the atheistic Russian Jews. And with the Jews have come some of another class, the class who are attracted by the grosser opportunities of freedom.

In conclusion it may be said that they

have had a happy time at Home. But in the end no higher form of living has come out of this trial of anarchism. On the contrary there appears a decline to a lower form. A larger treatment than this article permits would also show that its career has singularly illustrated the economic fallacies of the socialistic philosophy. At present the settlement seems nearing disruption as an organized body. The journal of the association has stopped for some two years. The elderly printer, reformed from dissipation by anarchy, seems to have reformed further—he has made a legal marriage with a blooming young girl and is anxious to have the association dissolved, so as to get a private title to his lots and have the security of an old-fashioned home at Home. And the drift of the feeling at Home seems largely that way—a return to freedom in the world way of order.

SEATTLE, WASH.

The Campanile of Venice

BY SALVATORE CORTESI

ALTHO the Italians have often been accused of not appreciating the antiquities with which their land is so greatly blessed, and while custom has undoubtedly staled the keen edge of their appreciation, it would be difficult for any American to understand what all Venetians felt when they entered the Piazza San Marco the day after the collapse of the Campanile and realized that it had disappeared. It was to them not a tower to be criticised or praised, and visited as a "sight," but an intimate part of their daily life, which habit had made as necessary as a bed to sleep in, or clothes to wear.

But altho it was all this, it was also something much more; it symbolized the greatness of the Venetian Republic. At first, in those dim ages even before the world panic in which people thought the end of all things was upon them, it was a watch tower, half the hight to which it later attained, where the fierce guardians of Venetian independence kept watch seaward for an insidious enemy, sticking to their posts when the rest of humanity went mad and scattered its property wildly in the year 1000, and even committed suicide not to be a witness to the end of the world. Those were the days in which physical prowess was worshiped; thus the tower was strong, an emblem of Venice and the Venetians; and so faithful was it to the designs of its builders that hostile ships never got a footing in the lagoons. By the year 1170 it had become a third taller, to match the buildings growing up about it; in the twelfth and thirteenth centuries it was already a bell-tower, more of a safeguard than before, since, while the piercing eyes of the sturdy sailors still swept the sea from its summit, its bells rang at the first hint of danger to warn the citizens.

In the beginning the belfry was a replica of the one now surmounting the San Nicolò dei Mendicoli tower, but was replaced later by the elegant roof so distinctly seen in Bellini's picture, to find itself toward the end of the *cinquecento* with the form of a small temple, rich in marble, bronze, columns and sculpture, which adorned it from that time on. During these passing centuries the bells, the "Marangona" and its companions, rang out their messages to the Venetians, on successful occasions as well as in times of stress, until the sad days of the foreign invasion. They announced the taking of Constantinople by Dandolo to a waiting and expectant crowd; they clanged when the victory of Lepanto made Venice master of the East; they sang when she established her rights of sovereignty against Rome; they tolled when the Doge-traitor, Martin Faliero, lost his head; they played a dirge when the peace of Campoformio put an end forever to the Venetian Republic; they boomed when in 1866 the lagoons were united to the Italian Fatherland, and so expressive was their

music that the first note was sufficient to inform the citizens of the tenor of their message. Was the tower beautiful? Was it esthetically in the right place? Those were questions for outsiders; the Campanile just as it was had grown in the hearts of the people, and deprived of it, their lives were crippled. Thus are hoary buildings a part of the national life, and thus do the people read their own history and glory in them.

THE CAMPANILE BEFORE THE FALL,
Showing St. Mark's, the Doge's Palace, the Royal Palace and the Procuratic Vecchie.

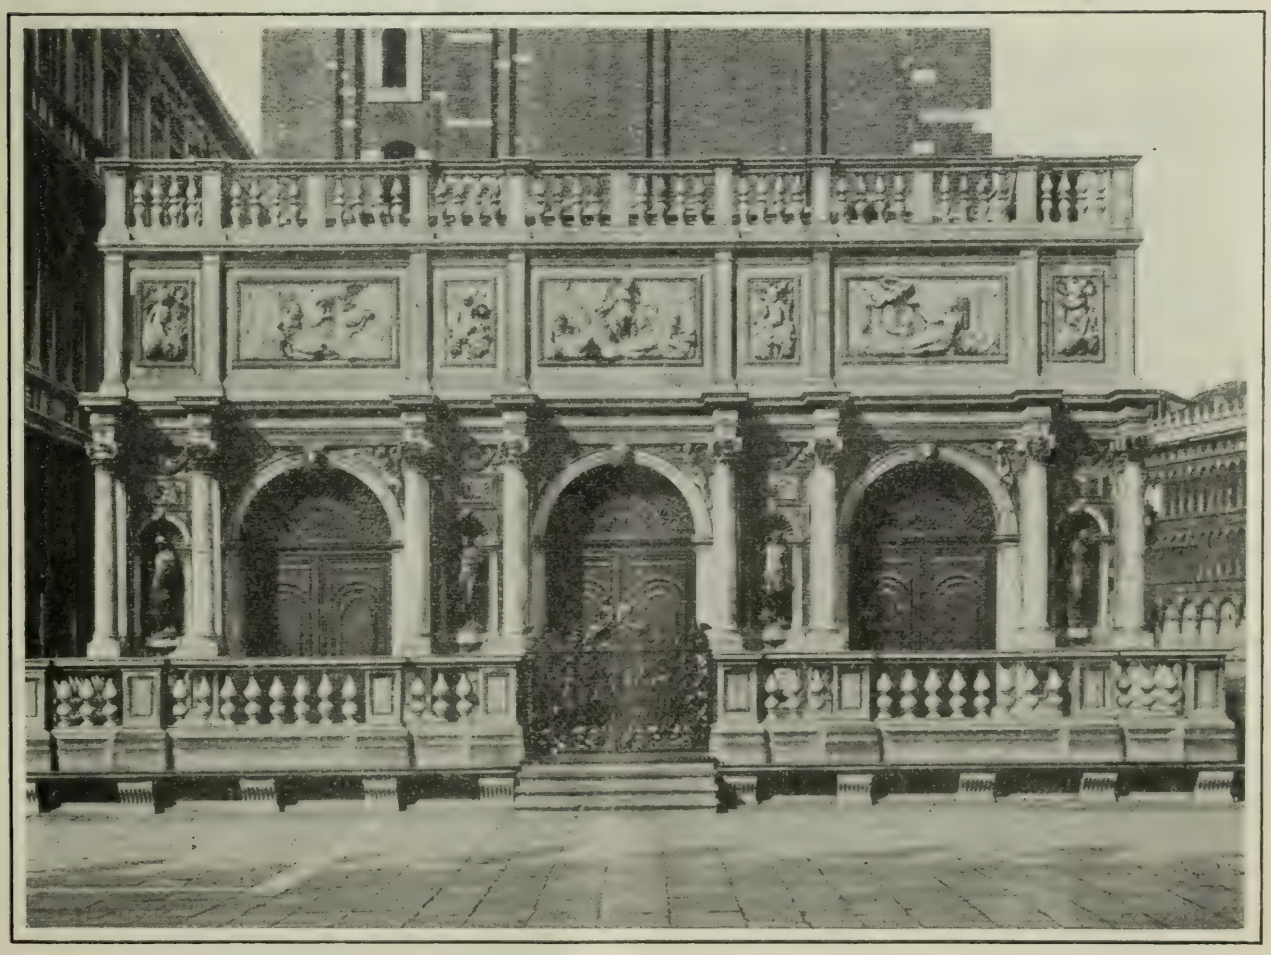
The first shock of loss over, discussions as to the artistic value of the vanished Campanile arose, and as to whether the piazza and the surrounding buildings did not gain by its absence, and thus whether it should not stand in another place, but there was never any question or difference of opinion about the rebuilding of it. From the very first moment the majority of Italians, absent or at home, were determined that it should rise again, with either a new or old face. It was soon discovered that matters might have been much worse than they were; the Campanile, when its strength gave way, gallant gentleman as it was, collapsed in the very smallest space possible, and toward the north and the open piazza. Had it fallen backward, the Library of Sansovino, of 1537, the "superior to all envy," as Aretino says of it, would have been destroyed, while, as it was, a great rent was torn out of the side; had it inclined toward the east the glorious Doge's Palace and sumptuous St. Mark's Cathedral would have been defaced; and toward the west the royal palace would have suffered. So near did the *debris,* full as it was of great blocks of marble, come to St. Mark's, that it rippled about the columns like foam, but did not even chip or disfigure their seasoned whiteness.

The Campanile fell on the morning of

July 14, 1902. Somewhat less than a year later, in the spring of 1903, work on the old-new foundations was begun. In 1906 the building of the tower, which had risen 18 feet above the piazza, was suspended for over twelve months, while

THE PIAZZA WITHOUT THE CAMPANILE.

now, in the beginning of 1910, it has reached 195 feet, and on April 25, 1911, the fête day of St. Mark, the whole will be completed, nine years after the fall.



The first year was absorbed in technical discussions about the shape the new tower should take, the advisability of it being the best that modern architects could produce, or a reproduction of the old, whether to use the ancient foundations, how to raise money, etc. These points settled, the Count of Turin, cousin of the King of Italy, in the presence of Pius X, then Patriarch of Venice, and state and ecclesiastical and municipal authorities, laid the cornerstone of the reincarnation, in the center of the original foundations. At first it had been suggested to remove the old foundations, which were obviously too small for so heavy a structure, and had never been intended to carry such a weight. However, as they were seen to be absolutely perfect, as far as they went, they were used as a nucleus for the new. Round them were driven, over a surface of four yards, 3,076 fresh larchwood piles, from Cadore, the mountainous region below the Alps, the piles being about 9 inches in diameter and 12½ feet long. Oak was spoken of, but larch trees have the two superior qualities, that of being straight, and tending to harden, not decay, in the damp clay of Venice, into which they are driven. They averaged twelve to every three square feet, touching at the corners, making a total enlargement of 300 square yards. They were driven in by a 570-pound weight, raised 4 feet 6 inches, and were pounded down to absolute resistance.

While the driving was going on, the northwest angle showed a depression of half a foot, due to a sandy bed, which ran for a considerable distance, but was

eventually obviated by using longer and thinner piles, placed in greater proximity to each other, thru the sand to the clay below. On this old, renewed and enlarged foundation a platform of large blocks of stone, cemented together, was carefully laid, and on this firm base, estimated capable of bearing a weight of 90,000 tons, will stand the completed Campanile, which will only weigh 20,000 tons.

The most interesting controversy raged about the question of the number of steps from the piazza to the entrance of the tower, as the disputants were divided into two parties, each having precedent to back them up. At the time of the collapse the Campanile apparently had three steps, while, during the excavations about the foundations, two others came to light, covered during the various changes of level in the piazza in the course of a thousand years, due to repaving. These steps had already disappeared in the sixteenth century, when the great palaces of the Procuratie Vecchie and Nuove were erected, proved by the fact that these buildings are at the present level of the piazza. The party favorable to the five steps gained the day, putting them, however, into the same space as was before occupied by the three, so that, after all, they are less a replica of the old than the lesser number would have been.

The shaft outside is a perfect model of the old, but the inside has been so modified as to reduce the weight by some 20,000 tons. A feature of the work has been the completion of each detail as it came up. The only scaffolding was four slender but immensely strong steel rods, which ran to the top at the four corners, and supported a kind of platform, on which the men worked, and on which the building material necessary for the day's construction was put, carried aloft by an inside elevator, which will ultimately be used by visitors to the belfry. The shaft is of copper-colored bricks, each of which is hand made over a wood fire, according to ancient measurements, taken from bricks found in the *debris,* and

THE LOGGIA OF SANSOVINO.

THE TERRA-COTTA MADONNA.
Henceforth to be without the St. John at her feet.

which bore the names of all the Emperors from Nero to Theodosius. Each of the 1,200,000 new bricks was tested before being put in place, and if it proved to have even a small defect was rejected.

With the belfry at the top and the loggia of Sansovino at the bottom began the use of the ancient material, rescued with infinite patience from the chaotic mound of what appeared to be useless rubbish. And it is just here that the wonders of this reincarnation show. The belfry is entirely of the old stone, the bells have been recast, with the exception of the "Marangona," which was uninjured in spite of its fall, and the guardian angel of the tower, which crowned the summit and spread her copper wings, alighting so gently that she was practically unharmed, will return to her lofty position and again point the wind to the Venetians, and be the first sign of welcome to incoming sailors.

The part, however, which suffered most, and which was the most artistically precious, was the loggia of Sansovino, supposed at first to be hopelessly gone. Could that dust heap contain anything which would give the faintest idea of the lost gems of art? The pessimists said no, the optimists yes, and the latter have come out triumphantly in the struggle with terrible odds. The four historic bronze statues, which stood in the niches, have returned to their ancient perfect form; the famous gates have been put together, piece by piece, a work which required untold patience, and would have been absolutely impossible had it not been for the photographs and old prints available; the pillars are partly the old, and where pieces were actually missing, the required marble to mend them was taken from the inside of the larger blocks of the pillars; the doors are of wood, and are new, on the old model; but the most wonderful reconstruction of what is all wonderful

is the terra-cotta Madonna, with Christ and St. John, which stood inside. It has been estimated that the Madonna and Child alone were broken into nearly two thousand pieces, which now joined make so perfect a whole that the fact that it is a mosaic, so to speak, has to be pointed out. To give an idea of the ruin, the St. John was so reduced to dust that not one piece was found which could be recognized, and the group must remain without this figure.

Thus the Queen of the Adriatic has again her symbolical and gigantic flag-pole; showing in her new dress, that what has been can be, and that Venice may rise from the ashes of the past to be again a power on the seas.

ROME, ITALY.

THE CAMPANILE READY FOR THE BELFRY.

The Final Dread

BY WILLIAM H. HAYNE

WHY should the thought of Death affright our souls?
Why need we falter at his grim command?
Do we not hope his mighty current rolls
Thru sunless caverns to a radiant strand?

MONTGOMERY, ALA.

Literature

McMaster's History

THREE years ago the colleagues of Prof. John Bach McMaster at the University of Pennsylvania celebrated with him the twenty-fifth anniversary of the appearance of the first volume of his *History of the People of the United States, from the Revolution to the Civil War.** The seventh of the massive volumes of this work is now before us, while we have the author's promise that the eighth and last will not be long delayed. For thirty years Professor McMaster has devoted his life to the completion of this work. He has grown with it from the inconspicuous instructorship in civil engineering from which the first volumes were produced to a position at the head of his profession. And he has kept to his furrow with an unswerving allegiance rare among men of letters and almost unknown among those who do full work in the classroom every week.

Every volume from the first to the seventh has marked an advance beyond the accepted frontier of historical research. When he began to write of the critical period and the formation of the Constitution, that decade of American history had not yet been exploited by the mass of general and special historians who have since supplemented his studies and enlarged upon the lines which he suggested. Each succeeding volume has kept ahead of "common knowledge." Even today, the detailed story of the forties, which is the theme of the new volume, has been so sadly neglected that it is still to be studied best in the partisan history of Von Holst or the brief sketches in Schouler or Professor Hart's "American Nation."

The significance of this leadership is to be seen in the fact that upon the earliest writer falls much of the burden of organization in a new field. Later students may enlarge, revise and improve upon the preliminary survey; yet they must in general accept it if it has been well done. No writer on the history of the United States since the Revolution has more successfully maintained his control and justified his insight than Professor McMaster. We have no doubt that in this decade, as in the earlier ones, his pioneer path marks the line of the future highway. With this volume, however, his peculiar leadership must necessarily end. Since he began to write, Mr. James Ford Rhodes has undertaken and completed his own history, which takes up the story in the year 1850. In Volume VIII Professor McMaster must either accept the guidance of Mr. Rhodes or invite critical comparison by departing from it. The forest is no longer chartless.

This volume covers a period of ten years. It opens with two chapters on the aftermath of the panic of 1837, treating of the currency famine, the bankrupt States, and the struggle for revenue which ended in the tariff of 1842. In these chapters is the most novel work of the volume, as the author relates the least savory and most humiliating period of our public finance. Following these are four descriptive chapters on the East, West and South in the forties. They are based upon the works of travelers and the writings of contemporary newspapers, and contain few startling conclusions. Their view of slavery is distinctly more harsh than that which is gaining favor at the hands of the new Southern economic historians. They reach the conclusion that in 1850 "the North and the South were now two distinct peoples." With this introduction the writer plunges into the period of expansion and the Mexican War, to which he devotes the rest of his space. Most of the materials which he uses here are already well known, but in clear arrangement and sane judgment his narrative is likely to be relied upon as standard.

In its philosophy and arrangement this volume resembles its predecessors and invites the same praise and blame as they. No other important historian has placed upon the newspapers so much

*A HISTORY OF THE PEOPLE OF THE UNITED STATES, FROM THE REVOLUTION TO THE CIVIL WAR. *By John Bach McMaster.* In Eight Volumes. Volume VII, 1841-1850. New York and London: D. Appleton & Co. 1910.

reliance as has Mr. McMaster. His materials are public documents and contemporary newspapers. From them his pages reflect the atmosphere of their day. It appears to be his belief that when the public are moved, by whatever cause, their movement becomes an historic fact, which the historian must recount in photographic fashion. But he does not hold himself bound to show as well whether the motive was honest or fabricated, whether the people saw the truth or rushed after a mirage. He rarely relies upon the lesser detailed works which treat of episodes of his period, tho these might often add to his information and correct his judgment. In the Middle and further West he has made almost no use of the abundance of recollection and antiquarian research which the local historical societies have accumulated.

Yet, after all, Professor McMaster is writing a history of the people, who can be no wiser than their guides and who rarely show judicial poise in their action. It is a defensible proposition that the press which they support is the index of their civilization. Certainly it is this aspect which the author has elected to describe and upon which he has been ready to stake his professional reputation. That he is right in his view of the importance of the social and economic factors in history no one who is in touch with the trend of present historical writing can doubt.

Studies in Theology

THEOLOGY is doubtless a subject of vital and enduring interest, when it is approached thru the channels of history, literature, psychology, and social science. But the old dogmatic, *a priori* method, however skilfully pursued, is capable of awakening but little response in the modern mind. Good evidence of this is furnished by the four volumes already published in the new series of *Studies in Theology*,* issued under the imprimature of "A. M. F.," presumably the veteran scholar who recently retired from the principalship of Mansfield College, Oxford. The only volume of the four which lacks interest is that by Professor Orr, who fills his pages with arguments designed to fortify positions which are no longer worth assailing, meanwhile confessing that he cannot undertake to defend the reality of revelation and inspiration on the basis of modern critical knowledge, the very basis on which the thoughtful mind of today demands that the defense be made. It is not surprising that under such limitations the author's laborious reasoning seems little more than a floundering around in a confused mixture of "things new and old," resulting in no clear ideas of the essence and evidences of revelation and inspiration.

In strong contrast to this in both interest and effectiveness is the short discussion of revelation given by Dr. Rashdall in his volume composed of lectures on *Philosophy and Religion*. If one accepts the idealistic philosophy so attractively and persuasively set forth in the first four lectures, nothing could be more natural than the view of revelation maintained in the fifth. But with this background the doctrine loses its old dogmatic harshness and formalism and assumes a new and vital meaning. Dr. Rashdall holds that "there is a sense in which all truth is revealed truth," and revelation in religion differs from that in poetry and science only in content and degree. Biblical revelation is not guaranteed by miracle or authority, but together with other Christian doctrines must be submitted to the examination of reason, and their final valuation will rest mainly on their appeal to the moral and religious consciousness of the age. The presentation of idealism and its implications in this book is so clear and intelligible that even the "tough-minded" realist in Professor James's classification ought to find pleasure in its perusal.

Written from a different philosophical viewpoint, but with equal freshness and vigor, is the volume on *Faith and Its Psychology* by Professor Inge, of Cambridge. This book also is an expansion of a course of lectures given by the author in London. In some parts of the

*STUDIES IN THEOLOGY. A New Series of Handbooks for the Use of Ministers, Thelogical Students and General Readers. A Critical Introduction to the New Testament, by A. S. Peake, D. D. Philosophy and Religion, by Rev. Hastings Rashdall, D. C. L. Faith and Its Psychology, by Rev. W. R. Inge, D. D. Revelation and Inspiration, by Rev. James Orr, D. D. 75 cents each, net: New York: Charles Scribner's Sons.

work there is a needless quantity of untranslated Greek and Latin, but perhaps this is permissible in a series designed mainly for students and professional readers. Professor Inge believes that faith is a constituent element in human nature, developing and operating thru the natural faculties. At first it is no more than a vague feeling or instinct which assures us that behind the world of phenomena there is a world of eternal values, attracting us toward itself. When faith becomes conscious of its aims, he holds, these spiritual values become classified under the ideas of truth, goodness, and beauty, which can only be fully realized in the life of God, who thus becomes the true object of faith. Finding the primary basis of faith in the very nature of man and the universe, Professor Inge sees in authority only a secondary ground which should be treated as entirely ancillary to the first, rightly contending that the only office that authority can have in religion is essentially educational, and that like every good teacher it should labor to make itself superfluous.

In Professor Peake's *Critical Introduction to the New Testament* one finds on the whole a very satisfactory piece of work. The style is not all that could be wished and sometimes makes very heavy reading on topics that might easily have been treated otherwise, but the temper of the book is judicious and fair. The author gives the prominent divergent views held in regard to the authorship, date, and place of writing of the several New Testament books, with the reasons usually adduced in the support of each view, adding his own preference in every case. Professor Peake regards II Cor. 10-13 as a separate letter, and the latter part of chapter six as a misplaced fragment, but contends that Rom. 16 is an integral part of that letter. In the Pastoral Epistles he finds only fragments from the hand of Paul. It is to be regretted that Professor Scott's thoro discussion of the Pauline literature did not come to the author's attention in time for him to make use of it in his work. We believe that many of his conclusions, such as those in regard to the Thessalonian letters, would in the light of Professor Scott's investigations have been somewhat modified. In his discussion of the Synoptics, Professor Peake adopts the two-document hypothesis, but he refers to "extremely suggestive discussions" recently published on the subject of Luke's use of other documents. The reference is doubtless to Professor Burton's work, and this certainly should have received some consideration in any careful survey of the present status of the Synoptic problem. Another notable omission from both the books of reference and the discussion is the valuable contribution of Prof. E. F. Scott to the study of the Fourth Gospel, which our author thinks must have been written by the Apostle John, altho he recognizes that the primary interest of the Gospel is apologetic and polemical, and that the stages of the historical movement described in it "have not been distinguished in all their original sharpness." In no other book on the New Testament can so much critical material be found in so small a compass, and "a desire to be loyal to the facts" is everywhere in evidence.

The volumes as a whole bear out the judgment of Professor Inge, exprest in his preface, that the time has not yet come for "any ambitious construction" in theological thought. At present the site for the new building is being cleared and the materials for its erection are being made ready. The wise master-builder is still to come. In the meantime the crucial question is "whether Christianity can come to terms with the awakening self-consciousness of modern civilization, equipped as it is with a vast mass of new scientific knowledge, and animated for the first time by ideals which are not borrowed from classical and Hebrew antiquity." We believe that the progressive and open-minded discussions in this series will help to answer this question in the affirmative.

The Kingdom of Slender Swords. By Hallie Erminie Rives. Indianapolis: The Bobbs-Merrill Co. $1.50.

Let us hope that this book owes its proud position as a "best seller" to the colorful and properly sympathetic depictions of Japanese life that constitute its redeeming feature; otherwise, the success of a work of fiction in which sensa-

tionalism, physical absurdities, wretched taste and dubious morality are so conspicuous raises the suspicion that the public which has accepted it was educated largely on the old-fashioned yellow-backed novel. The plot turns on the villainy of the sinister Doctor Bersonin, an expert in explosives, who has mastered a mysterious force by which matter may be instantaneously resolved into its component atoms. Mainly to further the success of his speculations in stocks that would be affected by a Japanese war, the wicked doctor, with the aid of a dissolute accomplice, trains his infernal contrivance upon the Dreadnoughts of a friendly navy lying in the harbor of Yokohama. Naturally, the diabolical scheme is frustrated at the last moment by the hero in an aeroplane, while the unspeakable doctor inexplicably explodes himself in a burst of hysterical laughter. All this is perhaps harmless enough. The tolerant mind may even sanction the clearing up of a murder mystery by an obliging phonograph which, when the victim is knocked on the head and falls down a bluff, somehow or other manages to record his dying words. But the author's taste in making her American heroine's shadowy father Lafcadio Hearn in nearly all but name is at least questionable. And she might have spared us the disgusting chapter in which her Japanese heroine, in order to learn a secret that concerns the welfare of her beloved Nippon, sells herself to the dissolute deputy villain. While this incident is approved by the Japanese Baron Makino in his "Foreword" to the book as in accordance with "the dominant idea of duty and sacrifice with the Japanese," it behooves authors of novels for Occidental readers to show some regard for our possibly immature Western standards of taste and morality.

The Printers. A Study in American Trade Unionism. By George E. Barnett. Cambridge, Mass.: The American Economic Association. Paper, $1.50; cloth, $2.

Dr. Barnett's study of *The Printers* is one of the most exhaustive monographs on a trade union that has come to our notice. The historical part is somewhat limited, but everything relating to government, jurisdiction and trade regulations is treated in detail. The author has done a prodigious amount of work and has done it well. The printers have had a checkered history. The first organization recorded is the Typographical Society of New York (1795-97). The Franklin Typographical Society succeeded this body in 1799. The Philadelphia Typographical Society was organized in 1802, tho it seems probable that an earlier society existed. Until about 1848 the organization movement among printers was spasmodic, and at two periods (between 1820 and 1830, and about 1840) the number of unions dwindled almost to the zero point. The first national society was formed in 1836, but it lasted only two years. The present national union was founded in a preliminary way in 1850, and formally in 1852. In 1869 it became the International Typographical Union. In 1908 it was composed of 618 local unions, with 43,740 members. High-water mark was reached in 1905, when 46,734 members were recorded. The great eight-hour strike of the following year caused a considerable loss, largely thru the collapse or withdrawal of the smaller unions; but the hold of the union in the larger cities has been, on the whole, maintained. One must be a printer to appreciate the skill and care with which the author has treated such (to the lay mind) abstruse matters as the disposition of the "phat" and the workings of the priority law.

The Immigrant Tide: Its Ebb and Flow. By Edward A. Steiner. New York: Fleming H. Revell Co. $1.50.

With his attractive style, his sympathetic point of view in regard to the immigrant, and his knowledge of the immigrant populations in many of their native places as well as those of their adoption in this country, Professor Steiner is enabled to present a vivid panorama full of pictures of life that should be of interest to Americans who are watching this incoming immigrant tide with fear and pessimism. For Professor Steiner believes in the present-day immigrants—the Slavs, the Italians, the Jews—in the qualities which they

bring to us, and in their adaptability to American conditions and ideals. But the people of the United States have a great responsibility. "What we teach the immigrant by precept or by example he will become." Perhaps that is almost too strong a statement of the author; yet it has a great element of truth. And where the immigrant is blamed, we should often blame the people here. Professor Steiner rightly points out that we are least efficient in interpreting the rights of citizenship to the immigrant. Those who know the several immigrant populations well have learned their faults as well as their virtues. They merely ask for a just appreciation, without that prejudice which the native and the adopted of some generations are prone to conceive.

Terry's Mexico. Handbook for Travelers. By T. Philip Terry. Boston: Houghton Mifflin Co. $2.50.

One would take this thick little volume, at first glance, to be a Baedeker. It turns out not to be a Baedeker, and a footnote under the foreword explains. "The author considers the Baedeker form of guidebook the best in existence," it is there explained, "and having followed that model in the physical make-up of the present volume, he desires to acknowledge most gratefully his indebtedness." The book has 584 pages crammed full of the most detailed information about routes and places and rates, about geography, history and customs. One could travel much farther with such a book than with a big stick.

The Romance of Northumberland. By A. G. Bradley. With 16 Illustrations in Color by Frank Southgate Chicago: A. C. McClurg & Co. Pp. x, 400. $4.

Northumberland, perhaps more than any other English country, brings home to the visitor the fact that within the borders of what, from one point of view, is a single homogeneous kingdom there are in its various sections wide diversities of race, language and character. The American who visits London and the south coast, and then passes to the northwest thru the midlands to Chester, and perhaps on to the lake district, misses entirely the wild, rugged, picturesque county of Northumberland, with its myriad historical associations. It is of war—border warfare between members of closely similar races, if not of the identical race—that Mr. Bradley's pages are full. Northumberland was the scene of incessant fighting from the days of the Picts and Scots, until the accession of James Stuart put an end to the internecine struggle, and Northumbrians at last were at liberty to settle down to cultivate their somewhat bleak and barren land in peace. Mr. Bradley has been most persevering and most successful in his search after stories. His pages are a rich mine for the lover of anecdotes, and no doubt some of the best of these will soon begin a pilgrimage of quotation which will only end when they become so travel stained and so familiar as to make necessary a well-earned rest.

The Passion Play of Oberammergau. Translated by Montrose J. Moses. New York: Duffield & Co. $1.50.

With all eyes turned to the little town of Oberammergau in Bavaria, where the Passion Play is to be given this summer, as has been the custom every ten years for nearly three centuries, as it dates from the pestilence in 1633, a good translation of the religious drama is welcome. Mr. Moses's translation is authoritative; his historical introduction careful and scholarly; the reader of the sincere and naïve play gets a new impression of the earnestness of its authors and actors. Generations of men and women have believed as well as repeated these words, until, heavy with historical associations, they have become a somber litany. The translator has preserved much of the simple charm as well as the essential dignity of this peasant play; a great tragedy of the spirit of man triumphant over treachery, agony and death. It is not grotesque or irreverent even to the most sophisticated reader; its very homeliness of diction is its best defense. What men have felt so deeply and exprest so sincerely has human value for those who may not share their artless faith, as well as for believers in it everywhere.

Literary Notes

....Rev. T. Calvin McClelland, D. D., of the Memorial Presbyterian Church, Brooklyn, defines a volume of sermons on *The Mind of Christ* as "An Attempt to Answer the Question, What did Jesus Believe?" (Crowell, $1.25 net).

....The Bishop Paddock Lectures for 1909-10, delivered by Prof. Francis J. Hall, are published under the title *Evolution and the Fall* (Longmans, $1.50 net). The rise and content of the scientific doctrine of evolution are discussed in a clear and interesting way, and their important bearing on theological thought duly emphasized, but the attempt to find a place in the evolutionary scheme for the "Catholic" doctrine of the fall of man ends in complete failure. Considering the earnestness and erudition of the author, the result well nigh demonstrates the futility of such efforts.

....*War on the White Slave Trade* (Chicago: The Charles C. Thompson Co., $1.50) is hardy what one could wish it to be. It is made of a large number of papers, some good, some bad and some indifferent, by various writers. The contributions of United States District Attorney Edwin W. Sims are on the whole commendable, but the need of making up a somewhat sensational book has prompted the editor, E. A. Bell, to fill in with all sorts of heterogeneous matter. Nothing approaching a scientific study of the traffic, or even an adequate statement of the problem, appears between the covers. There is some valuable material scattered through the pages, but the lack of methodical treatment lessens its value.

....The world's attention has been repeatedly fixt on the unrest in British India and its occasional manifestations during the last few years, wherefore the publication of Lord Morley's *Indian Speeches* (1907-1909) may well be termed timely. These eight addresses give a vivid idea of the complexity and multiplicity of the problems and conditions that face the British Government in the Indian Empire, and of the difficulties which beset their solution, and which will grow in number and strength with the passing of time and the increasing enlightenment of the natives. The book contains also three appendices, among them being Queen Victoria's Proclamation in Council to the Princes, Chiefs and People of India (1858), which has been called the Magna Charta of India. (Macmillan, 8vo, $1 net.)

....A new magazine entitled *The Cosmopolitan Student*, devoted to the interests of the Association of Cosmopolitan Clubs and the prime object of that body, the furtherance of the peace movement, has just made its first appearance. The Association of Cosmopolitan Clubs now has chapters in twenty-four universities. These chapters are "Clubs of all nations." Over sixty countries are represented, and the number of nationalities in a single chapter is sometimes as high as twenty-five. During the past two years, since the movement started, the following articles have appeared relative to the work: "Cosmopolitan Clubs in American Universities," by Louis P. Lochner, in the *Review of Reviews*, March, 1907; "A Cosmopolitan Convention," by L. P. Lochner, in THE INDEPENDENT, January 28, 1909; "Peace Among the Nations," by L. P. Lochner, in *LaFollette's Magazine*, October 23, 1909; "The Peace Movement in Colleges," by George W. Nasmyth, in THE INDEPENDENT, February 17, 1910, and "The Association of Cosmopolitan Clubs," by W. L. Schwartz, in the *American College*, March, 1910.

Pebbles

THE Sunday school teacher asked the class: "What kind of boys go to heaven?" And one little urchin yelled out, "Dead boys!"—*Lippincott's Magazine.*

"MY friends," said the campaign orator, "beware of the unscrupulous heeler. (Applause.) There are men so lost to shame that they will offer you a dollar for your vote. (Hisses.) Do not listen to them. Spurn them. Be on your dignity. Demand more." (Continued applause.)—*Philadelphia Ledger.*

THE following appeared in an Irish newspaper:

"Whereas, John Hall has fraudulently taken away several articles of wearing apparel without my knowledge, this is therefore to inform him that if he does not forthwith return the same his name shall be made public."—*Tatler.*

"YOU'D better subscribe for McSwat's Magazine, madam," said the agent, as he slipped his toe inside the door so "madam" could not close it. "Costs you only fifty cents per year; and every new subscriber gets a life-insurance policy, a bicycle, a mushroom hat, a bottle of Finnigan's Oil of Joy, and a copy of Nicholson Meredith's 'House of a Thousand Cradles.'"

"Not me," said the madam. "I've just subscribed for McSquirt's Monthly, and they gave me a 'God Bless Our Home' motto, a kitchen range, some fly paper, a rainy-day skirt, an ice pick, a picture of Edward Bok crossing the Delaware in a gilt frame, and send me to the next exposition throwed in."—*Woman's Home Companion.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mark Twain

His voting name was Clemens, but to the world that admired and loved him he was Mark Twain. Yet how many of them knew what the two words *Mark Twain* mean, and what they come from? For a while in early life he was a pilot on the Mississippi. Those flat sternwheelers had to pick their way thru clear or muddy waters, and the man on the bow was kept constantly dropping the line and calling out the depth. At six or seven feet his voice would sound out slowly, for that was safe water, but at four feet it would come quick and sharp, and at three and a half the boat would back, or, if it had grounded on a shoal, the two long beams, like two legs, would be dropped down upright, one each side of the bow, and the engine would puff and the bow would be lifted from the mud, and the boat would back out of danger, and try another course. At twelve feet, if the present writer's memory of the tedious passage in the late fifties from St. Louis to Kansas City does not deceive him, the man with the line called "Mark twain," and all was peace. So "Mark" was not a name, only a knot in the sounding line; but it was deflected, as a joke, into a name, like "Mark, the perfect man," or "Lo, the poor Indian." It was after the boy, with almost no schooling, had tried the printer's trade, and had satisfied his ambition as a pilot, and had done some newspaper editing, and had begun to be known as a humorist, and then had written his second book, "Innocents Abroad," which gave him worldwide fame, that Mark Twain settled down to literary life in Hartford, Conn.

At that time Boston had not quite ceased to be the literary center of the country, and Hartford now became a worthy second. They were a choice circle of men among whom Mark Twain was the most distinguished; and a very beautiful affection there was among them, such as had earlier marked the fellowship of Longfellow, Lowell, Holmes, and the Dante circle in Cambridge. They were such men and women as Charles Dudley Warner, who collaborated with Twain in "The Gilded Age"; Harriet Beecher Stowe and her learned husband, and her sister, Mrs. Hooker, with the latter's husband, Judge Hooker; Dr. J. Hammond Trumbull, of the Watkinson Library, the one man in the world who had read Eliot's Indian Bible thru, and who, for one of Mark Twain's books, provided that astounding set of opening mottos for the chapters in the most unknown languages, but all pertinent; his brother, Henry Clay Trumbull, himself traveler and author; Dr. Burton, whose son, Richard, is poet, editor and teacher, and E. P. Parker and the much loved "Joe" Twitchell, both of whom still survive and are still pastors of Hartford churches. Catherine Beecher and Rose Terry (Cooke) had left Hartford before Mark Twain made it his home. It was a most congenial fellowship into which he was welcomed.

The book which gave him fame the world over was "Innocents Abroad." That announced that a new supreme American humorist had arisen, far superior to the Josh Billingses and Artemus Wards, with whose broad wit he yet had a certain relation. But his later works were to prove the tender fiber of his genius, while such works as his "Tom Sawyer" and "Huckleberry Finn," and his articles on Christian Science showed him to be a great master of English style,

a creator of new characters in fiction, and one of those authors who are not to be forgotten. Even so nice a critic as Tennyson declared him one of the great writers of English prose, and in this country such professional critics as Brander Matthews and Professor Phelps have called him our greatest master of style.

He had his trials, as when the property he had acquired was all swept away in the failure of the publishing house which he had backed; but refusing a popular subscription in his behalf, like Sir Walter Scott, he assumed the task of paying his creditors by the product of his brain, and for several years he worked furiously in writing and lecturing, and with the whole world's sympathy. Again, in his later years, the sudden death of his daughter was a very great blow to him. And yet even to the very last years of his life he maintained his literary productiveness. Meanwhile he was the dean of our literary fellowship, grand and gray, honored and loved, the most distinguished figure in the American and perhaps in all the English-speaking world of letters.

It will be the task of another generation to give him his permanent place among the world's great writers. Perhaps in literature, as in politics, the fame of wit and humor forbids the highest rank. They tell us—but we doubt it—that Dickens is sinking in popular esteem. Mark Twain's fun was riotous, grotesque, bizarre, and it could be coarse. But it hovered about serious themes, and his spirit was sane and sober. We have had other great humorous writers, yet those who kept their humor under control, and used it more delicately and occasionally. Such men were Washington Irving and Oliver Wendell Holmes, and we may add George William Curtis. To the older men these writers will still seem supreme, while the younger generation will give their loyalty to Stockton and Mark Twain. Only Stockton can compare with Twain, and he was less *outré*, and his loss was a very sad one for American letters. But after all, the fun that thumps you in the ribs and forces you to a guffaw is of a less permanent and satisfying character, we suspect, than that which is more delicate and suggestive, has in it more of the elusive, and which we read with smiles of quiet satisfaction. But all this is a matter of taste, and which the world will choose we cannot decide. Probably in the future, as in the past, each generation will give its homage to its own popular writers of the day, while the next will put their collected works on the shelf for occasional reference, and only three or four of a century will compel familiarity as well as lessening homage. Whether Mark Twain will be one of these few the next century will decide. Sufficient for the day is its fame.

The Judicial Arbitration Court

It is announced from Washington that Secretary Knox's plan for the establishment of the Judicial Arbitration Court or Court of Arbitral Justice, created but not completed at the Second Hague Conference, is likely to succeed. The identic note sent to eighteen of our sister nations is said to be meeting with general favor, and already France, Great Britain and Germany have acceded to the principles involved.

The details of Mr. Knox's note have not yet been given to the public, but it is understood that as soon as a sufficient number of nations agree to the plan, indicating the support of fifteen or thereabouts, a conference of them will be called at The Hague to draft a convention for the establishment of the court.

To understand the momentous importance of this announcement it is necessary to go back to the Second Hague Conference of 1907. At that conference the American delegation proposed to establish for the world a court modeled on the greatest court of any nation in the world—the United States Supreme Court. It was not to supersede the world court created at the first conference, but to be added to it so that whichever proved to be the most useful to mankind would eventually survive. This daring and far-visioned plan was conceived by Elihu Root, then Secretary of State. He rightly felt that the Permanent Court of Arbitration of 1899 was neither "permanent" nor a "court." It was not permanent because it was

only in session when especially constituted, and it was not a court to make and apply the rules of international law, but rather a panel of arbitrators chosen and paid by the litigants for a single case only.

As Mr. Root said at the New York Arbitration and Peace Conference in May, 1907:

"What we need for the further development of arbitration is the substitution of judicial action for diplomatic action. . . . We need not distinguished public men concerned in all international questions of the day, but judges who will be interested only in the question appearing on the record before them. Plainly this end is to be attained by the establishment of a court of permanent judges who will have no other occupation and no other interest but the exercise of the judicial faculty under the sanction of that high sense of responsibility which has made the courts of justice in the civilized nations of the world exponents of all that is best and noblest in modern civilization."

Accordingly the United States delegation introduced a bill into the conference looking to the establishment of this court, to be composed of about fifteen judges, representing the different judicial systems of the world. As it was universally agreed that a court composed of much more than fifteen judges would be too unwieldy, the problem was how to apportion fifteen judges among 46 nations. The first plan proposed was to give England, Germany, France, Austria, Russia, Italy, Japan and the United States a judge apiece, and divide the remaining judges among the thirty-eight lesser powers. Instantly Señor Barbosa, of Brazil, the Calhoun of the conference, rallied all these thirty-eight nations under his leadership and fought that proposition tooth and nail, ending up his victorious parliamentary battle with a speech on "The Equality of Sovereign States," which we published in THE INDEPENDENT of January 9, 1908, and characterized as the most lofty and notable oration emanating from the Second Hague Conference. Señor Barbosa's proposition was that as every nation present was there in its sovereign capacity, it followed that each had an equal right to a judge on the court, otherwise there was a difference of degree in sovereignty, and that was a backward step in international law. Finding that the opposition of the thirty-eight lesser powers could not be overcome, the United States delegation capitulated and then came forward with the proposition that each nation should have an equal vote in choosing the judges; that each one should nominate a judge and then all vote for fifteen on the list, those fifteen receiving the highest number of votes to constitute the court. But thereupon all the eight great powers backed down with the exception of the great Republic of France. There was a deadlock. The delegates saw it might take months to solve the difficulty. So what did they do? They created the court, but left the detail of the method of selecting the judges to be determined thereafter by diplomacy or otherwise as the nations might determine. The problem of the method of the selection of the judges therefor is the detail, which Secretary Knox now assures us is in process of solution.

It will be noticed, however, that the Secretary is not proposing any new solution of the problem of how to divide fifteen judges among forty-six nations. He has thrown that aside as apparently insoluble. The final act of the Second Hague Conference in advising the signatory powers to establish the Judicial Arbitration Court does not specify the number of powers necessary. Therefor he proposes—at least so we surmise—that the new court shall be not a court for the forty-six sovereign nations of the world, but only for those few powers which he has invited to confer with him. He proposes, it is true, to let any other nation adhere to the court who wishes, but it is quite clear that the majority of the fifteen judges will be chosen by the great world powers and the other nations can take them or leave them and be thankful.

Now THE INDEPENDENT is the last journal in the United States to belittle any advance in the peace movement simply because something else might be better. We shall consider it a master stroke of diplomacy if Mr. Knox can bring England, France, and especially Germany to agree to settle their differences in a real court of justice. The adherence of the great powers of the world to such a court would well-nigh

inaugurate the reign of universal peace. Nevertheless, we are disappointed that Secretary Knox has apparently given up the problem of how to make the court universal instead of international. The debates at the Second Hague Conference clearly show that the smaller states will probably never come in on any other basis. Would Rhode Island and Delaware ever have joined the American union if they had been told by the great States of Massachusetts, New York and Virginia that they could not have an equal right to a judge on our Supreme Court; yet that is precisely now what Secretary Knox tells the small powers they must expect in this world court. As a matter of fact, Rhode Island and Delaware have never had a judge on our Supreme Court, but they have the equal right to have one, and they send two representatives to the Senate who have an equal vote with those of the great States in confirming or rejecting judicial nominations by the executive. Probably the big nations, as a matter of fact, would get most of the judges if the new court were universal, and the small nations would willingly acquiesce, but we can hardly expect the latter to adhere to a proposal that contemplates the possession of a *permanent* majority of the judges by the so-called eight great powers of *today*.

And this brings us to an even greater objection to Secretary Knox's plan. It assumes that the great powers of today are also to be the great powers of tomorrow. All history shows the fallacy of this supposition. If any thing is sure in the future it would seem to be a fact that within a century Brazil, Argentina and Mexico will outrank Austria. Africa will advance in power, prestige and wealth beyond the dreams of avarice, and China will wake up from her age-long slumber and dominate Asia, if not the world.

Even at the present moment England, France, Germany, Russia, Austria, Italy, Japan and the United States, the world powers who at the Second Hague Conference, claimed the right to have a judge on the court all the time and who are now expected to participate in Secretary Knox's plan and dominate his court—all these powers have only about one-half the population of the globe, including the disfranchised millions of Russia and England, and only one-sixth of the population when those who enjoy the voting franchise are reckoned.

As Señor Barbosa said on the floor of the Second Hague Conference:

> "The same delegates who have voted against the small and great States equal rights for the selection of judges represent governments which not very long ago were rated among the despised petty states. . . . But how long will that last? The great empires appear and disappear; they pass like shadows on the wall, without leaving any trace. Today these great Powers seem to be almighty, but the next stage on their way to maturity will be corruption; for as soon as an empire reaches the summit it begins to fall."

So we wish well to Secretary Knox and his great peace plan. If successfully carried out it will be a long advance in that movement for the substitution of law for war. Nevertheless the whole foundation of the court will have to be modified before all the nations of the earth will enter it. The inspiring spectacle of the two Hague Conferences composed of the sovereign nations of the world so fired the hearts and minds of men that no smaller gathering of the powers in the name of the world will ever again be tolerated. The whole is bigger than any of the parts, mathematically, psychologically and internationally. We now have a world conference; we shall yet have a world court.

Meaning of the Defeat of Aldridge

THERE was an interesting election on the 19th in that Congressional District of New York which includes the city of Rochester, where a vacancy had been made by the death of Representative James Breck Perkins. Continuously for twenty years this district had sent a Republican to Washington. This time a Democrat was elected by a plurality of 5,440, altho Mr. Perkins's Republican plurality only sixteen months ago was 10,167. It will be recalled that a similar change was shown in the Fourteenth District of Massachusetts, on March 22, where a plurality of 5,640 for Eugene N. Foss, Democrat, displaced a Republican plurality of 14,250 for his predecessor, the late Mr. Lovering. And that

district had never before had a Democratic Representative. Prominent Democrats who said they saw then "the handwriting on the wall" are now gazing at it again.

The returns of last week in the Rochester district, when compared with those of the election in 1908, show that the total was reduced by 12,000, and that the Republican loss was 14,000, while the Democrats gained 2,000. It is reasonably plain that about one-third of the Republicans declined to vote, and that a considerable number of those who went to the polls voted for the Democratic candidate.

Democrats say that this election foreshadows a great revolt against Republican rule in November next, because it indicates conditions prevailing thruout the country. On the other hand, Republican leaders assert that the result was due to influences purely local and personal. The facts, so far as they can be ascertained, are as follows:

Republican defeat was invited by the nomination of George W. Aldridge, who had been boss of his party in the city and the district for twenty years. This nomination was procured by means of his control of the party machine. It was an affront to the best people of the party in Rochester and the outlying towns. Aldridge was tainted some years ago by a memorable scandal relating to the expenditure of $9,000,000 for canal improvements. A few weeks ago it became known—owing to an investigation made by Insurance Superintendent Hotchkiss—that $1,000 of the fund raised by certain fire insurance companies, to be used in connection with legislation at Albany, had been given to him by the companies' "legislative agent," E. R. Kennedy. Aldridge admitted that he had received the money, but said he has used it for the benefit of the party. The facts came out at about the time when the Senate was voting that Senator Allds had taken a bribe. Like Allds, Aldridge had been prominent and influential while holding legislative or executive offices.

Against Aldridge, the Democrats nominated James S. Havens, a lawyer of excellent reputation and a Yale graduate, who had been the partner of the late Representative Perkins. Twenty clergymen publicly favored his election; seven of them in a signed statement asked the people to express their disapproval of Aldridge's conduct; the moral issues of the campaign were discussed in pastors' sermons.

These were the local and personal influences which affected the election. They should have been sufficient to elect Mr. Havens. Whether they alone would have wiped out the normal Republican plurality we do not know. To them was added the popular protest against the high cost of living, and voters were asked to believe that the increased cost was due to the recent Republican revision of the tariff. For obvious reasons, prominent Republicans living outside of the district did not care to assist Aldridge by making speeches for him, but Havens had help from abroad. One of those who aided him was Mr. Foss, of whose victory in the Fourteenth Massachusetts district we have spoken, and the subject of his addresses was the tariff revision. Havens himself discussed this question, and the campaign literature issued in his interest virtually asserted, or suggested the inference, that the burdensome increase in the cost of living was due to the revision which bears the names of Representative Payne and Senator Aldrich.

Undoubtedly the action of the voters was affected by this treatment of the tariff question. Mr. Foss says that the defeat of Aldridge was due to the tariff discussion, and that the main issue was the tariff and Canadian reciprocity. We do not think it was, but there is evidence that tariff revision was one of the issues. Probably a considerable number of voters believed that the recent revision had raised the prices of food and other commodities. But if Mr. Foss errs in ascribing the great change at the polls exclusively to public sentiment concerning the issues which he discussed in his Rochester speeches, as he had discussed them in his own successful campaign, Representative Payne also errs, and inexcusably, when he asserts that the tariff had nothing to do with it.

These two elections, one in Massachusetts and the other in New York (while

in each case the result was determined in part by local and personal considerations), show that by many the revisers of the tariff are held responsible for the increased cost of living, and that there are men in public life who encourage and promote a popular conviction to this effect. We are speaking of the revision, not of the tariff as it existed before the revision was enacted. The effect of that tariff upon prices is one thing; the effect upon them of the revision is another. In some recent political addresses the distinction has virtually been ignored. The revisers should have taken action that would tend to reduce the prices of certain products. While on the whole they gave no relief, the general level of prices has not been raised by the changes they made. But there are a great many people who cannot now be convinced that this is so. Among them are thousands of voters who will turn from the Republican to the Democratic party when they are called to the polls. There are others who will take the same course because, while they do not think revision has raised prices, they resent the Republican leaders' failure to revise downward.

These leaders ought to see that a popular movement which promises to make many Democratic pluralities where Republican pluralities were shown in 1908 should suggest an attempt on their part to correct what was badly done. Leaders of the type of Messrs. Aldrich, Cannon, Hale and Payne cannot be led to see this. But their day is passing. We still hope that Mr. Taft will see it. The assertion that the new law is the best of all tariffs yet known has no weight with those who are leaving the party because they believe it is worse—or, at least, no better—than the tariff which preceded it. If the President should now insist upon the creation of a well equipped and strongly supported commission, empowered and directed to ascertain without delay, so far as possible, the difference in cost of production here and the cost abroad, and to report promptly what changes are needed for an adjustment of the tariff to meet the requirements of the party platform, many voters who are preparing to cross the line might be restrained.

The Institutional Parent

THE natural parent has abdicated. This is the conclusion set forth in a thoughtful article recently contributed to *Unity* by W. C. Gannett. For the training of the mind the child is turned over to the week day school. For religious training he is committed to the Sunday school and the instruction of "an earnest-hearted girl of twenty, with almost all of life's lessons yet to learn herself." For the choice of companions and the employment of time in sports, party going, theater going, and all the rest, the child is turned over to himself —or practically so, since his insistence that he must be allowed to do "what all the others are doing" is allowed to settle the matter.

Paradoxically, with this abdication of parental responsibility we are furiously cultivating fads of "child study," "child science," "child protection," "child legislation," and "child welfare" in general. We have "child conferences," and there are bills in Congress to create a "Children's Bureau" as a department of the Federal Government. All this is in keeping, however, with the well recognized habits of what Mr. Muirhead has well called "the land of contrasts." It all "goes" in an age of ready-made clothes, predigested foods, and five feet, more or less, of selected readings. We assure ourselves that experts can do all sorts of things for us better than we can do them for ourselves. So we assume that kindergartners, teachers, club organizers and summer camp caretakers can bring up our children also much better than we ourselves could look after them.

Mr. Gannett does not think that we shall thus produce a superior race of men and women. But not everybody takes his distrustful view. For example, a few days ago a Sunday newspaper contained an interview with Prof. Simon N. Patten on domestic art and philosophy, the servant question, child science and allied subjects, in which the distinguished economist rejoiced over the prospect that children are henceforth to be trained in the way they should go by properly equipped institutions. We suppose that some such disposition of "the kids" is arranged for also in the regen-

erated and reconstructed society which Mrs. Charlotte Perkins Gilman contemplates.

Far be it from us to decide where the authorities thus disagree. Yet we confess to an old-fashioned prejudice in favor of that view of the matter which Mr. Gannett takes. We don't quite like the idea that it is desirable to get the children "out of the house," along with spinning, shoemaking, baking and the laundry business. We admit that plausible reasons can be urged for ejecting the industries, but we have a certain shrinking from disposing of children in the same way. It occurs to us that we have seen of late some sobering confessions in the medical journals that, notwithstanding all their science, their aseptic and antiseptic precautions, their expert nursing and costly devices, the doctors have not been able greatly to reduce the high death rates in foundling and orphan asylums, and that they see no prospect of being able to reduce them even to the level of the death rates in the wretched homes of crowded tenement districts, where there is at least some mother-care and miscellaneous family attention. We can't help thinking that "the start in life" that a child got in an old-time group of brothers and sisters quickened its perceptive faculties and its motor centers quite as well as a kindergarten awakens them and we venture to doubt whether any real substitute has yet been found for the moral training which a child gets from even an "ordinary" father or mother. There are, of course, vicious, indecent, altogether impossible parents, from whom any child were better separated, but leaving such out of account, we think that commonplace, more or less stupid, well-meaning, instinctive fathers and mothers generally bring up their children with sounder notions of right and wrong, and of decent living in general, than children usually get from even very good institutional training.

We are strengthened in this view by the fact that the material commodities once produced by household industry have not all in all been improved in quality, however much they may have been "cheapened," since their production was turned over to factory enterprise. In thousands of American families articles of linen and of woolen, spun and woven in ancestral households, and now cherished as heirlooms, are unanswerable evidence that the fabrics of today are frauds and abominations by comparison.

Getting things done by other people is all very well when it is a matter of necessity or when one is himself actually well employed in really expert service for his fellow-men. But most human beings are not experts in any line whatever, and it is preposterous to suppose that they ever will be. On the whole, they probably come as near to competency in domestic industry and the rearing of children as in anything. In any case the number of experts in the art of rearing other people's children is not yet sufficiently large to reassure us when we view the extending abdication of the parent.

Cardinal Del Val and His Father

THE father of the Cardinal Secretary of State, Del Val, was in Rome during the Roosevelt episode. Whether that fact was of any importance as to the *impasse* we do not know, but Roman gossip insists that it was. The father is charged with being at the bottom of the whole trouble, his object being in some way to even up the harm done Spain by the colonel of the Rough Riders. The world knows that the Roman Curia sympathized with Spain; hence it took no action when the senior Del Val, who was then the Spanish ambassador at the Vatican, undertook to raise a fund with which to buy, or build, a man-of-war to be named after the Spanish Queen-Mother, and to be used by Spain against the United States. Among the contributors to that fund was an American archbishop, now dead, who gave quite a large sum. We do not dare to give credence to the story told in Rome that another American prelate, when the news of Dewey's victory in Manila Bay reached Rome, called on Signora Del Val and, while presenting her with a bouquet, exprest his regrets at his country's crime. It would be hazardous to credit Cardinal Del Val's father with inspiring the Vatican so unhappily, for the son seems himself quite equal to the

error. His period of office has been most unfortunate for the Papal Court.

The other European journals, as well as those of Italy, we observe, put the blame of the Roosevelt incident not on the Pope but on his Secretary of State. It is regarded among Catholics as well as Protestants as his crowning folly. The *Neue Freie Presse* of Vienna says that he has added a new link to the chain of his blunders. Millions of Catholics are praying that the Pope's eyes may be opened, and that this disturber of the world's peace may be sent to an out-of-the-way monastery, where he may spend the rest of his days in sackcloth and ashes for the evil he has done. But as yet he is in power, and it is the Dominican Abbot Janssens, who ventured to call on Mr. Roosevelt, that has been sent into seclusion, and deprived of all his official positions, except that of membership in the Biblican Commission, all of whose decisions are signed by him and the French scholar Vigouroux as consultors. This last action seems to authenticate the reported insulting publication from the Vatican, which we were so slow to accept as genuine, and which not only disavowed the courtesy of Janssens, but also sneered at Mr. Roosevelt.

From all that our correspondents report affairs in the Catholic Church of Italy are rushing to a climax which is likely to show some important changes. The very activity of the proselyting work of the Methodist, Baptist and Waldensian Churches is less indicative than the fear of them shown by the Vatican. Our readers know that we much disapprove the bitterness of some of these men, whether shown in the outbreak of Dr. Tipple or the editorial attacks of the *Evangelista,* but the Vatican has no right to complain of proselytism. Every one who has been in Rome knows that the Roman Catholics, directed by the highest clergy, are always carrying on a vigorous propaganda, especially to gain over rich American and English men and women. It is perfectly correct for them to be fiercely anti-Protestant, but for Methodists and Baptists to be similarly anti-Catholic is the worst of crimes. On both sides this does more harm than good, but what one side does it cannot blame the other for doing.

In fact, the Methodists, Baptists and Waldensians are making more converts than ever before. The profound dissatisfaction with the present policy of the Vatican impels multitudes of priests and laymen to seek a refuge in some other Christian Church. A venerable and wise clergymen, not belonging to any of the proselyting bodies, reports to us that it is a hard problem to know what to say to many priests who are inclined to leave the Church of Rome, and could be received into the Protestant churches, but could then find no means of subsistence. He is inclined to tell them to remain where they are and lie low waiting for a better time. But the present activity against them renders such a course impossible to a large number of priests and laymen who are practically put under the ban and deprived of religious privileges, and who really need some place of refuge. This situation is probably a temporary one, but it is a real and terrible one to many priests who really do not know what to do. For this unhappy situation the Cardinal Secretary of State is chiefly responsible. The great mass of men in Italy, France and Spain are anti-clerical, and the tendency among them is to become anti-Catholic and anti-Christian. The Papacy in its present attitude is multiplying these men and intensifying their tendency. If they cannot stand the strain it is better that they find Churches of refuge where they can remain Christian, even if anti-clerical or even anti-Catholic.

Hetch-Hetchy Again

Secretary Ballinger has called upon the municipal authorities of San Francisco to show cause why the Hetch-Hetchy Valley and reservoir site should not be eliminated from the grant obtained by them two years ago. This grant conferred upon San Francisco, conditionally, the right to flood Hetch-Hetchy Valley as a source of water supply and of electric energy for the municipality. It was seen very soon that this use of this wonderful valley would not only destroy its scenic features, but involve the sequestration of the best half of the Yosemite National Park to protect the purity of a water supply which could be obtained from *fourteen other sources.* Now the

director and engineers of the Geological Survey, after careful examination, have reported that the Lake Eleanor project alone is amply sufficient to meet the present and prospective needs of the city, and that, therefore, the permit should be modified as relates to Hetch-Hetchy. Disinterested opponents of the scheme long ago called attention to the fact that the enormously valuable water power rights which the grant included were the real object of the promoters. The city engineer promised the city a relief from taxation amounting to $300,000 annually. What moral right has any community to demand such a benefit from the nation under cover of a spurious necessity and of local quarrel with a water company? It seems preposterous that we should thus lightly endanger the perpetuity of our national parks at a time when at least two European nations commending our wisdom and foresight, are seeking to establish them. It seems incredible that a project so inherently selfish should ever have been urged upon the notice of Congress for ratification. No less than a dozen great civic organizations, and nearly the entire press of the country have registered their emphatic protest against the grant. We commend the action of Secretary Ballinger in reopening the case, and hope it will be settled by placing Hetch-Hetchy finally beyond the reach of local politics.

Disarmament on the Great Lakes

In connection with Mr. Hunt's article on the threatened danger to the Rush-Bagot treaty, published elsewhere in this issue, it is of interest to call attention to three bills that Representative Boutell, of Illinois, has recently introduced into Congress asking the Secretary of the Navy to report why the appropriation for the building of a gunboat on the Great Lakes, authorized eleven years ago, had not been expended, and also what bids have ever been received from ship builders on the Great Lakes for the construction of warships and how these bids compare with bids for the same work from seaboard shipyards. These bills would seem to indicate that the Great Lakes ship concerns are already "putting out feelers" in Washington as Mr. Hunt charges. Happily Secretary Meyer has reported back to the House that the construction of naval vessels on the Great Lakes would constitute a violation of the Rush-Bagot convention of 1817. That seems to settle the matter. Nevertheless we urge, especially in view of the fact that Canada is about to build a navy that "may" help Great Britain in time of war, that Canada and the United States totally disarm on the Great Lakes. This matter was considered by the joint commission in 1900 and altho Great Britain was prepared to accept absolute disarmament the commission adjourned without action in the matter. The whole question should therefore be taken up anew and in the meantime a sharp lookout kept on Representative Boutell and the Great Lakes ship builders.

Governor Hughes and the Supreme Court

It is not strange that President Taft should have turned to Governor Hughes as a suitable man to be placed in the Supreme Court of the United States. He is known as a superior jurist as well as a brave and wise Governor. He is the kind of man whose sane judgment and learning would fit him for either judicial or executive station. It is well known that it was against his will that he consented to be a candidate a second time as Governor. It is understood that his four years as Governor have made a heavy inroad on the fortune of $40,000 which he had acquired, and he feels it necessary to retire to private life in order to make suitable provisions for his family. We doubt if he would accept the position on the Supreme Bench, for the salary there was fixt in earlier days, and is scarce half what is paid to municipal judges in this city. We might say, and we believe, that when the public service needs a man he should be willing to sacrifice both himself and his family, but the public has no right to ask the sacrifice. We think of Governor Hughes as again a possible candidate for the Presidency, but President Taft and Mr. Roosevelt will also be surely in the public mind. We wish Governor Hughes might be willing to accept an appointment to the Supreme Court, particularly as his selection would not be imagined to be an attempt to pack

the court in the interest of corporations; but we would have Congress suitably increase the salaries of its Federal judges.

Special Pension Bills

We have mentioned the fact that this year, as might be expected in the course of nature, the pension appropriations show a considerable reduction. By far the great bulk of these pensions come under a general law. But there are special cases in which there ought to be a pension given, for the support of a soldier or officer, or his widow and young children, which will not come under the general law. They are not numerous; we notice that there are but about twenty-five in the bill now presented to Congress, and they include all ranks from the highest to the lowest in the service. One of them must interest the people at large, that asking a pension for the widow of Gen. O. O. Howard. In this case no one would ask for less than a generous grant, for it is a case that does not come under any ordinary rules. The widow is aged and infirm, left without means of support. Her son, Captain Howard, was killed in the Philippines. General Howard was the last officer of the Civil War to survive that ever commanded an entire army, that of the Cumberland. There were many major-generals during the war, for no higher rank was given even to General Grant or General Sherman until after peace was declared. The major-general in command of an entire army might have three corps under him, and in each corps three divisions, all commanded by officers of the same rank with himself. In no officer did General Grant or General Sherman feel more confidence than in General Howard, who, as the war was ending, commanded a corps in General Sherman's march to the sea. General Howard was before his retirement in command of the entire army, and up to his death gave his free labor not to his personal fortune, for he left none, but to the service of his country so that no other officer was so well known to the people. No one would grudge a worthy pension which would give her the modest comfort to which she has been accustomed during the few remaining years of her life, something worthy of her husband's exceptional services, and not limited by the cost of her constant nurse.

Conversion En Masse

A very interesting and even important question of missionary strategy is briefly discussed by Prof. E. D. Burton, of Chicago University, in the *American Journal of Theology* for April. During his visit to the East, with a view to the study of educational openings in China, he spent some weeks in India, and among other matters in this article he raises the question whether conversions to Christianity of whole villages or communities in the mass should be welcomed. They are, he says, not to be objected to, but even welcomed:

> "The objection that converts are in this case won by non-religious motives, by desire to better themselves socially and educationally and to give their children a better chance in the world, and that by coming whole villages at a time they escape the persecution that falls on the individual convert, is without force. Why should they not wish to better themselves and their children, and why should we wish it to be as hard as possible for them to tage the first step. It does not indeed transform them into cultured Christian gentlemen, but the Christian education that follows it does gradually make them and their children a different sort of people."

It is by this wholesale way, following their rulers, that Europe was Christianized. We presume that it is in good part in this way that it is hoped to add a million adherents this year in Korea to the Christian community. It is a method much to be followed in low-caste or non-caste India, but it requires most careful and persistent subsequent education and religious culture to bring these adherents into fit actual membership.

The English Sparrow

The Government proposes radical measures for the extermination of the English sparrow. If it succeeds it will deserve the thanks of every farmer in the United States, and will get the co-operation of most of them. This sparrow has proved to be an almost unmitigated nuisance. Careful observations carried on for many years by the

Government and by private parties show that it eats caterpillars only when driven to them from the scarcity of other food. Its preference is for our cereals in the field, and they consort by millions in all the grain fields of the West. Charles V. Riley, when entomologist at Washington, announced that, after examining the stomachs of hundreds of these birds, the evidence was wholly against them. The charge that they drive other birds away from our grounds is true; altho it is equally true that some birds, taken singly, can defy them. The trouble is that this sparrow fights in masses, and pounces down by the dozens or hundreds to tear up or destroy. A mean-spirited bird at best, it in no way compares with our native sparrows and thrushes and catbirds from any standpoint of valuation. It is also insufferably dirty. A number of them will stuff a hollow limb with horse manure or any other refuse at hand, till it becomes a menace, not only to the tree but to the neighborhood. All other birds hate them, and will put up a good fight against them with our help, to keep them out of our grounds. If you will fight them continuously and fiercely for several years, they will quit your property, understanding that it is not a safe place. The English Government employs poison to get rid of the multitudes that infest the villages and grain fields of Great Britain. The American people will do well to respond to the Government, very cordially, in its present efforts to greatly reduce, if it cannot exterminate this pest.

A new and highly intellectual diversion has recently sprung up at Cornell University. It consists in smoking a cigar as slowly as may be. One of the Cornell professors succeeded not long since in establishing a world's record of eighty-five minutes in this new field of competition. No sooner had this been done than our American desire to smash records made itself felt and a telegraph operator has now gone the Cornell professor nine and one-half minutes better and has snatched the laurels from Cornell, since he has smoked a mild cigar of standard size for ninety-four minutes and thirty seconds without relighting it. This notable achievement marks an epoch among thinking men, as it requires the exercise of far more than ordinary intellectuality to smoke and yet not to smoke too fast.

Perhaps it will be well to let the controversy now rest as to the new Flood tablet, as enough has been said about it. The last article is a long one in the Philadelphia papers by Dr. Hilprecht, in reply to his critics. It is particularly directed against a communication by his associate, Dr. Clay, who was particularly careful in his remarks at the meeting of the American Oriental Society to avoid anything personally offensive. Yet Dr. Hilprecht now goes beyond bounds of courtesy in charging him with "extraordinary inexcusable ignorance," and accuses him of "either an intentional misrepresentation of facts or a blissful ignorance of the first principles of Assyrian cuneiform writing"! *"Hæc olim oblivisci juvabit."*

We are sorry that Mrs. Harper, in her article this week, speaks of the President as having classed women with Hottentots. This is hardly fair. The reports of his address to the suffragists distinctly say that he definitely declared that the objection to giving the suffrage to ignorant Hottentots could not apply to American women. We further doubt the correctness of Mrs. Harper's statement that the use of the ballot by the Filipino men has been "a travesty on self-government."

Think of the benefits to the country if tuberculosis could be utterly eradicated! In response to a request by their Governors, the pastors of a number of States made a united appeal to the people to join the medical profession in this effort. The Governor of Kansas in his proclamation quoted the best medical authority of the State that thru the influence of the permanent temperance policy and the healthfulness of the climate, consumption could be there checked at once, and eradicated entirely in a few years.

Insurance

Victory for the Union Central Life Insurance Company

In 1908 the Union Central Life Insurance Company, of Cincinnati, Ohio, of which Jesse R. Clark is president, declared a stock dividend of $400,000 out of the profits which the company claimed had been realized from stock or nonparticipating policies. Upon the announcement of this stock dividend a suit was instituted against the company by the State of Ohio thru Wade H. Ellis, then Attorney-General, the charge being that the company had misused the franchise privilege and right conferred upon it by its incorporation and that it had attempted to exercise a franchise privilege and right in contravention of law in claiming to be a joint stock life insurance company, with a fully paid-up capital stock of $500,000, and because of this the relator prayed that the defendant might be ousted from the claim of franchise right and privilege above complained of, and for all other and proper relief. It was also charged in the Attorney-General's action that the profits represented by the stock dividend had not been realized, and the claim was set up that the company should be estopped from declaring such a stock dividend, on the ground that the surplus belonged to the policyholders. The correctness of the computations made by the company which formed the basis of the stock dividend were fiercely challenged and a special investigation of the company's computation was made by a special investigation undertaken by Consulting Actuary S. H. Wolfe, on behalf of several insurance departments. Mr. Wolfe's investigations, covering a few years only, cast some doubt upon the accuracy of the assumptions made by the actuary of the Union Central in his computations. The company's actuary acknowledged his computations to be approximate. The fight regarding the stock dividend has been long and bitter, but a decision has now been reached in the company's favor by the Circuit Court of Hamilton County, Ohio, and the case dismissed. The decision sets forth that the defendant company was not a mutual company. It has a surplus of $2,400,000. This undoubtedly belonged to the company. The company is made up of the stockholders. Not a penny of the surplus belongs to the policyholders. This surplus was not there for the benefit of the policyholders. It was not so intended and could not be so understood. There was no law that compelled the company to create the surplus. The State, not the policyholders, objected. The surplus could never be returned to the policyholders who created it, for most of the contracts under which the surplus came into being, have been terminated. No rights of the public have been invaded, therefore the relief asked for must be denied and the petition dismissed. When the directors declared the stock dividend it took nothing away from the company and added nothing to what it already had. If it had any effect at all, it was to increase the stability of the company and add to the security of the policyholders. Looking at it in any light, if we are correct in our conclusion that the evidence shows that there is at the present time $1,000,000 in the surplus, placed there from the nonparticipating business, the excess over the $400,000 represented by the stock dividend would pay the dividends for twenty years to come, and there could be no possible injury to the public.

President Clark, of the Union Central, and his associates are receiving the congratulations of underwriters upon the favorable outcome of the harassing litigation which resulted from the action of the board of directors in declaring the stock dividend. It has been a matter of much surprise among insurance men that any such issue as the one now decided by the Circuit Court should ever have been raised. It does not appear that any appeal has been made from the decision and it is to be hoped that the entire dispute is now at an end.

Financial

A Cotton Pool Inquiry

LAST year's cotton crop was about 10,350,000 bales. There were 13,850,000 in the crop that immediately preceded it. This decrease of 25 per cent. caused an advance in prices. The market favored those who bought for a rise. Shorts, or those who sell for future delivery at a decline, have been at a disadvantage. Many sold for delivery in May. Their reckoning day is near at hand. They find it difficult to obtain the cotton which they need (and which they never possessed), and they have already brought back from Liverpool 40,000 bales, at considerable expense. Naturally, they regard with much interest the inquiry begun last week in this city, before a Federal grand jury, by order of Attorney General Wickersham, to ascertain whether the anti-Trust law has been violated by certain cotton brokers or speculators, who, it is alleged, agreed in February to obtain control of the visible supply (2,500,000 bales) by purchasing and holding 150,000 bales. It is denied by the accused brokers that any such agreement was made. They assert that they have been buying cotton contracts legitimately, that they want the cotton delivered by the shorts and others who agreed to deliver it, that they have been selling the cotton to manufacturers, and that it is their purpose thus to sell it as fast as it comes into their possession.

On the other hand, the Department of Justice says it has information indicating that these brokers combined "to buy up all the remaining unused raw cotton" in the country; and that the prevailing high price, "largely in excess of the normal," is due to their operations, which have caused a reduction of manufactured output, thrown many employees out of work and resulted in "the monopolization of the entire visible supply of raw cotton."

If it can be proved that the accused brokers combined thus to monopolize the supply, have monopolized it, and have caused the high prices, together with the curtailment of factory output, the people will gladly see the Sherman act enforced against them. In view of the many published statements and explanations of interested persons, however, the success of the Government in this undertaking cannot now be predicted with confidence. The assumptions and assertions in the Department's preliminary statement are not wholly warranted by the known facts. Again, what is the "normal price" and how is it determined? Does not the serious deficiency in the crop account for substantially all of the advance? If the proceedings, which are related, of course, to indictments and criminal prosecutions, fail because the allegations in the Department's statement cannot be sustained, the charge, already made, will be repeated, that the Government was in some way led to act, unintentionally, in the interest of bears or shorts who were in danger. But if it can be shown that the accused persons did conspire to monopolize and to hold the visible supply, and that the condition of the cotton mills and cotton goods trade is due to them, we shall be glad to see them prosecuted to conviction.

....Bids for $5,000,000 of 4 per cent. fifty year Highway Improvement bonds offered last week by the State of New York amounted to five times that sum. They ranged from par to 109.15, and the average of those which were successful was 105.376.

....The Central Trust Company, of which J. N. Wallace is president, has declared an extra dividend of 9 per cent., which makes the entire dividend for the year 45 per cent., on a capital of $3,000,000. Prior to the increase of capital stock, last year, from $1,000,000 to $3,000,000 (the added amount having been taken from earned surplus), the dividends for several years were 15 per cent. quarterly, with an extra dividend of 20 per cent., or 80 per cent. annually. This year's dividend is equivalent to 135 per cent. upon the old capital. Altho the dividends have been so large, the company's surplus and undivided profits amount to $16,166,229.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, MAY 5, 1910 No. 3205

Survey of the World

Governor Hughes Goes to the Supreme Court

President Taft sent to the Senate, last week, the nomination of Governor Charles E. Hughes, of New York, to be an Associate Justice of the Supreme Court in the place left vacant by the death of Justice Brewer. This nomination was formally offered to the Governor on the 22d ult. and accepted on the 24th, the understanding being that he should not qualify and assume the duties of his new office until the beginning of the next term of the court, on October 10. Until that date he will be Governor, and his successor during the remainder of the term, nearly three months, will be Lieutenant-Governor Horace White, of Syracuse. It was already known that the Governor would not consider a nomination for a third term. He is not a rich man. His expenses in office have largely exceeded his salary of $10,000, and he felt that he ought to resume the practice of law. The salary of an Associate Justice is $12,500, a bill to increase it to $17,500 is pending in Congress, and the necessary expenses of the office are less than those of the Governor of a great State. The President was greatly pleased when he learned that the Governor had accepted the offered nomination. His choice of the Governor, and the Governor himself, were commended thruout the country. In Congress there was praise from Republican regulars, insurgents and many Democrats. "I am delighted," said Chief Justice Fuller, and the Associate Justices exprest great satisfaction. The only discordant notes heard by the general public were the opinions of William Barnes, Jr. (a Republican opponent of Governor Hughes at Albany), Mr. Hearst's papers and Mr. Bryan. Mr. Barnes said the Governor was a party wrecker and a deserter and was not judicially minded. Mr. Hearst's papers found in his record proof of much leaning toward corporations. Mr. Bryan gave to the press the following comment:

"The appointment of Governor Hughes to the Supreme bench will be regarded by many as a popular appointment. He has been put forward as a reformer, and seems to be considered one by a great many good people, but his reputation as a reformer rests upon a few official acts which show him opposed to grafting and to the individual vices. But no one who will examine his record can doubt that he is in close sympathy with the exploiting corporations.

"It will be remembered that he vetoed the bill for the reduction of railroad rates after a New York Legislature, and a Republican Legislature at that, had passed the reduction bill. This measure gave the congested population of New York the two-cent rate now enjoyed by the more scattered populations of the Western States, and his veto of it is conclusive proof that he obeys the dictates of the railway managers instead of listening to the voice of the public.

"He is understood to be a close personal friend of Rockefeller, and the published reports show that the Trust magnates have contributed liberally to his campaign funds. He has not hesitated to show that he acknowledges his indebtedness. In 1908 he was the chief defender of the inaction of the Republican party on the Trust question.

"It will be remembered also that he was the first prominent man to oppose the income tax, and his opposition came after Mr. Rockefeller had announced hostility to the income tax amendment. The corporation attorneys who filed an argument against the income tax with the Albany Legislature presented the same argument that Governor Hughes did and these corporation attorneys with Governor Hughes's powerful aid barely succeeded in preventing the ratification of the amendment by the State of New York. What would he do on the Supreme bench if any question arose affecting the income tax? His speeches show that he feels no hostility tow-

ard private monopolies, and there is no reason to doubt that his decisions would be in line with his speeches.

"Governor Hughes exemplifies the individual virtues and naturally demands honesty in the public service, but he is a shining illustration of that peculiar type of citizen developed in this country during the present generation—the citizen who personally opposes vice and is a punisher of small crimes, but shows no indignation at the larger forms of legalized robbery."

Certain newspapers printed an extract from one of the Governor's speeches, in which he said:

"I am for the Anti-Trust act. I am against the unfair combinations by which people are deprived of their chance to get to markets and by which independents have a hard time getting along. I believe in the policy of making it impossible for secret agreements to put down the independent competitor."

President Taft said, in a speech at Buffalo, on the 30th ult., that he would be entirely willing to submit to the Governor, on the bench, the constitutionality of an income tax, being confident that he would consider the question judicially, without regard to previously exprest opinion. It is thought that his retirement from political life will be a considerable loss to the Republican party in New York. Lieutenant-Governor White has generally been with those in opposition to the Governor's reform legislative program. Among those mentioned as possible candidates for Governor is President Schurman, of Cornell University. It is understood that Mr. Roosevelt would not accept a nomination, altho some think he would consent to be made Senator.

The Pittsburg Graft Cases

At the trial, in Pittsburg, of ex-Councilman Maurice S. Coffey, for accepting bribes, the jury disagreed (standing 7 to 5 for conviction) and was discharged. Judge Fraser dismissed the entire panel of sixty jurors drawn for the graft cases. This indicated, it is thought, that his opinion as to the quality of those on the jury lists agreed with District-Attorney Blakely's, which was quite unfavorable. At Coffey's trial, the leading witness, ex-Councilman Klein, said the bribe money paid by the German National Bank was received by one Bolger from President Ramsey, who had procured it from Cashier Vilsack. Bolger gave it to Klein, who paid Coffey $150. Ramsey is in prison. Vilsack and Bolger are awaiting sentence.——There was an election in seven wards of Pittsburg last week, to fill Council vacancies. The voters rejected George H. Riley, a member in 1908 and one of the few (according to Klein's confession) who could not be bribed.——Joseph M. Huston, of Philadelphia, architect of the new capitol at Harrisburg, was found guilty last week of conspiracy to defraud the State. Four men indicted with him were convicted some time ago. Two of these, Treasurer Mathues and Contractor Sanderson, are dead. The other two, Auditor General Snyder and Superintendent Shumaker, are in the penitentiary. The jury at first insisted upon a verdict that Huston was guilty of fraud, saying there had been no conspiracy, but finally a verdict in conformity with the indictment was rendered. This may give Huston a new trial. But he is accused in thirty-four more indictments and is a defendant in the civil suit of the State for the recovery of $5,000,000.

Higher Wages

There was additional evidence last week of the upward movement in wages on the railroads, and also of a coming increase of freight rates, to be made on account of the higher pay. Tariffs filed with the Interstate Commerce Commission by Western trunk lines showed an average increase of about 18 per cent. in commodity freight rates. The arbitration proceedings in the case of the New York Central (the result of which will determine the wage increases on several other Eastern roads) were not finished. The Seaboard Air Line and Southern Pacific asked for mediation under the Erdman act. The following increases were announced:

Erie Railroad, firemen, 8 per cent.; Gulf, Colorado & Santa Fé, 6 per cent. for 10,000 men; Baltimore & Ohio, 6 per cent. for 60,000 not included in the recent agreement; Atlantic Coast Line, 6 per cent.; Missouri, Kansas & Texas, 3 cents an hour for machinists, or about 8 per cent.; Kansas City Southern and Texas & Pacific, the same for machinists.

Jones & Laughlin, one of the largest of the independent steel companies, and the

Republic Iron and Steel Company have followed the Steel Corporation in granting an increase of 6 per cent. Trolley companies in Lehigh, Wilkesbarre and Hazleton, Pa., have given an unsolicited addition of 10 per cent. Trolley men in Springfield and Worcester, Mass., are preparing to strike for higher pay. The Postal Telegraph and Cable Company gives notice of an approaching increase ranging from 5 to 25 per cent., to be measured according to merit, ability and length of service. It is still expected that all the bituminous miners will gain higher wages. Those in Central Pennsylvania, and 40,000 in the Pittsburg district, have already obtained an addition of 5½ per cent. and have resumed work. The strike at the works of the Pressed Steel Car Company ended on the 26th ult. Nothing was gained by the strikers. The cost of the street railway strike in Philadelphia was nearly $8,000,000 in wages, cost of additional police, and loss of the car company's receipts. This total does not include the losses in retail trade.

Mayor Gaynor and Mr. Hearst

A bitter controversy between the Mayor of New York and William R. Hearst excites interest in political circles, owing to the prominence of Mayor Gaynor as a possible candidate for high office and the relation of Mr. Hearst to the Democratic party. Judge Gaynor was the guest of honor and the first speaker at the annual dinner, in New York, on the 28th ult., of the Associated Press and the American Newspaper Publishers' Association. In his address on "The Press in Its Relation to Public Officials," he denounced Mr. Hearst's morning newspaper in New York for its course with respect to the payment by the city of a bill for $48,000, presented by Daniel F. Cohalan (the legal adviser of Charles F. Murphy, head of Tammany), who had been employed as counsel in franchise tax cases. The paper had published a fac-simile of the check or warrant, but without a date, altho the date (December 31, 1909) was mentioned in the accompanying text. This date was that of the last day of the administration of Mayor Gaynor's predecessor, Mayor McClellan. The Mayor said he had been assured that the date had been cut out of the plate before the printing. He asserted that the publisher and editor was guilty of a criminal offense. One of Mr. Hearst's associates attempted to answer the Mayor, and there was some disturbance. Mr. Hearst's paper, holding that the bill was excessive, had contended that Mayor Gaynor should and could have prevented payment. The Mayor asserts that the claim had been audited and the warrant signed and completed before he took up the duties of his office. As to this matter, much testimony has been published, and there are conflicting statements. Mr. Hearst has begun libel suits against the New York *Times* for $100,000, the Brooklyn *Eagle* for $100,000, and the Associated Press for $500,000.

Testimony of Secretary Ballinger

Secretary Ballinger began last week to testify in the Ballinger-Pinchot investigation. He frequently denounced Glavis as a liar. The dismissed agent's assertion that he had asked for a postponement of action with respect to the Cunningham coal claims until after election, in order that campaign contributions might be obtained from claimants, he said, was false. Glavis's reports of the conversations with him, he added, were deliberate lies. Ex-Secretary Garfield's assertion that he had not authorized him to appear before a Congressional committee was not true. He would now clear-list the Cunningham claims again on the same record that was laid before him when his favorable action was taken. Much of the Secretary's testimony related to the reclamation service, and was not connected directly with the charges under consideration. His counsel, Mr. Vertrees, asserted that the movement against him was a conspiracy against the Taft Administration, inspired by the resentment of ex-Secretary Garfield because he was not retained in the Cabinet, and by Forester Pinchot's anger on account of his dismissal. The Secretary will continue his testimony this week.

Cuba and Other Islands

Eighty of the negroes recently arrested in Cuba have been indicted for inciting rebellion. Among those arrested last week were several members of the Rural Guard. The Government asserts that it has evidence proving that Estenoz and his followers had planned an armed uprising against the whites, which was to take place on the 24th inst. On the other hand, General Freyre Andrade, who is counsel for the indicted men, says that the affair is merely "a trick of the Government," designed to prevent the organization of an independent political party by the negroes. Andrade was President Palma's secretary and afterward was Speaker of the House. Following his advice, the indicted men have refused to give bail.——Morua Delgado, the foremost negro politician of Cuba, and a member of the Cabinet, died on the 29th ult. He had been in poor health for several months.——The Cuban Government has accepted the offer of our Government to supply rifles of the latest model for the Cuban army at the cost of manufacture.——Governor Colton, of Porto Rico, says the island's crops have been abundant and that the progress of education among the masses is shown by the new schools springing up in many places. Henry M. Hoyt, recently Attorney-General, denies that his resignation was due to his testimony in support of Glavis in the Ballinger investigation. He desired, he says, to resume the practice of law.——Several hundred Russians, recently brought to Hawaii by the immigration authorities, have refused to work for the wages offered. They attempted, last week, to rescue four of their number who had been arrested, and were with difficulty subdued by the police and firemen of Honolulu.——The House, at Washington, has adopted, by unanimous vote, a resolution calling upon the War Department for complete information concerning the recent sale of Friar lands in the Philippines to persons representing Sugar Trust interests, and any negotiations relating to additional sales. President Taft has asked the appropriate committee to report an amendment to the Philippine laws which will subject the Friar lands to the limitations which prevent the sale of more than 2,500 acres of other lands in the islands to one corporation. Representative Martin, of Colorado, has published a statement criticising the Government for negotiating for the sale of 55,000 acres to representatives of Sugar Trust interests while it was prosecuting the same Trust for customs frauds. The negotiations were begun by the law firm of which the Attorney-General was formerly a member, and in which the President's brother is a partner; and the sale was permitted by an opinion which the Attorney-General prepared. Mr. Martin holds that this explains the failure to indict high officers of the Trust, and also the Government's opposition to an investigation of the Trust's frauds by Congress.

Countries South of Us

In Nicaragua, the Government's army has begun an attack upon the revolutionists near Bluefields. The Government has 2,000 men, and it is said Estrada has 2,500. The Nicaraguan consul at New York says that a party of prominent Nicaraguans will soon go to Washington and ask our Government to intervene by sending a commission, appointing a Governor (as in the case of Cuba) or establishing a permanent protectorate. He asserts that the country is in a deplorable condition, owing to the war. The crops have been destroyed and the cattle are gone. Altho he does not represent the revolutionists, he severely criticises President Madriz, saying that the latter has caused many residents to be tortured for the purpose of extorting money from them. This consul was appointed by Zelaya several years ago.——Juan Vicente Gomez (who succeeded Castro) was elected President of Venezuela for four years by Congress, last week, without any opposition. All political prisoners were released.——Altho the President of Ecuador issued a warlike proclamation on the 27th ult., dispatches from Lima, two days later, said there was good reason to expect that a settlement of the controversy between Ecuador and Peru would soon be reached.——The last of Brazil's boundary disputes have been settled by

treaties which were ratified last week. Brazil concedes territory to Uruguay, without pressure or demand. As a result of the negotiations with Peru, Brazil obtains title to 200,000 kilometers of the richest rubber territory on the continent.——There is trouble in Hayti, owing to a concession, granted by President Simon to James McDonald, of New York, which involves a monopoly of the exportation of bananas and permits the construction of 300 miles of railroad. The ratification of this concession by Congress is opposed by a minority, aided by the German element. General Frederique, leader of the Firminist party and proprietor of a newspaper, has been arrested (with others) for threatening rebellion if Congress ratifies the President's grant.

Roosevelt's Triumphant Tour

Following his lecture in Paris Mr. Roosevelt, on Monday, the 25th, was received by the Municipality of Paris with great honor, and replied in French to the welcome given him. Here he inscribed his name in the "Book of Gold," reserved for the signatures of kings and the most distinguished guests. He had previously visited the National Library, where he was shown the earliest books printed in France and Cabot's map of Manhattan. The afternoon was given to visits and dinner, and in the evening he received an ovation at the Opera and heard "Samson and Delilah," which at his request had been substituted for "Salome." On Tuesday he took luncheon with Premier Briand, after which a delegation of the Interparliamentary Union called on him, led by M. Bourgeois. When M. Bourgeois in his speech reminded the former President of the part he had taken in securing the second Hague Peace Conference, and added, "Now we want some one to move for a third conference," the Colonel interrupted and said: "Remember, I am only a private citizen." "So am I," replied M. Bourgeois, "but every one must do his best." The next delegation was headed by M. Hanotaux, the former Minister of Foreign Affairs. The subject discussed was the friendship between France and America. In the evening Ambassador Bacon gave him a large reception, at which all the Ambassadors in Paris were present. In the afternoon, at an odd hour, Mr. Roosevelt had visited the aviation grounds at Issy, five miles from Paris, and saw a short flight, as the high wind made a serious flight impossible. Wednesday was again crowded with sightseeing, of which the chief was a military review of 5,000 picked soldiers, which he greatly enjoyed and praised, declaring it the finest thing he had seen in Paris. He also visited the Salon and saw particularly J. P. Laurens's painting of the "Surrender of Yorktown," intended for the Baltimore Court House, and G. G. Barnard's marble groups for the Capitol at Harrisburg, entitled "The Life of Humanity." On Thursday noon he reached Brussels. He was met by the King's automobile, took luncheon at our legation, then visited the Exposition and made an address of forty minutes. Then the King took him to the Palace, where he had dinner, and afterward to a reception by the Burgomaster. Mr. and Mrs. Roosevelt wore black, as all were in mourning for King Leopold. Friday morning was given to Holland. First they reached Amsterdam, where they were met by the Burgomaster. A public meeting had been arranged for him at a church, where he spoke to the audience. He started off by saying he was proud of his Dutch ancestry, which he traced back for three centuries, when the names of Rembrandt and Admiral De Ruyter were unknown. He was proud of the good Dutch blood running in his veins and hoped it would run strong in the veins of his children and their children, and help to make them such people as those of Holland. He added: "I am sorry I cannot speak Dutch, but to show that I am not altogether bad I will say some words in Dutch I have never forgotten. It is a little rhyme my grandparents taught me." He then recited a nursery jingle, a translation of which is: "Little pigs stand to their throats in the beans, horses are in the oat field, cows are in the clover, ducks are in the water. Splash! So great is my little Hanschen." The audience lis-

tened with evident delight as Colonel Roosevelt recited the words to a movement of his arms as tho he was tossing a baby. Then he broke away into a characteristic discourse. The party then took the train for The Hague, where they received every courtesy from Queen Wilhelmina and the Prince Consort, and the Queen regretted that she could not show them the royal baby, which had been vaccinated. Saturday was a holiday in honor of Baby Juliana's first birthday. Mr. Roosevelt was wildly greeted everywhere. He first visited the House in the Woods, which was the scene of the first peace conference, made a formal call on the Foreign Minister, visited the picture gallery to see the famous works by Rembrandt and Rubens, then was presented to the Queen Dowager, and spent the rest of the day in visits and a grand reception in the evening. On May 1 he visited the great tulip gardens in Haarlem, where the president of the Tulip Show told him that 200,000 pounds of bulbs are shipped to America yearly, and ventured to suggest that America would be more beautiful if they were imported free. It is announced that on his visit to Copenhagen, the grandchildren of the late M. de Scholten, sometime Governor of the Danish West Indies, will present to him a rare and interesting gift consisting of a collection of Washington relics, including an eyeglass, stick and snuffbox, which M. de Scholten bought at an auction at St. Croix some hundred years ago.

A Victory for Mr. Asquith

The Budget, after a year's delay, owing to the refusal of the House of Lords to accept it, has at last become a law and received the King's signature, altho it has cost a new election and not less than $6,500,000 to the treasury. It passed the Commons by a vote of 324 to 231, a majority of 93, a few less than in previous important votes. It was then sent to the House of Lords and was passed very quietly, and without a division, it being understood that the Lords were pledged to accept it if the appeal to the country gave it a majority. It immediately received the King's assent, and on Thursday night Parliament adjourned until May 26. Then will come up a bill announced to deny the right of the Lords to veto the Commons on any financial bill, and to limit the control of the Lords on any other bill, which shall become a law after it has, within two years, passed the Commons. The bill will also limit the length of any Parliament to five years. A bill will also be presented to reform the second house on a basis which will eliminate the hereditary principle. It is not expected that the Lords will accept such a bill, which will compel a second appeal to the people. There is general desire that the new election shall not take place in the summer, but it seems to be the general expectation that it will not be delayed. As much has been said about the likelihood of the King's making a wholesale appointment of lords to coerce the present majority, the King has published a request that his name be not introduced into political discussions. The Unionists are very bitter over conditions, and Lord Lansdowne denounced the Government's asserted capitulation to the Irish members as worthy of Morocco or Somaliland. Mr. Balfour, leader of the Opposition, in an address, talked of revolution as the purpose and effect of the new legislation. He argued that the United States and France, both republics, allowed a strong second chamber, which safeguarded their constitutions. The Government holds that it does not object to such a second chamber, based on the popular choice, as is possessed by the two republics, but that a hereditary second chamber is a lingering relic of the Dark Ages, such as no other country in the world has. There is the usual Irish quarrel, in which Mr. O'Brien and Mr. Healy have taken every opportunity to revile the majority of the Irish members, led by Mr. Redmond; and they declare that the Budget has already done great injury to Ireland, particularly, as we understand it, in its heavy taxation on alcoholic liquors. King Edward and Queen Alexandra had both paid their income tax of 14 pence on the pound before he signed the Budget bill. The law does not require this of the Sovereign, but Queen Victoria set the example, so as to share the burdens with the people.

The Albanian Revolt A very serious rebellion against the Turkish Government has broken out in Northern Albania. Albania is a general term for all the western district of European Turkey bordering on the Adriatic and extending from Montenegro to Greece. The fighting seems to be mainly in the villayet of Kossovo and in the region of the two larger towns, Prisrend and Prishtina. It is mainly about the mountain passes. It is asserted that the Christians, both Greeks and Roman Catholics, have joined the Mohammedans. The Albanians were warm supporters of the Young Turkey movement, but have for some reason not yet very clear become dissatisfied and even bitter. The whole of northern Albania is in arms, the insurgents being said to number 30,000, but probably not as well armed or disciplined as the Turkish army sent against them. The Turkish army of forty battalions is led by General Shevket, Minister of War, and Turgud Pasha. There has been severe fighting with heavy losses on both sides, and in the bombardment of one town 500 men, women and children were killed. The railroad and telegraph north of Uskub have been cut, so that news from Prisrend and Prishtina is held up. According to such news as is sent the Turkish troops would appear to be generally gaining, but they are in the midst of a hostile community, in a very difficult mountainous country, and the result is very doubtful. It will try the strength of the new Government. Some of the Albanian leaders were in the deposed Sultan Abdul Hamid's bodyguard. He is in confinement at a villa in Salonika, and some think he has a hand in this new rebellion.

German Affairs The troubles in the building trades which led to the lockout of many thousands of men have been settled for three years. The unions have accepted the Berlin industrial court's arbitral award. The agreement gives a small increase in wages August 13 and a further increase October 1.——Much talk has been made by the operations of the so called "Princes' Trust" controlled by Prince Egon von Fürstenberg and Prince Hohenlohe-Oehringen. At the election of stockholders they surprised financial circles by taking control of the Berlin Omnibus Company, in which they had quietly bought up a major interest, against the former control by the S. Bleichröder banking house. Since they began operations two years ago they have invested about $50,000,000 in city property and transportation companies. Prince von Fürstenberg is the richest man in the two empires of Austria and Germany, and has immense properties in both countries. He is said to be the most intimate friend of Emperor William. ——The restrictions in regard to the admission of American pork products into German markets have been abolished. For the past few years they have been subjected to a costly and troublesome inspection despite the fact that they bore American certificates of health. Hereafter these certificates will be regarded as adequate. But the prices in this country will not at present render exportation profitable. ——The German Socialist executive committee decided to have no outdoor demonstrations by the party on May Day, but meetings were held in the largest halls on behalf of universal suffrage. "Prussian reaction," said the *Vorwärts* in announcing the program, "continues to weigh like an incubus on the whole of Germany. The voice of the people is ignored by the throne and altar, while the parliamentary bloc of junkers and priests treats the outlawed citizen with contumely." May Day passed quietly in all the European capitals.——The great airship Zeppelin II was wrecked by a high wind, altho it was thought to be safely anchored, besides being held by 300 soldiers. But the ropes snapped and it was forced from the hands of the soldiers. It flew off 13 miles and fell on a house and a tree. This probably seals the fate of this type, at least, of an airship. At the same time the latest British military airship was taken out for a trial in a gale, when it turned turtle and was wrecked.——We have not heard much lately of *lèse majesté* in Germany, but there may be occasion for a trial on account of a book by Herr Ilgenstein,

"A Mirror of Prussia," which censures and ridicules the Kaiser's speeches and deeds. He says the Kaiser is praised only by sycophants as a statesman, that he has failed in everything he has undertaken, that his religious intolerance is such that he would have created a civil war if he had lived in earlier times; that he does not know the German leaders of thought or wish to know them, but only those who slavishly serve him and worship his particular gods; and that he reads only the productions of rhyming decoration hunters and crawling Byzantines.

Italy

The visit of the Prince of Monaco to Rome gave a great deal of talk and unfounded rumors were given out, this being the first time that a Catholic ruler has visited Rome since the Pope became a "prisoner." It was believed that the Pope would make a protest against the visit of the Prince to Victor Emmanuel. But nothing of the sort has taken place, as it is made clear that the Prince of Monaco visited Rome not as a ruler but as a private scientist to lecture on oceanography.——The program presented by Prime Minister Luzzatti was favorably received by the Chamber of Deputies, and the new Cabinet has the support of the popular ex-Premier Giolotti. A notable incident of the session was the speech by Signor Murri, the ex-priest, in priestly garments, urging a cleaner anti-clerical policy, while supporting the Cabinet.——The budget appears to be based on that of Lloyd-George, the British Chancellor of the Exchequer. The Ministry promises to lighten the burden of taxation borne by the poor by transferring a substantial portion to the wealthier classes. The taxation of food and other necessaries of life is to be substantially reduced. An attempt will be made to reform the upper house of the Parliament. The King has already consented to relinquish his sovereign right of nominating the president and the chief officials. Premier Luzzatti has also promised electoral reforms with a view to prohibiting intimidation and bribery at the polls besides the extension of the franchise to all male citizens over twenty years of age who can read and write.——The Italian Government is about to sign contracts for building three Dreadnaughts.

Minor Items

The new Chinese Governor sent from Peking has restored order at Chang-sha. The missionaries and foreigners are returning. The cause of the riot was not the growth of an anti-foreign feeling, but anger at the Governor, who had twice deferred the distribution of rice for the poor, on the persuasion of the merchants who manipulated the markets. Some of the native agitators attacked the government on the matter of the railroad loan, but this was a comparatively unimportant influence, altho the outbreak once started fell on the foreign residents. French, German and British gunboats are in the river and command the situation. There are, however, reports of other riots on account of the scarcity of food in several cities.——There was an attempt made to assassinate the Prince Regent of China. A bomb was exploded, killing two attendants walking in advance.——The great aviation race from London to Manchester, with a distance of 186 miles and a prize of $50,000, was won by the French aviator, Louis Paulhan.——Count Albert Apponyi, ex-Hungarian Minister of Education, whose guest Mr. Roosevelt was on his trip to Budapest, was attacked at a political meeting at Temesvar on Sunday night by a crowd of Socialists. They bombarded his carriage with stones and eggs, and cudgeled the Count severely. After desperate efforts, the coachman forced the horses thru the mob, and the Count took refuge in the Bishop's palace. He was followed by the rioters, who broke practically every window in the palace. The Count's face was badly injured, and he has been obliged to keep to his room since the attack. He is one of the leaders of the Opposition party.——Alfred Deakin, the Prime Minister of Australia, has resigned. In the general elections about a week ago there was a great labor upheaval and the Deakin Government was defeated. Mr. Deakin himself had a narrow escape from defeat at the hands of a Laborite. The Deakin Government was a Free Trade, Protectionist and Anti-Socialist coalition which overthrew the Labor Ministry about a year ago.

To One Expected from Rome

BY ALFRED AUSTIN

Poet-Laureate of England.

Come back, now the swallow
  Announces the spring,
And from hazel and sallow
  The storm-thrushes fling
Over garden and cover
  Their amorous notes,
And the rough-nesting plover
  Sweeps, circles and floats;
All the choristers vernal
  Hail the sun-shining air,
And to the Eternal
  Chant hymnals of prayer!

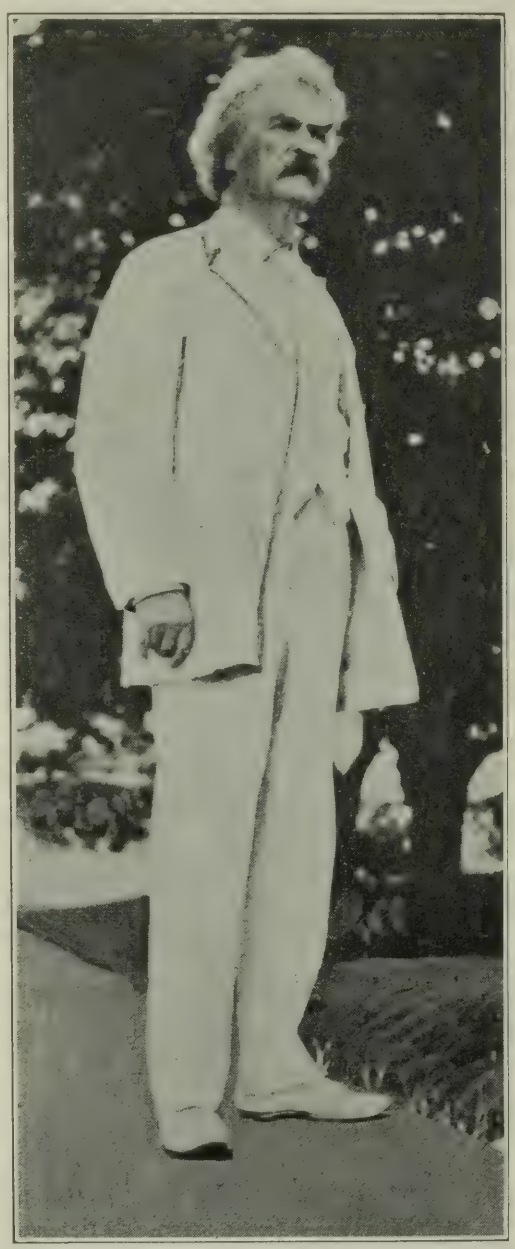
To the domed Empyrean
  The laverocks soar,
And victorious pæan
  Winged woodlanders pour
To the green-golden glory
  Of daffodilled March,
And branching oaks hoary
  Seem young as the larch.
Hope no more is tortured
  By lingering gloom,
And in border and orchard
  The cherry-boughs bloom.

In Egeria's Fountain
  Dip curved palm or shell
Ere to Tusculan mountain
  You gaze your farewell,
To keep your heart yearning
  In fair Western home,
To be some day returning
  To seven-hilled Rome,
Where altar and column
  Lie prone from their seat,
And memories solemn
  Encompass one's feet.

For my heart has ne'er wavered
  While you were afar,
Tho no nightingale quavered
  To moonlight or star.
But now sounds the bleating
  Of lambs in the garth,
I long for our meeting
  At portal and hearth,
To see you beholding
  The love-smile that charms,
And I feel the folding
  Of life in your arms.

Ashford, Kent, England.

Some Notes on Mark Twain



With Some Unpublished Letters

BY WILLIAM LYON PHELPS, Ph.D.

LAMPSON PROFESSOR OF ENGLISH LITERATURE AT YALE UNIVERSITY.

I.

ONE does not naturally associate the names of Sir Thomas Browne (1605-1682) and Mark Twain, and yet there is a curious parallel between a section of the "Religio Medici" (1642) and "Some Rambling Notes of an Idle Excursion,"* by the American humorist. The latter sketch gives an amusing dialog between a profane old sea captain, Hurricane Jones, and a well-known New England clergyman, who figures in the story as "Peters." The captain did not know that Peters was a minister, so he undertook to explain the Bible miracles to his passenger, and "wove a glittering streak of profanity thru his garrulous fabric that was refreshing to a spirit weary of the dull neutralities of undecorated speech." In particular the captain gave a delightful exegesis of the discomfiture of the prophets of Baal by Elijah, which, it is rather surprising, has thus far escaped the notice of the higher critics. The fact that the captain called Elijah "Isaac" is merely an unimportant detail, and does not in any way vitiate the value of his interesting commentary.

MARK TWAIN.
From a photograph taken at Redding a year ago.

"Well, the prophets of Baal prayed along the best they knew how all the afternoon, and never raised a spark. At last, about sundown, they were all tuckered out, and they owned up and quit.

"What does Isaac do, now? He steps up and says to some friends of his, there, 'Pour four barrels of water on the altar!' Everybody was astonished, for the other side had prayed at it dry, you know, and got whitewashed. They poured it on. Says he, 'Heave on four more barrels.' Then he says, 'Heave on four more.' Twelve barrels, you see, altogether. The water ran all over the altar, and all down the sides, and filled up a trench around it that would hold a couple of hogsheads,—measures,' it says; I reckon it means about a hogshead. Some of the people were going to put on their things and go, for they allowed he was crazy. They didn't know Isaac. Isaac knelt down and began to pray; he strung along, and strung along, about the heathen in distant lands, and about the sister churches, and about the State and the country at large, and about those that's in authority in the Government, and all the usual program, you know, till everybody had got tired and gone to thinking about something else, and then all of a sudden, when nobody was

*Published in "Tom Sawyer Abroad," etc.

noticing, he outs with a match and rakes it on the under side of his leg, and pff! up the whole thing blazes like a house afire! Twelve barrels of *water? Petroleum,* sir. PETROLEUM! That's what it was!"

"Petroleum, captain?"

"Yes, sir; the country was full of it. Isaac knew all about that. You read the Bible. Don't you worry about the tough places. They ain't tough when you come to think them out and throw light on them. There ain't a thing in the Bible but what is true; all you want is to go prayerfully to work and sipher out how't was done."

Now in the nineteenth section of Browne's "Religio Medici," the author is talking gravely of his religious doubts and thinks that they are whispered in the ears of believers by no less a personage than the devil.

"For our endeavours are not only to combat with doubts, but always to dispute with the Devil: the villany of that Spirit takes a hint of Infidelity from our Studies, and by demonstrating a naturality in one way, makes us mistrust a miracle in another. Thus having perused the *Archidoxes,* and read the secret Sympathies of things, he would disswade my belief from the miracle of the Brazen Serpent, make me conceit that Image worked by Sympathy, and was but an *Ægyptian* trick to cure their Diseases without a miracle. Again, having seen some experiments of *Bitumen,* and having read far more of *Naptha,* he whispered to my curiosity the fire of the Altar might be natural; and bid me mistrust a miracle in *Elias,* when he entrenched the Altar round with Water; for that inflamable substance yields not easily unto Water, but flames in the Arms of its Antagonist."

Some ten years ago I observed this rather interesting parallel, and finally I wrote to Mark Twain on the subject. I immediately received this characteristic reply:

NEW YORK, April 24, 1901.

I was not aware that old Sir Thomas had anticipated that story, and I am much obliged to you for furnishing me the paragraph. It is curious that the same idea should have entered two heads so unlike as the head of that wise old philosopher and that of Captain Ned Wakeman, a splendidly uncultured old sailor, but in his own opinion a thinker by divine right. He was an old friend of mine of many years' standing; I made two or three voyages with him, and found him a darling in many ways. The petroleum story was not told to me; he told it to Joe Twichell, who ran across him by accident on a sea voyage where I think the two were the only passengers. A delicious pair, and admirably mated, they took to each other at once and became as thick as thieves. Joe was passing under a fictitious name, and old Wakeman didn't suspect that he was a parson; so he gave his profanity full swing, and he was a master of that great art. You probably know Twichell, and will know that that is a kind of refreshment which he is very capable of enjoying.

Sincerely your,
S. L. CLEMENS.

MARK TWAIN.
From a sketch by Poultney Bigelow in 1900.

II.

Mark Twain's first book, "The Celebrated Jumping Frog of Calaveras County," was published on the 1st of May, 1867. On the very day of its appearance in print, the author wrote a highly interesting letter to his friend, Bret Harte, in which he comments on the new publication, and announces his departure for the Old World. This was the voyage that made him famous, for it resulted in the composition of "Innocents Abroad," the work that gave him the world-wide reputation that he was to enjoy for forty years. The year 1867 marks also the date of Bret Harte's first book, "Condensed Novels"; his great contribution to literature, "The Luck of Roaring Camp," had not yet appeared. It is interesting to note the signature, "Mark," for in later years he almost invariably signed his epistles with his own name. It was only a short time before this that he had adopted the pseudonym. The original autograph of this letter, already yellow with years, was kindly

given to me in 1908 by Bret Harte's sister, Mrs. Wyman, of Oakland, Cal.

WESTMINSTER HOTEL, May 1, 1867.

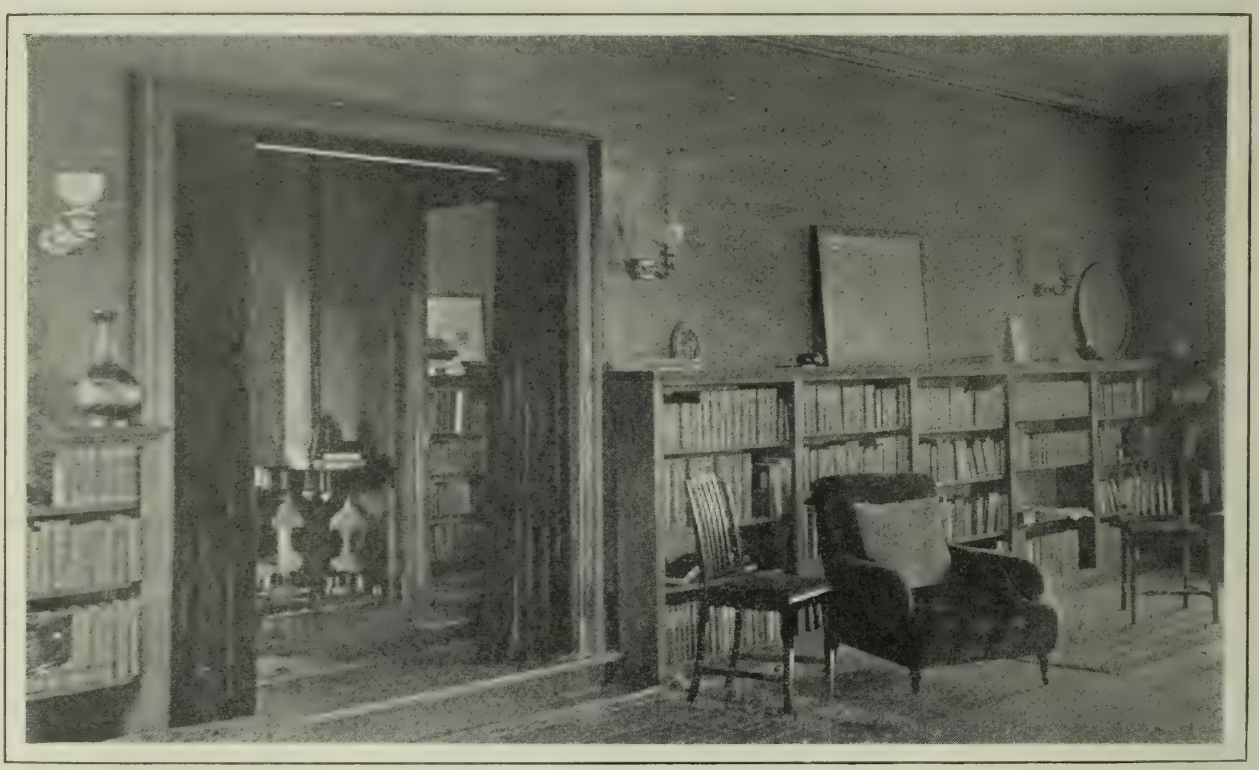
Dear Bret—I take my pen in hand to inform you that I am well and hope these few line [*sic*] will find you enjoying the same God's blessing.

The book is out, and is handsome. It is full of damnable errors of grammar and deadly inconsistencies of spelling in the Frog sketch because I was away and did not read the proofs—but be a friend and say nothing about these things. When my hurry is over I will send you an autograph copy to pisen the children with.

I am to lecture in Cooper Institute next Monday night. Pray for me.

We sail for the Holy Land June 8. Try and write me (to this hotel), and it will be forwarded to Paris, where we remain 10 to 15 days.

Regards and best wishes to Mrs. Bret and the family.



Truly Yr Friend

MARK

III.

On the 8th of April, 1904, I had the pleasure of hearing a song recital in Florence given by Miss Clara Clemens, now Mrs. Gabrilowitsch. She has, as everybody knows, a splendid deep contralto voice, and that evening she sang beautifully. Mark Twain was in the audience, and, in spite of himself, was forced to hold an informal reception before the Italians and foreigners in the room would let him depart to his villa on the hill. On a fine afternoon in the following week, the 14th of April, I had an hour's conversation with him and his accomplished daughter, Miss Jean Clemens, in their Florentine home. Miss Clemens, whose sudden death in December was the last terrible shock that Mark Twain had to endure in the steady tragedy of his old age, was one of the most charming women I have ever known; charming in her natural and wholly unaffected grace of manner. She acted as her father's secretary, and during the last year of his life she, with his devoted friend and literary executor, the novelist, Albert Bigelow Paine, made up the little family circle at Redding. In a letter that I received from Mark Twain only a few weeks before his death, and which cannot be printed now, he said of his daughter Jean: "I shall not have so dear and sweet a secretary again."

When I entered the room in Florence where Mark Twain and his daughter were sitting, I found him wholly absorbed in reading the latest news of the Japanese-Russian War, and it was with the greatest difficulty that I could induce him to talk on any other theme. He was

INTERIOR OF MARK TWAIN'S VILLA, REDDING, CONN.

a tremendous partisan of the Japanese, and rejoiced greatly in their victories. "The real reason," said he dryly, "why the Russians are getting licked is because of their niggardly policy. Look at General Kurapotkin! I read in the papers that he has taken out with him only *eighty* holy images! Just like the Russians! They never make adequate preparation for battle. Why, eighty ikons are not half enough; they ought to have two or three for every private soldier if they expect to beat those clever Japs. But that's just the way the Russians do business; they are economical with their holy images when they ought to order them out by the carload." I remarked that I had just read in a New York newspaper (the *Sun,* I think it was) a poem by the well-known American poet, Miss Edith Thomas, in which she hotly defended the Russians because they were Christians, and earnestly hoped that they would triumph over the heathen Japanese. He impatiently replied: "Edith doesn't know what she's talking about."

Photograph by Helen S. Graef.

LOOKING WEST FROM "STORMFIELD," MR. CLEMENS' CONNECTICUT HOME.

I finally persuaded him to talk a little about himself. I asked him which of all his works he thought was the best. In Yankee fashion he asked which I put first, and I said "Huckleberry Finn." After a moment's hesitation he remarked: "That is undoubtedly my best book." Then I asked if, leaving aside the pleasure of artistic creation, it was not a source of great happiness to him to think that from a river pilot on the Mississippi he had risen to be an honored and welcome guest at royal courts, and that this tremendous change in his circumstances had been wrought not by the accidental acquisition of a great fortune or by success in war, but wholly by the power of his own mind. (For from this point of view Mark Twain's career is absolutely unique in the history of America.) He drawled out very slowly: "I do look back on my life with considerable satisfaction."

The truth about his selection of the name Mark Twain has, I think, appeared in print before, but nine out of every ten times it is stated falsely, and has so been published since his death. He did not adopt the pen name directly from his experience on the river. On this occasion he said:

> "There was a man, Captain Isaiah Sellers, who furnished river news for the New Orleans *Picayune,* still one of the best papers in the South. He used to sign his articles, *Mark Twain.* He died in 1863—I liked the name, and stole it. I think I have done him no wrong, for I seem to have made this name somewhat generally known."

I had seen Mark Twain many times since 1876, but this was the first occasion when he looked like an old man. He was tormented with anxiety about his wife's health, for he knew her illness was fatal. The muscles in his right cheek were beyond his control, twitching constantly during the hour I spent with him, and there was something wrong with his right eye. He had not, however,

cut short his allowance of tobacco, for he smoked three cigars while I was there.

Altho he was an optimist concerning the present age, believing in human progress and the general moral advancement of mankind, he was a profound pessimist in his attitude toward the happiness of the individual, and he by no means agreed with Rabbi Ben Ezra that old age was best. This was perhaps partly owing to the steady accumulation of blow on blow that he was forced to suffer in his later years. There can be no doubt that he looked on death as a release. In a public interview that he gave to the press last October he said:

"There are two or three tragically solemn things in this life, and a happy marriage is one of them, for the terrors of life are all to come. A funeral is a solemn office, but I go to them with a spiritual uplift, thankful the dead friend has been set free."

IV.

It is, of course, impossible to foretell Mark Twain's place in future literary history. At present his fame seems permanently secure, for he has apparently contributed some things to world literature, and his books represent the spirit of America as no others have ever done. On the occasion of his receiving the Oxford degree in 1907, which he regarded as the greatest honor of his life, he was the central figure in a notable gathering. A prominent French journal, mentioning the names of all who received academic distinction on that day, said that France was justly proud of the honors paid to her, but that it would be foolish to be blind to the fact that the brightest star in the whole international constellation was the great American, Mark Twain. In Germany his reputation is steadily growing. It is true that the oldest and one of the most distinguished of living German novelists once told me that the much vaunted humor of Mark Twain was to him nil. "I read carefully thru every page of one of his longest books without being able to laugh once." This dictum was psychologically interesting. But Young Germany sees him with different eyes. In a recent criticism in *Die Schöne Literatur,* the writer observed: "Altho Mark Twain's humor moves us to irresistible laughter, this is not the main point in his books; like all true humorists, *ist der Witz mit dem Weltschmerz verbunden,* he is a witness to higher thoughts and higher emotions, and his purpose is to expose bad morals and evil circumstances, in order to improve and ennoble mankind." This I firmly believe to be the true view. So long as cruelty, snobbism, affectation and the tyranny of convention endure, so long will his powerful attacks on such things be wholesome and helpful. For in his wildest exaggerations and most incongruous mirth one can see that what he loved best from first to last was the living truth.

New Haven, Conn.

Twainiana

BY ALEXANDER McD. STODDART

[We give here a little sheaf of sayings and anecdotes of Mark Twain current among his friends. Mr. Stoddart, who collects them, is an editorial writer on the New York *Press.* —Editor.]

WHEN Mark Twain was leaving the San Francisco *Call* he sauntered along the street with a cigar box under his arm.

"I am sorry," said a woman acquaintance, stopping him, "to see that you are smoking again."

"You are mistaken, my dear madam," he drawled, "I am only moving again."

He opened the box. It contained a pair of socks, a pipe and two paper collars.

* * *

Said Mark Twain to Speaker Cannon, when he was in Washington in the interest of the present copyright law, "I would like to become better acquainted with you and wish you would take lunch with me tomorrow."

"But I don't eat lunch," replied the Speaker.

"So much the better; neither do I," retorted the humorist; "we'll let George Harvey eat the lunch while we smoke and talk."

* * *

A reporter came to learn the truth of the report that the celebrated author was dead.

"Say that the report is very much exaggerated," the humorist answered.

* * *

At a recent public dinner he remarked: "An old saying of mine has been misquoted. I didn't say: 'When in doubt, tell the truth.' What I did say was: 'When you are in doubt, tell the truth.' When I am in doubt, I use more sagacity."

POSTER USED BY MARK TWAIN FOR A BROOKLYN LECTURE, 1866-67.
From the Lenox Library Collection.

One of the pressmen, whose duty it was after that work was completed to sweep up the floor, contributes this: "Every day Mark would give me a nickel to get away from him. He never wanted to uncross his legs."

* * *

The office boy on the same paper adds this: "One day he gave me a nickel to dot an 'i' in his copy. He certainly did enjoy life, that man."

* * *

Hartford did not know quite how to take the humorist. After listening to a sermon by Bishop Doane, then Doctor, Twain remarked: "I enjoyed your sermon this morning very much. I have a book at home which contains every word of it."

To the implied charge of plagiarism the Bishop protested.

Finally the lover of fun showed the clergyman an unabridged dictionary and said he "stood ready to prove it."

* * *

A friend once asked him about the cost of building his Redding residence. The architect's estimates, he said, had been so many thousands of dollars.

"Did it cost that much?" asked the friend.

"Well, half of it did," replied Mark Twain.

* * *

One Christmas Robert Collier wired that he was sending to the humorist to his Redding home, as a gift, a sacred elephant. The day before the arrival of the elephant a carload of hay was received, which Collier paid to have carted over to the Stormfield stables. For one whole day Mark Twain stormed against this freakish idea. Finally the pachyderm arrived. It was a handsomely carved imitation, two feet high.

* * *

Walking up Fifth avenue one day a little girl slipped her hand in his and tried to get his stride.

"I'm awful glad to see you," she said.

"Are you?" he said.

"Yes," she prattled on, "I knew you right away."

When they reached the corner he stopped.

"Who am I?" asked the man with the shaggy eyebrows and mussed up hair.

"Why," answered the little miss, "Buffalo Bill, of course."

* * *

The day following the visit of burglars to Stormfield, Mark Twain put up this notice at the main entrance to the grounds:

"Notice:

"To the Next Burglar:

"There is nothing in the house but plated ware—now and henceforth. You will find it in the brass thing in the dining room over in the corner by the basket of kittens. If you want the basket, put the kittens in the brass thing. Do not make a noise, it disturbs the family. You will find rubbers in the front hall by that thing that has umbrellas in it—chiffonier, I think they call it, or pergola, or something like that.

"Yours truly,

"S. L. Clemens."

* * *

To the reporters who met him in October, 1900, when he came home from a nine years' exile, having paid his debts, Mark Twain remarked: "Some people lie when they tell the truth; I tell the truth lying."

* * *

T. Max Smith, musical critic of the New York *Press*, relates this: "The talents of an actor were pronounced in Mark Twain. He loved to assume a pose. Frequently in his own home in Hartford he took part in tableaux, charades and buffooneries arranged by his daughters and friends. One of the most side-spliting mummeries in which he ever figured was a pantomimic prank in which he impersonated an enamored youth on one side of a raging river, his daughter Susy being the beloved maiden on the other. A Turkish rug represented the stream. With laughably exaggerated movements and gestures Mark Twain conveyed to the onlooker the distress of the lover so cruelly separated from his sweetheart, his passionate longing, his horror as he looked into the rushing torrent, his determination to brave death in order to reach the coveted prize. With hands outstretched for the dangerous leap, Mark Twain flung him-

self into the water and swam bravely to the other shore, or, to be more explicit, threw himself face down on the rug and by flopping and squirming, wriggled his way across the carpet. Up, then, he bounded into the arms of his best beloved, and as the pair embraced, ardent, exultant, their voices broke forth ecstatically into the Pilgrim's chant from 'Tannhäuser,' now a hymn of triumph."

It was at an evening of charades in Guilford, Conn., that Mark Twain broke in with the announcement "Warner and I will give you a charade. It is one scene, a kind of a tree with four syllables." Thereupon Mark Twain got down on his hands and feet and grunted and squealed, while Charles Dudley Warner pulled him by the ear. The company could not guess it and he had to tell them. "Ma-hog-an-I" (mahogany).

NEW YORK CITY.

Fishing in Newfoundland

BY ARCHIE M. REID

AS a field for sportsman or camper the rugged coast of Western Newfoundland and Upper Labrador affords opportunity for unlimited exploration during the summer months.

From among the mountains, which rise sheer from either side of the straits, pour out innumerable streams, each with its own charming individuality. Nine out of every ten of these rivers have scarcely, if ever, heard the click of a fisher's reel or had a fly cast upon their clear waters. For the natives are deep-sea fishermen from time immemorial and

ENTRANCE TO ST. JOHN'S HARBOR.

scorn the light and flimsy tackle, which gives the fish better than an even chance.

It can be readily imagined with what expectations a fisherman starts up one of these unknown waterways for the first time, with the big bleak hills rising abruptly from the river's edge on both sides and the roar of rapids ahead.

As the first worry whether the canoe can live wears off, he begins to take note of the strange and beautiful nature of this land.

The snow-capped hills seem mighty peaks, so abruptly do they rise, tho in reality they seldom reach higher than a thousand feet.

So steep and rugged are the mountain sides that traveling inland, except by the rivers, which have cut their way thru the solid rock to the sea, would be almost impossible.

Vegetation is very limited on account of the shortness of the season and the scarcity of the soil. There are few big trees and fewer wild flowers.

Small firs, birches and a tangle of undergrowth take root and try to thrive wherever they can secure a foothold. Back among the hills the explorer will usually find extensive and treacherous marshes, collecting the frequent rains and fogs, like a huge sponge, and acting as a constant storage reservoir for the rivers.

The marshes are at times quite passable if one knows the good spots, but woe to the greenhorn who starts to cross without a guide or marked trail, for the crust of thick moss which supports the traveler may at any minute let the unwary one thru into bottomless pits of peat mud.

Lakes also are very numerous, of great depth and extreme clearness. The natives say that the depth of a lake is the same as the hight of the surrounding hills; and in many cases they are not far from correct, for some few which have been sounded by men-o'-warsmen have been found to be almost two hundred fathoms deep.

In the very bleakness of the country lies much of its charm. The feeling of being in the real wilderness, where a man

KILBRIDE FALLS, NEWFOUNDLAND.

A CATCH OF NEWFOUNDLAND TROUT.

must depend on himself, gives a feeling of self-efficiency and independence which is highly stimulating.

There is little chance of meeting any one after leaving the immediate seashore, for the few inhabitants gain their livelihood from the sea and are seldom found far from it.

Animal life is comparatively scarce. The caribou, which abound in the more southerly parts of the island, cannot find food enough in this barren section, and are not often seen.

On the Labrador side many black bear are to be found, but in Newfoundland very seldom. Even the birds are extremely limited in variety, consisting mostly of water fowl, who swarm to the marshes and lakes for the breeding season and then hurry away, leaving the fresh water deserted again.

But in the water life abounds. Every one knows of the great quantities of cod, herring and mackerel taken from Newfoundland waters every year, but few know of the great army of fine Atlantic salmon which yearly comes to this island and makes a dash up some river to spawn. If one happens to be camped on a river when the "run" is in full swing, he enjoys for a couple of weeks the finest sport in the world.

If the camp be near the mouth of the river, one can interrupt his salmon fishing now and then with a session among the sea trout, those fierce and sturdy fighters, who come by thousands to the mouths of the rivers, schooling in and out with the tides. These fine fish are at their best in this cold water, and a glistening three or four pounder furnishes fine fun on a fairly light rod.

Seals are also to be seen wherever the fish are, for these pirates follow the salmon and trout relentlessly, even far up the rivers, and are always proper game for a fisherman to bag with a rifle if he is quick enough to catch this swift and alert beast when he comes to the surface for his bearings and fresh air.

These, of course, are not the fur-bearing seals found on the Pacific islands,

but are the common "strait seal," whose hide is fit only for leather.

After the first great run of salmon, lasting for, perhaps, two or three weeks, the trout start on their upward journey. Their run is much more concerted and of shorter duration, lasting, perhaps, only a few days at a time. After waiting at the mouth for weeks they will suddenly make up their minds to go, and will scoot up the river with amazing speed.

I have known an instance where a large trout has carried away a cast at one place and twenty-four hours later been landed, with the fly still in his mouth, seven miles up the river.

The ideal way to make a trip is to move along the coast from river to river, never stopping at any one long enough to tire of the surroundings or the fishing, pitching camp on a new site continually and always having the delicious uncertainty of what you may find at each place.

The little trips from place to place often afford novelty and excitement. Frequent squalls must be avoided; no easy task where harbors are scarce and the gales so fierce and sudden, springing out of a comparatively smooth sea and in a few minutes carrying the scud like a cloud.

Traveling should be done by day if possible, but oftentimes wind or gasoline, upon which you must always depend for power, may fail, and then night work is necessary, feeling along the shore until a haven is reached. After dark there is no way of knowing your whereabouts.

Once I remember moving along on a very dark night, when our engine had stubbornly refused to respond to all kinds of persuasion; we finally rowed into a little canal, running about three hundred yards into a sandy beach. Here we pitched a tent, and, worn out with the day's work, rolled up in our blankets and went to sleep without exploring our surroundings. What was our surprise on awakening in the morning to find ourselves camped in the very center of a good-sized fishing village, left high and dry by the tides.

We must have been an odd sight, camping on the village green with a big launch and five canoes, but no water in sight.

We were, on this occasion, probably ten miles beyond the point we had thought we were, owing to a favoring tide running at the great speed it does there.

The flies and punkies are a fearful plague, and must be well guarded against. Of course the first step of an experienced camper is to place his camp in as free and open a place as possible, where the winds have a fairly clean sweep.

Next, the sleeping tents must be provided with canvas floors sewed to the walls and a netting with a drawing string protecting the entrance.

This arrangement is very efficient in keeping out mosquitoes and flies, but if the sand nudge or "punky," as he is familiarly termed, appears, there is nothing left but to pull up stakes and run, for they will get thru the stoutest canvas and the thickest blankets or sleeping bag for a taste of human flesh.

They come without noise or warning, and first make their presence known when they have reached the skin and begin to burn like millions of red-hot needle points. An attack of these pests is probably the best test of disposition there is. But, fortunately, they are very local in their tastes, and often can be entirely shaken off by moving camp a few hundred yards.

There is no object in trying to "rough it" too much. As all the traveling is done in boats, many comforts, such as food and extra tents, can be taken along without much additional trouble.

And it is certainly worth a good deal during a dripping day to have dry things to put on. And if the rain lasts for several days, as it often does, a nice drying tent is indispensable. The evenings and nights are too cold to risk wet clothing.

As most of the salmon fishing is done on foot, waders are necessary, for it would be impossible to stand waist deep in the ice cold water for any length of time.

Even with the waders, wettings are frequent enough, for following a lively fish down a swift running river, over slippery and rolling boulders, trying to play your fish with one eye and pick your way with the other, is not the easiest thing I know of. Oftentimes it ends with the battle in favor of the fish.

But such accidents only go to make the final conquest, when a fish has at last been gaffed and lies gasping on the shore, seem the greater. And little wonder that the successful angler will guess the weight of his first fish at twenty pounds, until the unimaginative scales show him to be but ten.

The fish along the upper straits do not run to great size, twenty pounds being considered a large fish, and the average about twelve to fifteen.

The days are, of course, very long, and on clear evenings fishing is good until nine o'clock and even later. Many times have we sat down to supper at eleven o'clock, having fished till the last sun ray was extinguished and seen the northern lights streak the sky until the surrounding hills were clearly outlined in the silver light, not realizing the lateness of the hour.

And so also in the morning before we had fairly gotten to sleep the sun would be beating on the tent, telling the weary man that he was missing some fine morning light for a bright fly.

The change of life for a man who is accustomed to work indoors is complete. Not only his own method of living, but the character of the people and country furnish an exhilarating novelty and experience. He feels that he is absolutely free, and that the worries of business and society are no longer part of his life.

NEW YORK CITY.

Björnson and His Woman Types

BY BERNARD STAHL

[Mr. Stahl is the author of "Björnson and His Plays" and the translator of Björnson's "Wise Knut." He has long known Björnson personally. Recent references in THE INDEPENDENT to Björnson include "The Novels of Björnson," by William Lyon Phelps, September 30, 1909, and "Björnson," an editorial, February 10, 1910.—EDITOR.]

BJORNSTJERNE BJORNSON, fondly called by Norwegians the "uncrowned king of Norway," who died last week in Paris, was born December 8, 1832, in the parish of Kvikne, Osterdalen, Norway. There were four years between the birth of Ibsen and Björnson and also four years between the deaths of these two Norwegian men of letters, Ibsen being born in 1828 and having passed away in May, 1906.

If one may estimate the morality of a country from the standpoint of its women one is quite justified in judging a writer's ethics by the moral force of his woman types. Surely few modern authors, if any, have placed their woman characters in such shining positions as has Björnson. It is a significant fact that not a single book, hardly an essay even, left Björnson's desk for publication without first having been neatly copied by his clever secretary—his faithful and lovable wife—Karoline Björnson. Surely it is only fair to the woman who has stood by his side in rain and in shine to draw the conclusion that Björnson's remarkable insight into a woman's life, his understanding and true interpretation of her, are due to the wise influence of his wife.

BJORNSTJERNE BJORNSON.

It is an open secret that his gay little comedy, "Geography and Love," is a humorous study of himself and his home-life, and in this work he has indeed erected to his wife an enduring monument.

"God defend every woman from those crazy people who write books!" exclaims an old aunt of the household in a dispute with the learned Professor Tyggesen, who wants the spinster's room for his books and maps. He had already driven his daughter from her room and his wife from hers, his books and maps having crept even into the kitchen in spite of the cook's furious protest. Karen, the wife, implores him to think a little bit of her, too, and of his children. But to no avail. He considers nobody but himself and his dusty old books. At last she is driven out of the house and accepts the invitation of a friend to take a trip up the coast with her. Tyggesen rejoices in the thought of having the whole big house to himself, and asks her to make the trip a long one.

"I'll make it a very long one, indeed," she replies as she leaves the house and slams the door behind her.

"Hurrah!" he exclaims, "no womenfolks in the house! Hurrah! How I shall work, oh joy!"

But what happens? With the departure of Karen his vitality vanishes. His brain becomes dull and inactive. All his former strength and working power are gone. After a protracted struggle he writes Karen:

"Come back from the country! I surrender at discretion and unconditionally!" But, strange enough, his wife has a few conditions to make, a fact that surprises him greatly and puts him back again on his high horse. He soon gives in, however, and writes: "You shall have every room back again without any geography, but filled to overflowing with love." Karen returns and with her his vitality and creative power, and then the sun shines brighter than ever.

Altho farseeing as a philosopher, Björnson was limited as a writer, because he confined himself exclusively to the healthful in life and always tried to find the best in his fellowmen, believing strongly that the good predominates the evil and triumphs in the end. Frequently this belief is set forth by his woman characters, especially in the closing lines of a drama or novel, as tho he would make women the torch-bearers of the future. When a man gives up entirely and can see no opening at all, a woman often sees several, and to this faith in her possibilities Björnson adheres.

Valborg, the heroine in "A Bankruptcy" and Ragna, the bright young heroine of "The Dagestate," tell us that everything should be done in the name of the home. They both teach that the home is the center of life—a center to which all that is best is drawn and from which radiate the influences that, next to Christianity, keep the world pure and sweet. The common utterance, "A girl is so soon to marry that it isn't worth while spending much money in educating her," is one of the fallacies that Björnson especially tried to do away with. There is no station in life, he urges, that demands more knowledge, a higher culture, or a better understanding than does the enviable one of wife, the creator of a home. And to those women who think it impossible to become home-makers without marrying he says: "Open your heart to all the possibilities you see about you. If you let the sun shine freely into your heart the home will build itself and children, the offspring of beautiful thoughts, sacrifices and goodness, will abide at your hearth and brighten your life with sweetness, even tho they are but dream children."

"Your wife must come to you now," says the advocate in "A Bankruptcy" to the ruined merchant. "Call your wife!" is Björnson's advice to the husbands of his country. Be honest to the woman by your side is his philosophy in this play. A man has no better friend than a faithful wife, no one that understands him better or is so ready to forgive and help.

Another beautiful woman character is Rachel in "Beyond Human Power." To take care of others and see their happiness grow is her only joy in life and the only happiness she finds worth while. She closes the drama by saying to the leader of a great strike:

"Somebody must be the *first* to forgive." If peace and good will are to survive on earth she means.

Thora Parsberg is a strong, clever woman ("Paul Lange and Thora Parsberg"), who instinctively understands

that something must be wrong in her community, since culture and justice make no progress. She is the representative of the courageous women who have grown tired of silent hopes and silent tears, and so she steps out of her inactive life, and, holding out her white but willing hands toward the brave men who battle for progress, cries: "Take us women with you! We will fight with you and for you! Your ideas are ours!" She is a born fighter, but loses because the man by her side is not brave and strong enough.

In "At Storhove" the woman who is the dramatist's mouthpiece in the play closes the drama by a brave defense of a poor led-astray girl with a few lines to this effect:

"Yes, she can still be saved. Every woman can be. If I only had her here alone with me and had the time."

Björnson's unwearied warfare against the evils of his country has undoubtedly been the secret of his strength and eternal youth. It probably pays well to see the best in one's fellowmen.

NEW YORK CITY.

The Income Tax Amendment

BY FREDERICK M. DAVENPORT

PROFESSOR OF POLITICAL SCIENCE AT HAMILTON COLLEGE AND SENATOR FROM THE THIRTY-SIXTH DISTRICT.

NOTHING could be clearer than the line of cleavage between the legal opinions of United States Senator Root and Governor Hughes upon the proposed income tax amendment, when they are read separately or when they are placed side by side. The thought and expression of each man are admirable and unmistakable. The Governor believes that the power to tax incomes would be granted by the proposed amendment in such terms as to place the borrowing capacity of the State and of its governmental agencies at the mercy of the Federal nation. He speaks from the standpoint of a strict guardian of the interests of the State. He believes that the way should certainly be left open for the exemption from taxation not only of State and municipal bonds but of the income from these bonds. He regards it as important that there should be for these securities a particularly favorable market in time of stress or emergency. He calls attention to the emphatic words, "from whatever source derived." He believes that this phraseology of the proposed amendment, giving to Congress power to lay and collect taxes on incomes "from whatever source derived," threatens to destroy the inviolability of the instrumentalities of State government, threatens to uproot the rule of judicial construction which has hitherto been a bulwark against the encroachment of the nation upon the State or the State upon the nation.

Mr. Root does not find in the proposed amendment any such meaning or effect. He holds that there is no new grant of power, that the National Government has always had unlimited power of taxation, except that taxes on exports were prohibited and that the method of exercising the power was subjected to the limitations of uniformity and apportionment. Aside from these restrictions and one other, the nation has always had the power to levy taxes upon incomes "from whatever source derived." That one other restriction is the rule of judicial construction which has its foundations in the very warp, woof and texture of the Federal instrument and which could not by any manner of means be uprooted or overturned without permanent injury to our whole constitutional system. That rule is that no language of the Constitution, no matter how wide its seeming scope, shall be interpreted in such a way as to do violence to the principles which are inextricably interwoven with the Federal instrument, namely the great principles of separate and distinct State and national sovereignty and an indestructible union of indestructible States. The Senator has no fear that the phraseology of the proposed amendment will

change the rule of construction hallowed by a century of judicial history and experience. He is as earnest a champion as the Governor of the doctrine of the inviolability of the instrumentalities of credit of the State government. He believes that the amendment, if adopted, will not be construed by a critical examination of words but in accordance with a century of judicial and political development. This rule of construction represents the clarified common sense of the nation. There is no danger of its being uprooted, overturned or broken down.

The intent of the proposed amendment is to restore to the general Government a power of vital importance, which was taken away from the nation by the decision in the Pollock case. Great classes of income, the income from real estate and from personal property, are now for the first time practically immune even in the direst national emengency, *because of the source from which they are derived.* The proposed amendment would restore to the nation the power to reach these incomes and all others *from whatever source derived,* subject only to the restrictions, implicit or explicit, which are within the Constitution itself. It is in this intent that the significance of the words "from whatever source derived" clearly appears.

This difference of view between legal experts, important as it is, is to my mind not at all fundamental in the final determination of this issue. I think it will turn out to be pretty nearly the universal opinion of the economists and experts in practical finance that the Governor's fears are ill-grounded. No harm can come to the credit of State or municipal bonds thru the levying of a general income tax. If a tax strikes only certain fields of investment, then the price of the security, whether a State or a municipal bond or anything else, theoretically falls off somewhat in proportion to the tax which is levied upon it. And why does it fall off in price and strength in the market? Because the demand for this class of security lessens as capital flows out into those fields of investment where the tax is non-existent and where the return is therefore greater. But if a general income tax, which is contemplated by the proposed amendment, is levied upon *all* fields of investment, to what other more favorable field of investment can capital flow? There would be no change, therefore, in the demand for State and municipal bonds, no fall in the price and no injury to State and municipal credit. It is only when an *exclusive* tax is levied upon particular fields of investment that the danger to credit arises. It is for this reason, among others, that the general income tax is the fairest and most just tax both to sovereignties and individuals that can be devised, once the system of administration and collection of the tax is perfected. The failure to observe the distinction between a general tax and an exclusive tax is the cause of the whole misconception which has arisen with respect to the danger of State and municipal bonds. The perfected income tax would leave everything relatively with respect to price and credit precisely the same as before the tax was levied.

It may be urged that the national Constitution should make a discrimination in favor of State bonds, should exempt them even from the general income tax, so that they may sell more easily and at a higher price. Of course this shifts absolutely the ground of the argument. This is not the doctrine of reciprocal exemption but of special exemption. And the contention itself receives a body-blow from that prince of taxation experts, Prof. E. R. A. Seligman, of Columbia University, who says:

> "There is no good reason why the Federal Government should discriminate in favor of the States. The constitutional inhibition only means that the Federal Government should not discriminate *against* the States by affecting their power to borrow. So long as there is no *special* taxation of State bonds this, power to borrow will not be injuriously affected. Special exemption would confer upon the States a gift and an advantage over other investments. If Federal securities were taxed under a national income tax law, as they sometimes have been in the United States for fiscal reasons, and as they are everywhere abroad, this would give State and municipal securities an unfair advantage. The constitution was never designed to favor the States as against the nation."

The substance of the matter is that an exclusive tax on the income from State and municipal bonds is wrong and falls within the rule of construction which forbids injury to the instrumentalities of

credit of the State. A general Federal tax on incomes which includes the income from State and municipal bonds is not only harmless to the instrumentalities of credit of the State, but should be permitted. The amendment ought to prevail. No matter how wide the latitude given to the meaning of the words "from whatever source derived," the amendment is financially and economically innocuous and desirable.

It does not follow from this that a State tax on Federal bonds as part of a general property tax is constitutional or permissible. A State is only a part of the whole. The lack of uniformity in reaching Federal bonds in different States might easily affect their value and injure the power of the general Government to borrow. This plain economic reasoning is absolutely on all fours with the view of Chief Justice Marshall in McCulloch v. Md., 4 Wheaton 535, when he said:

"It has also been insisted, that, as the power of taxation in the general and State governments is acknowledged to be concurrent, every argument which would sustain the right of the General Government to tax banks chartered by the States, will equally sustain the right of the States to tax banks chartered by the General Government. The two cases are not on the same reason. * * * The difference is that which always exists and always must exist between the action of the whole on a part and the action of a part on the whole."

CLINTON, N. Y.

Dr. Sheldon and the Theater

BY CHARLTON ANDREWS

THE Rev. Dr. Charles M. Sheldon, writing in the issue of THE INDEPENDENT of April 7, presents his views upon the subject of "Reforming the Theater." His article was evoked by the fact that a New York theatrical agent recently asked permission to put one of Dr. Sheldon's books, "In His Steps," on the stage.

In reading over the faults found with the theater as it stands, I am struck with the fact that the criticisms almost invariably apply to nearly every other art, particularly to the art of the novelist, an art which Dr. Sheldon has practised with so much popular approval. He complains that the theater strangely combines the good and the bad, presenting a purpose play one night and an indecency the next; that modern plays frequently discuss human frailty, a practice which, experience shows him, "does not help to better conditions, but rather incites the passions, just as hanging used to do when it was performed in public"; that the effect of the theater upon the chronic theatergoer is to produce a "blasé condition of mind, to dissatisfy the young with real life, and to rouse passions that tend toward demoralization of character"; that actors say and do things on the stage which could not be said and done on the street without subjecting them to arrest; in fine, that "plays not nice for boys and girls to see are offered at the theater." These are, for the most part, arguments that might be directed with equal force against fiction, poetry, music, painting or sculpture.

It is true that all kinds of plays, good, bad and indifferent, come to our theaters every season, and that the various types frequently alternate. It is difficult to keep them classified. Similarly we often see upon the same shelf at the bookseller's—and even in the libraries of cities, of schools and of Christian men and women—literature of the most exalting character alternating with books of the basest influence. Art galleries and concerts and lecture courses are often likewise objectionable, but it were absurd to condemn music because suggestive ragtime preponderates in popular esteem, to condemn painting because here and there we light upon a Titian's Venus, or to condemn the lyceum because it is too often the resort of the demagog.

Undoubtedly many modern plays discuss phases of human frailty; and it may possibly be true that such discussion, instead of helping to better conditions, rather incites the passions—tho it is hard to see what passion could be incited in an

audience by Ibsen's "Ghosts," for example, unless it be the passionate fear and hatred of social corruption. At all events, literature of all sorts is obviously open to the same charge: "The Scarlet Letter," "The Idylls of the King," "Pippa Passes," "Vanity Fair"—it is indeed difficult to name any large group of great books which does not contain many that discuss "some phase of human frailty." Yet the antagonism so frequently manifested toward the theater on this ground is rarely loosed against standard poetry or fiction.

Perhaps inveterate theatergoing, the frequent contemplation of the artificiality of the playhouse, does result in a blasé dissatisfaction with real life. But there is the same element of unreality in all art, just as there is an artificial atmosphere in all fiction, necessarily, to some extent, in even "In His Steps." If the effect is evil in the one instance, it must be so in the other. As a matter of fact, the habitual reading of cheap novels, the slavish addiction to the "best seller" habit, is doing incalculable harm, as all the wise will freely testify. Thousands of young people—to say nothing of their elders—are frittering away time, energy and ambition over dollar-and-a-half trivialities that serve them as mere anodynes, drugging the spirit of enterprising service quite out of them. Yet it were foolish to condemn the novel as an institution, or even to regard all fiction with the disdainful dubiety so often evinced toward the stage. Moreover, is it altogether an adverse argument that theatergoing results in dissatisfaction with real life? If the "purpose play" really has the power to rouse such discontent with regard to the evils it assails, then it can surely render humanity a service equal to the best that the novel can do.

In the evil plays, no doubt, actors and actresses say and do things on the stage which could not be said and done safely on the street. So do the characters in novels; so do the men and women represented in the other arts. Dr. Sheldon complains that, in all our cities, "staring billboards depict women indecently clad, advertising theatrical presentations," adding that, if the persons portrayed were suddenly to come to life and get down off the boards and walk along the street, the law would arrest them for indecent exposure. This is, unhappily, true. And, similarly, if some of the individuals represented in the advertising sections of the very magazines to which Dr. Sheldon contributes were to step out into public life, they would not stay long out of the lock-up. And so in art; even St. Sebastian would have to find some decent covering for his arrows and his agony. I do not cite these instances in justification of indecent billboard advertising, which I detest as roundly as does Dr. Sheldon, but because they illustrate the injustice of neglecting the theater as an instutition on the ground of these symptoms of imperfection.

"Plays not nice for boys and girls to see are offered at the theater." The world abounds with books, paintings, statues, buildings, places, conditions, specimens of humanity not nice for boys and girls—or even men and women—to see. Yet we do not, on that account, the less frequent library and art gallery, the city and the world. Dr. Sheldon very seldom goes to the theater himself, "because he does not know what he is liable to run into." Reasoning along this line, he must certainly deprive himself of many of the best opportunities life affords; indeed, he can go scarcely anywhere outside his home, except it be to church, and even there he is not unqualifiedly safe. Topeka has truly fared ill when, out of the twenty-seven cited plays that came her way, only five were clearly good; yet those five make up a strong foundation for hope. In spite of all the deplorable indecency that floods the stage today, good plays exist and serve their great purpose, just as strong books, like "In His Steps," rear their heads above the equally deplorable sea of insincerity and evil suggestiveness that is modern fiction. If the proportion of evil in the theater is greater than in fiction—which I doubt—it is largely because the stage, by virtue of its greater graphic possibilities, more completely mirrors life. It may be safely said that the last twenty-five years have seen the production of better dramas than any other twenty-five years since the last of the Elizabethans.

When Dr. Sheldon says that he is "fully inclined to believe that the effect

of even a good play on the theatergoer has been tremendously exaggerated," he is merely attacking the stage with another argument which partakes of universal application. "I get the impression from what I see of the constant theatergoer that his emotions vanish just about as he leaves the house and are forgotten when he wakes up the next morning." How truly may as much be said of the average churchgoer. We are inclined to believe that the effect of even a good novel, a good poem, a good painting, a good statue, a good oratorio, or a good sermon is often grossly overstated.

Dr. Sheldon offers only one suggestion as to the reform of the theater, tho he starts out as if he had several in mind. "The only real things," he writes, "which will reform the theater, either within or without, will be: First, the control of the business by great Christian men and women who are not in the theater for the money to be got out of it, but for the good they can do." The other things remain unmentioned; the good doctor has evidently forgotten his secondly and thirdly—a pleasing ministerial failing. The suggested reform is of the highest excellence; and it takes on its complete significance when he adds: "The Church may have a duty here which it has not been willing to assume." There, surely, lies the gist of the whole matter; the Church and all good citizens not only may, but do, have this duty, and it is a shame to shirk it—savoring much of the Pharisee. The stage is an institution of tremendous capabilities and importance. If left to itself and the non-Christian money-grubbers it may move on thru life a great engine of evil and degradation. If adopted and uplifted and encouraged by good men and women it will revert to that invaluable adjunct of religious civilization that it was intended to be in the beginning. It cannot be destroyed. The stage is fundamental and therefore permanent. Neglect of it will react terribly upon its neglecters. It needs the help and guidance and toleration of strong men like Dr. Sheldon. And some day it will get it; some day, for instance, a drama based on "In His Steps" will be unfolded on the stage to the immense betterment of all who come under its powerful influence, for its author will accede eventually to this demand, just as the late Lew Wallace, after many years of refusal, yielded up "Ben Hur" to the new sphere of effectiveness. It may be that all the actors and actresses engaged for the production will not be, in private life, the devout Christians Dr. Sheldon and the rest of us could heartily wish them. It is infinitely regrettable that all the authors, poets, musicians, artists and lecturers, whose genius we so greatly profit by, are not in faith and character men and women of the very highest type. Still we do not utterly discard either them or their work.

The complaint about the commercialism of the stage is undoubtedly well taken. I was interested to note in the same issue of THE INDEPENDENT, in William Frederick Dix's article, "Is Novel Writing Declining?" this similar protest: "The novel of today suffers terribly from commercialism . . . The publisher's criterion is not, 'Is it good, will it add prestige to my house?' but 'Will it sell?'" The commercial taint is over all things nowadays, as, doubtless, in the past: even the ministry has not always been entirely exempt from the charge. But we give up hope for none of these other institutions: why do so in the case of the theater?

If "the theater in real Christian hands will be an adjunct to help the Church and the home in the real influence on character in the shaping of righteousness," then, by all means, let men like Dr. Sheldon lead the way in the movement to bring about this devoutly wished for consummation. Let those who are "inclined to believe" much evil of the theater examine themselves closely for traces of merely inherited prejudice or perhaps even institutional jealousy, and make themselves ready for a good fight to bring back to righteousness one of the foremost instruments of Christian civilization.

VALLEY CITY, N. DAK.

Roadtown: A Multiple Home

BY MILO HASTINGS

[The theory of "Roadtown" seems unassailable on paper, just as the profits in bee keeping or chicken farming. Whether it will work in practice or not remains to be seen. It is certainly a novel proposition that deserves careful attention.—EDITOR.]

A HOUSE a thousand miles long, in which will live a million people, is the startling prophecy of Edgar S. Chambless, of New York City.

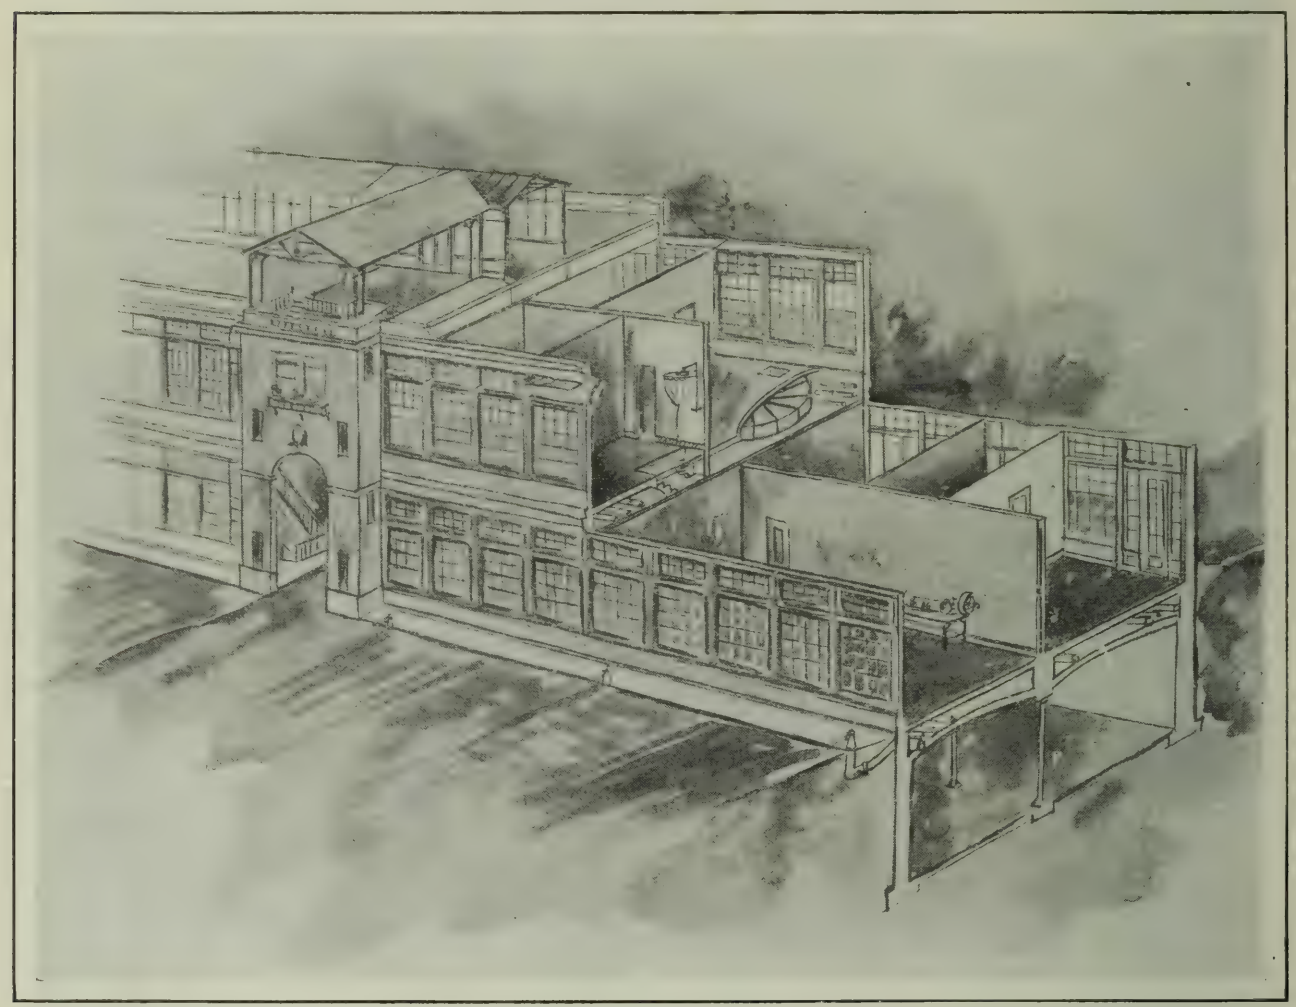
Mr. Chambless is a patent expert and has devoted half a lifetime to the development of his universal housing scheme which he calls the Roadtown. His dominating idea has been the finding of a way to use the many inventions that are now made unavailable by our fashion of individual house construction and the private monopoly of transit and conduit franchises. After working on various forms of model cities and co-operative homes, Mr. Chambless hit upon the remarkable scheme of building a continuous house and putting a railroad and all the pipes and wires in the basement.

With the combination of express and local train service, such a line of houses would start from the outer end of the present rapid transit lines and extend to the limits of the commuting distance. But the commuting range need not determine the ultimate length of the line of Roadtown, for with two hundred and fifty families to the mile, and tillable land

EDGAR S. CHAMBLESS,
The inventor of Roadtown.

BIRD'S-EYE VIEW OF ROADTOWN
Winding its way thru the country.

on either side the house line, and power available at every point, the Roadtown will not have far to build out until it will become a distinct industrial community housing a mixt population of commuters, gardeners and craftsmen.



The great nations of the ancient world arose in arid countries because irrigation forced co-operation and taught the advantages of united action. In the country and village today houses are built individually. From sheer lack of room to build separately, men in the city have been forced into housing many families in one building. Because of this co-operation city apartments have comforts and conveniences which private houses can only have at much greater cost per resident. But the very lack of room that has forced the construction of the co-operative apartment house has deprived its occupants of the light, air, quiet, and privacy which are more essential to comfort than the mechanical utilities which the compactness and co-operative construction of the apartment house makes feasible.

The city man, especially if he has children, will spend from one to three hours a day on board a train and tramp half a mile thru all kinds of weather to secure a home in the suburbs where he can have light, air and privacy and a place for his child to dig in the dirt.

The continuous house or Roadtown proposes to extend the city into the country and combine the advantages of the apartment house and those of the suburban home. We may even go further and say that it proposes to combine the apartment house with the farm, for there will be five acres of land per family within a mile of the house line, an acreage in excess of that required to support a family in many forms of intensive agriculture.

The Roadtown houses are to be built along the right of way and hauled by a work train to its place in the structure, the saving as compared with present methods of house construction will be unprecedented.

A like saving will occur in all plumbing and wiring, for in the place of our present ridiculous system of street conduits, the pipes and wires of Roadtown will be placed in an accessible passageway beneath the building. So simple will be the installation of an additional pipe

ONE METHOD OF ARRANGEMENT
Showing side stairway workroom, shower bath and toilet combined.

of cement, Thomas A. Edison having donated his cement pouring patents upon the understanding that the Roadtown is to be incorporated with non-dividend paying stock and financed by 5 per cent. bonds, thus permitting the full benefits of the economies involved to go to the inhabitants in the form of reduced rents or improved services.

As the Roadtown excavation can be made with a steam shovel, the building constructed of sand and rock found or wire that the poorest laboring man in Roadtown may have in his home the best gas, water and sewerage service, steam heat, electric light and power, vacuum for sweeping, refrigeration in the summer time, telephone, signal bells which can be turned on to announce the approach of the train and many other forms of gas, liquid or electrical servants now in existence or yet to be invented.

For the sake of convenience, sightliness and the avoidance of grade crossing,

the Roadtown railroad will be put in the basement. As the floor of the house may be raised sufficiently to leave an ample space for ventilation, the air conditions will not be those of a tunnel or city subway, but simply that of a shaded trench. The Boyes Monorail, patents of which have been donated to Roadtown, is as noiseless a means of transportation as is an electric automobile. The Boyes car is not built on the order of a heavy subway train but is as light as a bicycle per passenger, each section being only eight feet long, which are held together by couplings protected with a rubber washer. Each of these train sections runs on a single wheel which forms the armature of the motor, thus eliminating all gearing. The wheels are broad and are leather-faced, thus eliminating noise and securing a traction grip which makes possible the use of an exceedingly light car and hence greatly increases the speed which can be obtained from a given amount of power.

The Roadtown of any considerable length will be equipped with one local and two express tracks. Express stations will be about five miles apart, and a single local train will oscillate between stations.

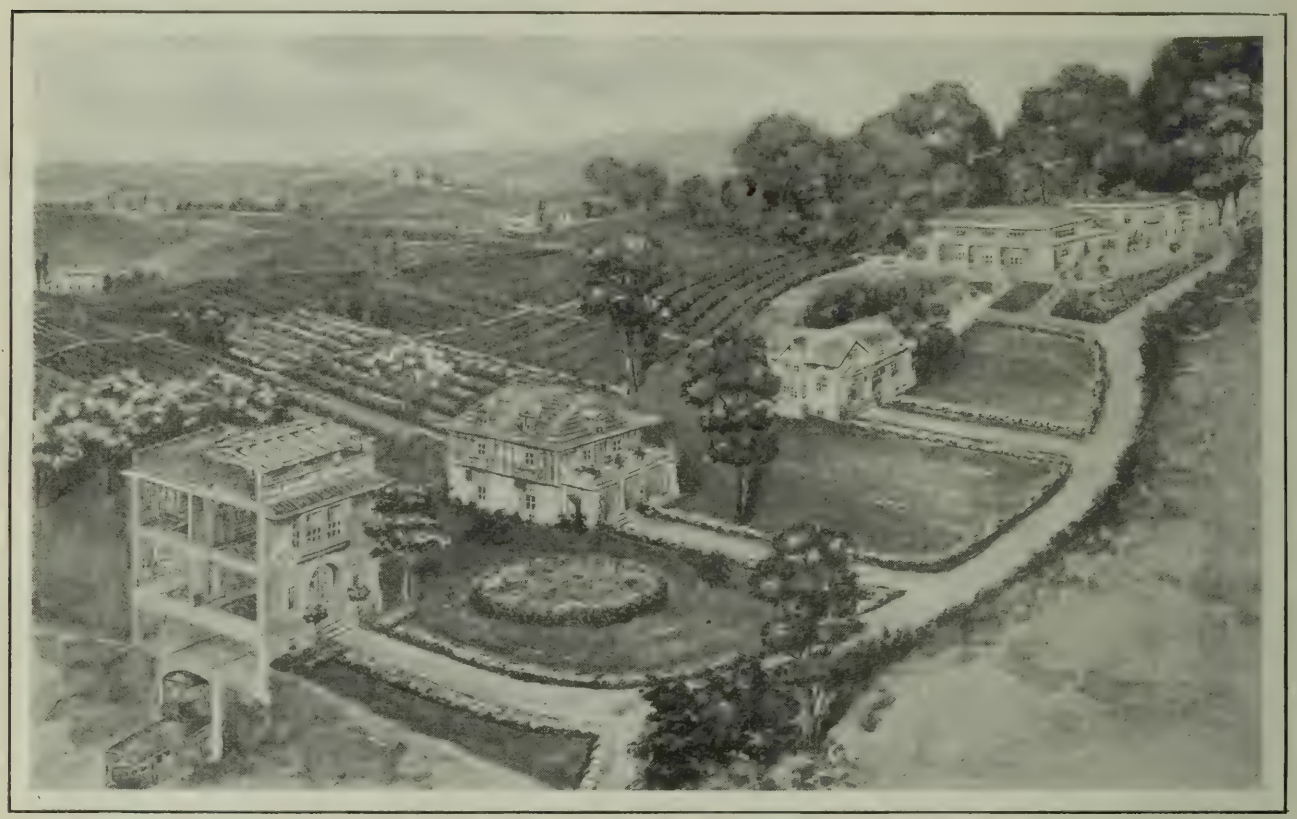
Not only will the railroad serve for the transportation of passengers but it may be used as a freight line at night and for delivery service at all times. This latter function means elimination of nine-tenths of the present cost of the distribution of mail, food and parcels.

So great, indeed, are the possibilities of this delivery system that the inventor of Roadtown believes that it will result in the work of cooking being entirely removed from the home and centered in large cook shops like modern bakeries. Moreover, Mr. Chambless goes further and insists that in all light manufacturing industries the cheap power and economical transportation will cause the machine to return to the worker's home, which with the aid of co-operative marketing that would naturally follow will give the machine operator the same free industrial existence that the farmer now enjoys.

There is no street in Roadtown. There is no need of vehicles, except for pleasure turnouts and these will be kept in barns and garages located at points where roads or turnpikes cross the Roadtown. The paths for pedestrains, bicycles and rubber tired roller skates will be provided upon the roof. The placing of the street upon the roof not only forms the grandest kind of a promenade imaginable, but it frees the land on both sides of the house for private parks or gardens.

The Roadtown, winding its way across the country like a Chinese wall, presents a very unusual picture to the imagination of a man whose mental stock of house images consists of a variegated selection of cubes, rectangles, pyramids, cones and domes. A frequent first comment upon seeing a picture of Roadtown is, "I wouldn't live in a thing like that."

When, upon fuller explanation, the home dreamer is informed that this queer snakey appearance which he at first finds so objectionable involves a fundamental saving in construction and in the installation and operation of the numerous utilities that are to render the Roadtown home a place of easy comfort, an interest is aroused that ripens into enthusiasm on the part of those whose nature is of the type that welcomes the new.



Those who by nature are conservative and who prefer to let "well enough" alone may dismiss the subject of the continuous house with various unstudied criticisms usually based upon its failure to supply some supposed need of modern life that is itself the direct result of our present type of living. An amusing example of such criticism was the case of a man in New York City who, while looking at a picture of a Roadtown with the green fields and forests stretching away for miles on either side, said with an air of final dismissal, "Why, there would be no place for the children to play."

A criticism frequently raised is that the Roadtown home will lack privacy. The criticism is a natural one; the Roadtown proposes to house many families under one roof, and that is just what we go to the country to avoid. But to object to a communal roof for itself alone would be to worship a fetish of sentiment. Roofs do not concern our daily lives. The thing to which we object is the realization of the presence of our neighbors or the fear that others may

spy or eavesdrop upon our own affairs. In either case the mischief-maker is one of the five senses. Nearness in feet and inches is meaningless; men lost in adjoining chambers of a dark mine with a few feet of rock between them are as utterly alone as if at the opposite poles of the earth.

The Roadtown homes will be separated by a monolithic concrete wall which will be impervious to all ordinary sounds. That the presence of the mechanical transportation beneath and the recreative travel above, both of which will be made noiseless, seems more of an interference with privacy than our present suburban or village streets is due to the fact that at present we are used to having the roof and cellar space private, and for that matter useless. The Roadtown takes these now wasted spaces and turns them into traffic ways for which they are more fitted than our present streets. Better still, the present street and alley or courtyard spaces become private. Our light and air and chance to get at the soil must be thru the vertical walls of the house. Now we mar these God-given utilities by planting in front of our windows the dust and noise and publicity of traffic.

The Roadtown home is not only private but it is the most private home possible to construct and yet retain the cooperative services of civilization. There is no street, no house across the street, no windows across the court. The space in front of our window is private as our useless roofs are now private, and this privacy does not only apply to vision but to sound as well, for in the open air sound will not turn thru a ninety degree angle. The sound of voices on the roof or in the neighboring house will not be heard in the Roadtown home tho the windows be wide open.

SEPARATE HOUSES.
The Roadtown principle as applied to detached villas.

That the Roadtown is mechanically feasible no one will seriously question. That the financial and legal phases of the proposition will speedily work themselves out when the people decide that they wish to live in Roadtowns must, in the light of numerous modern achievements, likewise be conceded. The materialization of the Roadtown will ultimately rest in the scale that weighs the

pleasures and comforts and profits of the resident against the cost of living. Is the Roadtown economical? The inventor says that it is, remarkably so, and that an eight room house in Roadtown will rent for $20. But in addition to specific figures or estimates Mr. Chambless lays down fundamental principles which, if valid, would give the Roadtown civilization marked economic advantages when compared with existing country and town.

Three of these principles may be stated as follows:

1. Transportation in all its phases is a growing factor in the cost of living.

2. The increase in volume and speed of transportation tends to distribute population in lines.

3. The prevalence of the present disjointed and wasteful scheme of the transference of ownership from producer to consumer depends upon the disjointment of the mechanical scheme of distribution and will disappear when the mechanism is unified.

The first proposition needs but little elaboration. It is the most evident feature of the growth of modern civilization. Not only is the increase of travel, especially the daily travel of the urbanite from home to business, and the carrying of solid commodities by rail, wagon and dumb-waiter to be considered, but water, gas, intelligence and all other pipe and wire conveyed commodities belong in the same classification. The Roadtown is the first type of dwelling or city that concedes to transportation the chief place in house planning and that makes it an integral part of home life, planning for not only present but future needs.

The second principle is to be seen plainly at work in the present distribution of suburban population. On Long Island, within three miles of Madison Square, is a large area of open ground while along the main line railroads leading out of New York City, almost solid city extends for thirty miles. The Roadtown is a concrete recognition of this tendency and depends for its efficiency on the fact that all service supplied by rails, pipes and wires can be more cheaply supplied in a straight line than in the ramifying or gridiron arrangement founded upon the scheme of distribution by horse drawn vehicles.

The third principle upon which the inventor of Roadtown lays stress is an outgrowth of the other two. When by deliberate planning we unite transportation and housing in the most economical form we find that the entire population will live upon the main line, where they may receive any goods or service from any other point on the line by a single mechanism of transportation. For illustration, the Roadtown gardener is in direct telephone communication with the other inhabitants of the line, including the co-operative cook shops. He can ship his truck directly from his own station to the consumer. It is hard to see where the three to five middlemen, who now get in between the truck grower and the consumer, and absorb from 40 to 60 per cent. of the profit, will find a foothold in Roadtown.

The logical outcome of the co-operative nature of Roadtown mechanics will be co-operation in Roadtown commerce. Tho many are in ignorance of the fact, millions of dollars' worth of farm produce is now marketed in this country co-operatively, and the amount is growing rapidly. The Roadtown will make co-operation the natural and simplest way for the distribution of publicly produced utilities and privately produced commodities.

The Roadtown with such co-operation would eliminate the principal evils for which socialism is proposed as a remedy, but by natural rather than legal means. The Roadtown requires no great political organization or revolution to make it a reality. If its co-operative feature embodies, as the inventor claims, such remarkable economies as to successfully compete with present industrial methods, co-operative Roadtowns will simply grow out from the cities and across the farms and our congested centers, competitive wastes and the private ownership of public utilities will come to an end as stagecoaches and muzzle-loading shotguns came to an end.

Until some one is able to show a flaw in Mr. Chambless's reckoning of human nature or the figures submitted by the engineers who have estimated upon the cost of the Roadtown we must accept the

endless house as one of the probable innovations of the near future—and a weird and wonderful innovation it will be, revolutionizing our entire commercial, social and artistic life.

New York City.

My Choice of Mays

BY E. P. POWELL

Author of "The Country Home," Etc.

I LOVE my Florida home—only that it has no spring. The oranges hang on all winter, and at the same time blossoms crowd the fruit. It is a noble sight; green foliage, as beautiful green as ever you saw; white bloom and golden fruit all together. Plums throw out their blossoms almost unnoticed, and the cherry trees stand in white, without a worshiper. Peaches, with that almost human blush of theirs, attract even less attention; for they are always in bloom—November, January, March and June are all one to them. But here at the North all the world cries out a welcome to the bursting cherry bloom. It is the dividing line between snowbanks and plowing days, shouting days, bonfire days, cowslip and anemone days.

What a fine thing it is to get out into the woods, for the first time, of a spring day, to find the first flowers and hear the brooks bounding off, carrying the last blocks of ice and snow. They will melt them to run the mill with. One should never grow old so long as he can feel the world recreating itself in the meadows and finding the springs of life hidden in the hillside glens. Dear little mouse ears and anemones, you preach immortality.

Yet I love the everlasting life of Florida; the perpetual summer, with edges of autumn. It does not know winter, and as for spring, it is so dovetailed with the other seasons that the birds sometimes mate at the wrong time, and all life is puzzled when to push out its new thoughts. The years have no New Years and Christmas comes while we are still picking oranges. No wonder the black folk celebrate it as they do the Fourth of July, with horns and firecrackers.

Day before yesterday the daffodils here in New York looked out from under the half-thawed hedge rows, to see the first bluebirds sailing over, with a clear cry of joy. It was too cool for my comfort, but I felt that the season of flowers and fruits had begun. I do not wonder that the poets love daffodils; they are so hearty and generous—split all open with their doubleness. Right over the snowbanks they hang their heads with a whole soulfulness that says winter is over and spring is here. Their doubleness is like a thick, warm hood, and indeed they need it.

That is the difference. New York has spring, and Florida knows nothing about it. Yesterday I walked among the tulips. It is a companionable flower, and there is nowhere else anything so given to blossom in proportion to the stalk. I think one or two tulips, or a dozen of them, look lonesome about the garden; but if you will grow half an acre of tulips you will see how they nod to each other all day and are happy. They are great ozone breeders, and one of your best works as a home builder in the country is to create good air. I have two thousand tulip blossoms at work for me each year and none too many.

Today I smelled lilacs. There are twenty varieties of them—all the product of art; that is, of brains and Nature. Here again one should have enough of them. A single lilac bush was well enough in our mother's days, but you know it soon got plucked bare and was every way lonely. Have a big group of them if possible, and, best of all, have them somewhere about the outbuildings; the barns where the cows are shedded and where associations of milk are too generally left to rubbish or worse. Create your stables among the warm-hearted flowers, the ozone breeders and health givers. Let the milk pail come in flavored with lilacs and mock orange. Ani-

mals like it, and the whole home feels the influence. Some of my lilacs are down by the brook in the pasture, for they are great drinkers. I found my first hen's nest the other day under a lilac bush. There were seven eggs in it, and I was as glad as I was when I found my capful of eggs in my boyhood days. Hens are wonderful workers, but the best thing about them is their knack of piling up eggs in odd places.

Always make the best of everything. I see so much of the second best and the third best; lilac bushes and folks alike. But a perfect lilac bush, fed generously, with plenty of elbow room, hanging all thru May with hundreds of clusters of bloom; the articulation of joy, why, that *is* something; and if you have a dozen sorts, full of bud and bloom, white and red and blue and crimson, double, semi-double and single, floating their perfume together in a song of vegetable Esperranto, why then you have something worth the while. I pity the man who tries to make a country home without the beautiful.

Tomorrow I will walk down the apple orchard, by the brook. The odor is better than that of the orange orchard, where I slept in March. Here again is health. I heard of a man who cut down his apple trees because he was tired of fighting his rivals, the moths and insects. He was whipped. He might at least have left the trees for the blossoms and the ozone. Every apple tree is a family doctor, and the blossoms at least we get without a contest. It is worth the while always to fight for what we have. Nature (God) knows what He is at; trying not only to feed us, but to create us, to make men of us. I do not envy the days when we got our apples by simply planting the trees (only really no such time ever existed, for seventy-five years ago we trimmed and we pruned and we grafted, and we had bad years and we made soul muscle by struggle; no other way ever was or will be). It surely needs the brains as well as the hands to make good apples, and I hope it always will. Our fathers whipped England, but they whipped a lot of other things, and, best of all, the tendency to loutness and enfeeblement. Old orchards were not degenerate affairs at forty years of age. I pick from two trees that are one hundred and nineteen years old; hearty old mothers of apples they are yet.

Next week I will walk in a garden of strawberries. There are thirty sorts, all named, and each one in its way is the best of all. There are cardinals and generals among them and Senators; each one doing his best for the good of his constituents as usual. I would like to be remembered by a huge and delicious strawberry. I advise you to have a strawberry garden, and every morning to take note of the new sorts as they crimson under the sun. Ah, what a delight it is to stroll up and down these aisles of Nature every morning before the dew is off. Better to have you also with me, my Gilbert, to tell who is who in the garden and where we shall dig out a sort as only good. There is one thing better in this world than all else, and that is a tested friend, and I advise you to grow a few as you do your strawberries. But if you have them, associate them well with your garden life. There is no reason why our living should be so close and so prosaic. Get a song into it some way, a bit of the melody with which Nature runs the world.

In Florida we have the daffodils and the strawberries, but not the tulips and the lilacs; only the berries ripen in winter, and that is not right, as any one can tell them. But hens cackle all winter in Florida, and bees work every month, altho they never seem to be in a hurry. I go by the hives, and they do not notice me. I have heard that, in time, they will forget to lay away a surplus, but not yet at least, for every one of the three hundred orange trees in my neighbor's orchard has a half a hive full of joyous workers. I think that with bees work is pleasure, as it is with a few of us. But in my Northern garden the bee is first to note the oncoming of spring, and it would seem very unnatural not to find him of a warm day tumbling about for exercise like a schoolboy and sucking every maple chip. Half of the fellows never come home again, for March is tricky.

The birds also! For here at the New York end they are home builders, and they are sweeter singers. There is no comparison between the mocking bird

rattling all his conceits and his cousin, the catbird, putting into music his domestic loves and cares. It is with them as with us, that the homeless are songless. A man or a woman without a family needs to be born again; in his soul is only silence. In Florida the cardinal bird would begin the March day, over in my neighbor's orange grove, with a-wack, a-wack, a-wack. After a while he would come over into my pines, with get-up, get-up, get-up. What the fellow really meant I cannot say, only it sounded like a broad hint (to some of my friends, of course) to get out of bed and wait on the morning.

It is astounding how much on these yellow Florida mornings will turn up to be done. The weeds have grown an inch above the melon hills; that would mean six inches a week. A-wack, a-wack, a-wack; get-up, get-up, sure enough, and take the hoe. Trees must be trimmed, for they are on the jump, and the beans climb their poles like boys going up apple trees; they must be tied. Strawberries must be picked for breakfast. Dear me, what would Nature do without you and me?

The quail leads his family thru the grasses, calling bob-white, bob-white, and the wood doves, two and two always, flutter up, with only a mild alarm, for they are learning that with me they are safe. I hate a man who will kill a useful bird, and despise a woman who will wear bird plumage. In fact, the man with the gun is only the savage and a dangerous neighbor. Our blessed robins are protected in Florida, but when they come across some of the Middle States they are mercilessly slaughtered. We need a *national* game law for our birds of passage; an Interstate Commission to preserve for us our most useful allies.

At the North birds and bird life are different. The robin no longer chaffs about one thing and another, in the bayheads and pine groves, but comes to your lawns and your doors. He and his mate are building in the vines over my window. All summer I shall have personal fellowship with my catbirds, and I am half inclined to grow a little fence corner full of bull thistles, just to make the goldfinches happy. That is asking a little too much, however, and instead they shall have some more columbine seed. Let us live to love, and then we shall love to live.

I like Florida, because you can go anywhere without roads. "Yaas, suh. Roads ain't necessary, suh. It's monstrous nicer to go under the trees and have shade everywhere." This is not to save time, for of all things the negro cares least for clock ticks. It is the shade he cares for and the general feeling of freedom. Fences do hem us in wonderfully and police all our movements. Of all races the African most dislikes restraint. He is a believer in the happiness philosophy; it is ludicrous, in comparison, to see our Saxon folk trying to be happy. Our hymns are monstrously lugubrious. The negro's religion is positive and present bliss; our is only a hope for bliss hereafter. "Yes, suh, Mr. Powell," says my colored teamster, "we believes in shade and in sunshine, bof of em, suh; but we don't hanker after goin' two miles to get a watermillion, in the sun, 'tween two fences, when we can jess as well get em by goin' one mile in the shade."

Yet I have gone on building fences, mostly from Yankee instinct; shutting out range cattle and getting rid of the cattle tick; doing everything possible to make the razorback unhappy, purely from the economic standpoint. It simply does not *pay* to be savages. But does it pay to make ourselves uncomfortable with restraint? After all, is there anything better than to find out the world which is about us? It seems to me this is the real business of life, to find out everything we can of what is going on within the range of our senses. When I take this viewpoint I am not quite so *sure* that a moderate savage has not the better of us. Perhaps it depends on the degree of civilization. Over civilization, that cuts out all the natural, is responsible for a deal of human waste.

In a world of cherries and wild strawberries. what can one say pleasantly of a twenty-five foot front city lot and a life hemmed in by a house of planed boards, nailed and lathed and plastered, adding the latest pattern of wall paper? Maybe a social pittipat compensates somewhat for this sort of prison life, and maybe a few holidays, and a pew in the church, three feet by seven, make up for the re-

ligion that finds God in the groves and hears a sermon in the brooks. Maybe you are content with those formal calls that you exchange with formalized neighbors; and have never heard God call you, somewhere in the chambers of Nature, as he called the beautiful boy Samuel. You need not call to account the genuineness of this voice; for neither you nor I know what a perfect human organism can hear, or what, by and by, human folk will be able to see; only the bondage of ordinary social life is something pitiful.

Florida, as generally seen, is of little value either for pleasure or health. A wise lady said to me: "I dread tourists. Of all people on earth the professional tourist sees least. The tide runs Southward, and then again Northward, a good deal as the crowd runs at a State fair—from the biggest pumpkin to the fastest horse. The people know them, and pluck them finely with show resorts, show accommodations and show prices; and they go home knowing nothing of the land." With her I hate a hotel that only gaps for the human tide and is itself identified with rush and flow. Its numbered cells, where they send you for the night, are undeniably a trifle larger than those at the station house or the jail. I wish rather to pay for rest, for peace, for honesty and for good will. In fact, I cannot see any connection between the tourist hotel and Florida.

It is a pitiful lot, to live on the outer rim of life, and to discover, possibly, that your real knowledge of the universe is no greater than that of your collie or your Morgan. I was stooping in my garden, and saw a very tiny ant, one of those bits of anatomy that you wonder survive at all. This infinitesimal marvel was killing the larva of a beetle as tiny as himself. For half an hour he dodged the limbs of his rival, but had him at last ready for portage. To the ant the universe was the diameter of an inch, within which lay his life work, his heroism and his history. Our own lives are only relatively larger, mainly because the schools refuse to educate the senses. Instead one must load his skull with tabulated facts; and he is educated when the garret is full.

If you want peace and rest, not show or pretense, central Florida gives you more of it, out of tourist range, among hills and small lakes, than any other spot on earth. I do not go to Florida for the hotels and the crowds, but for the pine woods and the orange groves and the gardens filled with wild flowers, just as God planted them "eastward in Eden." I love New York for its progress, its improvements, its science in orchard growing, its stock laws and its general up-to-dateness. I love Florida for its wildness and its primitiveness. We have been going ahead so fast since my boyhood it is delicious to deliberately turn back and try it over again. The other day a man with a telephone came to my door, and I let him fasten his novelty in my study. He assured me that I would find it a great thing, for I could talk with my neighbors and call up the stores. I suppose we will soon have our telephone tea parties.

But in Florida May is lost among the months. Its natural work has already been done by its predecessors. It has no one specific and beautiful place among its fellows. Here in New York it is a month of promises, when the bosom of the earth is bared to seed. The mosaic which constitutes a happy home and a prosperous year lies everywhere ready for use. There are infinite pieces, and much depends upon how we put these together. A big May Duke cherry tree wraps my balcony in its loving arms and is pushing its blossom clusters into my hammock. I am not a Japanese to worship cherry flowers, but God in the cherry tree and in all that it gives to me or pledges is very near. My May Duke will soon give me big bunches of crimson fruit, instead of white blossoms, and after that will come the consumer's check, but all the time the best part will have been what has gone into character, as love and life. *Just now* I love best New York.

CLINTON, N. Y.

Literature

Spring Fashions in Fiction

THO it is too early yet to determine this season's particular fad in fiction, it is safe to say that *The Tower of Ivory*[1] was cut after last year's styles. Mrs. Atherton's books are too intelligent about their morals. Not that the characters in them have any, but they harass the reader, playing hide-and-seek with the possibility that since they know what decency is, they might develop some. This is the story of an illicit love in a Baedeker setting. The scenes are

[1] TOWER OF IVORY. *By Gertrude Atherton.* New York: The Macmillan Company. $1.50.

GERTRUDE ATHERTON,
Author of "The Tower of Ivory." (Macmillan.)

laid partly in Munich and partly in England. The heroine, an American, is a woman of the streets who has become a great prima donna and the idol of opera-loving Munich. The hero is the younger son of a noble English house, and is a vague and indolent character, the plaything of the women and the gods. The victim is his young American wife, whom he marries for her money and then sacrifices upon the fires of his passion for the prima donna. The story revolves around the fierce ardors and recoils of the heroine and the esthetics of the author. Margarrethe Styr is one of Mrs. Atherton's typical lurid women, who, if she were translated into the animal world, would be a cross between a hyena and a panther. After thirteen years of dissolute life she suddenly discovers a mind, a voice and a disgust for her present mode of life. She goes to Germany and becomes great thru her voice and virtuous thru social retirement and a moral deodorization which is very carefully explained to us by this astute novelist. But, with the appearance of John Ordham, the young Englishman, her tower of virtue is shaken and it is only the blanket of her reputation as a singer that conceals the fact that she reverts to the woman of the streets. When, in the end, as she is about to yield to Ordham, she commits suicide, the reader feels that it is the moral triumph of the artist and not of the woman.

WARRINGTON DAWSON,
Author of "The Scar."
(Small, Maynard.)

The story drags with long accounts of the Wagnerian operas as presented by the heroine; with dissertations upon Rossetti and Burne-Jones, and with descriptions of house furnishings and toilets that would do credit to a column in some society journal. The reader has the peculiar sensation that everything in the book gradually becomes lithe, languorous and intense, and that every person wears some lotus flower of evil. Before Mrs. Atherton writes another novel she should treat her characters for over-developed senses and undeveloped ethics.

With the next books the evergreen of sectional antagonism and the negro problem has put out new leaves. The author of The Scar[2] had a nightmare about the South, mistook it for a vision, and wrote a book. The romance of the story is a blank sheet upon which he automatically throws pictures of the horrors of the "new South" as he conceives it. A scheming Northern girl comes South, marries into a poverty-stricken Southern family, and then finds it impossible to adjust herself to circumstances. A dingy succession of misfortunes and disgraces follow. Mr. Dawson was evidently obsessed by the title of his book. The men of the story are futile hookworm heroes or villains, either incipient or advanced. The women are viragos and adventuresses, now and then lighted by some pallid candle character whom the author presents as a type of gentle Southern womanhood. This writer has been guilty of too much literary license within a limited area.

Octave Thanet, in *By Inheritance*,[3] takes the same problems as those of "The Scar"—Southern poverty, sectional prejudices, and the negro—but she throws over them a humorous tolerance and a gilding of dramatic romance and adventure which will give the veracity of her book the proper flavor for both Northern and Southern intellectual palates. It is the veracity of such books that usually makes them unpalatable. She emphasizes the educational feature of the negro problem in the person of a young negro graduate of Harvard. He is the *protégé* of a Northern white woman, whose conscience repressed in her all instinctive thoughts of race superiority until she came South. Once in that section, however, she finds that the social and moral creed of generations of

[2] THE SCAR. *By Warrington Dawson.* Boston: Small, Maynard & Co. $1.50.

[3] BY INHERITANCE. *By Octave Thanet.* Indianapolis: The Bobbs-Merrill Company. $1.50.

Southern whites is stronger than her conscientious scruples. When the young negro comes South his benefactress has by that time yielded to the code, and is unable to receive him socially. Thereafter he becomes the Ishmael of the story, neither one with his own race nor with the white. His gradual awakening to the fact that academic education has unfitted him for life in that environment forms the chief interest of the story. The unusual feature of this book is that both hero and heroine are negroes—the man intellectually educated and a pariah, the woman industrially educated and beloved by both blacks and whites. In spite, however, of its problematic nature, the novel is primarily dramatic. Each incident is a small drama imbedded in Southern scenery and romance.

FRONTISPIECE OF "BY INHERITANCE."
By Octave Thanet. (Bobbs, Merrill.)

Lost Face[4] is a collection of stories written in Mr. London's familiar vein.

[4] LOST FACE. *By Jack London.* New York: The MacMillan Company. $1.50.

The scenes are laid in the savage Northwest of which he is the inimitable painter. He inclines to Promethean situations of suffering and cruelty, of which the first story in this series is an illustration. A trader is about to be tortured to death by the Indians. By a clever ruse he escapes the torture and obtains quick death. A succession of such stories, in which suspense and physical agony play a large part, follows, with one exception. "Spot" is one of Mr. London's dog stories that never fail to excite interest and sympathy. It is a notable fact that this author may tell many significant tales about men with a streak of dog in them and become tedious to the reader, but when he tells about dogs with a streak of man in them the reader

MISS MIRIAM MICHELSON,
Author of "The Awakening of Zojas."
(Doubleday, Page.)

follows him with enthusiasm. Mr. London's genius lies in canine psychology.

The essential note of variety has been struck in this collection of four stories by Miriam Michelson. *The Awakening of Zojas*[5] is a scientific adaptation of the Rip Van Winkle legend. Dr. Rossi, a famous scientist, believes that he has discovered a sleeping draft by which a man may pass the various years of his life in different decades of history. He administers this to young Zojas, who awakes a hundred years later amid conditions and events with which he is entirely unfamiliar. It is an interesting point in the story that one hundred years before Zojas had been a lawless highwayman. On awakening he becomes the leader of a revolution. Of the three remaining stories, the most vivid in both narrative and descriptive coloring is the Norse story, "The Cradle."

Little Brother o' Dreams[6] is a fragrant idyl of a child with the beam of poetry in his mind. It is a delicate score of idealism too difficult for the average child to hear and too aerial for the general public.

Social England

One of the direct results of the great and increasing attention which has been given in England in the last ten years to social conditions and their amelioration has been a stimulus to historical research into social conditions in other centuries; and a remarkably good example of the valuable and scholarly results that are accruing in Mr. A. Abram's *Social England in the Fifteenth Century.*[7] From many points of view the fifteenth century stands out prominently in English history. It witnessed the breakdown of medieval institutions and ideals. Feudalism was weakened but not destroyed; for from many aspects England is still a feudal country with the House of Lords as the barrier against democracy. The fifteenth century, moreover, saw almost the ending of serfdom, which was followed by the rise of the yeomanry in rural England, and of a prosperous and wealthy class in London and the large towns made possible by an increasing domestic and export trade. The flocking of people from the country to the towns also had its beginnings in the fifteenth century; and the century more than any preceding one was essentially a century of political, religious, economic and social change. The materials for its historical study are scant and fragmentary and widely scattered, and when unearthed they do not

[5] The Awakening of Zojas. *By Miriam Michelson.* New York: Doubleday, Page & Co. $1.50.

[6] Little Brother o' Dreams. *By Elaine Goodale Eastman.* Boston and New York: Houghton, Mifflin Company. $1.

[7] Social England in the Fifteenth Century. A Study of the Effects of Economic Conditions. *By A. Abram, B. A.* New York: E. P. Dutton & Co. Pp. xvi, 243. $1.

cover the whole of England or touch all the aspects of national life as amply as could be desired. Fifteenth century municipal records have not been drawn upon by Mr. Abram as fully as was possible; otherwise there might not have been the gaps there are in *Social England in the Fifteenth Century,* as regards the housing of the laboring classes and the licensing system when that system was administered by the municipal authorities and free from any supervision from the central government. But with this exception all that there is in print has been drawn upon by Mr. Abram with completeness and care; and the result is the best book, as yet published, which is concerned with economic and social conditions in the fifteenth century.

The aim which Mr. Stephenson set before himself in writing his book about *The Elizabethan People*[2] was to supply a framework for Shakespeare and his plays—to show the humanity of Shakespeare, with all the weaknesses, the credulity and the faults of his age, as well as with its splendid virtues and its heroic spirit of adventure. And it must be freely acknowledged that Mr. Stephenson has succeeded in his aim, and that a reading of his book will give the student of Shakespeare's plays abundant new light and new insight into the meaning of many difficult and almost incomprehensible passages, as well as a new realization of the many-sidedness of Shakespeare's genius. But the value of Mr. Stephenson's book is not confined to Shakespearean students. Mr. Stephenson has made a thoro search in the literature of the Elizabethan period, and while his book makes no claim to be a complete sociological study; from contemporary plays and pictures, from buildings and museum collections—from every source which can appeal to eye and imagination, he has built up for his readers a very full and detailed picture of the outward life of the Elizabethan people—their dress, their houses, their furniture, their domestic life, their indoor and outdoor amusements and sports, their holy seasons and holidays, and the ceremonial observances that marked the great occasions of life and death—baptisms, marriages and funerals. With the most serious problems of national and social life, Mr. Stephenson is not concerned. He does not touch upon the political life of the age, nor yet upon the religious, except to describe some of the ceremonial, religious observances. The great mass of workers, rural and urban, are little regarded in his pages, tho he gives some description of the housing and clothing of the poorer, as well as of the richer classes, and he also describes the sports and pastimes of the peasantry. Most of his chapters are taken up with the appearance and habits of what would now be called society of the Englishmen and women of the class of Raleigh, Drake, Frobisher and the other splendid Elizabethan adventurers. The Elizabethan men and women—especially the men, for the women of the present day are not so far behind their foremothers—exhibited a heroism in the bearing of discomfort and torture for the sake of correct and fashionable attire which it would be hard to find equalled nowadays, when the wearing of a hard shirt front and an inordinately high and stiff collar is all that fashion demands of discomfort from modern man. In the days of Queen Elizabeth, a man's courage was put to a severer test. "His garments were stiffened and stuffed till the wearer could not move with any comfort. A man in full dress was laced from head to foot. His doublet was laced or buttoned in front. The sleeves were often laced to the armholes. The doublet was laced to the hose. The hose was laced. Sometimes even the shoes were laced. A man could not dress himself without assistance." Worse still were the ruffs which are always associated with Queen Elizabeth and her courtiers. Mr. Stephenson tells of ruffs that contained eighteen or nineteen yards of linen. The depth was from a quarter to one-third of a yard. "Imagine," he writes, "the head of a man or woman like the hub of a cartwheel firmly gripped in the midst of a mass of starched linen extending a foot on all sides!" It might seem that Englishmen and Englishwomen could have found

[2] THE ELIZABETHAN PEOPLE. *By Henry Thew Stephenson.* New York: Henry Holt & Co. Pp. xi, 412. $2.

neither time nor energy for anything except to don and wear their clothes. Yet it must be remembered that this was in the days of Queen Elizabeth—the days of England's greatest achievements—and that these excesses in dress must have marked only the exuberance of that energy which was building up the great English speaking peoples of today.

Strictly Business. By O. Henry (Sidney Porter). New York: Doubleday, Page & Co. $1.20.

The fourth series of Mr. Sidney Porter's (O. Henry) stories of the Four Million, is published under the title *Strictly Business.* The author may make a Thousand-and-One-Nights tale of New York before he is done with it. Apparently any three or four people in

O. HENRY,
Author of "Strictly Business." (Doubleday, Page.)

the Greater City are enough to furnish a new story for O. Henry. There are signs of haste, however, in his latest volume, and the hurried craftsmanship conceivably may carry out the implication of the title. "The Day Resurgent" rebukes any such ill-natured criticism; for it is a tender story of Easter in the heart of a big Irish drayman, as he painfully reads the "History of Greece" to his blind old father on his only holiday of the week. "A Municipal Report" is a gruesome tale of Nashville, in answer to Frank Norris's challenge: "Fancy a novel about Chicago or Buffalo, let us say, or Nashville, Tennessee. There are just three big cities in the United States that are 'story cities'—New York, of course, New Orleans and best of the lot, San Francisco." Since San Francisco has become the "City that Was," it is well for O. Henry to discover a new hunting ground for the imagination as he does in this grim story of Nashville, which he ends dramatically with the words: *"I wonder what's doing in Buffalo?"* It is in such eldritch turns that O. Henry's power consists. Mingled with the cleverness is a deeper wisdom of love for human beings as they are which makes the rarer merit of many of his tales. "Psyche and the Pskyscraper" begins:

> "If you are a philosopher you can do this thing; you can go to the top of a high building, look down upon your fellow men 300 feet below, and despise them as insects. . . . But if your name happened to be Daisy, and you worked in an Eighth avenue candy store and lived in a little cold hall bedroom, five feet by eight, and earned $6 per week, and ate ten-cent lunches and were nineteen years old, and got up at 6.30 and worked till 9, and never had studied philosophy, maybe things would not look that way to you from the top of a skyscraper."

It is his union of the views of the philosopher and that of Daisy which is the unique gift of O. Henry, and which makes some of his stories better than the fantastic farragoes of slang and insight, adventure and irresponsible fooling that pad out his books. If they live, it will be because of the few stories like "The Day Resurgent."

The Faith Healer. By William Vaughn Moody. New York: The Macmillan Co. $1.25.

Mr. Moody has followed his successful play, "The Great Divide," by *The Faith Healer.* It dramatizes the strange history of Francis Schlatter, that singular prophet who appeared in the West about eighteen years ago, and performed many cures thru faith in his supposed miraculous powers of healing. Crowds of people flocked to him bringing themselves, their sick and even handkerchiefs for him to bless. Marvelous cures were reported. When suddenly declaring his mission ended he disappeared in the mountains. His body was reported to have been found some time later lying alone where it had fallen. Whether he escaped from the

crowd for rest and further spiritual vigils in the wilderness, or whether, having lost faith in his powers he fled in despair, will never be known. With such a theme much was expected of Mr. Moody's drama. We cannot say that it is a great play. Expectation has been disappointed, in spite of the literary finish of the dialog. The action halts and falters, the bewildered prophet comes on the stage too near the end of his career; he should have been shown in the fullness of his triumph over disease with an acclaiming crowd pressing about him—then the subsequent failure and disappointment would enlist the sympathy of the reader or hearer more keenly. Altho the play ends with a sort of hope, a "new sweetness in the air" of souls redeemed and turning shining faces to greet the Easter dawn, one cannot shake off the impression of failure given in the second act and most of the third. And we feel that the most has not been made of a great theme and noteworthy dramatic material.

A New History of Painting in Italy from the Second to the Sixteenth Century. By Crowe and Cavalcaselle. Edited by Edward Hutton. Vol. III. The Florentine, Umbrian and Siennese Schools of the Fifteenth Century. New York: E. P. Dutton & Co. $5 net.

This third volume of Mr. Hutton's scholarly edition completes the reissue of a famous and standard work on Italian art, which has long been out of print—and provides that work in a handsomer form than it has ever had before. The first of this new edition's excellencies is the retention of the original text verbatim; and that is supplemented with a sufficient mass of notes to correct mistakes and add such information as is necessary or really desirable. While these notes make no attempt to embody the enormous bulk of critical writing on Italian art that has appeared in the last half-century, they are fairly encyclopedic of modern opinion on the subject; and they have been gathered from the most trustworthy sources and represent all schools of criticism. They have not been permitted to encroach upon the text, but they do add materially to the value of the book by supplying a summary of the opinions of modern art critics and archeologists on disputed things and a full statement of important discoveries made since the book was first published. The providing of a well-printed and well-made, ungarbled, and not over-encumbered "Crowe and Cavalcaselle" is a praiseworthy achievement. The illustrations are generous in number and for the most part fairly satisfactory in reproduction.

The Divine Minstrels. A Narrative of the Life of Saint Francis of Assisi with his Companions. By Auguste Bailly. Translated by Ernest Barnes. New York: Charles Scribner's Sons. $1.25 net.

This charming story of St. Francis, into which is woven, as a delicate thread of gold, the romance of two of his adherents, gives vivid and sympathetic pictures of the activities, burdens, and aspirations of the great saint during the last few years of his life. The poetic and appreciative descriptions of nature and the portrayal of the life of the common people with their changing enthusiasms and eager acceptance of the marvelous, furnish an agreeable background for the presentation of the childlike simplicity of Francis, his devotion to his ideal of poverty, and his love for all of God's creatures. In Francis's association with his companions and in his relations with Clara and the lovers who take vows to stifle their love, the author finds avenues by which to lead us into the depths of the saint's heart, and show us the secret of his power over others. The restrained and almost incidental narration of the culminating scenes in the lovers' history leaves much to the imagination, but the presence of this living human passion gives the story a keen and unbroken interest. The material make-up of the book is fortunately in keeping with its literary qualities, the flavor of which has not been lost in the translation.

Great Issues. By Robert F. Horton. New York: The Macmillan Company. $1.50 net.

Dr. Horton has been for a generation one of the foremost leaders among the English Nonconformists. He has done much to popularize the results of biblical

criticism and create in religious organizations a responsive attitude toward modern thought. In reading *Great Issues* one feels that it is in this work of mediation that Dr. Horton excels rather than as an original thinker or investigator. In a dozen essays he discusses such varied themes as "Myths," "Socialism," "Art" and "Death," always treating his subject with seriousness and intellectual distinction, but never with the penetrating insight which adds to the sum of human knowledge. His attempts in the latter direction and his excursions into such unaccustomed fields as that of "Art" show clearly his limitations. The author's wide reading and long association with many leaders of thought, his moral enthusiasm and command of a forceful English style are everywhere apparent in his book. One almost hesitates to add, what nevertheless is very evident, that Dr. Horton has not kept pace with advancing thought, and the aforetime liberal is again entangled in the yoke of a conservative bondage.

India. Impressions and Suggestions. By J. Keir Hardie. New York: B. W. Huebsch. $1.00.

Mr. Hardie traveled for two months in India in 1907, investigating the condition of the people and the workings of the British administration. What he tells is not to the credit of Great Britain. He finds the condition of the people "one of perpetual, hopeless, grinding poverty." The native rulers often extracted all they could from the peasant; but the methods now employed rob him of his last cent and keep him in abject destitution. The average income of the Indian population is $10 per year, against $55 for the Russian, $195 for the American, and $210 for the British. Not less than 75 per cent. of the harvest yield goes up in taxes. Formerly taxation was based on product, now it is a fixed sum. Great Britain has about two and one-half billion dollars invested in India, the interest on this sum, at 5 per cent., amounting to $125,000,000 yearly, going mostly to non-resident investors. Education is far less common than in the older days, not more than five million children, out of a population of three hundred millions, attending school. Three cents a head yearly is spent on education, against 24 cents a head on the military establishment. The natives are constantly discriminated against in the civil service, none of the higher places ever being given to them. The color line is sharply drawn, and the natives are subject to frequent insult and oppression. At the time of Mr. Hardie's visit the air was full of the talk of sedition, but the author found no valid evidences of plotting. He found the great bulk of the natives of all classes loyal, but restive under constant injustice. A savage rigor was shown in punishing alleged sedition, most of the sentences being totally unjustified. The Swadeshi movement, in behalf of supporting Indian industries, is spreading. It was at first encouraged by some of the British officials, but has come to be looked on with suspicion. One who has had his fill of accounts of British beneficence in India might well read Mr. Hardie's little book for a strong statement of the other side.

Idealistic Beginnings in England. By John Pickett Turner. New York: A. G. Seiler.

Dr. Turner's interesting monograph had its inception in an inquiry as to the meaning of the term *imagination* in earlier English philosophers. It traces the *idea* from Hobbes thru Locke and Berkeley to Hume, and gives the exposition with clearness and conciseness. The style is felicitous and the matter valuable to the general reader to a degree not often found in doctors' theses. In Hobbes the author finds the precursor of the modern physiological psychologist. Mind is a moving sea of images to both; and philosophy seems to have swung away from the naturalistic interpretation to the idealistic, with Berkeley as its extremest protagonist, and has now returned upon itself to the starting point. Hobbes, hated most heartily in his day, would find sympathy and agreement among present-day psychologists, if not among sociologists, who, as a rule, discredit his theory of a "social contract." The chapter on Hobbes in the present monograph is especially interpretative; and the whole discussion is worth the reader's attention, whether he be a philosopher or simply a thoughtful man.

Literary Notes

....Messrs. Harper & Bros. have begun the publication of a thin paper edition of the works of Thomas Hardy, which cannot be too heartily recommended to the lovers of the novelist, to whom he will be more of a companion than ever before in these well-printed little volumes, simply and attractively bound. (Small 12mo, cloth, $1.25 per volume.)

....In his collection of *Essays in Pentateuchal Criticism* (Bibliotheca Sacra Company, Oberlin, Ohio, $1.50 postpaid), Mr. Harold M. Wiener seeks by a display of superior learning and wisdom to discredit the results of higher criticism. The author's legal studies (he is a London barrister) seem to have produced a good cross examiner, but a poor judge.

....If you are considering the purchase of a horse *The Encyclopedia of the Stable*, by Vero Shaw (Dutton, $2.00), will prove a valuable guide. Telling age by the teeth, the main faults in horses to guard against, and the methods of concealing faults are adequately treated. There is much also of general interest to the horse owner. The book is profusely illustrated.

....Following her handbook on *Home Nursing*, issued thru the Macmillans in 1905, Miss Eveleen Harrison has now written a book under the title of *A Jeweled Crown*. (Gospel Publishing House.) In it she has taken twelve gem stones or jewels and given something of their folk lore as birth stones, cited scriptural quotations regarding them and has skilfully cast the whole into story form that makes a strong appeal to children. ($1.)

....Biblical students are familiar with Prof. Wilhelm Bousset's "Jesus," one of the best recent sketches of the life and teaching of the founder of the Christian religion. Another essay by the same author now appears in English, *The Faith of a Modern Protestant*, translated by F. B. Low (New York: Charles Scribner's Sons. 75 cents net.) It describes and defends the Christian belief in God as intelligent and informed men of Protestant heritage cherish that faith, and sets forth with compelling reasonableness the life consistent with it. Men of the type of Professor Bousset cannot be accused of unbelief, or of any lack of devout religious conviction, however their faith may diverge from the forms current a few generations ago and still dominant in the orthodox confessions of Protestantism.

....The third and fourth volumes of the serviceable series of "Masters of Literature," which aims at giving in handy volumes the finest passages from the writings of the greatest authors, are devoted to *Defoe* and *Carlyle* The Defoe volume is edited and provided with a biographical and critical introduction by Mr. John Masefield; Mr. A. W. Evans renders the same service to Carlyle, and both introductions are not the perfunctory, conventional hack work all too common in books of this kind, but scholarly essays well worth reading. The selections are made with skill and understanding. As guides to some measure of general knowledge and understanding and appreciation of the abounding treasures of literature, the volumes of this series deserve commendation. (Macmillan Co., 8vo., each, $1.10 net.)

Pebbles

MOST of the terrific political noise in this country is due to an attempt of the fools to educate the wise men.—*Atchison Globe.*

DEGREES OF CRIME.

"Suppose I stole a kiss?" he asked,
"One teeny, weeny kiss?"
"Why, that were petty larceny!"
Replied the blushing Miss.
"Suppose I stole a thousand, then?"
He took her little hand.
She caught her breath and murmured "Oh,
Of course that would be grand!"

—*Walter Pulitzer.*

THE ANTIS.

SHE was an Anti-Suffragist, from somewhere up the State,
Who thought it was her duty to offset the coming fate,
So, altho she was a spinster, she went lecturing here and there
On "Wife and Mother, Home and Child, the Nursery, and Prayer."

Another of the Antis—a mother of thirteen—
Saw Votes for Women coming and stepped boldly on the scene;
She packed her little carpetbag and went from Troy to Rome,
Just preaching to creation that "A Woman's Place is HOME!"

And there was still another—with a husband meek as sand—
She used to tell the neighbors "she could train him with one hand!"
She said "he didn't know as much as their old Texas mule,"
But the text of all her lectures was, "Wives, Let Your Husbands Rule!"

The next one was a widow who would gladly wed again;
To her the weighty question was not altogether plain;
But thruout her lengthy lecture all the subject matter ran
That she wouldn't vote for women, but she would vote for a MAN!

The last had done the housework and the farmwork all her life,
Altho there was a farmer and she was this farmer's wife.
She'd churned and hayed and gardened, paid the taxes, saved the farm—
But she lectured on "The Comfort of a Man's Protecting Arm!"

—*New York Times.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Vice-President Sherman on the Tariff

SINCE the Administration began to be disturbed by the irritating activity of the insurgents it has not always been fortunate in those appointed to defend it before the people. Republicans in Congress who represent the Middle West's protest against the Payne-Aldrich tariff have sharply resented those remarks in which, as it seemed to them, Attorney-General Wickersham sought to read them out of the party. The main cause of insurgency is the Payne-Aldrich revision. That it is also the cause of losses already suffered at the polls, and that it promises to make great additional losses hereafter, has been shown by two recent elections in Congressional districts. The political situation should teach representatives of the Administration that the tariff question ought now to be handled with caution. But it has no lesson of that kind for Vice-President Sherman.

It was in St. Louis that Mr. Sherman, last week, made a public address which was designed to be a kind of "opening gun" for the approaching Congressional campaign. Going boldly into that part of the country where insurgency thrives and the Payne-Aldrich revision is intensely disliked, he not only sought to defend the new tariff by ascribing to its influence the return of prosperity, current increases of wages, and the high prices of food, but even suggested that the duties ought to be made higher! Having commended the new law because this year's customs revenue is greater than last year's, it occurred to him that the increase of tariff receipts must be due to an increase of imports. "With the increased volume of employment that has come with the new tariff law," he remarked, "and the great increase of wages and the consequent purchasing power, has come an ability to absorb these imports." But ought we not to keep them out by making the tariff wall higher?

"So long as this condition of affairs continues, and because the increased importation gives the necessary revenue to meet the expenses of the Government, we may sound no cry of alarm. But would it not be well to examine closely into the matter of increased importations and to consider whether, when we again revise the tariff, it will not be necessary to check a sentiment for downward revision *and perhaps instead resort to revision upward in some schedules?* While I do not advocate an immediate revision of the tariff, and do not advocate necessarily that when the revision is made it shall again be upward in every essential, yet I do wish to put myself on record as insisting that it is the duty of the business men of this country to scan closely the increasing imports and see whether it would not be wise to protect a little better our own labor and industries. If we do not anticipate and prepare, if we open the customs gates too far, then we shall invite and shall have an avalanche of foreign goods that will close our mills and drive our laborers to idleness. Then will wages and prices fall and, compared to the consequent calamity and disaster that will follow, the depression of 1893-96 will be as a summer shower compared with an equinoctial storm."

At the same time the Treasury Department was showing that the increase of imports was mainly in materials for manufacture. As the figures for the eight months ending with February disclosed an average ad valorem rate of 43.07 per cent. on dutiable imports, against 42.84 for the corresponding months of 1907 and 1908, under the old tariff, they indicated upward revision, altho the addition was not enough to support Mr. Sherman's theory that it accounts for the return of prosperity, the recent increase of wages, and the pay-

ment to farmers of "the highest prices ever received by them."

Probably the Vice-President gave expression to his convictions, and he has a right to do so. But some friend whose opinions he respects ought to tell him that he does not promote the interests of his party by sounding such a "keynote" in the Middle West, where so many Republicans protest against the Payne-Aldrich revision.

The course to be taken by the Administration, if it desires to conciliate the tariff insurgents without openly repudiating the revision which it has so warmly commended, is to insist upon a prompt and thoro inquiry by a competent commission concerning the costs of production here and abroad, and to say that it seeks, by means of the information thus to be acquired, to shape the tariff in conformity with the Republican national platform. Those who speak for it in public addresses merely intensify the menacing opposition of insurgents when they point to high prices as a blessing, ascribe to the influence of revision those increases of wages which have been granted merely to aid workmen in carrying the burden of high prices, and talk about the need of still higher tariff duties for the exclusion of imports.

We are glad to know that the Republican majority in Congress is now willing to make the appropriations required for a tariff commission's work, and to give explicit authority for an investigation concerning the difference in costs of production. The money should be granted promptly, and the inquiry should be undertaken without delay.

A Temple of Friendship

LAST week, Tuesday, the new building of the International Bureau of the American Republics was dedicated at Washington, D. C., in the presence of a great and most distinguished assembly, including the foreign diplomats, the President of the United States and representatives from all the co-ordinate

THE PAN-AMERICAN BUILDING.
The $750,000 Gift of Andrew Carnegie to the Republics of North and South America. Dedicated April 26, 1910, at Washington.

branches of the Government. The building marks a new era in the development of Pan-American concord, comity and commerce.

The Bureau of American Republics is the outgrowth and executive branch of the Pan-American conferences founded twenty years ago by James G. Blaine. The conferences meet every five years and already have held sessions at Washington, Mexico City, Rio de Janeiro and this summer at Buenos Aires. The bureau is the only official international organization upon this hemisphere. It is controlled by a governing board composed of the diplomatic representatives in Washington of the twenty republics and the American Secretary of State, who acts ex-officio as chairman. The Director of the Bureau is appointed by this governing board and not by the President of the United States. He is therefore in all respects an international officer. The bureau is financed by all the republics, the United States now contributing $75,000 a year. It handles every day an enormous mass of correspondence, principally in regard to Pan-American commerce and industry, and publishes an exceptionally well edited *Bulletin,* in English and Spanish editions, which spread broadcast information concerning the progress, resources, possibilities and characteristics of all the New World nations. The bureau also issues numerous special reports, maps and handbooks, while its Columbus Memorial Library numbers some 18,000 volumes. Its large staff, consisting of translators, statisticians, compilers, clerks, etc., are all experts in international affairs.

Except in the establishment of the Hague Peace Palace, not yet completed, Mr. Carnegie has never given his money to embody in concrete form a greater ideal than in this Pan-American Building. As Secretary Root, who suggested the idea to Mr. Carnegie, well said when the cornerstone was laid two years ago:

"Many noble and beautiful public buildings record the achievements and illustrates the impulses of modern civilization. Temples of religion, of patriotism, of learning, of art, of justice abound; but this structure will stand alone, the first of its kind—a temple dedicated to international friendship."

We print a photograph of the front of the building this week. The reader can see that it has noble lines and is in all respects worthy to be the permanent capitol of the New World. Tho not the largest or costliest building in Washington, it is without question one of the most beautiful. Its dignified location, a few blocks below the White House, with abundance of surrounding lawn space and a fine view of the Potomac Park and river, is unsurpassed. It is as spacious and beautiful within as it is imposing without. In the center is a typical Spanish-American patio with tropical plants and a fountain, and upon its walls are emblazoned the escutcheons of each nation. On either side of the patio are large and sunny offices for the staff, while in the rear is a great assembly hall of pure white marble effect in the Greek style of architecture—an ideal gathering place for historic assemblages and conferences. The statuary, bronze panels, paintings and furniture are all in perfect taste and realize the highest canon of decorative art—the elegance of simplicity.

We have not space here to report the many excellent and graceful things said by the distinguished speakers at the dedication. We second, however, Mr. Carnegie's invitation to Canada to join the Pan-American Union "thus extending it over the entire continent, an area nearly four times as large as Europe," and President Taft's declaration that

"We twenty-one republics cannot afford to have any two or three of us quarrel. And Mr. Carnegie and I will not be satisfied until all nineteen of us can intervene by proper measures to suppress a quarrel between any other two."

This is a perfectly sound pronouncement of the President's. Neutral nations should in all possible ways unite to intervene between belligerents so as to preserve the peace. Indeed, it is no secret that Mr. Taft bids fair to outrank his predecessor as a peace advocate. Already he has declared that even questions of "national honor" between nations should be referred to arbitration, which is nothing else but saying that no interested party in a dispute is fit to determine whether his own honor is affected.

So we look to this Pan-American Building to play a very great role in the future history of the New World. Secretary Root, Mr. Carnegie and the

efficient and untiring director, Mr. John Barrett, deserve the thanks of all men for this example of New World solidarity.

With unpardonable indifference and stupidity the United States has until lately paid scarcely any attention to her great and growing sister republics to the south. If Europe is the land of yesterday and the United States is the land of today, then Latin America is the land of tomorrow. We seem at last to have begun to realize this.

The Psychologistic Madness

Psychologistic paranoia has become endemic in America. The sinister fact cannot be too soon admitted, and we cannot too quickly bestir ourselves to put in operation all educational and other agencies to withstand it.

Appearing in New England within a generation after the planting of the Plymouth and Massachusetts Bay colonies, psychologistic paranoia became acute in the witchcraft delusion. Subsiding for a time, it reappeared in the eighteenth century, and again in the first half of the nineteenth, in connection with new revelations, and especially with Adventism. The Millerite excitement of 1843 was followed by a second acute development of the malady. During the years immediately before and after the Civil War it again subsided. Of late it has once more rapidly increased, until now it threatens incalculable disaster. Its present day forms are more subtle and more dangerous than those which it assumed in the earlier decades.

Psychologistic paranoia is distinguished from other forms of insanity, including the hopeless dementia, which it often simulates, by one definite mark. It fixes upon a theory of mind (a psychology), or upon a theory of the relation of mind to body or to "matter" in general, as its focus of obsession. In mild cases it may merely assert the power of mind to ignore or to heal bodily ailments. In more serious cases it commonly denies the reality of corporeal states, and especially of evil, including what healthy people call pain. Advanced and hopeless stages are marked by an overwrought insistence upon certain "logical consequences" of "the fundamental principle." The victims reiterate that since matter is unreal there can be no such thing as the "impersonal causation" which "materialistic science" talks about. Everything that is or that happens, they say, has a personal origin—in a thought or a wish or other state of mind. And since one person by "the right thought" or wish can affect another person helpfully, or with healing power, he can in like manner by "the wrong thought" affect another person injuriously. He can cause illness by "malicious animal magnetism." He can even kill his enemy by directing a "death thought" upon him.

Within the last year dangerous cases of psychologistic paranoia in its incurable stages have rapidly multiplied. The newspapers have more and more frequently reported instances of death said to have been caused by "malicious animal magnetism" or by the "death thought." Under ordinary circumstances there is little justification for commenting upon the self-destruction of an unbalanced person. But when, as happened the other day, a young woman, otherwise sane and healthy, takes her life under the torturing delusion that an enemy has directed a "death thought" upon her, the incident is too full of warning significance to be permitted to pass unheeded. That its significance is seen by the thoughtful has already been demonstrated in the communications and the editorial comments which have pointed out that belief in the "death thought" differs in no essential whatever from that belief in malicious bewitching which brought the horror of great darkness upon Salem and its neighboring towns 250 years ago.

Psychologistic paranoia cannot be prevented by moral teaching, or, indeed, by any inculcation of mere ideas. Sanity is insured only thru bodily health and a continual exercising of the mind upon processes of verification. The people who use the word "science" in connection with mental therapy usually betray their complete ignorance of its meaning. Science is the agreement of ideas with the verdict of the senses. To teach that we have no concern with the senses or with the material world that the senses make known to us is to deny science and to talk stuff which, even when it comes from a university chair of psy-

chology, differs in no essential respect from the vagaries overheard in insane asylum wards, since both deliverances assert that mere ideas, unchecked by sense impressions, may be accepted as truth. The rule which John Stuart Mill laid down for the testing of alleged truth is the rule also for testing the sanity of "views" and of mental habits. That alone is truth, according to Mill, which still appears to be truth when scrutinized in the light of *the whole content of the mind.* Not only the arguing reasons, but also the practical will which makes applications—the pragmatic criterion—and yet again the observing senses, must agree in their verdict. If we would have a sane people, we must bring up our children to *live the complete mental life.* To permit them to grow up in a riotous world of unchallenged ideas, with senses untrained to observe, to measure and to weigh the concrete forms of matter, and therefore with no conception of impersonal causation, is an individual and a national crime, for "that way madness lies."

A New Political Situation in the South

In an interesting paper in *The South Atlantic Quarterly* William Garrott Brown tells Southerners that it is now safe for them to throw off the tyranny, or, as he calls it, "the oppressive habit of public opinion," with its resultant "political solidarity," and assert their right of freedom to belong to any political party they choose or to no political party. This is a condition, he believes, to any escape from that condition of political inferiority and ineffectiveness under which the South has suffered since the Civil War. This release is, he believes, now safe, for the dominant Republican party, he says, has definitely resolved not to interfere with Southern control of Southern affairs. He puts it in this way:

> "Nothing of that sort is any longer likely to be done by the North, or by the nation, against the will of the Southern people. This is a fact which deserves the strongest possible emphasis. For it is, in my judgment, a fact which marks the transition to a new period in the history of the Southern question; to a period in which we need not any longer be controlled as we have been—in which we ought not to be controlled as we have been—by the fact of the presence of the African among us. . . . Northern public opinion no longer demands interference with our internal political *régime.* The Republican party no longer makes any real threat of such interference. There is not any really strong faction in that party which makes such a threat."

What Mr. Brown says is perfectly true, and it has been true for thirty years, ever since President Hayes withdrew from the South all military oversight and left the Southern States to rule the negro as they pleased, trusting to limitations of that rule provided by the new Amendments. We believed then, as we believe now, that President Hayes's policy was politically wise and necessary, altho it allowed great wrongs to be inflicted on the negroes for a generation. But worse wrongs were being suffered before, more violence, more hatred, and it takes time and place and education to reorganize society on stable and fair conditions. They are in sight, and Mr. Brown's paper is proof of it, for he tells his fellow Southerners they must stop worrying about the negro, and that the negro of thrift and education should have free access to the ballot.

But this raises the question again, What is the proper duty of the Republican party to the negro? On this subject the national platform of 1908 was positive enough and fairly definite. It said:

> "We demand equal justice for all men, without regard to race or color. We declare once more, and without reservation, for the enforcement in letter and spirit of the Thirteenth, Fourteenth and Fifteenth Amendments to the Constitution, which were designed for the protection and advancement of the negro; and we condemn all devices which have for their real aim his disfranchisement for reasons of color alone, as unfair, un-American, and repugnant to the supreme law of the land."

That plank was not long, but it was good enough for a national platform and to announce a national policy. But unfortunately all this does not belong to Congressional action; it concerns State action in the South. Not much more can be done by Congress, but there is much for the Republican party to do in the Southern States. In Maryland the Republican party fights the proposed law

and constitutional amendment designed to deny negro suffrage, and the law has been vetoed by a Democratic Governor. Here is one of the evidences of progress.

At present there is plenty of the ethical element for political parties to talk about, and, if they please, to put in their platforms; but all that does not differentiate the two leading parties. Both want, or say they want, great and rich organizations controlling public utilities so controlled that they cannot rob the public; yet it is not easy to divide on the question. Other questions are those of policy, financial or political, tariff, banking system, etc. But in the Southern States the Republican party can, if it will, make an active campaign for equal justice—which means equal treatment before the law—for all of all colors and races. It will keep the party in the minority for years yet, perhaps, but it might give courage, and it has the ultimate future with it. That is a question of ethics, of principle, and therefore it gives scope for enthusiasm. But we fear it is too severe a strain for the lily-whites.

Deforestation and Drouth

Willis L. Moore, Chief of the United States Weather Bureau, has laid before the House of Representatives a report on the influence of forests on floods and climate, in which he takes the most emphatic issue with the almost unanimous judgment of scientists. He holds that the decrease of precipitation of rain should be regarded as the cause, rather than the result of the barren condition of the soil. He asserts that dead forests stand long after the streams have receded, a fact that goes to show that their removal did not precede the drouth or drouthy era; but that the forests ceased to exist when the rainfall became deficient.

The local temperature he lays to the character of the soil covering, and wooded areas, he thinks, may slightly retard the growth of crops in their neighborhood. The flooding of an area or the cutting away of forests may have some minute effect on local climate, but this does not mean that there is any great difference in the climatic effect between a forest covering and one of growing crops; it does not signify that there is sufficient change due to the activities of man, to make an appreciable difference in the temperature, or to affect the general climate, or to cause storms to be more frequent than formerly, or to increase the amount of rain.

If there is any change at all due to the removal of forests it is far slighter than has been estimated. He tells us that in New England, where deforestation began early in our history, the rain curve has been a rise; and in the Ohio Valley, where the forest area has been greatly diminished, there has been no decrease at all of rainfall. He quotes European authorities along the same line, to show that in the basin of the River Eure, and elsewhere, the soil has been cultivated more, and the farmers are reaping advantages from the culture of the ground since the removal of the forests. The waters retarded in their flow, have settled in great part thru the ground, and disappeared before reaching those lands in which they formerly made ravines. In other words freshets are less frequent and formidable than formerly.

Professor Lauder is quoted as believing that progressive deforestation of a country has no effect in increasng the frequency of floods, or in augmenting their hight. At the Tenth International Congress of Irrigation, held in 1905, representative writers from France, Germany, Italy, Austria and Russia were unanimous in the opinion that forests exercise little influence upon either high water or low water of rivers.

Our rainfall then is the result of such fundamentally great causes as not to be appreciably affected by either the planting or the cutting of forests, or by any of the operations of human beings, that change the character of the surface of the land. If this be true, our view of deforestation must be largely modified. We shall have to agree with Mr. Moore that the time has come when we should clear up and seed to cereals and fruit and grass millions of acres that now lie idle under brush or forests. He urges that every acre that will grow food for the people, and reduce the cost of sustaining our enormously increasing population, should be so employed.

This does not mean, by any means,

that forests must be largely destroyed, or that the sweeping out of the woods of a country will benefit agriculture. The theory may go in harmony with forest planting, where forests are needed and tillage is not. The rugged mountain slopes and tops belong naturally to the forests. It would be far better, however, over a large part of the country, to plant orchards of apples than groves of maples and elms. Preservation of forests, cutting wisely, but no more than can be reproduced, enables us to draw a perpetual supply for public and private needs.

All this while the forested lands yield not a handful of wheat nor of corn, and the people are doubling up that must be fed. The general tendency to convert forest lands into cultivated fields, Professor Moore thinks, should not be discouraged. The average virgin forest is wasteful as a source of lumber and of fuel; he would therefore have all of our forests placed under such control that they should be lumber producers of the highest class. In this way we should get returns of a surer sort, from a smaller area, and there could be no valid objection to decreasing the area, so long as well furnished country homes take the place of wild animals and the wilderness. The argument is certainly a good one so far as it applies to the intenser cultivation of a land. We need to bring under the plow twice the area that we already have.

It must not be forgotten, however, that cultivated farms do not take the place of deforested areas, not with any rapidity Immense tracts of land are left to the fury of the elements, and there is not the slightest effort put forth by human beings to regulate the changes that are taking place, or to prevent soil waste. Soil erosion is certainly accelerated by deforestation. The instances are too abundant, under the observation of the most careless, where hilltops are rapidly dumped into the valleys. This erosion is going on so continually that our hillside gardens cannot hold the humus or fertilizers which are applied, unless by special attention of the owner. The author does not show that cultivation, as at present carried on, holds water as well as the forest humus holds it, and we do not believe that it does. This is possible as a future result of a much more advanced agriculture—an agriculture that comprehends the meaning of humus and its importance. Still Dr. Moore may have been doing us a great service, in calling off attention from the supposed value of a forest to hold and to equalize moisture, to the more certain importance of garden soil, well filled with humus, to do the same thing. Many of our woods have very little humus, and many of our gardens have very much humus. In other words what we want is to hold the water that comes, to equalize its influence on the soil, and not let it run away from us, while we sit helpless. It needs about three hundred pounds of water to develop a single pound of solid matter, and maybe it is just as well that we do not rely too much upon forest distribution.

Small streams, however, are surely drying up, and the verdict of the common people is unanimous that it is due to the cutting away of forests; we are convinced that the common judgment is correct. The writer of these notes remembers sawmill streams and cidermill ponds that are now oblierated, and they were located in the best cultivated districts. This has been due undoubtedly in part to drainage. Gardening puts down innumerable tile and stone drains that distribute water. Still, it will need a burden of evidence, based on the most careful observation, before we can reverse our opinion that deforestation has nothing to do with our spring floods and our summer drouths.

A Congressional Appropriation for Peace

Thanks to the efforts of Congressman Richard Bartholdt, from Missouri, the United States has joined the growing number of countries which of late have begun to make some small appropriations for the constructive policy of peace. Early at this session of Congress Mr. Bartholdt introduced a resolution in the House to appropriate $2,500 for the maintenance of the International Bureau of the Interparliamentary Union for the promotion of international arbitration, which bureau is now located at Brussels, but will be transferred to The Hague as soon

as the Carnegie Palace of Peace, now being erected in that city, will be completed. An effort was made by Mr. Bartholdt to have his resolution attached, as an amendment, to the Diplomatic Appropriation bill, but this effort failed because the rules of the House prohibit any appropriation for subjects not already authorized by existing law. The chairman of the Committee on Foreign Affairs, the late Mr. Perkins, was, therefore, obliged to raise the point of order, but did so reluctantly because, he said, he believed in the merits of the proposition. Mr. Bartholdt then went to the Senate, where the rules are less rigidly enforced, and in that body, upon motion of Senator Cullom, the amendment was inserted in the Diplomatic bill, and in conference between the two Houses the item was afterward agreed to, but not until Messrs. Bartholdt, Moon and Slayden had appeared before the House Committee on Foreign Affairs and explained the object of the appropriation. The significance of this action is, of course, not to be found in the amount appropriated, but in the fact that the American Congress has at last officially recognized that great brotherhood of the world lawmakers, called the Interparliamentary Union, an organization which has accomplished more than almost any other agency in the interest of a world federation of arbitration and peace. The other countries which have either made or are about to make appropriations for the same beneficent purpose are Great Britain, France, Austria, Norway, Denmark, Sweden, Switzerland, Belgium and Holland. From now on we may expect the governments to expend more and more money for the furtherance of world peace. Who knows but that Edward Everett Hale's prophecy may come true that a Secretary of Peace will eventually hold a more important portfolio in the Cabinet than the Secretary of War?

Paulhan and Weston

Two great achievements of physical courage and endurance have been noted this week, one the flight of Paulhan from London to Manchester in a high wind and benumbing cold, and the other the completion by Weston, now over seventy years old, of his walk from Los Angeles to New York well within his schedule time. Mr. Weston was, if we remember, the first one to walk one hundred miles in a day on exhibition. He has kept temperate and sober, and has accomplished this feat at an age when the pension rules say that an old soldier is presumed to have entirely lost the power to support himself by physical labor. To be a professional walker is no very high ambition, but perhaps as high as to carry one's university letters on his breast for similar physical superiority. Folks like that sort of fame, and doubtless Mr. Roosevelt's athletics and his African prowess have been an element in his popularity here and abroad. M. Paulhan's aviation success has won him $50,000, and his feat is of a higher value because it is in the line of a new victory of science that may much transform the conditions of civilization. But it is not yet proved that winds and storms will allow flight except in quiet weather. Even birds strike for cover in a storm.

Upton Sinclair and Helicon Hall

In our editorial on the Milwaukee Socialist victory in THE INDEPENDENT of April 14, our readers will remember this paragraph:

"Socialism, therefore, is still an experiment. As such it should be viewed by all men with an open mind. We wish well to those who believe in it and especially to those who have the courage to practise their belief. They will be the first to abandon the cause if it won't work. Had Upton Sinclair been prevented from founding Helicon Hall how many "Jungles" and "Journals of Arthur Sterling's" would he have written to prove the tyranny and bigotry of his fellowmen and the paradisical joys of a co-operative household. But one year of Helicon Hall was enough to teach him and his devoted band of enthusiastics that one family to a home is about the correct ratio."

Mr. Sinclair takes exception to the above statement in the following communication:

"The above remark fully involves the implication that I am of the opinion that the Helicon Hall enterprise was a failure. Now, from the facts made public about Helicon Hall, you are perfectly at liberty to draw that conclusion yourself, but you ought not to imply that that is my conclusion. I have nowhere ever written anything to that effect, nor ever said it to any one, nor do I believe it. The last time I referred to Helicon Hall in your columns I stated quite clearly that I considered that we had proved a co-operative home to be a practical proposition; and that

my only reason for not attempting to rebuild it was that I had found it required the entire time of one man to run it, and that not a man whose mind is full of unwritten books. I consider the fact that our Helicon Hall experiment has not given rise to many such enterprises a proof of nothing but the lack of social intelligence among the American people and especially among those who edit our newspapers."

THE INDEPENDENT has taken enough interest in the Helicon Hall experiment to publish several articles about it. Indeed, It was Mr. Sinclair's article in our columns that caused the experiment to be tried. Nevertheless, neither Mr. Sinclair nor any of the other members of Helicon Hall have ever attempted to reunite in another co-operative household or start a new one with a new membership. They were not the kind of people to go back to the old and tried ratio of one family to a home unless they had good reason to. We leave it to our readers, therefore, as to whether we were justified in our reference to Mr. Sinclair and "his devoted band of enthusiastics."

A New Ally

The times change and the London *Times* with them. It announces a Woman's Supplement every Saturday during the social season. It says:

"Special historians of the future may not unlikely record that the most prominent feature of the present day was the outburst of what might be called the collective consciousness of women. . . . Only in our own day has there been heard, in all tones, from the shriek of defiance to the grave softness of good counsel, the voice of woman, declaring her aims, expounding her desires, and speaking for her sex as a part of the community that deserves to be heard."

Accordingly it proposes that the supplement deal with all the interests and activities of women, from politics and public work to domestic life and dress, and shall give expression to the aims and achievements in many fields in which the women of today are making the present age remarkable. It says there is yet no journal in existence which attempts to embrace all the interests and activities of women, from politics to powder, from medicine to millinery; no journal which keeps its finger on all the work that women are doing for the nation, the Empire and the world, and this gap the great Thunderer proposes to fill.

"Chu" and "Ko"

The two principles which these words designate have been from time immemorial at the basis of the Japanese system of morals. "Chu" is loyalty to the Emperor, and "Ko" is filial piety toward parents and ancestors. Dissatisfied with the moral education given in the schools the Japanese Department of Education has issued an instruction in reference to lessons on morality in the elementary schools of the country. It is on these two basic principles that the department bids teachers lay new stress; and new lesson-books have been compiled to impress these two duties on all children. These are very well, but they do not seem basic or sufficient. They do not forbid murder or theft, and, indeed, they may require the commission of these crimes. In a novel based on Japanese customs reviewed by us a woman is applauded for yielding her virtue for just such a reason. Just as righteousness is less than love as a basis of ethics, so obedience to Emperor and parents is less than righteousness. "My country right or wrong" is lower, ethically, than "It is better to obey God than man." Japan cannot help feeling the influence of Western ethical standards. Japan may keep the terms "chu" and "ko," but they will put new meaning in them, with their new civilization. It used to be thought the hight of Chu duty to disembowel one's self in honor of the dead ruler; now Japan has learned better. She will learn better than to teach daughters to prostitute themselves to support their parents.

A Bitter Speech

We observe that Archbishop Gibbons has said not a word yet on Mr. Rooseevlt's Vatican incident; but he is a Cardinal already. Here is Archbishop O'Connell, of Boston, a supposed favorite of the Vatican, who in an address on Sunday to the Federation of Catholic Societies, supposed to represent a million members, described Mr. Roosevelt's treatment of the Pope as "insulting," that Mr. Roosevelt allowed oceans of vilification to be heaped on Merry del Val, and that the Catholic, John C. O'Loughlin, who conducted the corre-

spondence for Mr. Roosevelt, is "a sort of Catholic to be ashamed of," one "who is looking for a job and who is willing to sacrifice the things that man holds most sacred" for his own benefit; and he thus pillories him:

> "He will live to see the day that he will regret these words, for there never was a man yet in the history of the world who played the part of Judas that didn't in the end pay for it, and Mr. Callan O'Loughlin, who is insincere, will live on."

and

> "Mr. Roosevelt is shrewd and knows that that kind of a Catholic is not a Catholic at all, and we know that the Federation will keep out of public office such men as this."

A "Judas," whom the Federation must never vote for! That is stiff instruction. We wonder if Archbishop O'Connell can give orders to these million of voters. That method did not work as against Judge Gaynor.

Very properly, *The Christian Advocate* exercises more courteous reserve in its expression of feeling as to Dr. Tipple's outbreak at Rome than we did, but its condemnation is no less distinct. It quotes his language, tells him that it was a time to keep silence, as it was for all Methodists in Italy, at least until Mr. Roosevelt should leave the country. Instead of that, by his "denunciatory utterance" he "prolonged the controversy," directly against the request of Mr. Roosevelt, and "was sure to create a bitter discussion of Colonel Roosevelt's act and to raise a counter demonstration from his friends." His "appeal to American Catholics," our contemporary adds, "was ill-timed" and "calculated to kindle wrath rather than induce reflection." The only explanation it can make is that "he did not finally 'lose his head,' but temporarily lost the use of what the scientists call the *inhibitive* powers contained therein." But we have learned from Judge Holt in his charge on the Hartridge case to discredit the "brain-storm" theory."

When some of the "infant foods" and "remedies" that have been described in a pamphlet just issued by the Department of Agriculture are considered, it is small wonder that so many infants die. The wonder is that any of the babies should live. The remedies that very properly fail to secure the Department's indorsement are those containing morphine, codein, opium, cannabis indica, heroin, and certain other dangerous drugs. Can it be that Secretary Wilson, in his doing of good work by the issuance of an official cook book, the present publication and others that may come contemplates the idea of a five-foot shelf for farmers?

The period of President Roosevelt's term did no greater thing for the country than when it created the reclamation work. It is estimated that the crops produced on lands irrigated by the water system of the Government last year were valued at $14,000,000, and that the increased value of the land was not less than $105,000,000. But it has thus far cost $60,000,000, which leaves a fine profit. It is believe that the settlers will generally be able to make their payments to the Government due May 1, at which time the reclamation project will begin to be self-supporting.

It has often been mentioned that in Italy those villages in which there is a large number of returned immigrants from America show unusual enterprise and comfort. A curious occurrence in a Slovak village in Hungary shows similar influence. Baron Levay began to address a political meeting in Zakoposo in Magyar, when the audience told him they did not know Magyar, and asked him to address them in English, which he did, and the questions of the hearers and the vote of thanks were in English. Four-fifths of the 3,000 inhabitants had returned from America.

It is no great loss to military or any other science that two of the three dirigible balloons which Emperor William "reviewed" the other day as the beginning of his air fleet were wrecked on their return. And a similar fate befell last week the British army machine, which was destroyed in a gale. The future does not belong to balloons, but to craft heavier than air.

Insurance

Infant Mortality

Some researches regarding infant mortality, made by Dr. Herman Schwartz, of this city, show deplorable conditions, some of which are removable. According to Dr. Schwartz, many of the deaths of children under one year old are directly traceable to inadequate nourishment. From his own experience in the work of saving babies under two years of age he deduces that the most critical period of an infant's life is the fourth week. There is likewise a fearful hazard during the second, third and fourth months. He found a mortality of 172 in every 1,000 babies whose parents were illiterate against 111 in every 1,000 among children of literate parents. Where the food was good the mortality sank to 62 in 1,000, against 144 per 1,000 where poor and inadequate food obtained. Dr. Schwartz has compiled charts which show that infant mortality was 159 for every 1,000 where both parents were native born Americans. Where the mother was foreign born, the rate was 116. Where both parents were foreign born the rate was 117. In cases where the mother was a breadwinner the doctor's experience showed an infant death rate of 164 for every 1,000, as compared with 110 where the wife and mother was unemployed. Where the family income was $5 per week only, the mortality rate was 236 in 1,000; where the income was from $6 to $10, the mortality was 124, and but 92 where the wages were $15 per week or over. The death rate in big families is greater than in small ones.

Mr. Choate and the McCurdy Settlements

In our issue of April 21 we made some reference to the Mutual Life Insurance Company and the settlements made by it in connection with the McCurdy suits. These settlements were criticised very sharply by Superintendent Hotchkiss. Following the widespread publication of these criticisms Joseph H. Choate, the senior counsel of the company, wrote a letter to Charles A. Peabody, the president of the Mutual Life Insurance Company, in which he assumes the entire responsibility for the legality of the financial settlements made by the company with Richard A. McCurdy, Robert H. McCurdy, Charles H. Raymond & Co. and others of the former management. Mr. Choate's letter sets forth that the special committee to the board of trustees having the settlement of this matter delegated to them carefully considered and understood the whole situation. They did not mislead or intend to mislead the board of directors. $750,000 was received in settlement of this matter, as follows, viz.: $250,000 in cash from Mr. McCurdy, $250,000 from C. H. Raymond & Co. by a credit on the amount standing due to them on the company's books, and $250,000 from Robert H. McCurdy by a similar credit on commissions coming to him under his contract, to which was to be added $65,050.73, the amount of the bill for supplies received from Lawrence.

The reissue of a license to the United Surety Company, of Baltimore, to do business in this State was refused this week by Superintendent Hotchkiss. The capital of the company has been cut from $500,000 to $250,000 to make good a $90,000 impairment of capital. During the investigation made in connection with this Baltimore concern it developed that the Knabes, who were in control of the company, had borrowed considerable sums of the Metropolitan Trust Company, at high rates. The control of the United Surety Company has been taken over by Thomas H. Bowles, of Baltimore. Mr. Bowles was at one time an agent of the Mutual Life Insurance Company.

William H. Hotchkiss, Superintendent of Insurance for New York, last week authorized the Standard Fire Insurance Company, of Hartford, Conn., to begin business in New York State. The company has a paid-in capital of $500,000.

Financial

Increased Steel Dividend

THE dividend rate on Steel Corporation common stock has at last been raised to 5 per cent. This action was taken by the directors on the 26th ult., following a report of Judge Gary, for the finance committee, that conditions justified such an increase. At the same time the committee recommended that 5 per cent. should hereafter be regarded as a maximum annual rate, and that further increases, if any should be made, should be declared in the form of extra dividends. Opinions differ as to the wisdom and expediency of raising the dividend at this time to a rate never before paid. Net earnings for the first quarter of 1910 ($37,616,876) were less by $3,354,000 than those of the quarter immediately preceding. The condition of the iron and steel trade is not quite so good as it was a short time ago. It has recently been necessary to reduce the output of pig iron, owing to the accumulation of surplus stocks. Prices of iron have declined. The Corporation has just announced a wage increase amounting to about $10,000,000, which is equal to nearly 2 per cent. on the common stock. Of course, the earnings available for common dividends are ample. The answer to criticism based upon the conditions which have been mentioned is that the management of the company and of its finances has been admirable; that those to be credited with this management are responsible for this increase of dividend; and that it is a fair presumption that neither their conservatism nor their ability has been impaired. The increase appears to have been discounted in the stock market. There were large transactions in Steel common, which furnished nearly one-fourth of the week's business on the Stock Exchange, but the end of the week showed a net loss of $5⅜ per share.

Railway Wages and Rates

WHEN the organized employees of the Eastern railroads applied some months ago for a considerable increase of pay because of the higher cost of living, the companies replied that they also were affected by this higher cost. They were paying higher prices for substantially all the supplies and equipment which they had to buy, but there had been no increase in the average of their freight rates. Many of these companies have recently consented to increase wages by about 6 per cent., and probably all of them will do this. Naturally, they will insist upon raising their freight rates. The rate advances announced thus far, however, are those to be made by Western roads, on which there has been no recent general increase of wages. Advances will be made in the East, if the authorities permit. If freight rates remain unchanged, no increase of dividends can be expected. Higher rates may allow a higher dividend in some instances, but the present condition of the growing crops does not promise an abundance of such traffic as depends upon farm products.

....It is now estimated at Washington that the tax on corporations' net earnings will yield only $22,000,000, and that $3,500,000 of this will be received from the city of New York.

....Last week, the steamship "Kronprinzessin Cecilie" had as part of her cargo, consigned to London, $10,000,000 in gold, the greatest amount ever taken from New York on one ship.

....Gross earnings of 370 street railway companies in 1909 showed an increase of nearly $30,000,000, or about 7½ per cent. The increase of net earnings was $19,750,000, or 14 per cent.

....In the year ending on March 1 last, 93,370 persons emigrated from the United States to Canada. It is shown by the Bureau of Immigration that about 12,000 of these were heads of families, and it is estimated that the 93,370 emigrants took with them nearly $100,000,000. During the last thirteen years, Canada has received 520,830 immigrants from the States.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, MAY 12, 1910 No. 3206

Survey of the World

The President's Speeches

On his way westward last week the President stopped for two days in Pittsburg. He spoke briefly there at the founder's day exercises of the Carnegie Institute, on the 2d, and on the same day warmly commended Secretary Knox in an elaborate review of the work of the State Department, at the Grant Day dinner of the Americus Club. After referring to the tariff negotiations with Canada and other countries, he said:

"The example set by the last Administration, with Mr. Root at the head of the State Department, in cultivating good relations with all the South American and Central American Republics, has been followed closely by Mr. Knox, and the department under him. I say this deliberately for the purpose of meeting suggestions and criticism that there has been a departure from such policy, and I venture to affirm that never before in the history of the country have our relations with South American and Central American Republics been more friendly than they are to-day. By tact and diplomatic guidance a war between Peru and Bolivia was avoided, and not a little of the credit for reaching an honorable and pacific settlement was due to the sensible and straightforward suggestion of our Secretary of State."

Mr. Knox, he continued, was bending his energies to procure an agreement between Peru and Ecuador. The Department's course with respect to Nicaragua had been subjected to wholly unwarranted criticism:

"The great disturber of Central America in recent years has been Zelaya, the tyrannical and unprincipled President of the Republic of Nicaragua. With respect to every plan for the promotion of pacification and friendly relations between the five republics he played the part of marplot. When his brutal and cruel exactions drove a part of the people of Nicaragua into rebellion and an extended civil war he violated the laws of war and the rights of American citizens who had regularly enlisted in the ranks of the revolutionists by taking their lives. He thus gave a right to the Government of the United States to demand reparation and to decide, by reason of the character of his Government—exemplified by this cruelty toward American citizens—to withdraw all diplomatic relations by a letter of Secretary Knox which gave full reasons therefor and which notified the contending forces in Nicaragua that the United States would hold each one to strict accountability were the rights of American citizens further outraged. It is undoubtedly true that the attitude of the United States toward Zelaya so injured his prestige and brought him so clearly to the bar of the public opinion of the world as an international criminal that he was obliged to abdicate and leave his Government to a better man.

At the proper time our Government would ask Nicaragua to make just reparation for the killing of Groce and Cannon. "The elimination of Castro, who was of the class of Zelaya," had enabled us to settle American claims in Venezuela. Argentina had placed here a contract for two battleships. "The opportunity to get this business was brought about directly by the untiring efforts of the Department of State":

"The theory that the field of diplomacy does not include in any degree commerce and the increase of trade relations is one to which Mr. Knox and this Administration do not subscribe. We believe it to be of the utmost importance that while our foreign policy should not be turned a hair's breadth from the straight path of justice, it may be well made to include active intervention to secure for our merchandise and our capitalists opportunity for profitable investment which shall inure to the benefit of both countries concerned.

The Department was striving to assist Americans in securing railway contracts in Turkey, to obtain for American capital a share of the railway loans to China, and to maintain the policy of the "open door" in the Orient. A direct con-

tribution to the cause of peace was Mr. Knox's "project for evolving a general Court of Arbitral Justice out of the theory of the Prize Court Convention drawn up at the Hague Conference."——In St. Louis, on the 4th, at a luncheon given by the Business Men's League, the President spoke of the Supreme Court, having in mind Mr. Bryan's criticism of the appointment of Governor Hughes. The Supreme Court, he said, was to him the most sacred part of the Government, and the appointment of justices was his highest and most sacred function. He had heard or seen a criticism of one appointment on the ground, as he understood it, that "the appointee was not an implacable foe of wealth or corporations":

"I believe that we all, Democrats and Republicans, Republicans and Insurgents, as patriotic citizens—and we all are that—are in favor of having upon that bench men who are foes of nothing but what is wrong and are in favor of equal justice to every one, whether that be an organization of men doing business under the law and using the instrumentality of a corporation to promote the industries of the country or be he the humblest citizen struggling with his hands to earn a living for his family. I do not mean to say that men by their habits of life may not acquire a bent or a prejudice in one direction or another and that it isn't wise to select for the highest tribunal men who have such a bent and who have in their makeup the danger of prejudice to one interest or against another, but I do mean to say that there is in the public journals and in what I may call the cant of the demagogs a disposition to charge that kind of a bent in favor of corporate wealth and corporate greed and corporate monopoly when there is no justice for the charge at all. This assumption of peculiar honesty manifested by class declaration and the stirring up of class spirit is something that ought to be deprecated in our Republic, or else it will lead to great danger. We ought to take up the discussion of public questions and discuss their effect with judicial calmness and not have our minds diverted by charges of prejudice and corrupt motives. I say charges utterly unsupported by evidence or calm consideration."

He also spoke of the great need of reform in methods of litigation, to prevent delay which gave advantage to the man with the longest purse.——The nomination of Governor Hughes was confirmed on the 2d by unanimous vote, without debate. No weight was given to a long protest addressed to the Judiciary Committee by the American Anti-Trust League.

The Election of Senator Lorimer

Following the publication of charges affecting the election, a year ago, of United States Senator Lorimer, of Illinois, three Democratic members of the Illinois Legislature have been indicted. Mr. Lorimer, a Republican, was elected by the votes of fifty-five Republicans and fifty-three Democrats. The first confession was made a few days ago by Charles A. White, a Democratic member of the House, who said in a sworn statement that he was paid $1,000 by Lee O'Neil Browne, of Ottawa, the Democratic leader in the House, to vote for Lorimer, and also that at the end of the session, in July last, he received $900 from Robert E. Wilson, of Chicago, another Democratic member, as his share of the "jackpot," a general corruption fund distributed at the time of adjournment. The matter was at once taken up by a special grand jury. To this jury, on the 5th, Representative Beckemeyer, Democrat, of Carlyle, confest that he also had received $1,000 and $900. On the 6th, the jury indicted Browne for bribery, Wilson for perjury, and Representative Michael S. Link, of Mitchell, for perjury. The last two had denied to the jury that they were in St. Louis when (as White had sworn) the fund was distributed there. Having been indicted, Link confest that he also had received $1,000 and $900. Other confessions are expected. Browne says White borrowed money from him and sought to blackmail him when he refused to loan any more. Lorimer asserts that no money was used to procure his election, adding that White's charges were published by a newspaper that seeks to wreck certain financial institutions which he is organizing. Ex-Senator William E. Mason, of Illinois, said in an interview last week he believed 50 per cent. of the seats in the United States Senate had been "practically purchased."——An inquiry concerning certain legislation in Illinois may follow the indictment, last week, of William J. Henley, formerly a judge of the Indiana Supreme Court, and afterward general counsel and president of the Chicago & Western Indiana Railroad Company, for embezzlement. This indictment is related to the company's attempt to recover a large sum

from certain persons who acted as its agents in real estate transactions in Chicago. One of the defendants seeks to account for about $200,000 by saying that it was used in the Legislature to buy legislation which the company desired.

The Ballinger Inquiry

In the investigation concerning the public lands, Secretary Ballinger was under cross-examination for two or three days last week, and at times showed much irritation. There were sharp passages between counsel, and the committee itself was not in good humor. The cross-examination was not especially fruitful. Mr. Ballinger characterized a written statement of his predecessor, Mr. Garfield, as "neither fair nor truthful." This was the assertion that the Secretary had directed that the withdrawn lands be restored slowly, in order that the action might not attract public attention. Mr. Ballinger also said that $700,000 had been wasted by the Forestry Service in connection with the Menominee Reserve. Forester Pinchot's successor, Mr. Graves, has since virtually denied this. The Secretary gave notice that if he remained at the head of the Department he would "kill all the snakes," meaning subordinates not loyal to him or in sympathy with his administration. Some think this foreshadows the removal of Director Newell and Chief Engineer Davis, of the Reclamation Service, whose testimony has not been on his side. The following letter, sent to Mr. Ballinger by the President, from Beverly, Mass., on September 13, 1909, was read:

"I send you in letter form my conclusions in re Glavis's charges and other matters. I have studiously refrained from mentioning Pinchot's name in the matter because I do not wish to make it impossible for him to remain in the service. I value him highly as a public servant and believe him capable of further great usefulness. His weakness has been an inability to credit high and honorable motives to those who differ with him as to his method of doing things when he is pursuing a worthy object with all the enthusiasm of his nature. I know him well and am very fond of him personally, and mean, if possible, in spite of this defect, to preserve his great ability, valuable experience and his patriotic, disinterested zeal for the benefit of the public service. Please, therefore, advise your subordinates to be very particular not to involve Mr. Pinchot in this matter, and to rest silent in view of the complete acquittal they receive from my letter.

"Should it be necessary, as is not unlikely, to submit all this record and evidence to Congress, I shall be glad to have your authority and that of your subordinates to leave out of your answers any references to Pinchot or the part he took in bringing Glavis's report to my attention. I have every confidence in both you and Pinchot. I know you are both patriotic and sincere and both favor generally the same result as to conservation, but that you are a lawyer like me and insist on the legal way, while Pinchot is impatient of such restraint. I wish to secure the high value of the services of you both for the great work before us."

Votes of the committee upon certain questions indicate, it is thought in Washington, that in the final report seven members will support Secretary Ballinger, while five (four Democrats and Representative Madison, insurgent Republican) will dissent.

Wages and Railway Rates

Additional increases of wages were made last week. Arbitrators in the case of the New York Central reported an elaborate schedule of increases, and their decision will cause similar changes to be made by the Delaware & Hudson and the Lackawanna Railroad companies. Trolley employees in Springfield, Mass., accepted arbitration, and this course will probably be taken with respect to other trolley lines controlled by the New York, New Haven & Hartford Company. The National Association of Lithographers decided to grant an eight-hour day (instead of the present day of nine hours) for 20,000 men, and to provide insurance in case of illness, accident or death. About 5,000 carpenters and other workmen in the building trades have gone on strike in Southern New England for higher pay. Those in Hartford have been successful. The Steel Corporation has established a pension fund of $8,000,000, which is to be consolidated with the similar fund of $4,000,000 set apart some years ago by Mr. Carnegie.—— Higher passenger and freight rates on the railroads excite protest. Passenger rates thruout New England have been increased, the average addition being 13½ per cent. on the Boston & Albany

and from 15 to 20 per cent. on the Boston & Maine. To commuters' rates on the New Haven road from 15 to 30 per cent. has been added, and similar increases of all such rates near New York are expected. There will be a general advance of freight rates to compensate for the increase of wages. Some railroad men say the additional wages already granted, or soon to be given, east of the Mississippi, amount to $48,000,000, and President Brown, of the New York Central, predicts that the total railway increase this year will be $100,000,000.

Earthquake in Costa Rica

Cartago, formerly the capital of Costa Rica, was almost completely destroyed by an earthquake on the 4th, the shocks beginning at a little before seven o'clock in the evening. They had not been preceded by any activity of the neighboring volcano, Irazu. About 1,800 persons were killed, a large majority of them in the city, and the remainder in Paraiso, Pocaca and other villages situated within a few miles. In Cartago only a very few low wooden houses were spared. Among the destroyed buildings were ten churches, the College of the Silesian Fathers (where several priests and a number of students perished), and the new Temple of Peace, erected by Mr. Carnegie for the Central American Court of Justice. Mr. Carnegie says the Temple will be rebuilt. Dr. Bucanegra, Guatemala's representative in the Court, lost his wife and one child. Rafael Troy, a well-known poet, was killed. At the end of last week more than 500 bodies had been taken from the ruins. Special trains, bearing doctors and nurses, were sent from San José, the capital. At last accounts, thousands were homeless and without food. The ignorant and superstitious ascribed the calamity to the influence of Halley's comet. Cartago, which had a population of 12,000, is situated about 6,000 feet above the sea level. Several times it had suffered greatly from earthquakes, and in 1841 was destroyed by them. In April last, much loss of property was caused by shocks in other parts of Costa Rica.

Death of King Edward

Edward VII, King of England, died at 11.45 on the night of May 6 at Buckingham Palace. His last illness was short, for altho he had suffered from a cold for a week it was not until Thursday, the 5th, that the public became aware that his condition was serious. The weakness of his throat has several times before threatened his life and in this case bronchitis passed into pneumonia and the specialists who were summoned to the palace could do nothing but extend his life thru the administration of oxygen. Up to the last day he insisted upon attending to important business and could hardly be kept to his bed by the physicians' orders. He evidently realized his condition, as, speaking between the intervals of unconsciousness and violent coughing, he said: "Well, it is all over, but I have done my duty." His ruling passion was strong, and shortly before his death he inquired the result of the Kempton Park races and was gratified to learn that his horse, Witch of the Air, had unexpectedly won. The Queen, the Prince of Wales, Princess Victoria, Prince Christian, the Princess Royal and the Duke of Fife, Princess Louise and Prince Francis of Teck were present at the time of his death. In accordance with precedent King George first announced his father's death by a telegram to the Lord Mayor of London. ——Edward VII was born on November 9, 1841, and was christened in St. George's Chapel January 25, where his chief sponsor was Frederick William IV, King of Prussia. He received the name of Albert after his father, the Prince Consort, and Edward from his maternal grandfather, Duke of Kent. He was educated chiefly by private tutors, but attended lectures at Edinburgh, Cambridge and Oxford Universities. He has been a great traveler from his early youth to the present year. His visit to Canada and the United States in 1860 was the occasion of great popular rejoicings and fetes of hitherto unprecedented magnitude. In 1875 he visited India and thereby did much to confirm the loyalty of the people and native princes. For France he always had a particular attachment and was a constant attendant upon its theatrical and sporting events.

THE NEW KING, THE LATE KING AND THE PRINCE OF WALES.

His predilection for games of all kinds and society of a lively character was a cause of offense to many of his subjects and sometimes involved him in discreditable affairs, such as the Tranby Croft scandal of 1890, when he was summoned as a witness in a suit for slander brought by Sir William Gordon Cumming against those who accused him of cheating at baccarat, when the Prince was acting as banker. Since his accession to the throne in 1901, on the death of Queen Victoria, he has, however, won all hearts by his attention to the duties of his position and his management of affairs while maintaining a strictly constitutional and impartial atitude. His friendly and intimate relations with monarchs and public men of Europe has been used to smooth over international difficulties and to promote the peace of Europe. He has revived many of the old English

spectacular functions and his court has been more brilliant and open to a wider circle than that of his mother during her years of widowhood. It is largely owing to his personal popularity that the anti-monarchical and republican feeling of the past generation has become extinct, and during the violent attack upon the hereditary principles involved in the recent discussion of the rights of the House of Lords, even the most radical reformers avoided any reference to the King. Edward was married March 10, 1863, to Princess Alexandra, the second daughter of the King of Denmark, an alliance which was much more favorably received by the people than that with the German Princess which Queen Victoria is said to have preferred. Of his six children four are now living: George Frederick, who now becomes King; Princess Louise, born February 20, 1867, married July 27, 1889, to the Duke of Fife; Princess Victoria Alexandra, born July 6, 1868, and Princess Maud Charlotte, born November 26, 1869, married July 22, 1896, to Prince Karl of Denmark, now King Haakon VI of Norway. At the death of his mother, Queen Victoria, January 22, 1901, he ascended the throne, but his coronation, set for June 26, 1902, had to be postponed at the last moment on account of a dangerous attack of perityphlitis. On his recovery the coronation took place August 9, 1902.

Accession of George V

The Privy Council assembled at St. James's Palace at four o'clock in the afternoon of May 7th, and the new king, driving from Marlborough House with Queen Mary, appeared before it and took the oath of office administered by Lord Chancellor Loreburn. He was dressed in an admiral's uniform and wore no orders but the Garter. After he had signed the proclamation the Cabinet Ministers tendered to him the seals of office, which His Majesty returned confirming their appointments, whereupon they swore allegiance and kissed the King's hand. The King's address to the Council was brief and concluded with the following paragraph, following a reference to his father's reign:

"To endeavor to follow in his footsteps and at the same time to uphold the Constitutional Government of these realms will be the earnest object of my life. I am deeply sensible of the very heavy responsibilities which have fallen upon me. I know that I can rely upon the Parliament and upon the people of these islands and my dominions beyond the seas for their help in the discharge of these arduous duties, and their prayers that God will grant me strength and guidance. I am encouraged by the knowledge that I have in my dear wife one who will be a constant helpmate in every endeavor for our people's good."

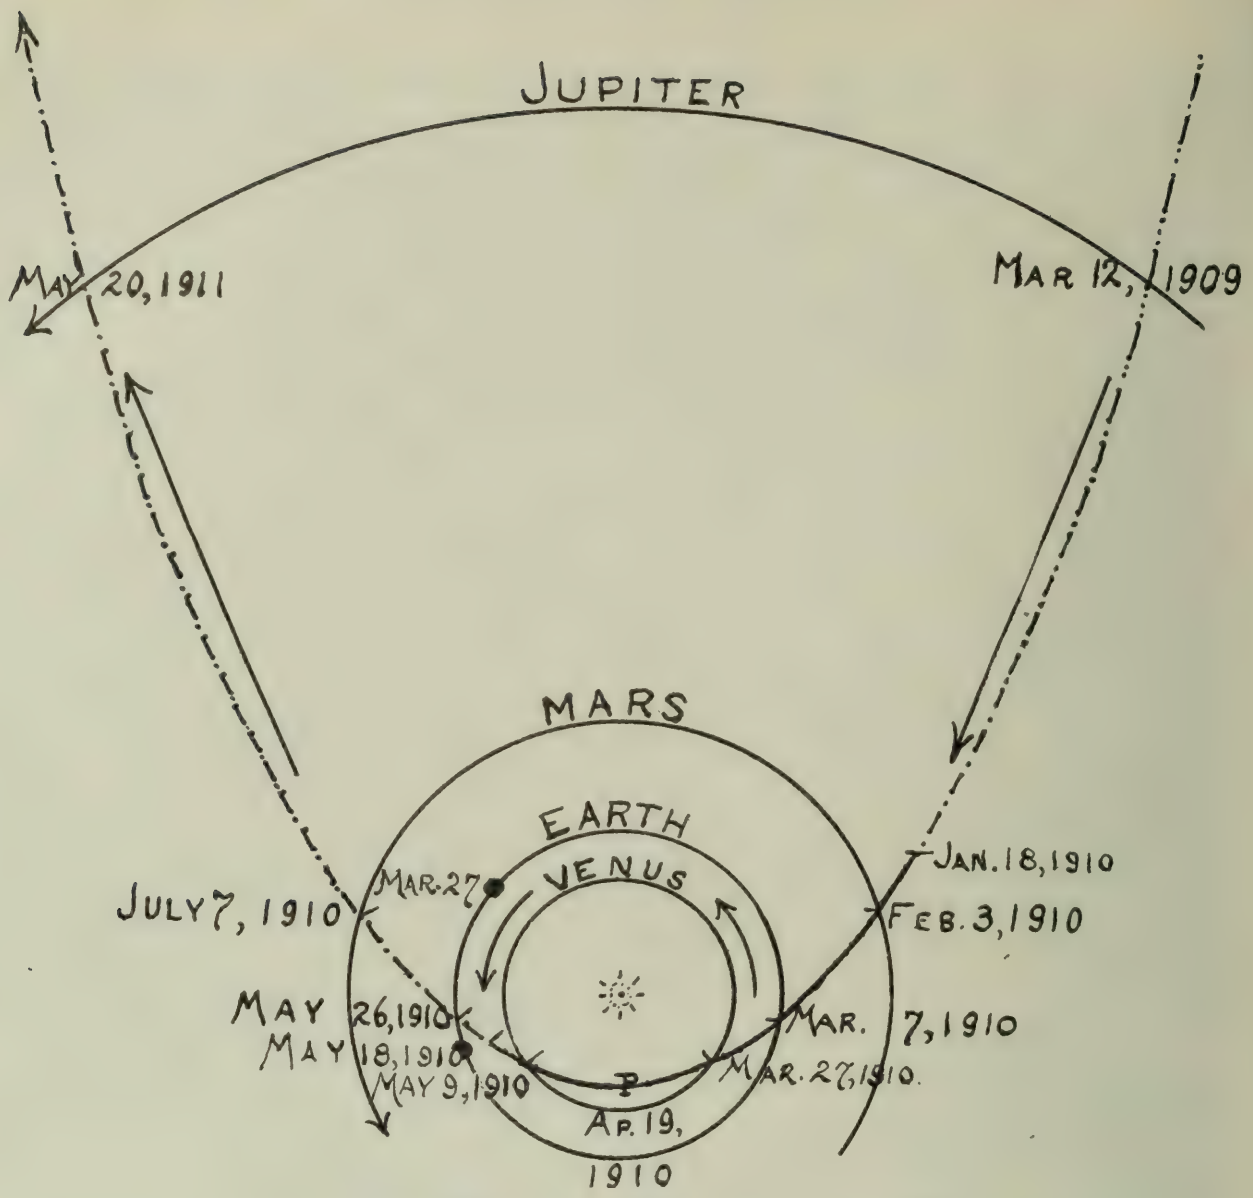
A salute of sixty-eight guns, telling the age of the late King, was fired in the Palace Park at the conclusion of the ceremony. The evidences of public grief are unmistakably genuine. Crowds throng the London streets wearing black garments or mourning badges. Socialist and Irish speakers at mass-meetings took occasion to express their sincere regard for Edward VII, and special services were held in Roman Catholic Cathedral and Jewish synagog. Telegrams of condolence have been received in thousands from foreign governments and prominent personages.

Character of the New King

So little is known of the character and opinions of the new sovereign that his advent is viewed with great curiosity and some apprehension. He assumes power in a crisis which even the tactfulness of his father was not able to relieve. The Lords and Commons are still at odds, and while a truce may be declared for a few months the issue cannot be long postponed. King George is generally supposed to be inclined toward the Tories as his father was toward the Liberals, but he is thought to be concerned with social reform and he has been diligent in his attendance at parliamentary sessions during the recent debates. He is in many ways a marked contrast with his father. He takes little interest in sport or society, but is of a studious and retiring disposition, unpretentious of manner and regardless of pomp. He lacks the geniality of Edward and his proficiency in foreign tongues. His hobby is postage stamps, of which he has a collection estimated to be worth half a million. There are no scandals in his private life except the rumor, officially denied, of a morganatic marriage with a daughter of Admiral Seymour, when

he was at Malta. His elder brother, the Duke of Clarence, died in 1892, and Prince George succeeded to his political expectations and to his fiancée, the Princess Victoria Mary of Teck, generally known as "Princess May," and a great favorite with the English people. She was to have been married on February 27, 1892, to the Duke of Clarence, but on January 14 he died, and on July 6, 1893, she was married to Prince George, now heir to the throne. They have six children, of whom the eldest, Prince Edward, soon to become Prince of Wales, is now nearly sixteen. King George is now nearly forty-five, and was born at Marlborough House, June 3, 1865. He entered the navy with his brother in 1877, and in 1879 they started on a three years' cruise around the world on the "Bacchante." In 1901, on the "Ophir," he made a nine months' tour of the British colonies, India, Australia, New Zealand, South Africa and Canada, and on his return delivered an address at Guildhall of strong imperialistic tone, beginning with the words "Wake up, England!"

Roosevelt at Christiania



It is not necessary for us to describe the royal reception given to ex-President Roosevelt at Copenhagen and Stockholm, but his visit to the capital of Norway is an event which is likely to prove of great political importance since he delivered there an address on methods of securing permanent international peace. It is one of the requirements of the Nobel Peace Committees that all persons who receive the prizes shall then or shortly after deliver in Stockholm or Christiania, an address on some subject connected with the achievements for which the prize had been bestowed. President Roosevelt received the prize for the promotion of international peace in 1906 on account of his efforts for the conclusion of the Russo-Japanese War, but the requirement of personal attendance was suspended in his case. Mr. Roosevelt's address we publish on another page. It was delivered in the State Theater at Christiania to an audience of about 1,800 people. The stage was decorated exclusively with American flags. King Haakon and Queen Maud were in attendance and the address of welcome was given by John Lund, former president of the Storthing and vice-president of the Nobel Prize Committee on Peace. Mr. Roosevelt prefaced his address by a tribute to the late Björnstjerne Björnson.——Mr. Roosevelt's visit to England will be marred by the death of the King since the Court will be in mourning and no official entertainments can be given. In accordance with Mr. Roosevelt's request, the German Emperor has cancelled the arrangements for all official functions and will receive him only privately. Mr. Roosevelt will be the guest of Ambassador Hill in Berlin instead of being entertained at the royal castle. On account of his continuous speechmaking Mr. Roosevelt's voice has given way and he is exceedingly hoarse.

Peary Honored in London

The highest honor to which an explorer may attain is to receive the gold medal of the Royal Geographical Society, and that this has now been bestowed upon Commander Robert E. Peary may atone in part for the fact that the pretensions of another robbed him at first of the applause which he should have received upon his return. Albert Hall was packed to its limits with an audience of 10,000 people when he appeared before the society, and he was received with unprecedented enthusiasm when he arose to address them. His closing paragraph referred to the British explorers as follows:

"In the person of Capt. Bartlett your flag stands next the north pole; in the person of Capt. Scott, God willing, it shall stand at the south pole. Honors are equal. We are of one blood. Thank you."

Then Major Leonard Darwin, president of the society, bestowed upon him the gold medal as "the one and only man who has yet, since the world began, led a party of his fellow creatures to a pole of the earth." At the same time Major Darwin called attention to the fact that it was not the policy of the society to honor any mere race for the Pole, but that the medal was given for Arctic exploration. A silver replica of the medal was presented to Captain Bartlett.

PATH AND SCHEDULED TIMES OF HALLEY'S COMET.

Unbroken line, from January 18 to May 18, indicates that part of the path above the ecliptic or earth's plane. P, perihelion, nearest the sun. May 18, comet directly between sun and earth, making transit of sun. Other dates, times of crossing orbits of the planets. (Drawn by the author.)

Thru the Comet's Tail

BY FREDERIC CAMPBELL, SC.D.

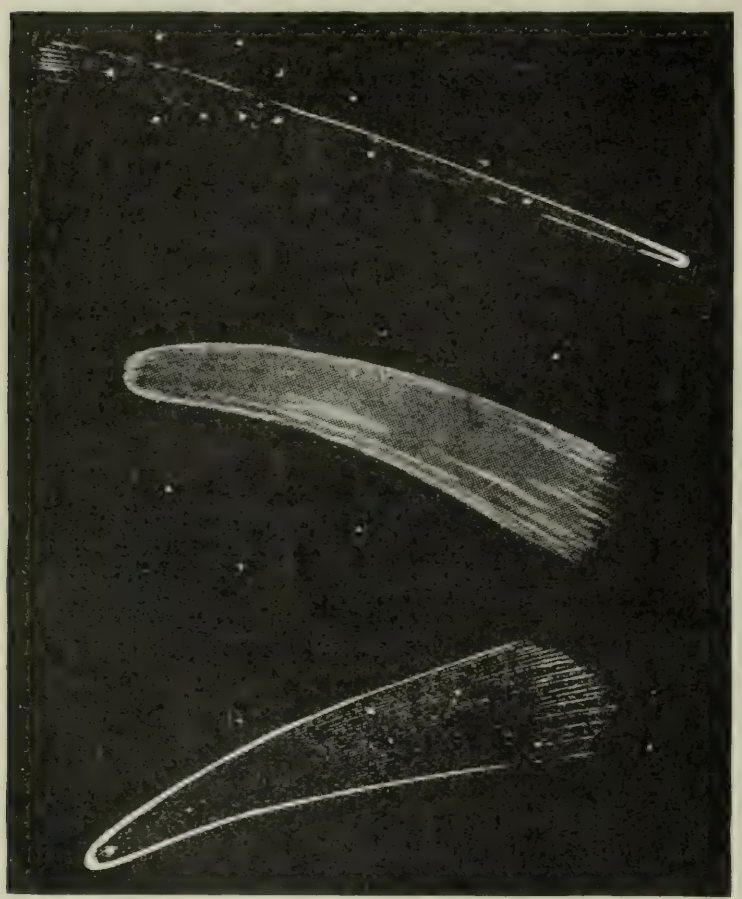
[Next week Wednesday the world passes thru the tail of Halley's comet. Whether we shall be able to see or feel it the reader can learn from the following article by the president of the Department of Astronomy of the Brooklyn Institute of Arts and Sciences.—EDITOR.]

IF the visit of Halley's comet to our skies is an event of a lifetime, the earth's passing thru its tail is easily an event of the ages. There is no record that the earth ever hazarded this plunge before, nor is there any prophecy that it will ever do it again. While we do not know just when Neptune laid his mighty hand on the celestial wanderer, intending to rush by with a single bow and be gone forever, and tied him up in the ellipse in which he has ever since traveled, we are able to trace his periodical visits back to 240 B. C., and to identify sixteen appearances. But the probabilities have always been overwhelming against the event which is now actually to occur.

The passing of the earth thru the tail of the comet is one and the same occurrence with the transit of the sun's face by the comet's head. In order that this may happen, earth, comet and sun must all be in a straight line. The probabilities are almost infinite that the three

bodies would arrange themselves in some kind of a triangle rather than in a straight line; that is, that one of the three would be a little out of line. The bringing of the three bodies into a straight line is a remarkable concatenation of events. The transit is to take place late on the 18th of May. On that day and at almost the same hour and minute the comet is to do two things that might easily have been separated by hours and days, thus making impossible both a transit and a passage thru the tail: namely, it is to pass its descending node and at the same time to be in conjunction with the sun.

By the former is meant that the comet on this date descends from above the plane of the ecliptic to below the same. The comet's orbit is not in the plane of the ecliptic, that on which the earth travels, and near which all the planets perform their revolutions, but it is inclined thereto by an angle of about 18 degrees; nearly all its time is spent beneath our plane; with every mile that it approaches, however, it ascends 1,631 feet nearer to it; on the 18th of January last it arrived at its ascending node, cut thru the plane of the ecliptic, and went on above it so high that, when it crossed the earth's orbit, early in March, it was 15,000,000 miles higher. In exactly four months it comes around to its descending node, and on the 18th of May it is again cutting the plane of the ecliptic, only this time downward. This brings it temporarily in the same plane with the sun and earth.



But while the comet is just now level with the sun, it is dropping, and its transfer from above to below our plane might be accomplished either before or after passing the sun; in that case it would pass either below or above and there would be no transit. Of this the probabilities are so great as to produce almost mental certainty. Yet the fact is that the passing of the descending node and the conjunction with the sun are so nearly at the same hour and minute that a transit of the sun's face, on the one hand, and the earth's passing thru the comet's tail, on the other, are fully assured.

There are only three other bodies which ever transit the sun, namely, the moon, Mercury and Venus. The moon has both her ascending and descending nodes every month and comes into conjunction with the sun in passing at new moon every month; but, like most comets, it usually gets by either above or below; but when otherwise its transit produces an eclipse of the sun, partial or total, as the case may be. Mercury made its last transit in November, 1907, and will make its next in November, 1914. Venus made its last transit in December, 1882, and will not make another till June, 2004, omitting 112 years. When we consider the frequency with which all these bodies pass their nodes and pass the sun, and the infrequency with which they transit the sun, we are enabled to realize the remarkable character of the cometary transit about to occur. If Methuselah saw Halley's comet twelve or thirteen times in his long life, it is safe to say that he never witnessed a transit. Such a performance is recorded of only one other comet, namely, the great comet of 1882.

On the other hand, the passing of the earth thru the tails of comets must be almost equally rare; not quite, because a comet's tail spreads to an enormous width and might involve the earth, even when the head failed to traverse the sun's face. Thus we have the record that the earth passed thru the tail of the comet of 1819, on June 26 of that year, and thru the tail of the comet of 1861, on June 30 of the latter year; but the heads of these comets did not transit the sun's face. The records of one transit, however, and of two passings thru comets' tails, assure us that our impending experience is not altogether new or unknown.

It is an almost universal rule that the tail of a comet is swept back from the sun by some force supposed to be the pressure of light. This is why the comet's tail will involve the earth when its head is seen in transit. Yet it will probably not be at the identical moment, but a little after, because of the curvature of the tail backward. Just what that curvature is we do not yet know; otherwise we could say how many hours after transit the tail would sweep down upon this globe. But combining the predictions of several eminent authorities.

not fully agreeing among themselves, the transit may be expected between 7 p. m. of May 18 and 1 a. m. following, Eastern time. Cowell and Crommelin, of Greenwich Observatory, place it at 9 p. m., Eastern time. Possibly by midnight we may expect the outer fringe of the tail to touch the upper layers of the earth's atmosphere. And, inasmuch as after the central moment of transit the entire comet, including the tail, will be

COMETS OF 1811, 1835 (HALLEY'S) AND 1843.

rapidly dropping, and the earth, too, rapidly speeding away from the transit line, it is plain that our globe will not pass thru the center of the tail, where it must traverse at least a million miles to make an exit, but some other portion where the passage will be materially shorter. But, even so, the experience will be a matter of hours.

That we have twice gone thru comets' tails without harm is full assurance of safety in this instance. While the tail of Halley's comet consists of vapors driven off from its active head, and there are in it poisonous elements, such as hydrogen and cyanogen, it is so extremely thin as to be literally next to nothing. Every day's atmosphere is thick with poisons as compared with anything that the comet will introduce. Even if it were otherwise it would be a question whether much or any harm would be caused. On the one hand all the products of combustion from the burning of fuel and the breathing of animals, all the outpouring of smoke, gas, ashes and lava from not a few volcanoes, are marvelously disposed of by processes that take place in our atmosphere. On the other hand, all the burning of a million meteors a day fails to vitiate the air we breathe. Even if we should graze the comet's head, with its seething mass of deadly fumes, it would take time for them to interpenetrate our atmosphere, and, before they could do us serious harm, it is not unlikely that they would in some way be disposed of. Surely the feathery touch of a comet's tail upon the surface of that atmospheric ocean in which we are immersed, 200 miles deep, cannot instantly affect us, nor harmfully even at a later hour. The pneumatic tire of the wheeling earth has been for ages its coat of mail.

As for the spectacle, inasmuch as both previous experiences were unknown at the time, we may doubt whether anything imposing is before us. Yet, in 1861, when it was afterward proved that the earth had been buried 300,000 miles deep in the comet's tail, it was remembered that even when the sun was in the heavens they wore a strange, auroral, yellowish look, which had been thought worthy of record. From midnight till dawn, therefore, and possibly even after the sun has risen, we may hope to witness a weird tho faint lighting up of the sky, the fainter because the gibbous moon is with us till 2.45 a. m. The transit itself can be seen only where the sun has not yet set, and, if the experience with the great comet of 1882 be repeated, it will reveal absolutely nothing, the sun shining brightly thru the comet's head as if it were not there at all. And then will it devolve upon the astrono-

mers to determine if the nucleus within the head be a mass of mutually attracted meteorites, perfectly solid bodies of varying size, each of them opaque, how the sun's light breaks thru as if they were not there at all.

It almost goes without saying that there is no possibility of collision with Halley's comet, whose path is as well known as that of the moon. In crossing our path it is first 15,000,000 miles above, and later 6,000,000 miles below; and its head, the only possibly dangerous part, will not come nearer than 12,000,000 miles, about fifty times the distance of the moon. The same divine hand that keeps the stars in their courses equally guides the apparently mad rush of every celestial vagrant. We are safe as long as there is a God, and as long as the history of man and redemption yet remains unfinished. No fortuitous event will be suffered to break in upon and overturn the course of the divine purposes. Yet, as the highly improbable transit of the sun, with all that is involved therein, is about to become actual, so, when the suitable moment arrives, some comet, perhaps even now on its way, may unexpectedly burst forth from the heavens, shattering the earth in an instant, or falling into the sun's already fiery bosom. In either case an ancient word would necessarily be fulfilled, that "the elements shall melt with fervent heat, the earth also, and the works that are therein shall be burned up."

GREAT COMET OF 1744. ITS SIX TAILS WERE SEEN STRETCHING UP THE SKY EVEN WHEN ITS HEAD WAS BELOW THE HORIZON.

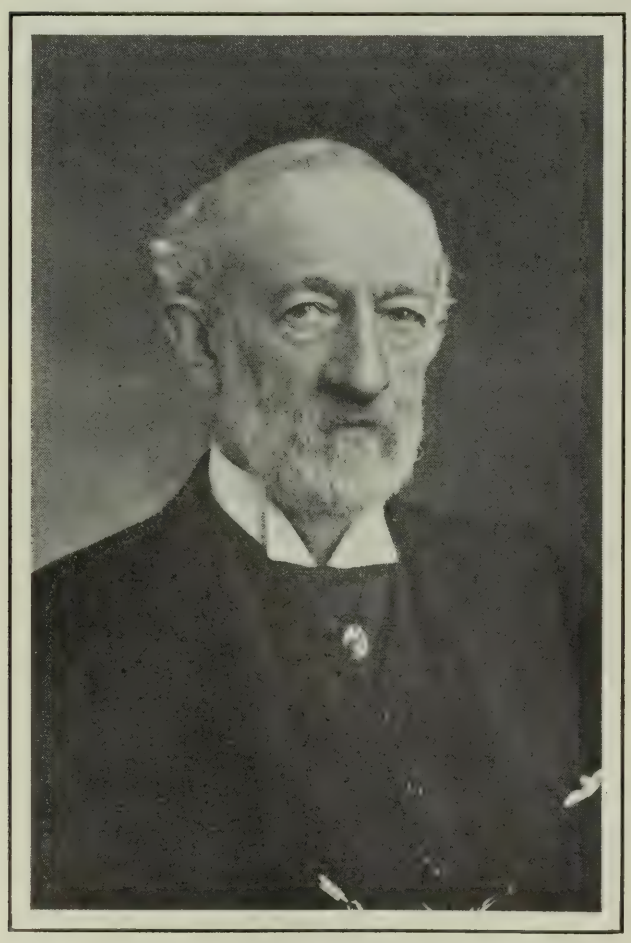
BROOKLYN, NEW YORK.

The Vatican Incident

BY THE MOST REVEREND JOHN IRELAND, LL.D.

[It pleases us to receive the following communication addressed to the Editor of THE INDEPENDENT from the distinguished Archbishop of St. Paul. It authoritatively confirms the judgment exprest by us that the uncivil language attributed to the Holy Father must have been falsely ascribed to him.—EDITOR.]

THE INDEPENDENT of April 21 takes notice of a cablegram from Rome to the effect that the Holy Father had disapproved of the visit of Abbot Janssens to Mr. Roosevelt as being an act lending itself to an interpretation offensive to the Vatican authorities—the cablegram adding, as if quoting directly, the following words: "The Vatican did not wish Mr. Roosevelt to bracket the Pope with other more or less royal personages he will boast of having hunted in Europe after his African hunt." Others besides the editor of THE INDEPENDENT were much surprised on reading those words and refused to believe that they had been spoken by an authoritative representative of the Vatican, however much this seemed to be the meaning of the cablegram. I beg leave to say that I am in a position to declare very positively that the words never came from the Vatican. The Vatican confined itself to a repudiation of the act of Abbot Janssens. The remainder of the cablegram was either the personal conclusion of the correspondent or an item he had picked up from the gossip of the day. Of one thing readers of THE INDEPENDENT may be sure—the Vatican, whether approving or condemning, is always dignified in thought and high toned and self-respecting in speech.



ST. PAUL, MINN.

Political and Other Troubles at Westminister

BY JUSTIN McCARTHY

I CAN easily understand that my readers in THE INDEPENDENT of this month will be a good deal surprised to find that the subject which I first bring under their notice is not that of the great Ministerial crisis and the next step which Mr. Asquith and his colleagues have made up their minds to take. Great as that question is, I do not make it my opening topic, for one reason because the House of Commons has just been engaged in discussing a subject than which hardly any could have greater importance for the whole of the British Islands.

The House of Commons was occupied in discussing the second reading of a measure introduced by Sir Robert Price, a Liberal member, who is by profession and occupation a surgeon, and his measure is entitled a Bill for the Prevention of Destitution. The measure found a welcome on both sides of the House, a welcome indeed as cordial as could reasonably be given to a scheme which involves such vast and seemingly hopeless difficulties. The prevention of destitution in civilized as well as in uncivilized countries seems when first heard of to be almost as hopeless a human project as a measure for the restoration of the Golden Age. Sir Robert Price, however, has had even already the happy effect of winning Liberals and Tories, Free Traders and Tariff Reformers to join cordially their resolve to give the bill a full and fair hearing and consideration and to do everything in their power to enable the author of a measure and his principal supporters to win some practical success for what I may justly call their heroic as well as philanthropic enterprise. The main object of the present bill is well described by the *Daily News* in its leading article on the debate as proposing "the creation of a department and a Minister of Labor equal in status to the Secretaries of State—a reform which it will be admitted is long overdue."

SIR ROBERT ANDERSON.

The *Daily News,* in an article which is positively enthusiastic in support of the measure's principal objects, describes it as proposing "the abolition of the Boards of Guardians and the entrusting of the county and borough councils with the duty of treating the non-able bodied poor under the various specialized committees at present doing the same work outside the Poor Law," and it proposes the transfer "of all matters connected with unemployment to the Department of the Minister of Labor." The leader of the Opposition, Mr. Balfour, gave just as warmly as did Mr. Asquith, the Liberal Prime Minister, the expression of his cordial hopes that some genuine and enduring and beneficent success might come of the efforts which thus far have resulted in the preparation and the intro-

duction of the present measure. "We recognize with much pleasure," says the *Daily News* article, "the service rendered by Mr. Balfour in making his protest against the practice of condemning a policy by the affixing of an opprobrious label." In the case of this measure the *Daily News* goes on to say, "a resort to the epithet 'Socialistic,' tho easy enough, is more than usually unintelligent, since the community has once for all accepted as a primary obligation the care of the young and the aged, the sick and the feeble-minded, the unemployed and the unemployable."

I need hardly say that I shall follow the course of this measure with the deepest and the most hopeful interest. The questions of unemployment and destitution are among the greatest national difficulties these countries have to deal with and Parliament has not yet done, or even resolutely attempted to do, anything like the work which it might have undertaken and accomplished for the prevention of destitution. Nothing, however, could have been more hopeful in its way than the union of good wishes which came from both sides of the House and were exprest as warmly by Mr. Balfour as by Mr. Asquith on behalf of the measure for the prevention of destitution. There was, indeed, an amendment proposed to the effect that the bill should be wholly rejected but no division was taken, and I hope that we are yet to hear a long and exhaustive debate upon the subject.

Only during very recent years has the British public been waking up to some perception of the fact that the whole poor law system of this country is founded on a basis of error and misconception, on the universal assumption that the poor are not fellow subjects who ask to be put in the way of making an honest and respectable living for themselves, but simply professional mendicants who petition for a daily allowance of beggar's food. It is something, at least, if by means of such debates as those we have been lately hearing in the House of Commons we are at last beginning to have the true explanation of the whole problem brought as a light and guide into the mind of the public. The measure brought in by Sir Robert Price appears to have undergone the temporary

SIR R. J. PRICE.

fatality known in the familiar language of the House of Commons as being "talked out." In other words, it was still the theme of discussion on one of those days when the House, according to rule, ends its business, whatever it may be, at a certain precise hour. If the matter under discussion be a private measure, it has but to take its chance of finding on some future occasion an opportunity of being brought up for further consideration. We may feel sure, however, that a measure so important in itself and so cordially welcomed as this for the prevention of destitution has been cannot fail by the help of this or some other ministerial influence to find ample hearing and steady progress. It seems to me hard indeed to understand that some of the evils described during the debate on Sir Robert Price's measure had been held up for public condemnation and for legislative interference and removal so long ago as the days of Charles Dickens's earliest novels, and that some of them at least, as we learn from the recent debate, are still found to survive and flourish in our workhouse

system. Much as the House of Lords may need improvement, it seems to me that our system of dealing with destitution needs it yet even more.

Even amid all the unceasing and still actually increasing excitement of the political and parliamentary crisis I found myself filled this morning with an entirely new shock of surprise by the contents of a leading article in the *Daily News*. The article deals with a revelation suddenly made concerning the authorship of the dissertations on "Parnellism and Crime," which appeared in the *Times* in 1887, and created then a sensation to be remembered in history. The publication of these articles led also to the appointment of the Parnell Commission; in other words, the creation of a special criminal tribunal for the arraignment and trial of Charles Stewart Parnell, then leader of the Irish National party, and several of his colleagues, on the charge of having utilized the service of assassins in order to terrify the Government and the public into a submission to the Irish demand for Home Rule.

I have good reason to remember well the events of that year, the events brought about by the publication of the articles in the *Times* on "Parnellism and Crime," for I was one of Parnell's followers in the Irish Parliamentary party, and I was arraigned before the commission as one of his accomplices in the business of murder. We were arraigned before a tribunal. The general public thruout Great Britain and the United States well remembers the result of that investigation—the forged letter got up by the man Pigott, who afterward committed suicide when the forgery was proved and the triumphal acquittal of Parnell and his companions in the trial and their return to the House of Commons, where Parnell was received, I feel bound to say, with a cordial, upstanding welcome by the members of that House then present, of whom the great majority had been his most uncompromising political antagonists during the whole of his past career.

The latest revelation made to the world on this subject of "Parnellism and Crime" is that the articles written and printed with that title were the work of Sir Robert Anderson, adviser to the Home Office at that time and afterward head of the Criminal Investigation Department, from which he retired in 1901. The authorship is proclaimed now on what must be admitted to be very competent authority, for it is that of Sir Robert Anderson himself, who makes it known in an article which appears in *Blackwood's Magazine*. We come now, therefore, in face of the astonishing fact that the author of that memorable series of articles in the *Times* which bore the title of "Parnellism and Crime," and on which the special criminal tribunal was founded, had itself been contributed by an official in the political service of the then existing Government and who afterward became head of the Criminal Investigation Department. As might naturally be expected, Sir Robert Anderson has at once been visited by newspaper interviewers, and if his statements be accurately represented by one of these who writes for the *Daily News*, he is capable of surprising the public now even more than he did by his previous sudden revelation. "Incidentally, Sir Robert mentioned," as stated in the *Daily News*, "he still believes the 'Pigott' letter to have been written by Parnell, but considers that far too much importance has been attached to its contents." If Sir Robert Anderson did and still does believe that the letter was actually written by Parnell, he is evidently capable of believing anything, however preposterous, about himself or about anybody else. History records the fact that when the letter was proved to be a forgery and Pigott was charged with having written it, he fled to Madrid and there committed suicide to escape from being surrendered to the demand of the English authorities. It is quite certain, however, that the special tribunal created to inquire into the truth of the charges brought against Parnell and the colleagues arraigned with him was utterly refused belief by the judicial tribunal to whose decision the accusations were referred for judgment, and that nobody whose opinion was worth having ever believed that the letter had been written by Parnell. John Redmond made the conduct of Sir Robert Anderson the subject of a question addrest to

Mr. Asquith in the House of Commons last Monday, April 11. Mr. Asquith's reply was, on the whole, to my thinking quite satisfactory. "I cannot," he said, "use language sufficiently strong to express my condemnation of the admitted breach of official duties of which Sir Robert Anderson was guilty." Mr. Asquith did not seem to see his way as to any advantage which could now be gained from the opening of a new inquiry on this part of the subject, but in answer to further pressure from Mr. Redmond and some of his colleagues, he did not even commit himself to absolute refusal. It seems at present to be well understood that opportunity will be given for a revival of the whole question during some of the debates which must come during the regular course of the session on the financial wants of the Government during the current year.

Science, and more especially statistical science, has just undergone a memorable loss by the death of Sir Robert Giffen, for many years head of the statistical department of the Board of Trade, and at one time city editor of the *Daily News*. Sir Robert Giffen was one of the many educated Scotchmen who are attracted in their youth to seek in London a field of success for the noble ambition to give their intellectual capacity an opportunity of making its mark on the world's culture. I remember well that I first made his acquaintance thru my dear friend William Black, the famous Scottish novelist, who in my early London days was one of my closest literary and journalistic comrades. Giffen, altho undoubtedly one of the greatest men of his time in his own department of science, was never absorbed in statistics to the exclusion from his interest, his studies and his thoughts of subjects which belonged to art and to letters, and a poet or a painter might have conversed with him again and again with interest and delight. He was in his seventy-fourth year when he died.

In my latest contribution to THE INDEPENDENT I mentioned the fact that Mrs. Antrobus had published, thru Messrs Chatto & Windus, a new novel called "The Stone Ezel." This book has, I can tell my readers, all the characteristics of its authoress's other novels—charm of style, individuality, and a wonderful sympathy with Nature in all her moods. There is also a strange supernatural element in this story. At least "The Stone Ezel" seems to have a magical personality of its own, and it dominates the story, as the name suggests. In her power of suggesting the supernatural, the elemental, Mrs. Antrobus has much in common with Hawthorne. As has been said, "There are some for whom the limits of the possible seem to be set farther out than for the rest of the world—for them the darkened glass is less dark." Mrs. Antrobus's character drawing is ever remarkable, and even her minor characters have strongly marked individualities, and her men and women all stand clearly apart as they would in real life—if one were fortunate enough to meet so many clever and charming people at the same time and place. One parts from them all at the end of the story with much regret.

Mr. Percy White's short stories, which have lately been published by Messrs. Mills & Boon, are called after the longest story, "An Averted Marriage," and have a wide range—from cynical, realistic to frankly amusing and indeed almost farcical on the one hand, to pathetic and even tragic on the other. For myself I must admit liking the latter order the better. Mr. Percy White is a master of the art of the short story. I hope he will give us another such volume soon.

LONDON, ENGLAND.

The Fight for a Clean Ballot

BY EDWARD RIDLEY FINCH

[Mr. Finch is a Yale graduate, a lawyer, a Republican, and until recently a member of the New York State Legislature. He is an authority on the evil of "repeating," which is far too prevalent thruout the country. The following article, therefore, is of much more than metropolitan significance.—EDITOR.]

"SAY 'How do you do' to the man, Patrick. He is the man who sent you the present when you were christened and sent us the coal last winter." Thus said the woman to her small boy, and then turning to the visitor, continued: "So you say you want me to take on ten names this year when I took eight last year? If they come inquiring where they sleep in this small flat of mine, sure I'll have to say that some of them sleep on the fire escape, but there won't be any inquiries made; there never has been for all the years that I've lived here, but if there is, I'll say they live here all right, and I have got the list upstairs somewhere of the eight names I had last year, and you just give me the two extra ones, and that will only be two more to learn. No, thanks, we don't need any coal just now and everything is going finely, but if we do and I can't make out otherwise, I'll let you know."

The above conversation illustrates the practical carrying out of what takes place in many of the large cities of the country just preceding election day.

During the election of 1907, the extent of fraudulent registration and voting in New York City was brought to the attention of a number of men who have the best interests of their city at heart. They would not believe the extent of the fraud until they themselves, by visiting certain parts of the city on election morning, saw the repeaters going boldly from polling place to polling place. A careful investigation was thereupon made and the number of fraudulent votes reported as follows:

"Considering then the wholly fraudulent vote, . . . the number of these votes cast in an annual election in the Borough of Manhattan, never falls below 30,000, and in elections considered important far exceeds that number."

This statement when made was ridiculed. But when the amendments designed to prevent this fraud were sent to the Legislature of 1908, members of Tammany Hall privately admitted that the statement was true. It is no longer ridiculed; in fact, the number was understated.

Based upon such investigation and following the recommendations then made, the two acts which were recommended to the Legislature of 1908 became law. These are familiarly known as "The Signature Law" and "The Householders' Law." The first of these seeks to identify the voter at the ballot box and the second to prevent collusion between the householder and repeater in endeavoring to establish a false residence.

Herbert Parsons, with the experience of five years' service as president of the Republican County Committee, writes:

"The effect of these acts was, I estimated, to cut out 30,000 fraudulent votes in the election of 1908, nevertheless, a vast number were cast fraudulently and demonstrated the necessity of further precautions in the future."

This is corroborated also by the following registration figures of 1908:

For thirty-two years preceding the election of 1908, the number of persons registering in the boroughs of Manhattan and the Bronx increased every four years on an average 29,714. In 1908, on the other hand, the registered vote in the same territory decreased 19,952, which, if added to the normal increase during the preceding thirty-two years, represented a total falling off of 49,666 in the boroughs of Manhattan and the Bronx alone. It is also more worthy of note that far greater efforts were made to check this vote in this same territory than in the rest of the city. Despite this falling off of the registration in the election of 1908, yet in this very same election a leader of an assembly district has stated that in his district alone he found 900 fraudulent registrations, and even then he believed that there were many

that he had not discovered. This leader, moreover, is known as one who is overdiligent in seeking to prevent these frauds. A careful investigation in widely different parts of the city following the election of 1908 showed that, even with all the fraudulent votes that had been eliminated, yet in many districts this vote ran from one-eighth to one-quarter of the total registered vote. The above statements are not those made by a writer solely for the sake of exciting attention, but are capable of demonstration and actual proof.

It has been publicly stated that following the election had last November, those in a position to know have admitted that, owing to the precautions which were taken to prevent these frauds, 20,000 "tin soldiers," as they call the repeaters, had been prevented from registering and voting. This is the admitted statement of those who produce this vote. A conservative estimate places the number of fraudulent registrations and votes prevented as upward of 30,000. When it is noticed that a Sheriff, a District Attorney, a President of the Borough of Manhattan and three Supreme Court Judges were elected by considerably less than 30,000, thoughtful men pause and wonder how often in the past has the true verdict of the people been overridden.

New York City, because of its size and because the election officers do not expect to know their neighbors, furnishes the Mecca for those who make it their business to produce this vote. For many years now in this city personal registration has been required. Those who wish to vote must present themselves at the polling place on one of four specified days within thirty days preceding election day, and there personally state to the board of inspectors their qualifications. This is done by answering and signing the following questions: Name and address, age, number of floor residing on, person residing with, whether native born or a naturalized citizen, and if naturalized, in what court, length of time residing in the State, in the county and in the election district, from where last registered and voted.

For the purpose of affording convenient access to the polling places, the city is divided into election districts upon a basis of having 500 registered voters in each district. When the person applying to register presents himself this information is taken down by four inspectors, each of whom makes a separate record of the answers of the voter. Two of these inspectors represent the party casting the highest number of votes for Governor in the last preceding election, and two of them represent the party casting the next highest number of votes cast for Governor, and thus they represent at the present time the Republican party and the Democratic party respectively.

On election day the voter presents himself again at the same polling place and gives his name and address and signs his name and deposits the ballot that is given him in the ballot box. Now, if the board of inspectors knew their neighbors, as would be the case if the community was a small one, then fraudulent registration would be almost an impossibility. The board of inspectors would expect to know those applying to register, or at least to know their identity. The risk a repeater would run would be too great. In the City of New York none of the inspectors composing the board expect to know the person applying to register. It is an exception if they do know him. Probably out of 500 people that apply for registration, they may know fifty of them.

This is the great fact upon which the producer of the fraudulent vote relies. In each election district one person, aided by assistants, is responsible for the false registrations to be produced in that district. The object is to put on the rolls as many false registrations as possible. Of course, in many districts of the city it is impossible to produce much of this vote, but in other districts the conditions are such that the deficiency can be made up.

Now, let us see how easy it is to do this. A man comes in to the registration board and gives his name as Thomas Robinson, his address as a large boarding house or says he lives with Mrs. X., on the sixth floor of a ten-story apartment house having four families on a floor; that he has been living there for two weeks; is thirty-two years of age; has been in the State three years and in

the county six months; is a native-born citizen and has not registered and voted before in this State, and signs his name.

The board of inspectors do not know that these facts about him are not true and there is no one else to challenge him. The producer of this vote has seen Mrs. X. long before, as we saw in our opening paragraph. If, as very rarely happens, inquiry is made between registration and election days, Mrs. X. is prepared to say that Thomas Robinson is not at home, but that he lives there.

Thomas Robinson, after registering in this polling place, has walked up the street and had himself introduced to the producer of the fraudulent vote in the next election district and has had furnished him another Mrs. X., and here he has registered under the name of William Jones and given the second Mrs. X.'s address. Very often, and despite all the vigilance used during the last election, it has even happened that Thomas Robinson has gone before the same board of registration officers and given another name and another address in the same election district, and put another name on the same roll. A person who is genuinely interested in preventing these frauds can see them perpetrated by visiting any one of a number of different registration places.

Now, on election day, a repeater often other than the repeater who placed the name on the roll, comes to each of these polling places, gives the name and the address that was registered, signs his name, takes the ballot, marks it and deposits it. When once in the box it is just as valid as the ballot deposited by any honest American who has waited for one-third of his life before he was entitled to deposit his ballot in the ballot box.

The producer of this vote, with whose visit we opened this article, was endeavoring to make a record in this particular election, as it was a mayoralty election. The number of voters registering in his election district was about 400, and he had told the organizers, who kept well in the background, that he would be able to bring the number up to 550 in his district; that is, he would be able to enroll 150 false registrations. The organizers, on their part, had promised him all the aid and money he wished. Let us see how he distributed the false registrations in the block composing his district.

His wife and he occupied the first floor above the basement of a three-story house made over to accommodate a family on each floor. Eight names were to be registered as living with them, and his wife knew her rôle. He had been able to provide some odd jobs for the man who rented the floor above, and in return this man and his wife were to stand cover for seven. The woman who rented the top floor was to pretend that five lived with her, in consideration of the payment of her rent for a month. The barber in the basement, favoring a steady customer, was willing to put a screen in the rear to cover a double cot and make pretense for two more. He had gone to every one who had taken names the year before and had urged the necessity of the greatest possible increase. In addition, he had canvassed the janitor and the lessee of every apartment house and the proprietor of every house with rooms to let. Wherever there was a vacant apartment he had endeavored, and in most cases with success, to persuade the janitor to say it was occupied by the persons whose names he furnished. The persons living in his district whom he knew he approached directly, and others he approached thru mutual friends. Those who were willing he paid either with a cash consideration or a future reward.

A doctor, who was hoping to be appointed as a Coroner's physician, occupied a house with his father and brother, and was willing to take four additional names. The inmates of a disorderly house had been sent away and twenty-seven cots had been sent in, and the house had a sign as renting rooms to men only. A stable in the block had furnished cover for eleven more. If any questions were asked of these men, their only answer was to be that they worked and slept in the stable. He himself was employed in a city department, and consequently only put in an appearance for a few minutes, once in the morning and once in the afternoon. Every one in the department understood that it was the month before election. He had kept in mind all the year around the real work that he was assigned to do. Whenever

any favor was done for any householder or lessee, there was always the idea that this person might be obtained as a cover for additional false votes.

His efforts had almost brought the number up to 150, and he was counting on taking the chances of having a few register from residences whose owners would not be likely to scan the registration list, or if they did, would be too fearful of notoriety and inconvenience to make any complaint. Following the usual custom, he had arranged for the use of a vacant basement next door to the polling place. Here he had a helper in charge who had a list of the places from which the names were to be registered. Thruout the four days of registration he would be visited from time to time by a man whom he would know and who would introduce to him two or three men at a time, and these men would be sent into the basement, and there given the name and address and information under which they were to go up and register in the polling place. As soon as they had registered they would come back to the basement and would be furnished with a slip upon which they would write the name and address under which they had just registered, and the name of the person with whom they had stated they lived. On this same slip they would also sign the name just the same as they signed it in the polling place. Having made this slip out and turned it in, they would receive $1 apiece for registering, and go off with their leader to another polling place to meet the man who was there in charge of the same work.

The object of having the information put on a slip and the name signed as the repeater had signed it on the registration book was to have this slip ready to turn over to the man who would vote under this name on election day.

The man who acted as introducer is known as the "guerrilla" leader. On election day the same "guerrilla" leader and other "guerrilla" leaders would bring around the same or other men, only more men would be brought at one time and they would be brought faster, because, while there are four days to register the names, yet all the names registered must be voted on election day. It is the custom to get a start early in the morning, and so, after the polls have been open for a few minutes, there is usually a line of from seventy-five to one hundred men waiting to vote. In addition to the men brought by the "guerrilla" leaders, the producer of the vote in the particular election district usually knows a few local men whom he can utilize. Last year, it was said, two men, partners in business, who had received contracts under the city government, and who had an acquaintance with the producers of this vote in certain sections of the city, were informed that they would have to act as "guerrilla" leaders. They demurred, but were told that if they expected any favors to come, they would have to so act.

When considered in the abstract, it looks as if the fraud is bold, but when the concrete case is presented, as shown above, it is seen that the chance of detection is not formidable. The "guerrilla" leaders prefer to have men from out of the State, because at the close of the day these men can leave the State and their identity is lost.

The devices used to give color for false residences are innumerable. Old names are sought to be kept on the rolls, because it follows that the older they are, the more certain the investigator feels that they must be legitimate. Similarly, the names of dead men are oftentimes kept on the rolls. In the election of 1908 a name was registered which was that of a son whose mother said that he had died in 1904. This illustrates the humor in the remark of a Philadelphian "that they were still voting in that city the names of the signers of the Declaration of Independence."

The names of those who have moved between one election and another furnishes a fruitful source. From 30 per cent. to 45 per cent. of the voters in an election district move between each election. The remaining 70 per cent. to 55 per cent. represent the permanent roll. These men should be checked up during the period immediately following one election and in preparation for the next. But it has often been customary to make little, if any, investigation prior to the next registration, which must all take place in the thirty days immediately preceding. Then an effort is made to check

up the total registration in the City of New York, which numbers upward of 650,000 voters. It is impossible in this short time to make any adequate investigation, and consequently, the few cases that are investigated are often done in a haphazard fashion, and such investigation must of necessity only concern a small portion of the names fraudulently registered.

Certain needed amendments to the election law to prevent these frauds were drafted under the direction of Mr. Herbert Parsons and sent to the Legislature of last year. There they were disgracefully beaten, with the connivance of certain persons outside of the County of New York.

Following the defeat of these amendments, a determined effort was made by the producers of this fraudulent vote in preparation for the last mayoralty election. To counteract these preparations, the services of almost two thousand young men were enlisted. These young men were chiefly recruited from the Y. M. C. A.'s and the schools and colleges in and adjacent to New York City. These were under the direction of a "Committee on Clean Elections." These young men made personal investigations of the registration rolls of the election of 1908, prior to the registration days of the election of 1909. A record was also made of those who claimed to be new voters in each district, and these new names were investigated between registration days and election. A description was taken also of the identity of the men presenting themselves for registration. The repeaters called this "mugging." This plan was followed so far as it was possible to obtain men for the purpose.

These efforts were not made without many sacrifices, and the men who volunteered for the work were in many instances viciously and brutally assaulted. One man had his finger torn off when he was knocked down and his records snatched from him. Another had his teeth knocked out and lost the sight of an eye.

As greater efforts have been made for a clean ballot, so greater counter-efforts and more ingenious devices have been used on the part of those producing this fraudulent vote. In the last election transfers of fraudulent names were had between different election districts and between different Assembly districts, so as to baffle the investigator in verifying registration. Again, squads of men have been hired in adjacent cities and brought to the City of New York for the purpose of having them sleep a few nights in one district and a few nights in another district and so on, and have them register in each of such districts. One man from out of town showed four different keys of the four places where he was to sleep a few nights. Again, names were put on the rolls of foreigners actually living in the district. When inquiry was made at the houses it was ascertained that persons corresponding to the names registered were living in these houses, and thus the investigator felt satisfied, not thinking to ask whether these persons were naturalized. Another plan was to have unnaturalized aliens simply register on the statement that they were native born; when asked where, they gave some other State in the Union. Statistics have been so loosely kept that it is impossible to disprove this statement, even if time were available between registration and election. After election, the matter is dropped. A thoughtful person who learns for the first time that all a foreign-born citizen who desires to vote as native born has to do is to make a statement on registration day that he is a native-born citizen, is amazed at the effectiveness of the answer. Those seeking to eradicate these frauds are never sure that they have discovered all. Experience has taught that often names which appear to represent genuine voters are nothing but a trick more clever than any before discovered.

In the event that an effort is made to arrest and convict persons falsely registering, no expense or plan is too great for the producers of these votes to undertake in an endeavor to prevent a conviction. It is the psychology of this dastardly business to guarantee protection to those who take the chances. Low bail in the first instance is always sought, and if the chances for conviction look good, the bail is forfeited. Another favorite method is to have the men escape by the inability of the inspectors to identify the man as the person who actually attempt-

ed to register. If a conviction is secured, a persistent, determined effort is made to obtain a pardon, particularly before the next election, so that the producers of the vote may point to the pardon as their guarantee of protection before asking that the same chances be taken in the next election. The number of pardons of the producers of this vote is astonishing, and the number of those who actually escape conviction on what seems to the citizen wholly technical defenses is more astonishing.

Practically the same amendments that were defeated last year have been again presented to the Legislature of this year. In view of the fact that a mayoralty election has just taken place, there is not the same incentive to defeat the bills. But there is still being made a determined effort to defeat them. These amendments will go far toward completely eradicating repeating. They are as follows:

As has been shown, one of the questions asked of a person registering is from where he last registered and voted. In order to render this statement ineffective, the repeater says that he is a new voter in the district, and has not registered and voted since 1907, which was the year before the law requiring the signature at the time of registering and again upon voting. Many of the registration books simply contain ditto marks under this answer. As has been shown also, the producer of the fraudulent registration prevents investigation by using a householder as a cover to corroborate a false residence. The amendment proposed requires of those who are registering in the county for the first time a statement of their occupation or employment, and if without employment, the name of the last employer, and in each instance, the address. This will require the producer of the vote to provide not only a false residence, but a false occupation. This, moreover, will give a privilege also to those citizens who consistently perform their duties as citizens in registering and voting each year.

Another amendment requires a person when challenged on election day, to state in answer to the challenge the name of the person with whom he resides, the length of his residence in the State, county and city, and the place from where he last registered and voted. While these questions are simple for the legitimate voter to answer, they become difficult for the repeater to memorize, and the more often he has to vary his story the more difficult it becomes. He is constantly in fear of misconnecting the name and the information that rightly belongs with it. Under the present law, when a voter is challenged, he simply says "I do" in answer to a verbal oath of the chairman of inspectors, who says in substance: "Do you solemnly swear that you are entitled to vote in this election?" The voter himself gives no information showing such right, so that even if his right to vote has been investigated between registration and election day, there is no method on election day of having his statement to corroborate or disprove the results of such investigation.

Still another amendment provides that one of the inspectors shall certify by putting his initials after the signature of the voter on election day that in his opinion he is the same person who registered. This responsibility is now put upon the board as a whole and is thus divided, and no inspector is held responsible. The above amendment will place the responsibility definitely upon one of the inspectors who is chosen by lot. Very often two of the inspectors are in league with the producers of the fraudulent vote. The two other inspectors often suspect, if they do not know, when it is being produced. None of them will care to take this responsibility even in a case where they merely suspect that the voter is not entitled to register.

Provision is further made for a reduction in the size of the election district. As the law now stands, each district should contain 500 registered voters, but this number very often runs up to 650. The hours of the voting day are from six o'clock in the morning until five o'clock in the afternoon, 660 minutes. It is obviously impossible to vote with proper safeguard 650 people in 660 minutes. This works to the benefit of those who are interested in producing the

fraudulent vote, as they plan to rush the men thru and rely upon the confusion and haste thereby produced.

The law must be amended so that the penal provisions are an adequate punishment. It has been held that there is no law which prevents an inspector from authenticating the answers to the questions that are asked of a person applying to register or to vote. To furnish a man his name when that man is applying to register and vote upon this name would seem to be unreasonable. And yet, a few years ago, an opinion was rendered from the office of the then Corporation Counsel of the City of New York that there was no law to prevent this.

All that has been written above concerning repeating at elections can be magnified many times to represent what often takes place at primary elections. This is particularly due to the fact that practically none of the safeguards of the law to prevent fraud at the general elections have as yet been adopted for primary elections. An amendment extending the provisions of the signature law as above amended to primary elections was sent up to the Legislature of last year, but was there defeated with the other amendments. This amendment has again been sent with the amendments above noted to the Legislature of this year.

Not one of the above amendments entails any hardship whatsoever upon the legitimate voter. Every *bona-fide* voter is willing to welcome any necessary inconvenience to prevent his vote from being offset by that of a mere criminal trick.

The greatest obstacle in a fight for a clean ballot is due to the fact that the average person who has the ability and desire to prevent these frauds does not understand the machinery. So general is this that a recent writer in a magazine who prides himself upon his knowledge of election conditions furnished, as his main argument that fraud did not exist, the recount in the Hearst Mayoralty contest. This would cause a smile even to the most illiterate repeater, who knows that the dozen ballots that he deposits in the ballot box on election day are each as valid on their face as the vote of any honest voter. The trick is not in the marking of the ballot nor in the counting, but in the fact that the ballot is deposited in the ballot box by a repeater instead of an honest voter.

As its importance becomes clearer and clearer, no subject is so dear to the hearts of the American people as a clean ballot. In the past public opinion has often been tolerant of election frauds. The fight here is not against the *bona-fide* vote which is purchasable, because the moral sense of this class of voters can be appealed to. But the fight is to shut out the wholly fraudulent dead-weight vote. All people generally, including judges, magistrates, jurors and writers, must be made to see clearly that the ballot thief is indeed a traitor against the security and well-being of his country. The issue is moral, vital and above partisanship.

New York City.

The Answer

BY MARY J. JACQUES

"If I might *see!*" Faith cried;
"Could I but *feel!*" Love sighed:
A hapless brother they espied,
And wept the while his tears they dried.

International Peace

BY THEODORE ROOSEVELT

[This is the Nobel Peace Lecture delivered last week, Thursday, before the Nobel Prize Committee in Christiania, Norway.—EDITOR.]

IT is with peculiar pleasure that I stand here today to express the deep appreciation I feel of the high honor conferred upon me by the presentation of the Nobel peace prize. The gold medal which formed part of the prize I shall always keep, and I shall hand it on to my children as a precious heirloom. The sum of money provided as part of the prize by the wise generosity of the illustrious founder of this world-famous prize system I did not, under the peculiar circumstances of the case, feel at liberty to keep. I think it eminently just and proper that in most cases the recipient of the prize should keep for his own use the prize in its entirety. But in this case, while I did not act officially as President of the United States, it was nevertheless only because I was President that I was enabled to act at all; and I felt that the money must be considered as having been given me in trust for the United States. I therefore used it as a nucleus for a foundation to bring forward the cause of industrial peace, as being well within the general purpose of your committee; for in our complex industrial civilization of today the peace of righteousness and justice, the only kind of peace worth having, is at least as necessary in the industrial world as it is among nations. There is at least as much need to curb the cruel greed and arrogance of part of the world of capital, to curb the cruel greed and violence of part of the world of labor, as to check a cruel and unhealthy militarism in international relationships.

We must ever bear in mind that the great end in view is righteousness, justice as between man and man, nation and nation, the chance to lead our lives on a somewhat higher level, with a broader spirit of brotherly good will one for another. Peace is generally good in itself, but it is never the highest good unless it comes as the handmaid of righteousness, and it becomes a very evil thing if it serves merely as a mask for cowardice and sloth, or as an instrument to further the ends of despotism or anarchy. We despise and abhor the bully, the brawler, the oppressor, whether in private or public life, but we despise no less the coward and the voluptuary. No man is worth calling a man who will not fight rather than submit to infamy or see those that are dear to him suffer wrong. No nation deserves to exist if it permits itself to lose the stern and virile virtues, and this without regard to whether the loss is due to the growth of a heartless and all-absorbing commercialism, to prolonged indulgence in luxury and soft, effortless ease, or to the deification of a warped and twisted sentimentality.

Moreover, and above all, let us remember that words count only when they give expression to deeds or are to be translated into them. The leaders of the Red Terror prattled of peace while they steeped their hands in the blood of the innocent, and many a tyrant has called it peace when he has scourged honest protest into silence. Our words must be judged by our deeds; and in striving for a lofty ideal we must use practical methods, and if we cannot attain all at one leap, we must advance toward it step by step, reasonably content so long as we do actually make some progress in the right direction.

Now, having freely admitted the limitations to our work, and the qualifications to be borne in mind, I feel that I have the right to have my words taken seriously when I point out where, in my judgment, great advance can be made in the cause of international peace. I speak as a practical man, and whatever I now advocate I actually tried to do when I was for the time being the head of a great nation, and keenly jealous of its honor and interest. I ask other nations to do only what I should be glad to see my own nation do.

The advance can be made along several lines. First of all, there can be treaties of arbitration. There are, of

course, states so backward that a civilized community ought not to enter into an arbitration treaty with them, at least until we have gone much further than at present in securing some kind of international police action. But all really civilized communities should have effective arbitration treaties among themselves. I believe that these treaties can cover almost all questions liable to arise between such nations, if they are drawn with the explicit agreement that each contracting party will respect the other's territory and its absolute sovereignty within that territory, and the equally explicit agreement that (aside from the very rare cases where the nation's honor is vitally concerned) all other possible subjects of controversy will be submitted to arbitration. Such a treaty would insure peace unless one party deliberately violated it. Of course, as yet there is no adequate safeguard against such deliberate violation, but the establishment of a sufficient number of these treaties would go a long way toward creating a world opinion which would finally find expression in the provision of methods to forbid or punish any such violation.

Secondly, there is the further development of the Hague Tribunal, of the work of the conferences and courts at The Hague. It has been well said that the first Hague Conference framed a Magna Charta for the nations; it set before us an ideal which has already to some extent been realized, and toward the full realization of which we can all steadily strive. The second conference made further progress; the third should do yet more. Meanwhile the American Government has more than once tentatively suggested methods for completing the Court of Arbitral Justice constituted at the second Hague Conference, and for rendering it effective. It is earnestly to be hoped that the various governments of Europe, working with those of America and of Asia, shall set themselves seriously to the task of devising some method which shall accomplish this result. If I may venture the suggestion, it would be well for the statesmen of the world, in planning for the erection of this world court, to study what has been done in the United States by the Supreme Court. I cannot help thinking that the Constitution of the United States, notably in the establishment of the Supreme Court and in the methods adopted for securing peace and good relations among and between the different States, offers certain valuable analogies to what should be striven for in order to secure, thru the Hague courts and conferences, a species of world federation for international peace and justice. There are, of course, fundamental differences between what the United States Constitution does and what we should even attempt at this time to secure at The Hague; but the methods adopted in the American Constitution to prevent hostilities between the States, and to secure the supremacy of the Federal Court in certain classes of cases, are well worth the study of those who seek at The Hague to obtain the same results on a world scale.

In the third place, something should be done as soon as possible to check the growth of armaments, especially naval armaments, by international agreement. No one Power could or should act by itself, for it is eminently undesirable, from the standpoint of the peace of righteousness, that a power which really does believe in peace should place itself at the mercy of some rival which may at bottom have no such belief, and no intention of acting on it. But granted sincerity of purpose, the great Powers of the world should find no insurmountable difficulty in reaching an agreement which would put an end to the present costly and growing extravagance of expenditure on naval armaments. An agreement merely to limit the size of ships would have been very useful a few years ago and would still be of use; but the agreement should go much further.

Finally, it would be a master stroke if those great Powers honestly bent on peace would form a League of Peace, not only to keep the peace among themselves, but to prevent, by force if necessary, its being broken by others. The supreme difficulty in connection with developing the peace work of The Hague arises from the lack of any executive power, of any police power to enforce the decrees of the court. In any community of any size the authority of the courts rests upon actual or potential

force; on the existence of a police, or on the knowledge that the able-bodied men of the country are both ready and willing to see that the decrees of judicial and legislative bodies are put into effect. In new and wild communities where there is violence, an honest man must protect himself; and until other means of securing his safety are devised, it is both foolish and wicked to persuade him to surrender his arms while the men who are dangerous to the community retain theirs. He should not renounce the right to protect himself by his own efforts until the community is so organized that it can effectively relieve the individual of the duty of putting down violence. So it is with nations. Each nation must keep well prepared to defend itself until the establishment of some form of international police power, competent and willing to prevent violence as between nations. As things are now, such power to command peace thruout the world could best be assured by some combination between those great nations which sincerely desire peace, and have no thought themselves of committing aggressions. The combination might at first be only to secure peace within certain definite limits and certain definite conditions; but the ruler or statesman who should bring about such a combination would have earned his place in history for all time and his title to the gratitude of all mankind.

The Lover's Answer

BY LILLIE RIPLEY

You ask me why I love you! Can you tell
  Why violets purple the cool woods in May?
Or why spring-beauties carpet every dell?
  Or why bright stars flash out on heaven's highway?

Ah, can you tell me why the rainbow gleams
  A tinted arch against a tear-wet sky?
Or can you tell the secret of the streams
  That murmur like a tender lullaby?

Ah, can you tell me why the wood-thrush sings?
  Or why a golden light rests on the sea?
Or why 'mong moss and fern are living springs?
  Or why sweet odors lure the honey bee?

Canst tell why lilies are as pure as snow?
  Or why the rose in beauty is complete?
If you can tell me why these things are so—
  Then I can tell thee why I love thee, sweet.

ERIE, PA.

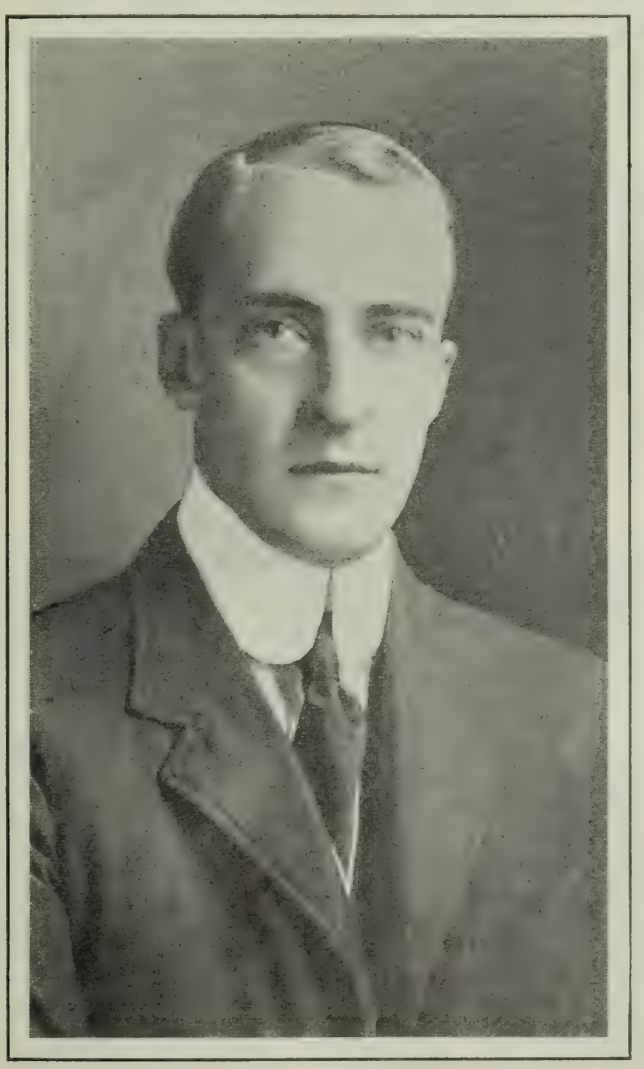
A Year of the New Theater

BY MONTROSE J. MOSES

Author of "Famous Actor Families of America," Etc.

WHEN the New Theater was first proposed for New York City a stream of speculative criticism was showered upon it, and by the nature of its endowment, as well as by the character of its suggested clientèle, the opprobrious term, "Millionaire Playhouse," was attached to it. This prejudice against a thoroly worthy enterprise grew by what it fed on, and for a long while the public conjured up a snobbish atmosphere and an undemocratic policy.

It is true that this opposition was partly invited by the slowness with which the New Theater organization sought to counteract rumor, and also by the identification of a playhouse with the Metropolitan Opera Company. It is likewise true that the number of fiascoes abroad, familiarly associated with the idea of a National Theater, had naturally created a general distrust of any movement to improve theatrical conditions which might be carried on in aloofness from a public realization that the theater needed freedom from consuming speculative limitations. Finally, it is very evident that, without analyzing the true province of an endowed theater, the commercial manager would oppose any corrective of his own close policy by damning the idea every step of the way.



Until the New Theater—erected on Central Park West—opened its doors on November 6, 1909, all comment about it was as speculative as the calculations made by Barker and Archer in their book, "Scheme and Estimates for a National Theater," but now that the New York season has closed, there is no longer any doubt as to what it has done in the very short period of its existence. In the midst of a theatrical activity by no means exceptional, the New Theater is the one notable feature of the year—not because of the long "runs" it has had, not because of the exceptional repertoire it has established, not because of any apparent initiative it has taken, but because, by impressing itself as a fact in the community, it has started its career as a factor in public taste. It has made good in its first season.

Thru the munificence of a number of capitalists it has been made possible to put into practical execution a scheme which might be at the same time outside of the economic situation confronting the theater, and sufficiently inside to exert a healthy influence on the art and on the profession. Tho the building is richly equipped, the sense of wealth does not obtrude itself. The Founders have shown excellent disinterestedness in their willingness to invest in art, where the only return on the investment was the promise to present better and better art. It is not the province of a New Theater to keep from making money; but it is the essential duty of such an institution to approach a production from the standpoint of its suitableness, rather than of its immediate commercial value. This does not relieve the director of the minute considerations which confront every producer. He has to spend his income wisely, whatever its source; for no enterprise ever flourishes that depends wholly upon money being poured into it—money which is given, but is not earned. Being placed beyond the point where risk limits the art to convictions of the director, he is freer to risk on the supposition that his art convictions are sound. If he fails, he must question his judgment.

We do not claim for the New Theater unparalleled success; there is still much to change in its policy and even in its physical proportions. The experience of the past months indicates changes which only practical demonstration could prove necessary. The statement that the auditorium is too large has become a platitude; the management knows it, and alterations are to be made during the summer. The unwisdom of combining opera with drama has been recognized, and the New Theater will sever its connections with the Metropolitan Opera Company before next year. In the official staff the only change has been in the resignation

of the Literary Director, who found one season's reading of over two thousand manuscripts more arduous than the results warranted.

This latter statement does not mean that the plays actually accepted by the New Theater have all been presented during the past months; but from what has been stated officially, the very purpose of the organization—freed from the necessity of immediate financial returns—invited an overflow of mediocrity from which the wheat had to be extracted. Whether this post of "Reader" will be filled by one man in the future has not been announced; assuredly the position is arduous enough for a committee, and the ease with which unsuitable manuscripts can be procured suggests the definiteness with which the proper manuscripts need to be pursued.

WINTHROP AMES,
Director of the New Theater.

For the playwright of note is confronting an economic proposition. If, at the beginning of the season, any doubt as to the success of the New Theater made the well-known dramatist hold back, that doubt has partly been dispelled; but the economic condition remains the same: In a theatrical year how do the royalty statements of a New Theater success compare with the royalty statements of a popular "run" under the management of the Trust?

What an organization such as the New Theater is in a position to do, however, is to offer encouragement in channels untouched by the commercial manager. Provided a play maintains a certain defined standard as a play, even tho its appeal be caviare rather than popular, a New Theater should be prepared to accept it, and to give it an adequate production. It is not too much to say that the New York venture has quickened a dying hope; three years at least will be required to establish the truth of this statement and to assure the permanence of the institution. Its presence should become a guarantee that excellence stamps every phase of its machinery—esthetically, practically and socially. The New Theater has distinctively met these requirements.

The New Theater has faithfully fulfilled its promises to the public. It has been more successful than any New York theater of average size. Calculating in round numbers, the ordinary play-house seats about seventeen hundred people. Were the nightly audiences at the New Theater to be poured into an average house, people would have had to be turned away at every performance. In fact, at the close of the season, about three hundred thousand persons will have passed thru its doors. It has presented a fresh play every fortnight, even at the expense of overwork, and tho at times evidences of haste were apparent in the small details of acting, the producing staff deserves full commendation for the intelligence and artistic feeling infused into the productions. For the public does not stop

to realize that whereas a première at the regular commercial theater means that the company for a week at least has been "tried out" on the road, the New Theater offers such a play to its audiences direct from the rehearsal rooms. The personnel of the stock company has consisted of thirty-eight members, while the balance, from chief support to supernumeraries, has been called in as the casts required.

By this institution one is made aware of invigorating results, born of the high standards which a New Theater is pledged to maintain. It means that each actor is an integral part of the whole, and that, therefore, he must share in the luxury which endowment assures. This does not mean lavishness. "Behind the scenes" at the New Theater is a revelation of comfort and ease—not of extravagance and of idleness. Well-appointed dressing rooms, quietness and quickness of scenic change have effect upon the movement and color of any play. The actor here finds himself raised from the plane of employee for a season to a post as member of a household. The New Theater does not repudiate the playhouses outside of itself; it demonstrates how futile the policy which deprives the drama of its true professional and artistic status and which reduces it to a business expediency.

In its production of "Antony and Cleopatra," the New Theater was handicapped, since Miss Julia Marlowe and Mr. E. H. Sothern, who were engaged for the title rôles, totally misconceived the drama; in "The School for Scandal," it tried Miss Annie Russell and Miss Grace George, with no marked dictinction, for neither of them understands the quality of poetry; in "The Witch," a Danish play changed to suit New England conscience, it procured the services of Madame Bertha Kalisch, the erstwhile Yiddish actress, who exhibited no unusual powers. Only in the "Sister Beatrice" of Maeterlinck, and in "A Winter's Tale," when Miss Edith Wynne Matthison, whose rôle of Every-

man, in the morality play, first made her known to the American public, joined the company, might it be said that the New Theater solved the difficulty of compassing large rôles. This difficulty points to a consuming defect in present day theatrical methods; the habit of the long "run" has kept the actor within confined limits for interminable periods at a time; has prevented him from developing his variety, and from strengthening his distinctive characteristics. Already, the development of a repertoire for the New Theater has had appreciable effect upon the technique of the actor.

The New Theater has presented twelve plays in twenty-four weeks; during that time it has been found necessary to call in an outside company, headed by Mr. John Mason, to fill an interval while rehearsals were being conducted for "Sister Beatrice" and "A Winter's Tale." This has been entirely too strenuous a record, considering the extensiveness of the productions.

A New Theater is supposed to establish such a repertoire as to be able on all occasions to revive that which is worth while. The outlay spent in making ready a Shakespearean production is larger than the average theatergoer realizes; it takes more than a season to get back thru the box office the amount expended in scenery and costumes. Endowment, therefore, enables one to meet the expenditure adequately and to wait for the results which follow a healthy taste, rather than to resort to illegitimate means of attracting a public and of creating a demand. A New Theater idea is essentially representative of clean intent and of noble purpose.

No criticism can be lodged against the New Theater for its lack of variety; some of its plays have had to be withdrawn, but tho that means loss, the Directors were prepared for such an emergency. It is encouraging to note that the two plays which have made most money for the theater have been "The School for Scandal" and "Twelfth Night."

Yet such a response is not surprising. The great fault with the majority of our theater managers is that, heretofore, they have underestimated the mental caliber of the public; they have assumed too strenuously the attitude of the tired business man, and have allowed the

stereotyped species of entertainment known as musical comedy to usurp the place of the more worthy drama. On the other hand, they have done more than the New Theater to follow the trend of newspaper interest.

It is disappointing to note how indirectly, save in the case of Sheldon's sensational but effectively theatrical play, "The Nigger," the New Theater has dealt with American subjects and with details vitally related to American interests. Save in the case of the classic revivals, it has followed the conventional paths, now and then presenting a literary curiosity, such as the fourth act of Ibsen's "Brand." Even Galsworthy's "Strife" was altered to suit American understanding. But nowhere was there any attempt made to revive an old American play. They might have presented to great advantage James A. Herne's "Margaret Fleming" or "Griffith Davenport"; in view of Mr. Fitch's untimely death they might have mounted one of his popular successes, which people, now that he is gone, are beginning to realize contained a deal of literary quality. Yet it is unfair to judge too harshly; we only indicate in this manner the province of a New Theater. It should not be interpreted as a storehouse

for the archaic, a museum for the unusual, but as a home where the best is preserved and kept alive. For the commercial manager will some day realize that a generation now fills his theater to whom tried successes are comparatively new, who would welcome with zest the revival of plays which have thrilled theatergoers before them — plays which may not have literary flavor, but which, nevertheless, were sufficiently dramatic to get across the footlights and to move the hearts of the multitude.

The New Theater has not been idle since it opened. It has given concerts and special benefits and operas and its own varied repertoire. This variety consists in Maeterlinck's "Sister Beatrice," the most artistic success, pictorially; "A Winter's Tale," presented in the Elizabethan manner so feelingly as to cover the archaic by an intelligent combination of imagination with knowledge; "Beethoven," a dramatic biography with an accompaniment of Beethoven's music; and as a curtain piece, "Brand." The character of its plays has stretched from comedy to tragedy, with much romance and history. Farce alone has been conspicuous by its absence.

Journalistic interest has stimulated public opinion to a point which will now be of great benefit while the company is on tour. For the New Theater, thru the "booking" arranged for by one of its executive staff, who is also at the head of the opposition Trust in the theater world, is sending its company with part of its repertoire to other important places as far west as Kansas City, thereby hoping, not only to meet with financial success, but to demonstrate the feasibleness of a similar institution as its own in every large civic center from Boston across the continent.

Curiously, there is a belief in certain quarters that the New Theater season has been a failure, but that is far from the actual fact. Director Winthrop Ames may begin his second year confident that public consciousness is keenly alive to the presence of an art playhouse, where healthy productions are given and where dignity and decency are preserved.

Joses, Brother of Jesus

BY HARRY H. KEMP

"Is not this the Carpenter's Son?"—Matthew.

JOSES, the brother of Jesus, plodded from day to day,
With never a vision within him to glorify his clay;
Joses, the brother of Jesus, was one with the heavy clod,
But Christ was the soul of rapture, and soared, like a lark, with God;
Joses, the brother of Jesus, was only a worker in wood,
And he never could see the glory that Jesus, his brother, could.
"Why stays he not in the workshop?" he often used to complain;
"Sawing the Lebanon cedar, imparting to woods their stain?
Why must he go thus roaming, forsaking my father's trade,
While hammers are busily sounding and there is a gain to be made?"
Thus ran the mind of Joses, apt with plummet and rule,
And deeming whoever surpassed him either a knave or a fool,
For he never walked with the prophets in God's great garden of bliss;
And of all the mistakes of the ages, the saddest, methinks, was this:
To have such a brother as Jesus, to speak with him day by day,
But never to catch the vision which glorified his clay.
